NOVELLO, EWER, & CO.'S CATA-

LOGUES (1880). No. 1.—Organ and Harmonium Music. No. 2.—Sacred Music with English Words. Post-free on application.

Now ready.

THE ONLY COMPLETE EDITION.

1 vol., 518 pp., folio, handsomely bound, cloth, gilt edges, price 21s. An entirely new and carefully revised edition of

MENDELSSOHN'S ORIGINAL COM-

POSITIONS for the PIANOFORTE, including the "Lieder ohne Worte." Also a New 8vo Edition (518 pp.). Price, in paper cover, 7s. 6d.; cloth, gilt edges, 10s. 6d.

"The volume before us is indeed a model of cheapness combined with elegance and convenient arrangement. It contains, in 518 neatly printed pages, everything Mendelssohn has written for the pianoforte, from the capriccio in F sharp minor, op. 5, composed in 1825, at the age of sixteen, to his latest works, including several published after his death. A student will find no end of interesting points in the works here collected, but to the more advanced amateur they will be a source of purest enjoyment. We need not add that the stately volume before us is eminently adapted to serve as an elegant and valuable gift-book at this, or indeed at any, season of the year."—Times.

A New Edition of the

LIEDER OHNE WOERTE, from the above

(Eight Books complete), is also published separately. Price, folio, paper cover, 8s.; cloth, gilt edges, 8s.; 8vo, paper cover, 2s. 6d.; cloth, gilt edges, 4s. 6d. *The only complete edition.

The Solicitors' Journal.

THE ORGAN OF BOTH BRANCHES OF THE LEGAL PROFESSION.

ESTABLISHED 1857.

Published every Friday. Price 6d.

Of the general contents of the JOURNAL the following statement will afford some idea:—

CURRENT TOPICS.

Comments on the legal events of the week.

LEADING ARTICLES.

Essays upon branches of law and matters of professional interest.

RECENT DECISIONS.

Explanatory and critical disquisitions on recent cases, pointing out their relations to the previous law.

CASES OF THE WEEK.

Short reports of cases decided during the previous week; during the Long Vacation, reports are given of cases before the Vacation Judge.

REVIEWS.

New legal works are carefully noticed in this department.

GENERAL CORRESPONDENCE. NEW ORDERS.

All new orders and rules are given, sometimes before they can be obtained by the public.

COURTS.

Special reports are furnished of cases decided by the Railway Commission, and of Solicitors' cases; selected cases in the County Courts are also reported.

PARLIAMENT AND LEGISLATION.

LEGISLATION OF THE YEAR.

Under this head careful criticisms are given during the Long Vacation of the legislative results of the session.

APPOINTMENTS AND OBITUARY.

SOCIETIES AND INSTITUTIONS.

Full Reports of the proceedings of the Law Societies. A Careful Summary is given of all the Legal News of the week, and Special Attention is bestowed on Furnishing Early Copies of all Court Papers.

The First number of Volume XXIV., published October 31st, 1879.

MUDIE'S SELECT LIBRARY.

THE NEW YEAR—SPECIAL NOTICE.

The attention of the Secretaries of Literary Institutions and Book Societies is respectfully requested to the LIST, Revised for the New Year, of the PRINCIPAL RECENT BOOKS in Circulation at MUDIE'S SELECT LIBRARY.

THIS LIST CONTAINS:—

The Life of Bishop Wilberforce; The Autobiography of Prince Metternich; The Letters of Charles Dickens; Mrs. Brassey's Voyage in the Mediterranean; Miss Bird's Ride Across the Rocky Mountains; Life of W. E. Gladstone, by G. Barnett-Smith; Memoir of Mrs. Tait; Life of Dr. Duff; Canon Farrar's St. Paul; McCarthy's History of Our Own Times; Ball's Jungle Life in India; Life and Work of Mary Carpenter; Memoir of Erasmus Darwin, by Charles Darwin; Bayne's Lessons from my Masters; Pen-Sketches from a Vanished Hand, by Mortimer Collins; Rough Ways Made Smooth, by R. A. Proctor; Memoirs of Edward and Catherine Stanley; The Manliness of Christ, by Thomas Hughes; Plumptre's Movements in Religious Thought; Hours of Thought, by Dr. James Martineau (new series); Life of Bishop Selwyn; Memoir of Bishop Milman; Memoirs of Baroness Bunsen; Blackburn's Breton Folk; Morocco, by Edmondo de Amicis; Animal Life, by E. P. Wright; Escott's England; Canon Liddon's Sermons (new series); Essays by Archbishop Thompson; Abbott's University Sermons; Loftie's Ride in Egypt; Twenty Years in Connaught, by Mrs. Houston; Cyprus, by Sir S. W. Baker and Mrs. Scott-Stevenson; Froude's Caesar; Henderson's Life of an Angler; Sir Gilbert Scott's Personal Recollections; Parker Gilmore's Adventures; Life of Marquess Wellesley, by W. M. Torrens; Life of Charles Mathews, by C. Dickens; Tour in Norway, by the Marchioness of Westminster; Life of Sir James Brooke, by Spencer St. John; De Pressense's Contemporary Portraits; Malleon's History of the Indian Mutiny; Worthies of Science, by Dr. Stoughton; Sister Dora; The Greatest Heiress in England, by Mrs. Oliphant; Young Mrs. Jardine, by Mrs. Craik; Donna Quixote, by Justin McCarthy; Sir Gibbie, by George MacDonald; High Spirits, by James Payn; and every other Recent Work of General Interest in History, Biography, Religion, Philosophy, Travel and Adventure, and the Higher Class of Fiction.

Fresh Copies of all the Books in this List and of all New Editions of the popular Standard Works in the Library Catalogue continue to be added as the demand increases, and arrangements are made with the leading Publishers for an ample supply of all Forthcoming Works of general interest as they appear.

In addition to the List of Recent Books in Circulation, the following Newly Revised Lists and Catalogues are ready for Distribution, and will be forwarded, postage free, on application:—

- I.—A CATALOGUE of the Books added to the Library from January, 1878, to the present time.
- II.—A New Edition of Mudie's Catalogue of well-selected SECOND-HAND BOOKS. This Catalogue comprises very many of the best Books of the Past and Present Seasons in good condition (cut and uncut), with nearly Three Thousand older Works, many of which are out of print, and not otherwise procurable, at the lowest current prices.
- III.—An Additional Catalogue, consisting chiefly of the Works of Popular Authors, newly and strongly bound in Half-Calf, Half-Roan, or Half-Persian, and well adapted for Circulation in Literary Institutions and Public Libraries.
- IV.—A Catalogue of Works of the Best Authors, in Morocco, Calf extra, Vellum, and other Ornamental Bindings, adapted for Gentlemen's Libraries or Drawing-room Tables, and for Wedding or Birthday Presents, and Prizes and New Year's Gifts.

All the Books in Circulation or on Sale at MUDIE'S SELECT LIBRARY may also be obtained with the least possible delay by all Subscribers to

MUDIE'S LIBRARY, BARTON ARCADE, MANCHESTER.

And (by order) from all Booksellers in connexion with the Library.

MUDIE'S SELECT LIBRARY (LIMITED),

NEW OXFORD STREET, LONDON.

CITY OFFICE: 2, KING STREET, CHEAPSIDE.

RICHARD BENTLEY & SON'S

LIST OF NEW WORKS NOW READY.

THE AUTOBIOGRAPHY of PRINCE METTERNICH.

Edited by his Son, PRINCE METTERNICH.

Translated by ROSENA NAPIER. In 2 vols., demy 8vo, with Portrait and Facsimiles, 36s.

THE LIFE of LORD PALMER- STON. By the Hon. EVELYN ASHLEY, M.P. 2 vols., crown 8vo, with Frontispiece to each volume, 12s.

Vanity Fair.

"A biography of a truly British Minister, in a convenient size, at a reasonable price, and pains have evidently been taken to bring out an edition adapted to the public convenience."

PEN-SKETCHES by a VANISHED

HAND: being Selections from the Papers of the late MORTIMER COLLINS. Edited by TOM TAYLOR, and with Notes by FRANCIS COLLINS. 2 vols., crown 8vo, 21s.

The World.

"Mortimer Collins at his best. Chatty, learned, breaking off into a quotation of his own and other poet's verses, into odd bits of animal and bird lore, into a mélange of gossip about dinners and churches, and into and classical writers, and High Toryism. Two most agreeable volumes for a winter's fireside or a summer's day."

Graphic.

"Lovers of Mortimer Collins' writings (and they are many) will have a rare treat in the two volumes lovingly edited by Prof. Tom Taylor and Mrs. Mortimer Collins. As you read it is just like listening to a friend who has the gift of saying, not one good thing now and then, but one at every pause or turn in the road."

A TRIP to BOERLAND; or, a Year's Travel, Sport, and Gold Digging in the Transvaal and Colony of Natal. By ROWLAND J. ATCHERLEY. Demy 8vo, 10s. 6d.

Morning Post.

"Dr. Atcherley is to be congratulated on the very interesting and unvarnished narrative which he has published, which is unquestionably one of the very best on a subject of vital interest that has appeared for a long time."

BY H.M. THE SHAH OF PERSIA.

JOURNAL KEPT DURING a SECOND TOUR in EUROPE. By the SHAH OF PERSIA. Rendered into English by General SCHINDLER and Baron LOUIS DE NORMAN. Demy 8vo, 12s.

PRECIOUS STONES: their History and Mystery. By WM. JONES, F.S.A. In crown 8vo, 7s. 6d.

THE EDINBURGH EDITION OF

THE INGOLDSBY LEGENDS; or, Mirth and Marvels. An entirely New Edition in large type, crown 8vo, with Thirty-two Illustrations specially re-engraved for this Edition by George Pearson, from originals by Cruikshank, Leech, Tenniel, and Du Maurier. 6s.

The Times.

"A series of humorous legends, illustrated by three such men as Cruikshank, Leech, and Tenniel—what can be more tempting?"

Examiner.

"Abundant in humour, observation, fancy; in extensive knowledge of books and men; in palpable bits of character, exquisite grave irony, and the most whimsical indulgence in point of epigram. We cannot open a page that is not sparkling with its wit and humour, that is not ringing with its strokes of pleasantness and satire."

THE HISTORY of the HONOUR- ABLE ARTILLERY COMPANY of LONDON. By Captain G. A. RAIKES, 3rd West York Light Infantry Militia, Instructor of Musketry Honourable Artillery Company; Author of "Historical Records of the First Regiment of Militia," &c. The second vol., in demy 8vo, with Maps, Illustrations, and Portraits, 31s. 6d.

RICHARD BENTLEY & SON,
NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

NEW BOOKS.

of BEDFORD. For the convenience of Parish Workers, a selection of Tracts from the Four Series of "Plain Words" has been made, and are issued in packets of three sorts, 1s. each.

THE PRAYER BOOK: its History,

Language, and Contents. By the Rev. EVAN DANIEL, M.A. Crown 8vo, cloth boards, 6s. [Fourth Edition.]

"We heartily commend this very excellent manual; . . . one of the most complete and satisfactory that we have."—*Guardian.*

THE WATCHERS of the LONG- SHIPS: a Tale of Cornwall in the Last Century. By

JAMES F. COBB. With Illustrations by Davidson Knowles. Crown 8vo, cloth boards, 8s. 6d. [Third Edition.]

"A capital story, and one we heartily commend to boy readers, both gentle and simple."—*Guardian.*

TRUE UNDER TRIAL. By

FRANCES PALMER. With Tinted Illustrations after Drawings by G. L. Seymour and W. A. Cranston. Crown 8vo, cloth, bevelled boards, 3s. 6d.

"One of the best boys' books we have seen for a long time. Written with a rare combination of religious spirit, with a perfect abatement from cant; and so well put together that we believe no reader who once took up the book would put it down without finishing it."—*Standard.*

"A well-written story."—*Times.*

BISHOP WILBERFORCE'S

SPEECHES on MISSIONS. Edited by the Rev. HENRY ROWLEY. Crown 8vo, cloth boards, 7s.

[Second Edition.]

London: W. WELLS GARDNER,
2, PATERNOSTER BUILDINGS.

SAMPSON LOW, MARSTON, & CO.'S LIST.

BLACKBURN and CALDECOTT'

"BRETON POLK": an Artistic Tour in Brittany. Text by HENRY BLACKBURN. Illustrations (71 in number) by Randolph Caldecott. Imp. 8vo, cloth extra, gilt edges, 51s.

"And wonderful illustrations they are! . . . To set aside the rare artistic merit of his work, in humour, in the faculty of selection, in case without carelessness, in finish without laboriousness, it is long since so consummate a master has appeared in this particular field of art."—*Times.*

UP and DOWN; or, Fifty Years' Experiences

in Australia, California, New Zealand, India, China, and the South Pacific. Being the Life History of Captain W. J. BARRY, written by himself. With several Illustrations. Crown 8vo, cloth extra, 8s. 6d.

From HER MAJESTY the QUEEN.

"Lieut.-General Sir Henry F. Ponsonby presents his compliments to Mr. Barry; he has received the Queen's commands to thank Mr. Barry for the volume which he has forwarded for Her Majesty's acceptance."

From the *Times* Review, December 22.

EXTRACT—"It is a true record of a life spent in 'roughing it' among many men in many lands. . . . Very varied and interesting. His blunt, homely style, extenuating nothing and setting down naught that he cannot vouch for, lends an additional charm to a narrative from every page of which the truth speaks out. The book is thoroughly worth reading, and worth thinking over as well."

NOTICE.

THE FERN PARADISE is being published

in Shilling Monthly Parts, of which the first is ready this day. Containing forty-eight pages, the Floral Title-page and Photographic Frontispiece of the work (a Devonshire "green lane"), a Full-page Engraving from a Drawing by Birket Foster, and an Engraved Plate of Grouped Frontispieces, representing the famous Boer Buddha Temple, Java. The volume will be completed in Twelve Parts at One Shilling each.

Crown 8vo, cloth extra, price 6s.

CHRIST in SONG. By Dr. Philip Schaff.

A New Edition, Revised and Enlarged.

ERCHOMENON; or, the Republic of

Materialism. Small post 8vo, cloth, 5s.

THE MUNSTER CIRCUIT: Tales, Trials,

and Traditions. By J. H. O'FLANAGAN, Barrister-at-Law, Author of "The Irish Bar," "Lives of the Lord Chancellors of Ireland," &c. 1 vol., crown 8vo, cloth, 10s. 6d.

From the *Times*, December 27.

"The Munster Circuit" becomes a very lively volume indeed when it brings us down to times comparatively recent. We need hardly add that on a "Munster Circuit" there must be many excellent stories of the Bench and Bar, and we can recommend the book as capital reading."

THE AUSTRALIAN ABROAD: Branches

from the Main Routes Round the World. Comprising the Author's Route through Japan, China, Coochin-China, Malacca, Bunda, Java, Torres Straits, Northern Australia, New South Wales, South Australia, and New Zealand. By JAMES HINGSTON ("J. H." of the Melbourne Argus). With Maps and numerous Illustrations from Photographs, including a Frontispiece, representing the famous Boer Buddha Temple, Java. 1 vol., demy 8vo, 14s.

Now ready, crown 8vo, cloth extra, 6s.

NISIDA; or, Two Winters in Madeira.

By EDGAR CRANE.

THROUGH the DARK CONTINENT. By

H. M. STANLEY. New and Cheaper Edition, complete in 1 vol., with the Text and Full-page Illustrations and Maps. Crown 8vo, cloth extra, 12s. 6d.

THE HISTORY of IRELAND. By

STANDISH O'GRADY. Vol. II., price 5s. It is the reproduction of the Ulsterian Cycle, containing the History of the Red Branch Knights, and concludes with the death of Cuclin, the great Ulster Hero.

Of this personage the *Spectator*, reviewing the first volume, writes:—"There is not in history or legend a character so striking."—*Shurly.*

HANDBOOK of EMBROIDERY. By L.

BIGGIN. Edited by LADY MARIAN ALFORD, and published by authority of the Royal School of Art Needlework, and dedicated to their President, H.R.H. Princess Christian of Schleswig-Holstein, Princess of Great Britain and Ireland. With Sixteen Page Illustrations, many of them in Colour, by Burne-Jones, Walter Crane, William Morris, George Aitchison, Fairfax Wade, the Rev. Selwyn Image, and Miss Jekyll; and Designs for Borders, &c., by Miss Webster, Miss Burnside, and Miss Mary Herbert, of the Royal School of Art Needlework. Crown 8vo, 5s.

Now ready, complete in itself.

VOL. IV. of MEN of MARK. Thirty-six

Cabinet Photographs (by Lock & Whittell) of the most Eminent Men of the Day, specially taken for this work. With Biographies. In handsome cloth gilt cover, 4s. gilt edges, 25s. This Volume includes Portraits from Life of the Crown Prince of Germany, Dean Stanley, W. P. Frith, R.A., H. M. Stanley, T. D. Huxley, Birket Foster, &c.

THE WITTY and HUMOROUS SIDE of

the ENGLISH POETS. With a Variety of Specimens Arranged in Periods. By ARTHUR H. ELLIOTT. 1 vol., crown 8vo, cloth, 10s. 6d.

THE NEW ADDITION to LOW'S STANDARD SIX-SHILLING NOVELS is

EREMA; or, My Father's Sin. By R. D.

BLACKMORE, Author of "Lorna Doone," &c. With Eight Illustrations Small post 8vo, cloth extra, 5s.

NEW NOVELS.

OUR SQUARE CIRCLE. By J. Hain

FRISWELL. 3 vols.

MRS. LANCASTER'S RIVAL. By the

Author of "A French Heiress in her own Chateau." 3 vols.

LITERATURE.

A Study of Shakspeare. By Algernon Charles Swinburne. (Chatto & Windus.)

THE general results arrived at in this volume, of which about one-half is a reprint from periodicals, are not new to Shakspeare students. There are, says Mr. Swinburne, three periods in Shakspeare's artistic career—the first, a “lyric and fantastic period”; the second, “comic and historic”; the third, “tragic and romantic.” In the youthful period, rhyme struggles with blank verse for the mastery; its crown and culmination is in the *Midsummer Night's Dream*. In the middle period Shakspeare “begins first to meddle with the mysteries and varieties of human character, to handle its finer and more subtle qualities.” The third period has an earlier and a later manner, an earlier and a later stage. For a time it would seem as if something of Swift-like cynicism disturbed the better genius of Shakspeare (p. 201). But his work ends with a harmony; the romantic plays, *The Tempest*, *The Winter's Tale*, and *Cymbeline*, bring Shakspeare's final period to a musical close.

Sixteen years ago a lecture on Shakspeare by Prof. Ingram appeared in a volume entitled *Afternoon Lectures*, published by Messrs. Bell and Daldy.

“We can distinguish,” wrote Prof. Ingram, “in the poetic life of Shakspeare three successive periods. . . . The characteristic distinction of the first period is that in the plays which belong to it the poet still predominates over the dramatist. . . . Rhyme abounds. . . . In the *Midsummer Night's Dream*, which closes the youthful stage, the great artist decisively shows himself. . . . The second period is that of Shakspeare's best comedies and of almost all his chronicle plays. He now draws his characters with deeper colours and with a firmer hand. . . . It is the exhibition of passion by which the essentially tragic third stage is particularly characterised. . . . The state of feeling to which ‘the censurer of mankind’ gives utterance was undoubtedly a phase through which Shakspeare's own mind was passing about the time when he wrote the plays in which that character appears. But Shakspeare was not to sink into such morbid misanthropy as corroded the soul of Swift. We are able to follow the poet into a serene and peaceful region, in which the old sweetness and cheerfulness are restored, joined with all the elevation and breadth of his maturity. Three of the works of the last period, which must be referred to its closing years, stand in some degree apart from the other members of the group. I mean *Cymbeline*, *The Winter's Tale*, and *The Tempest*.”

In that remarkable lecture Prof. Ingram recognised the aids which literary feeling may receive from scientific observation; he recognised the capital importance of the

study of Shakspeare's versification as furnishing data for the chronology of his plays; and he described the essential nature of the change from unbroken to interrupted verse. Mr. Swinburne prefers to trust to general impression, and wastes a fine extravagance of ridicule on verse-tests and the counting of syllables by fingers or by toes. No intelligent student ever supposed that the vital mystery of verse can be seized by a numerical test any more than that the mystery of animal life can be laid bare by the scalpel. But the anatomist knows more than other men about muscles and joints and articulations. Certain phenomena of verse admit of isolation, and are the proper objects of scientific enquiry. The instrument of the enquirer is his ear, and, acting under the authority of the ear, his fingers, or, if more convenient, his toes. Mr. Swinburne's warning against mere finger-counting, apart from the weighing of accent and syllable by the ear, is welcome, but perhaps would be more welcome if it were new. Prof. Craik, who some twenty years since made a study of the weak ending in *Julius Caesar*, speaks of Malone as having “no notion whatever of verse beyond what he could obtain by counting the syllables on his fingers.” Prof. Ingram, in his masterly paper on the “Light and Weak Ending” (*Transactions of the New Shakspeare Society*, 1874), writes:—“The lines must be read intelligently, and the rhythm understood; the eye acting mechanically will mislead.” Mr. Spedding, in his letter on the pause test, writes:—

“If you go no further than to count the number of lines in which a pause in the sense or the delivery coincides with the concluding syllable, I shall not be satisfied with it. The effect of the metre upon the ear depends mainly upon the distribution of the pausing places with relation to the normal structure of the line” (*Transactions of the New Shakspeare Society*, 1874).

“I quite recognise the necessity of subordinating verse tests in general to the ripe conclusions of the higher criticism, if these two sorts of evidence should ever be found at variance,” so writes Prof. Ingram, and he adds, “But I believe that the more thoroughly the former are understood, and the more scientifically they are used, the more they will be found in accordance with the best aesthetic judgments.”

To what baseless opinions mere general impression, even when the impression of a man of exquisite feeling and high genius, may lead will appear from a glance at the several chronological arrangements of Shakspeare's plays attempted by Coleridge, arrangements arbitrary, wild, and mutually discordant. Mr. Swinburne, a man of genius and a reader of Shakspeare from boyhood, placed *Julius Caesar* near *Antony and Cleopatra* until he was taught his mistake by François-Victor Hugo. “It is less creditable to England than honourable to France,” Mr. Swinburne writes, “that a Frenchman should have been the first of Shakspearean students to discover and to prove that the great triad of his Roman plays is not a consecutive work of the same epoch.”

In 1857, some years, I believe, before the appearance of the first volume of Hugo's translation of Shakspeare's complete works, Mr. C. Bathurst published his valuable “Remarks on

the Differences in Shakspeare's Versification in Different Periods of his Life.” He writes (p. 79): “From the verse I should say positively that *Julius Caesar* is not so late as 1602. It is mostly unbroken, like the *Histories*.” A verse-test had placed Mr. Bathurst in advance of Mr. Swinburne trusting to general impression, and enabled him to divine the exact date, as since confirmed by the reference noted by Mr. Halliwell-Phillips in Weever's *Mirror of Martyrs*, 1601.

Mr. Swinburne is contumacious in his heresy about the date and authorship of *King Henry VIII.*—it contains, he believes, none of Fletcher's work, and belongs to the second period of Shakspeare's dramatic career. One must listen with consideration to all that Mr. Swinburne has to say when Fletcher and Shakspeare are in question, but the evidence to which Mr. Swinburne refuses to attend is overwhelming. Here, indeed, Mr. Swinburne made an essay in the study of verse-tests, but he cannot be congratulated on its result. In *Henry VIII.*, he wrote, “we do not find the triple terminations so peculiarly and notably dear to that poet [Fletcher]” (*Fortnightly Review*, January 1876). It was immediately shown that we *do* find these triple terminations in *Henry VIII.* In reprinting his paper, Mr. Swinburne now corrects his error, and writes, “We do not find the perpetual predominance of those triple terminations so peculiarly and notably dear to that poet [Fletcher].” This is well; but Mr. Swinburne, with whom the infallibility of genius seems to be a foible, adds a note to this altered statement. “A desperate attempt was made to confute this argument.” The truth is, that a successful attempt was made to confute a very different argument—viz., that since triple endings do not appear in *Henry VIII.* the hand of Fletcher is not recognisable in that play. Mr. Swinburne has strong claims upon the gratitude and admiration of lovers of English literature; his claims would be still stronger had he the magnanimity to admit an error, and to abstain from a statement which I will not call disingenuous.

The same foible of infallibility appears in the reprint of papers on *Edward III.* “The word *wistly*,” wrote Mr. Swinburne, “occurs but once in Shakspeare;” the word *endamage-ment* is “a non-Shakspearean” word; the word *invoke* is “a pre-Shakspearean” word. It was shown that *wistly* occurs three or four times in Shakspeare; that *endamage-ment* is to be found in *King John*; that *invoke* is to be found in *Richard III.* and the *Sonnets*. So much the worse for the words! Their bodily presence, indeed, cannot be denied, but in some superior transcendental sense they are still absent; *endamage-ment*, which Shakspeare uses, is “essentially non-Shakspearean;” and “a mere ἀνάξιστον λέγόμενον can carry no weight of evidence with it worth any student's consideration.” Mr. Swinburne was wrong on the poor point of fact, on which any pedant may be right, but in the higher “Swoning sphere,” where knowledge disappears in excess of poetic sensibility, he is, and always has been, right. Perhaps it may be permitted one to smile very gently.

Such value as this *Study of Shakspeare* possesses—and Mr. Swinburne, though he were to try his worst, cannot write many

pages without giving us something of value—will be found in scattered pieces of bright, penetrating, and original comment. But when one comes to transcribe such passages the pen drives heavily amid the radiant riot of flower-soft speech, and the supreme spilt of starry syllables. One whose understanding has been darkened by verse tests finds himself, too, as he copies, half unconsciously at work on a painful series of prose tests, including the alliteration test, the abusive-epithet test, the triple-redundant-adjective test, and the never-ending-hyperbole test. I shall end with a passage written more simply than most others in this book, and disclosing

“Two points in [Iago’s] soul
Unseized by the Germans yet”

which have much taken my fancy.

“Malignant as Iago is, the very subtlest and strongest component of his complex nature is not even malignity. It is the instinct of what Mr. Carlyle would call an inarticulate poet. In his immortal study on the affair of the diamond necklace, the most profound and potent humourist of his country in his century has unwittingly touched on the main-spring of Iago’s character—the very pulse of the machine. He describes his Circe-de la Mothe-Valois as a practical dramatic poet or playwright at least in lieu of play-writer; while indicating how and wherefore, with all her constructive skill and rhythmic art in action, such genius as hers so differs from the genius of Shakespeare that she undeniably could not have written a *Hamlet*. Neither could Iago have written an *Othello*. . . . ‘But what he can do, that he will;’ and if it be better to make a tragedy than to write one, to act a poem than to sing it, we must allow to Iago a station in the hierarchy of poets very far in advance of his creator’s. None of the great inarticulate may more justly claim place and precedence. With all his poetic gift, he has no poetic weakness. Almost any creator but his would have given him some grain of spite or some spark of lust after Desdemona. To Shakespeare’s Iago she is no more than is a rhyme to another and articulate poet. . . . He has within him a sense or conscience of power incomparable; and this power shall not be left, in Hamlet’s phrase, ‘to fust in him unused.’ A genuine and thorough capacity for human lust or hate would diminish and degrade the supremacy of his evil. He is almost as far above or beyond vice as he is beneath and beyond virtue. And this it is that makes him impregnable and invulnerable. When once he has said it, we know as well as he that thenceforth he never will speak word. We could smile almost as we can see him to have smiled at Gratiano’s most ignorant and empty threat, being well assured that torments will in no wise ope his lips; that, as surely and as truthfully as ever did the tortured philosopher before him, he might have told his tormentors that they did but bruise the coating, batter the crust, or break the shell of Iago. Could we imagine a far other lost spirit than Farinata degli Uberti’s endowed with Farinata’s might of will, and transferred from the sepulchres of fire to the dykes of Malebolge, we might conceive something of Iago’s attitude in hell—of his unalterable and indomitable posture for all eternity. As though it were possible and necessary that in some one point the extremities of all conceivable good and of all imaginable evil should meet and mix together in a new ‘marriage of heaven and hell,’ the action in passion of the most devilish among the human damned could hardly be other than that of the most godlike among all divine saviours—the

figure of Iago than a reflection by hell-fire of the figure of Prometheus.”

There is a palpable touch in this of the romantic idealism and the extravagance which are Hugo’s and not Shakspeare’s; yet *O, si sic omnia.* EDWARD DOWDEN.

THE SHAH’S SECOND TOUR.

A Diary kept by His Majesty the Shah of Persia during his Journey to Europe in 1878. From the Persian, by A. H. Schindler and Baron Louis de Norman. (R. Bentley & Son.)

THE first visit of the Shah to Europe will not easily be forgotten by Englishmen, especially English tradesmen; but his second journey produced the weaker impression inherent in sequels, and was further stript of its glory by its inopportuneess. That the Shah should have been at Berlin when the Emperor was shot at, and in Paris when everybody was intent upon the Berlin Congress or the Exposition, was exceedingly unlucky for his fame; and that he should have neglected to confer the honour of his presence upon England is equally—but solely for his own sake—to be regretted. Altogether, the Shah’s second European tour, regarded as an advertisement, must be admitted to have turned out a failure. He has, it is true, endeavoured to repair his misfortune by publishing his journal, but it is quite open to doubt whether it will achieve its object. The first journal had the merit of novelty, if it had no other attraction. People were curious to know how a Shah looked at Western things. Any king’s ideas have a certain popular interest; but the ideas of an Eastern monarch, of whose jewels and wives wonderful stories are told, are specially *piquante* food for the enquiring minds of Messrs. Mudie’s subscribers. People read and were satisfied. They found that a Shah possessed a considerable faculty of wonder, an extremely comfortable belief in his own importance, and a truly gratifying appreciation of the luxury of sitting down in European countries. This was all very right and proper, and the book was returned along with its fellows in the neat leather strap, which would presently return with fresh volumes of equal geographical or fictional interest and novelty.

It is quite another matter with the second journal. It has not the novelty which constituted the interest of the former work. It has no excuse for existing—an objection, however, which applies to too many books to be worth advancing. If we class books according to their objects, we shall find it difficult to fix the place of the Shah’s journal. It does not belong to that largest class of books written to sell, for the Shah is not like an impecunious author whose literary income is an appreciable item in his general revenue. It is not a book of the didactic order, which often hangs very closely on to the first class; there is nothing to be learned from the Shah’s notes, except it be a not very high opinion of his Majesty’s intellect; moral and religious teaching are represented here by discreet silence in the one case, and in the other by a curious, and, we think, solitary, record to the effect that the Shah retired to his apartments “to pray and read the

Koran.” There is a small class of books that are written out of sheer love of their subjects; and there is another consisting of those which owe their appearance to a sublime love of the writer’s self. Perhaps the Shah’s book belongs to the last division: or it may be classed among the works that are written out of love of their subjects, for in this case it comes to the same thing, as the subject of the book is the Shah.

Those who desire to know more of this important subject than the first journal told them will be able to gather from the new work many very precious indications of the tastes and qualities of the Persian Sovereign. They will see the thoughtfulness he displays for others in his record of the unpleasant way the tents had of falling down in the night and wetting the servants on the journey through Persia; his power of humorous description in the account he gives of all his suite tumbling off their horses at the rate of a hundred a day on the soft clayey soil; his prudence and his sense of the sacredness of a king’s person, in his method of sending a minister of State on before to test the safety of a river-crossing. Indeed the wisdom of this precaution is plainly shown in the account of the crossing of the Aras river, which was evidently a cause of serious uneasiness to the august mind.

“The boatmen here are very expert. They first pulled the boat by ropes a long distance against the stream, which was a very strong one; they then coiled the ropes into the boat and left the boat unattached. The river now carried the boat away with great velocity, and the boatmen took to their oars, and rowed till we got to a piece of dry sand, lying like an island in the midst of the river, and dividing the stream into two branches. On the other side of the island the river runs much faster. Here there was a wooden sort of jetty, running about ten or twenty paces into the river, at the end of which were two boats joined together by planks, which in turn were connected with the other side of the river by stout ropes. When we got to the two boats the ropes were pulled by a windlass, and were drawn to the other side of the river. Praise God, the Most High, we passed with safety.”

On another occasion a troop of horsemen were ridden into the river over the girths to break the force of the stream and assist the passage of the Shah’s boat. The river difficulties and the equestrian feats of the suite are the only relief to the dreary narrative of the journey to the Russian frontier. The Shah scrupulously records what he sees on either side of the road, and even takes the trouble to look through a telescope to make sure of his vision. He tells us how the mountains resemble certain familiar heights near Teheran, and he records the names of the hamlets he passes. When he comes to a big town, he receives all the officials, foreign consuls, and the like, reviews the troops, walks in the gardens, sits down frequently (this is his strong point, on which he strenuously insists), and departs amid salvos, after distributing orders and distinctions among the people who have been presented to him, according to their rank. We wonder if the Shah keeps medals stuck over the lining of his coat, like the Order of St. Vitus which the diplomatist confers so

graciously in *Boulogne*. The Shah is very particular to tell us the names of all who were presented to him, and he exhibits a singular talent for describing a man in a few words. He either says "He is a very able man," or "He has a white beard." A young man is described as "intelligent."

It is astonishing how rapidly the Shah takes a man's measure. For instance, he saw a German doctor at Tebriz, and in the few minutes of presentation discerned his true character; "he is a very skilful and expert doctor." We congratulate Dr. Juris on this testimonial, and only wish he had been allowed to attend to his Majesty's teeth, which we are grieved to learn caused him some trouble, inasmuch as the Teheran dentist, who pursued the Shah over Europe, had been unable to extract a stopping which he had himself put in, and M. Chrétien, of Paris, had to be called in. "When Chrétien had worked at it for some days, it finally came out. I was very glad, and am going to have the tooth filled anew." We earnestly hope he did, and that the filling was quite satisfactory. That it ever went wrong shows something amiss in the ordering of the universe, and may serve as an encouragement to Nihilism.

When the Shah arrived in Russian territory he was delighted with the enthusiastic hurrahs of the people. "It seems as if the people were really very glad and joyful on account of my arrival;" and again, "It must have been from excess of pleasure, and quite spontaneous." When he got to St. Petersburg, the kindness of the Emperor, who showed him every cordial attention, deeply impressed him, and when the Czar threw his own *paletôt* over the Shah's shoulders on his departure we cannot wonder that the latter shook hands repeatedly with his imperial host and "stepped into the railway carriage with a very sad heart." He recovered, we are glad to be able to state, in time to note that "the difference of time between St. Petersburg and Warsaw is half-an-hour; that is to say, the sun rises and sets at St. Petersburg half-an-hour earlier than it does at Warsaw." He had had a busy time in the capital, going every day to the theatre or opera, where the management always contrived to provide a ballet, which seems to have given satisfaction. We are glad to notice that the Shah is not unimpressed by European dancing, for he quite well remembered a *danseuse* "who danced very well" at Moscow, and whom he had seen on his former visit. A good deal of the Shah's time was occupied in the lengthy task of penetrating from his own apartments to those of the Czar in the same palace; the number of intervening rooms is a never-ending source of amazement to him. But the great work of his days in Russia, and for that matter everywhere, was sitting down. The peculiar aptitude of the Shah for this process was made manifest by the earlier journal, but it is only in the pages now before us that we can fully appreciate the perfection he has attained in the art. He went for a walk with the Empress and "sat down occasionally"; he came in to dinner and is careful to tell us he "sat down," and who "sat down" on his right hand, and "sat" on his left; then he went to the opera or theatre and "sat down" in a box; some

royal personages came and "sat down" by him—doubtless they could not have done it if the Shah had not instructed them in the art by his practised example—other dignitaries "sat down" around, opposite, anywhere, but infallibly "sat down." The word meets one at the top of the page; if one skips to the middle, the immoral habit meets its punishment, for there again is the obnoxious word; if we dive to the bottom of the sheet, there it is still. There is no escaping it. Foreigners who are desirous of mastering the conjugation and all possible applications of the verb "to sit" should consult the Shah's journal. One feels a desire that a Shah could be made to understand the application of the verb "sit upon" in a passive sense.

In Germany, very little happens. The Berlin Congress cannot be postponed, and the Shah is "out of it"; and the attempt of Nobiling only increases his effacement. The Shah gives a harrowing account of the affair, leaves us to "imagine how he felt when he heard of it, and when he thought that this sad event had happened whilst he was at Berlin"—which was a selfish reflection, for he ought to have remembered what a comfort the proximity of his august presence must have been to the German Emperor. And then the Shah fled. He had a day's buck-shooting at Baden, but fired very often and hit very little, and meantime got into "a great perspiration." It was unroyal merely to do this, and needless humiliation to record it. What divinity can hedge a king when such reckless admissions are made? Then he went to Offenheim for pigeon-shooting, "a kind of European sport by which one learns to shoot." He did not regard it as a very efficient mode of training; at least it did not appear to answer in the case of the Europeans who were with him. Here is his simple note:—"The Europeans shot first. Whatever they fired at they missed, although the distance for the shot to travel was small; we had to shoot with small shot. I then fired four shots, one after the other, and did not miss once." But this was not remarkable, as the Shah easily defeated all comers in javelin throwing, which, however, he modestly says was due to skill rather than to unusual strength.

At Paris the Exposition was the Shah's serious business; and here there were plenty of opportunities for sitting down, and no need of an excuse. His Majesty was indefatigable in seeing things; there was nothing he did not "carefully inspect," from troops, cartridge manufactories, and printing machines, to whirligigs and river-looks. The last were a great delight, especially when they let all the water run out and the steamer stuck fast. But in the midst of constant engagements, dinner parties, receptions, calls, visits to the Exhibition, drives in the country, inspections of notable things, tours on the river, ascents of lofty edifices, recoveries in Turkish baths, and other equally important duties, the Shah found time to observe the habits of the Parisians with that keen discernment which characterises him. He notes, for instance, that "the parents pay the utmost attention to their children, who, when they reach a proper age, are educated and taught all the sciences and arts." He is peculiarly observant of the ways of Parisian Jehus.

"The coachmen of Paris never have any fixed hours for their repose. I have not yet seen a coachman that keeps awake when not actually moving. Whenever his master, or the person who has hired the vehicle, goes into a shop, or into a house to visit someone, or stops there a short time, the coachman immediately, and on his seat, falls asleep, and sleeps on till his master comes out again. Every coachman has a newspaper in his hand, but before he can begin reading it he is asleep."

Indeed, time seems to have sometimes hung heavily on the royal hands, for he was able to note—(perhaps while waiting for the oculist who examined his eyes, "but praise God the Most High! they were without disease—I had asked for him simply to have my eyes looked at!")—that "four hundred carriages, carts, and omnibuses passed every hour. . . . This extraordinary traffic continues by day and night."

His Majesty's return *via* Austria to Persia was uneventful. "Praise be to God! we arrived in safety at Enzeli, and thanked God for our safe return." It is a thanksgiving in which we think most readers will piously join.

The book is better translated than it deserves to be. There is no charm of style, nor could there well be in such a work; but there are few mistakes. It was not worth translating at all; but, such as it is, it is well done.

S. L. POOLE.

THE CID.

The Poem of the Cid: a Translation from the Spanish, with Introduction and Notes. By John Ormsby. (Longmans.)

It is not surprising that so picturesque a figure as that of the Cid should attract the notice of English writers, and that to the names of Frere, Lockhart, Southey, and Dennis we should have to add that of a fresh exponent of the career of the great Spanish champion. Mr. Ormsby has not been simply going over old ground, or merely gathering the aftermath. It is true that Southey has brought together the scattered incidents related in chronicle, poem, and ballad; but it is equally true that it remained for Mr. Ormsby to undertake the first formal English translation of the *Poema del Cid*, a fragment of 3,744 lines narrating the occurrences which have been diluted in literary merit and attenuated in historical likelihood by some of the subsequent writers. It is perhaps a pity that in so small a work the original, which is not very readily accessible, has not been printed side by side with Mr. Ormsby's version of it, which has very evidently been undertaken from genuine and almost enthusiastic admiration. The *Poema* was, he tells us, the companion of a pedestrian ramble "through the scenes of the Cid's exploits in Valencia, Aragon, and Castile." This admiration has not inspired him with sufficient courage to render the entire poem, and he has accordingly given considerable sections of it in the form of a condensed prose narrative. Thus to the fragments translated by Frere we have, after all, only to add a larger fragment. It is no more than justice to say that the most characteristic portions of the *Poema* have been turned into easy flowing verse which very fairly represents the simplicity

and directness of the original. The incompleteness we have named, while detracting from the value of Mr. Ormsby's work as a critical contribution to the literature of the *Cid*, will not lessen its interest for the general reader, who will find in it a graphic portraiture of the *Cid Campeador*, a portrait more vivid and ornate than that given by the cold-blooded historians, some of whom regard the hero as a myth, and yet not overlaid with the puerile exaggerations fastened on his memory by the singers of some of the later *romances historicos*.

The *Poema del Cid* offers a number of interesting problems for the consideration of the student of literature. Existing in a unique MS. found at the birth-place of the hero, it stands at the very threshold of Spanish poetry, and its date and authorship have alike been contested. Before Chaucer sang the chivalry of England, and before Dante had glorified the vernacular of Italy, the singer of the *Campeador* had produced a poem reflecting much of the national feeling of the chivalrous spirit of the Middle Ages. There has been a dispute as to whether it is the work of one man or a cento of ballad narratives strung together. The matter can hardly be regarded as definitely settled. Mr. Ormsby holds strongly to the individual origin of the poem, but states very fairly the arguments for and against that view. This he has done in his Introduction, which is really a careful, but too concise, monograph of the literary history of the *Poema*. If we accept the theory that it is the work of one man, the author, whoever he may have been, had homely dignity of language, the power of effective narrative, and a grim sense of humour. Above all, he impresses us with the feeling of reality. His characters are not mere puppets, but beings of flesh and blood, from the dastard Infantes of Carrion to the little-speaking, but much-doing, "Dumb Peter." The poem is the glorification of the national hero of Castile—Rodrigo Diaz de Bivar, "El Cid Campeador." Its opening lines show us the gallant knight weeping over the wreck of his household gods as he leaves Bivar, a banished man to whom none might give food or assistance on penalty of life and limb. A weak man would have succumbed under such difficulties, but the Cid by strength and valour conquers a place for himself in the world, sets himself on almost equal terms with his sovereign, and sees his daughters sought in marriage by princes of the blood royal. It is this victorious struggle and the conquest over hard fate and evil fortune that give its deep interest to the career of the Cid. The Castilian saw in this rugged, long-bearded, hardy hero, who cleft Moors in twain and forced refractory lions back into their den, a human symbol of that energy and courage which gained for Spain her high place among the nations. The ages have not paled the figure of "Myo Cid;" for if we have now only an "imperfect sympathy" with his habit of levying blackmail, his superstitious belief in augury, or his knavish device for obtaining a loan from the Jews, we can still estimate at its true worth the loyalty, chivalry, courage, and courtesy of "El Cid."

WILLIAM E. A. AXON.

The Peerage, Baronetage, and Knightage of the British Empire for 1880. By Joseph Foster. (Nichols & Sons.)

No English house is said to be complete without its Bible, its Shakspeare, and its Peerage, and of these books the last is certainly not the least often opened. Dod, Burke, and Lodge are household words among us, and we have long been accustomed to recognise them as authorities in their respective domains. Dod supplies us with personal details respecting the titled classes; Lodge with family particulars "corrected by the nobility;" and Burke traces, with more or less accuracy, the rise and progress of the British aristocracy. It does not seem, therefore, that much room is left for Mr. Joseph Foster in a field already so well occupied; and we have felt some curiosity as to the motives which have induced him to hazard a struggle with such approved veterans.

Mr. Foster is keenly alive to the many faults which disfigure the pages of the current Peerages, and has shown no lack of zeal in his efforts to avoid them; but, at present, his work is unequal and falls a long way short of the high standard which, in his Preface, he himself has set up. We will point out what appear to us to be the distinguishing merits of the book, and direct the author's attention to its chief shortcomings.

In the first place we must give Mr. Foster credit for being something more than a mere copyist. He has not been content to reproduce the facts and fictions of earlier writers, but in many cases has examined wills, inquisitions, pipe rolls, and such-like records, in order to correct or confirm what had been previously accepted without enquiry. One result of this praiseworthy labour has been the exclusion of those absurd fables which have brought discredit upon the art of genealogy. Scarcely a single pedigree is traced farther back than the thirteenth century, and the wholesome scepticism which Mr. Foster exhibits contrasts well with the credulity or indifference which Sir Bernard Burke would appear to favour. It must, however, be remembered that the manufacture of lineage is no modern branch of industry. It probably dates from the rise of the new nobility, and certainly was in active progress during the reign of Elizabeth. The College of Arms was at that period not altogether unscrupulous in countenancing, and even in originating, semi-mythical genealogies. Thus to flatter the vanity of such a patron as Lord Burghley it invented, or sanctioned the invention of, a knightly ancestry which never existed. Mr. Foster wisely omits all the early part of the Cecil pedigree, and is content to begin that of the house of Norfolk with Sir William Howard, who was a Justice of the Common Pleas from 1297 to 1308.

The space which has been obtained by what we may call the decollation of the pedigrees has been devoted to their "lateral extension," and thus the family tree, though less lofty, covers even more ground than before. Not only are

"The brothers and the sisters,
The cousins and the aunts"

of peers and baronets duly entered, but also their kinsfolk and relations to a very remote

degree. This feature alone will recommend the book to that large class of our countrymen and women who are proud of being connected, however distantly, with the peerage or baronetage, and desire that the rest of the world should be duly acquainted with the important fact. It will appeal to the widespread snobbishness of the British mind, and no doubt will not appeal in vain. Incidentally, of course, it also brings into prominence the intimate connexion that exists between all classes of the community. The English aristocracy is not a sacred caste. Its vitality is due to the fact that it is constantly being recruited from the middle classes, and that its cadets, in the course of a few generations, are indistinguishable from the common crowd. Mr. Foster is rather eccentric in the execution of this part of his design. For instance, he gives with great minuteness the descent of the Grosvenors of Drayton (whose present representative must be about twelfth cousin of the Duke of Westminster); while he passes over, almost without a word, many generations of the more important Grosvenors of Eaton. Again, we are favoured with quite a family history of the Mitfords; but the house of Lascelles starts abruptly into being with the creation of the first peer in 1796. No doubt these inequalities will be removed in a future edition, and some definite meaning assigned to the term "consanguinity."

The most conspicuous merit of Mr. Foster's volume is its style of illustration. Anyone who looks into the Armorial of the sixteenth century must be struck with the vigour and freedom which the limners then employed in their work. There is as much difference between the blazonry of the sixteenth and nineteenth century as there is between the architecture of the two periods, and the points of difference are the same. In the one case there is individuality; in the other there is none. In the one case we have artistic feeling; in the other, the mechanical rendering of a prosaic idea. The old nursery rhyme of "the lion and the unicorn fighting for the crown" suggests something of the way in which heraldic subjects were handled in olden times. There was life in it. The supporters did not stand on either side of the coat, like mutes at a funeral, but seemed to be actively engaged in upholding or defending it. Each illustration was, in fact, a little picture, and not the ten-thousandth impression of a commonplace wood-block. The false heraldry of the last century, and the wretched taste of certain Kings-at-Arms, had much to do with the degradation of the art of blazonry; but better feeling has now begun to show itself, and Mr. Foster's volume will help forward its development.

At the end of the *Baronetage* there is a section of the book entitled "Chaos," into which have been cast the particulars of more than sixty claims to the dignity of baronet. Upon the validity of these claims Mr. Foster passes no judgment, but we join with him in expressing our regret that no tribunal exists whereby the assumption of titles may be properly regulated. At present, there is no fear of punishment to keep back an unprincipled man from styling himself a baronet, and trading upon his self-assumed title; nor are there, so far as we know, any means by

which conflicting claims to a long dormant title may be satisfactorily determined.

Of course, in a closely printed volume of more than 1,300 pages, there must be some errors. Thus, *Wood* for *Woodford* occurs twice on p. 667; Edward Turnour is called Earl of Winterton, though his ancestor is stated to have been created Earl Winterton; and the fact of Bishop MacLagan's first marriage is altogether ignored. But we are bound to say that the faults are surprisingly few in number, and that the typography of the book is, like its illustrations, of rare excellence.

Mr. Foster states that he has devoted five years' incessant labour to his task, and is resolved to give another five to its correction. Let him adhere to this resolution, and he will not only justify the good opinion we have formed of his abilities but also deserve the success with which his labour will be crowned.

CHARLES J. ROBINSON.

Faune Populaire de la France. Par Eugène Rolland. Tome II. Les Oiseaux Sauvages. (Paris: Maisonneuve.)

THE second volume of M. Eugène Rolland's valuable work on the "Popular Fauna of France" discusses the nomenclature and the folk-lore of its wild birds as fully as did the first volume (*ACADEMY*, December 22, 1877) those of its wild beasts. Six other volumes are in preparation, which will be devoted to domestic animals and to reptiles, fish, and insects. The indefatigable industry of M. Rolland will also be devoted to an equally exhaustive work on the "Popular Flora of France," in four or six volumes. His present volume is well worthy of its predecessor, containing most careful lists of the numerous and often widely differing names by which the various wild birds of France are popularly known, compared with the names they bear in other countries, and very interesting contributions to ornithological folk-lore, chiefly consisting of the proverbs and rhymes associated with different birds by rustic fancy. If we take the woodpecker as a specimen of the subjects treated by M. Rolland, we find that it is known in France by fifteen names allied with or derived from the Latin *picus*, such as *picot*, *picoteau*, and *pioque*. From a Teutonic root, whence comes the modern German *Specht*, are derived ten French names for the bird, such as the *épé* or *épèque* of Normandy. From its habit of pecking and piercing wood it has acquired eighteen descriptive names, such as the *beque bô* of Picardy, the *pica bo* of the Jura, or the *percebois* of Dauphiny. As a worker in wood in general, it is sometimes called the *charpentier*, a term answering to the Sicilian *carpinteri*, the Swiss *Zimmermann*. Its long tongue has gained it the designation of *longo lengo* in Provence, and its Walloon name of *bèche feu* is due to the idea that its beak is strong enough to pierce iron itself. The green woodpecker has nine names referring to its colour, such as the *pivar* of Anjou or the *piere* of Poitou. Its cry of *plui-plui*, prophetic of wet, which has given rise in Somersetshire to its name of "rain-pie," is heard in such of its designations as the Norman *plieu-plieu*, and has led to its being

styled in some parts the *avocat des Meuniers*. Besides which, it bears several other titles. With it are connected many rustic fancies. It is said that when the basins of the sea, the rivers, and the brooks were dug out, the excavations were performed by the birds, all of which worked vigorously, except the woodpecker. By way of punishment for its refusal to assist in digging the soil, it is compelled to go on for ever digging into wood. And as it had no share in forming the world's reservoirs, it is not allowed to drink anything but falling raindrops. Therefore it is that it is always crying out *plui-plui*, in hopes that the clouds will give forth rain to assuage its thirst; and therefore also it usually maintains a vertical position in order that it may be ready to catch the falling drops. With this legend M. Rolland compares the stories connected with the Indian *chataka*, which was supposed to live upon raindrops, and to be always looking skywards and appealing to the clouds with piercing cries. In some places the *avocat des Meuniers* is supposed to obtain supplies of rain for the benefit of its clients, the proprietors of water-mills, by digging up ant-hills. Very widely spread is the idea that the woodpecker is in the habit of strengthening its beak by rubbing it against a plant which has the power of imparting a supernatural force to whatsoever touches it. Many a French villager spends long hours in following the woodpecker about in hopes of discovering its talisman. How numerous are such seekers in vain is proved by the fact that the woodpecker is often heard to laugh. And when it does so it is moved to mirth by the sight of a rustic follower engaged in such a hopeless chase. In Normandy it is held that if the entrance to a woodpecker's nest is stopped by a piece of iron tightly driven in, the bird will apply to the obstacle a plant which will at once expel it. A similar belief is mentioned by Pliny as existing in his days. An undeserved character for conceit has been thrust upon the woodpecker in consequence of its habit of knocking at one side of a tree, and then running round to the other side to see if any insects have been startled out of their homes. The opinion of the peasants is that the bird has so high an idea of the power of its bill that it has no sooner struck a blow than it runs round to see if it has pierced right through the tree.

We have taken the woodpecker as the brick from which to form an idea of M. Rolland's ornithological edifice. But several other birds—the owl, the swallow, the nightingale, and the cuckoo, for instance—are treated by him at even greater length, and from the accounts given of them a rich harvest might be gleaned of proverbs, rhymes, and legends. Of the stories connected with the peculiarities of birds, the following may be quoted as specimens:—It is well known that the wren was the aerial Prometheus who conferred upon the earth the gift of fire, bringing from the sun a ray which burnt off its feathers. It may not be so well known that when all the other birds gave a feather apiece to re-plume the fire-bringer the owl alone refused, saying—according to a Breton legend quoted by Luzel—"The winter is at hand. I shall want all my feathers, for I fear the cold." In return for which selfishness it

was condemned to be the saddest of birds. Only by night can it fly with safety. If it ventures out by day the other birds mob it. And for all its feathers, it is ever a-cold, and may be constantly heard at nights deploring its chilliness by cries of *hou! hou! hou!* At the same time its name of *chat-huant* does not imply that it is a *chat qui hue*. That designation is really a corruption of one of the names corresponding to the Old-French *chavan* or the Picard *cahouan*. About the kingfisher a tale is told in the Vosges and the *Pays Messin* to the effect that, during the time of the Deluge, Noah sent out from the ark that bird as well as the dove. A mighty wind arose, to avoid which it soared so high into the blue sky that its own feathers turned blue. But on its approaching too near the sun it became scorched, and the lower part of its body turned red. To escape from the heat it dived under water, and remained there so long that when it emerged the ark had disappeared, having been wafted to dry land. Ever since has the kingfisher been seeking it, following all manner of watery ways, and uttering sharp cries of distress. Its feathers still bear witness by their colour to its flight into the sky. Perhaps the best of all these tales is that about the blackbird from the Department of the Ain, communicated to M. Rolland, as was also the kingfisher legend, by M. Auguste Peupion. The blackbird was originally white. One day it saw a magpie hiding valuables in a hollow tree. On enquiring whence they came it was informed that a certain hole led to the underground home of the Prince of Riches, who would allow it to take away whatever it could carry. But it was necessary to abstain from touching anything before seeing the Prince. The blackbird entered the hole, and passed unscathed through a silver cave into which it led. But when it came to a cave of gold it could not refrain from pecking at the gold-dust. Instantly appeared a terrible demon emitting smoke and flame. The bird escaped with its life, but its plumage was all smirched, and has remained black ever since. Its bill, on the other hand, was turned bright yellow by the gold it touched. Whenever anyone comes suddenly upon a blackbird it takes him for the fiery demon, and flies yelping with fright. W. R. S. RALSTON.

NEW NOVELS.

Miles Harling. By A. Weber. (Walter Smith.)

Die Schwwestern. Von Georg Ebers. (Stuttgart: Hallberger.)

James Duke. By William Gilbert. (Strahan & Co.)

A Bad Bargain. By R. E. Francillon. (Grant & Co.)

Jobson's Enemies. Book II. By Edward Jenkins, M.P. (Strahan & Co.)

Miles Harling carries out very fairly the promise which *At Sixes and Sevens* gave of Miss Weber's capabilities as a novelist. The story is on a larger scale and of a more ambitious character than its predecessor. Like that predecessor, it is, as Mr. Littimer would say, "young" in places, but there are

worse faults than youth. The author has not yet attained to the faculty of drawing a man, her hero being a sister's ideal of a brother rather than a live human being. But her women are capital, and her command of pathos, not as in her former book leading her to the commission of wilful outrages on the feelings of her readers, is excellent. Moreover, the actual interest of the story—that mysterious quantity which, somehow or other, eludes critical analysis, and of which the most skilful analyst can only say that it is or is not present—is very considerable. As often happens with lady novelists, the heroine or quasi-heroine, Gwyneth Moore, is so severe a satire on the female sex that few men would, with the fate of Orpheus before their eyes, have dared to draw her. She is beautiful, virtuous, affectionate, and full of a certain kind of talent, but, at the same time, the most unmitigated and heart-breaking of fools. She spends her time chiefly in reading *Aurora Leigh* and the poems of Mr. Myers, and her other characteristics are such as the acute observer of life may have noticed in young ladies who chiefly spend their time in reading *Aurora Leigh*. Of course (there is no harm in saying it, for the intelligent novel reader will anticipate it very soon) she breaks or nearly breaks the heart of the good hero, and blindly adores a worthless rascal instead of him. Altogether, Gwyneth Moore may be said to be a great success. Mary and Eleanor Harling, the sister and aunt of the good young man, are also successes, but are less fully worked out. We should say that *Miles Harling* is, on the whole, the best novel that has been produced by the younger followers of the author of *The Heir of Redclyffe*. Personally, we could wish that Miss Weber, who is evidently a person of good knowledge in most things, had not talked of a Norman troubadour. The conjunction is exactly on a par with that of an Oxford senior wrangler.

Herr Ebers' series of Egyptian novels is becoming quite a formidable one in point of size. *Die Schwestern*, the latest member of it, has, in tolerably normal measure, the merits and defects of its predecessors and of other works of the class. Novels the scene and characters of which are taken from a wholly alien and unfamiliar state of society are rarely good absolutely. Even the prodigious labour and skill displayed in *Salammbô* have failed to secure for it much more than a *succès d'estime*; while *Hypatia* owes its attraction to the open allegorising which simply makes use of the unfamiliar appliances to tell a familiar story. Herr Ebers is neither a Flaubert nor a Kingsley, and, to take an example which naturally occurs when Egypt is the topic, still less is he a Gautier. The literary charm which makes the *Roman de la Momie* a delightful book, though a very dull novel, is not present in *Die Schwestern*. Still the book is readable enough. The sisters are two children of a Greek officer of the Ptolemies, who has been unjustly made away with and his wealth appropriated, while his daughters receive a scanty subsistence as attendants of the Temple of Serapia. The necessary lovers are provided for them in the persons of P. Cornelius Nasica and a young Corinthian, Lysias by name. The brother

princes, Philopator and Euergetes, and their sister, Cleopatra, also figure largely in the plot. Herr Ebers, it should be said, deserves particular credit for the way in which his antiquarian knowledge is displayed without being obtruded. Perhaps, however, he has committed a fault in not making his tale more stirring than it is. Such novels should almost always be full of action if they are to be successful.

Mr. Gilbert's *James Duke*, which we have here well got up in a single volume, has a striking resemblance to *Ginx's Baby* in its opening, but hardly at any other part of it. It is, of course, so far as it is a novel at all, a novel with a very decided purpose, and may be rather said to be a typical history of life in the slums than anything else. Mr. Gilbert is distinguished from some other social reformers by rarely resorting to caricature or unjust attack in his exposure of social anomalies. In this volume the only thing of the kind we note is a rather unnecessary sarcasm on the practice of police magistrates having lunch. We should have thought that such functionaries certainly deserved, if anyone deserves it, a short interval for refreshment and retirement from the squalid atmosphere of their courts. This sally, however, stands almost alone, and, on the whole, the exposition of the various difficulties, temptations, and injustices whereby James Duke, an honest and well-meaning man enough, gets into scrape after scrape, is as temperate as it is well meant and well executed.

Mr. Francillon's Christmas story, if it is not quite worthy of the author of *Olympia* and of that most admirable fantasy-piece *Pearl and Emerald*, is a very fair specimen of its kind—the Christmas story, or collection of Christmas stories, of which *Household Words* set the example long ago. According to precedent the divisions of the narrative are very sharply cut, and each chapter is in a way independent, though all form part of the same tale. The first part, the scene of which is laid in the war of 1870, is in our judgment very much the best, and shows an excellent faculty in Mr. Francillon for this sort of work. The subsequent embroilment of the plot is less to our taste, and we could very willingly have spared the gaudy and greasy chromo-lithographs with which the book is illustrated, backed, as they are, moreover, with staring advertisements. This intrusion of trade puffs into the body of a volume has hitherto, we think, been confined to guide books and such-like ware. It is very bad anywhere, and cannot be too much discouraged.

Jobson's Enemies continues well. The Barbadian scenes of last month's number are well supported by the sketch of the little Canadian town of Cornwall in this second book. The society of Cornwall, its hotel, its inhabitants and their humours, are described with considerable precision and crispness of style, as well as with a directness which contrasts well with the somewhat clumsy intention and innuendo of much of the author's earlier work. Jobson is only a small boy by the end of this instalment, and, as yet, his enemies have not figured largely on the scene. But we shall not quarrel with Mr. Jenkins for not acting up to his title so long as he gives us such

vigorous work as this. The sketch of an intended tarring and feathering which winds up this number, and in which a wicked major very nearly meets with condign punishment for his introduction of aristocratic and British vice into the pure atmosphere of Canada, is very good indeed. GEORGE SAINTSBURY.

CURRENT LITERATURE.

My Chief and I; or, Six Months in Natal after the Langalibalele Outbreak. By Atherton Wylde. (Chapman and Hall.) "My Chief and I" are the late Col. Durnford and Mr. Atherton Wylde, who first served under his "chief," then a captain of Royal Engineers, at Gibraltar. Circumstances having obliged Mr. Wylde to leave the army, he went to seek his fortune in Natal, and at Durban he fell in with Col. Durnford early in 1874. The colonel treated him with kindness and confidence, and took him with him on an expedition to destroy the passes in the Drakensberg range, so as to make it impossible for horsemen to enter Natal on that side or for cattle to be carried off over the mountains. Soon after the conclusion of this expedition, Mr. Wylde returned to England and wrote the present book while the events recounted in it were fresh in his mind. He wrote it chiefly in honour of Col. Durnford, to whom he submitted the MS. before venturing into print. The colonel's answer was:—"My dear boy, publish your book when I am dead and gone, if you like; but not before." The disastrous day of Isandhlwana hastened this publication, which seemed indefinitely postponed. The gallant Durnford had made so deep an impression on the mind and affections of his subaltern that the latter determined to give to the public all he knew of one he so honoured and admired. The events, indeed, so minutely recorded in this work have long been superseded by others of far more importance and interest; but it can never be unprofitable to have a record of so gallant, brave, and humane a soldier for the instruction of others. The most striking characteristics of this fine officer as depicted by Mr. Wylde are his humanity and strict sense of justice. These two qualities are constantly recurring in striking contrast to the cupidity, dishonesty, and cruelty of the colourists. Of their cruelty the author writes:—"One's blood runs cold at the repetition of such horrors, but burns with shame and indignation that they were inflicted in the name of the English Government upon an innocent and helpless people." These were the Putini tribe, to obtain justice for whom Col. Durnford spared no exertion, and incurred the enmity of the colonists. He assured Mr. Wylde that the facts related in his book respecting this tribe were strictly correct. It is to be feared that, in spite of the promises made to Col. Durnford, but scanty justice has been done to this unfortunate people, and now that he is gone there is the less prospect of full reparation being made to them. Should Mr. Wylde again appear as an author we would suggest more reticence with regard to his own private affairs and prospects.

Spiritual Evolution. By J. P. B. (Trübner.) The author of this *bizarre* little volume is evidently a man of considerable knowledge and wide culture. He has read and quotes from Mr. Darwin, Mr. Herbert Spencer, Dr. Maudsley, and other leading evolutionists. He has even studied *Mind*, *Nature*, and the *Nineteenth Century*, and is well up in the views of Mr. Romanes on Medusæ and M. Paul Broca on Anthropology. But, with all his knowledge and culture, he seems a very pronounced and hopeless spiritualist of the deepest dye. Side by side with diagrams of the nervous systems of invertebrata we

find such astonishing statements as these: "Spiritualists are assured, on the testimony of intelligent spirits of different grades, that there are different spheres in the spirit world which appear to be simply different parts of that world to which spirits gravitate naturally according to their different degrees of advancement;" "It is a commendable characteristic of these spirits who show the greatest amount of mental power that they constantly recommend investigators to use their own judgment;" or, "The spirit manifesting through the organism of Mrs. Jennie S. Budd," &c. The author's view would appear to be that there is in every man a spiritual body, "not, as might be supposed, an immaterial essence, but apparently another form of matter, more tenuous, and less subject to our physical law of gravity;" and that this spiritual body has always undergone, and will after death continue to undergo, a parallel evolution to that of the physical body. He admits, however, that modern spiritualism is threatened with destruction "by imposture on the one hand, and the vacuity and mischievous falsehoods of undeveloped spirits on the other." Perhaps if he follows up these two clues he may succeed in clearing his brain of its cobwebs. The book is prettily printed on corrugated paper, with dainty green margin lines, and altogether presents an appropriately aesthetic and mystical appearance.

THE anonymous author of *A Village Life* (Glasgow: Maclehose) is a great reinforcement to the school of modern Scotch poets including Dr. Walter C. Smith and Profs. Veitch, Rankine, and Nichol, whose works are issued by the publisher to the University of Glasgow. The title suggests Crabbe; and there are touches here and there that remind one of the past master of realism in quiet life and *verve*. But the author owes more to such writers as John Wilson, Thomas Aird, and other reverent—but not reverend—photographers of Scotch "humble," but morally aristocratic, circles. Still, the quiet, emphatically "pawky" humour and the suppressed pathos with which he deals with such subjects as "The Village," "The Parson," "The Kirk," "The Beadle," "The Squire," and "My Lady" are all his own. He is strongest in description; this picture of a schoolmaster will be acknowledged to be perfect by all who are acquainted with the actual life of a Scotch village before the Education Act was passed:—

"A shabby pedant, if you will,
With rumpled hair and wrinkled face,
And full gray eyes beneath a brow
Rounded and high, and just a trace
Of humour on the working lips."

The leading moral characteristic of the book is a gentle, almost melancholy attachment to the past, accompanied by a tolerant but sometimes mildly sarcastic appreciation of the material and spiritual activities of the present. There is hardly a weak line in the whole; it abounds in happy phrases such as "uproarious gravity," which perfectly hits off the demeanour of the "priests and laymen" who constitute a Scotch School Board, and in lines like these on Willie, the Beadle:—

"In the soft liquid of his eyes
A dainty, pawky wisdom lies."

The author quite unnecessarily predicts "the dust-bin" for his volume. It does not seek "to soar above the Aonian mount," but in its own "line" it is strong, and is bound to live and grow in public favour. It is to be hoped that the little leisure of an incessantly active life will allow the author to write more, and give full swing to his keen powers of observation, analysis, and description. Here he seems to have given only three-fourths of himself.

THE new volume of the *Transactions of the Royal Society of Literature* contains several papers of considerable interest. Capt. E. F. Burton compares the mysterious Ogham runes of Ireland with an equally mysterious Arabic system known as El-Mushajjar. Mr. C. F. Keary describes the earthly paradise of European folk-lore, a myth often in opposition to the ordinary Christian belief, as it placed the abode of bliss in the West and beyond the sea. Mr. Keary considers this to have been a myth of the soul's journey after death which had taken form before our Indo-Germanic ancestors had migrated from their original home in Asia. It afterwards took a more prosaic consistence, and may not have been without influence upon geographical discovery. Mr. C. H. E. Carmichael describes the Rubens Centenary. Mr. J. W. Redhouse vindicates the poetical character of the Turkish people by a number of selections and translations. Incidentally he shows how baseless is the calumny that the Moslems regard woman as unworthy of immortality. This error, though exposed by Sale when translating the Koran, still survives. Several passages in the Koran show that Mohammed held that "believing women" would share in Paradise, and a fine elegy on a lady by Fazil is cited with the same object. Among other selections he gives an *improvisu* written in the album of the Princess of Wales by Fuad Pasha:—

"Thy countenance a radiant mirror is, wherein
The fairest beauties of the mind resplendent glow.
Could artist's pencil truly paint thy crowning worth,
No other semblance would the charming picture show."

Mr. E. W. Brabrook shows that Sir Thomas More became a member of the Society of Advocates, commonly called Doctors' Commons, in 1514, a fact that has hitherto escaped the biographers of that great Englishman. The volume concludes with an article on poetry by Mr. G. W. Moon, who has culled definitions and descriptions from many authors and illustrated them by verses of his own, a proceeding equally notable for its superfluity and temerity.

Die Quellen des Flavius Josephus in seiner Archäologie. Von Dr. Heinrich Bloch. (Leipzig: Teubner.) Dr. Bloch holds a middle position between those who deny Josephus any sense of historical truth and those who, like Gfrörer, following some early Fathers, place him side by side with the most esteemed historians of antiquity. He thinks that, while the statements of Josephus are to be used with the utmost caution in matters which affect himself personally, he is both accurate and trustworthy in his use of traditional and literary material. To prove the latter point, Dr. Bloch investigates the relation of Josephus to his literary sources—Jewish, Hellenistic, and classical. He adds a brief chapter on the oral sources to which Josephus probably had access. The reason of this is that, when Josephus comes to the period of the Roman emperors, he indulges in a number of picturesque episodes which have no connexion with his immediate subject, and have all the air of being derived from eye-witnesses. The friendly relation between Josephus and Agrippa II. gives a ready means of accounting for this fuller treatment of the history. In the earlier part of Dr. Bloch's work, we may notice his careful examination of Josephus' relation to Nikolaus of Damascus, the apocryphal Book of Ezra, and the supposed memoirs of Herod the Great. In fact, he shows that whenever, in the course of his historical reading, Josephus found anything, however unimportant, bearing on Jewish history he carefully inserted it in its proper chronological place.

THE fourth volume of the English translation of M. Lanfrey's *History of Napoleon the First* (Macmillan) has just appeared. It comprises

only the last part of the fifth and, unhappily, final volume of the original work, and brings the reader down to the end of 1811. Readers of the earlier volumes know that the translator has done his work well, and will welcome the completion of his task.

MR. TAYLOR'S *First Principles of Modern History, 1815—1879* (Relfe Bros.), contains a good many facts that are true, and some that are not true, such as that the present King of Greece was ever known as Prince George of Denmark, or that Prince Louis Napoleon, "by the 2nd of December, 1851, had overturned the Republic, of which he was President, and caused himself to be elected Emperor of the French." The little work winds up with an elaborate defence of the foreign policy of the present Cabinet. Perhaps the most curious thing in it is an Introduction on the subject of home politics, which the author seems to have studied in the school of Delolme rather than in that of Mr. Bagehot. His definition of a Republic is as follows:—

"A Republic differs from the two former forms of government," i.e., Absolute and Limited Monarchy, "in that the office of the chief ruler is open to the whole body of citizens; that the ruler is appointed by the people for a certain period of time; that at the end of that period he lays down his power and becomes again a private citizen; and that he may then be called to account for any wrong he may have done while in power."

If Mr. Taylor would think as well as write he would see what a bad definition this is. It will not in fact fit exactly the case of any one of the Republics which are famous in history. It will not suit Athens or Switzerland, which had no chief ruler at all, or the Provinces of the United Netherlands, where the Stadtholder was appointed for life, or even the United States of America, where the President may not only be called to account at the end of his term of office, but, as Andrew Johnson found out, in the middle of his term of office. Yet a writer who can deliberately compile such a definition tells us that his former books have had a "favourable reception at the hands of the press, the teaching profession, and the public generally."

The Veil Removed. By James Copner, M.A., Vicar of Elstow. (Remington.) This little volume is interesting as a sign of the times. It is written by a benefited clergyman of the Church of England, and its chief object is to show that evolution is not contrary to Church doctrine, or at least to a somewhat pantheistic Christianity. Such an attempt proves at any rate that the evolution theory has entered on the second stage of its existence—the stage of reconciliations, harmonies, and compromises. Such headings as "On Creation by Natural Evolution," "Spontaneous Generation," "Evolution of Man," "Incredibility of the Narrative [of the Flood]," "Evolution of Religious Belief," "Knowledge in the Time of the Jehovahist," "How Language was Invented," and "On Praying for Fair Weather" mark in themselves an enormous revolution. Mr. Copner's book contains little that is either strikingly original or remarkably well presented; but it blinks very few scientific or critical facts, and speaks out its author's mind with commendable fearlessness. On the other hand, Mr. Copner evidently feels that modern thought has somewhat loosened the groundwork of his faith in immortality, and he has recourse to the very doubtful aid of ghost stories and spiritualism to strengthen the tottering edifice. "Although," he observes, "the greater number of so-called mediums are mere cheats and charlatans who, for their own base ends, are not ashamed to reap advantage from the gullibility of fools; still, allowing for all this, there remains a residuum of facts which no hypothesis of

trickery or delusion can satisfactorily account for." Mr. Herbert Spencer would smile to find the primitive ghost theory reappearing in the last resort to prop up a dubious orthodoxy. But it is a pity that Mr. Copner should have admitted so damaging a sentence into a volume of otherwise interesting essays, calculated to do some good among the class to whom they are addressed.

NOTES AND NEWS.

THE Rev. T. E. Gibson has been making researches among the papers of the Blundells of Crosby, an old Roman Catholic family of Lancashire, who endured much persecution and many losses in consequence of their adherence to the "old faith." One result of these enquiries will be the publication by Messrs. Longman and Co. of a selection from the commonplace book of William Blundell, a Cavalier, and one of the refugees who returned from Breda with Charles II. Blundell appears to have been a man of an enquiring turn, fond of examining anything new and strange, and taking pleasure in exactness and measurement, and in consequence many of the entries in his commonplace book have a special value.

M. RENAN is expected to arrive in England at the beginning of April. He will deliver the Hibbert Lectures in London, and pay a long-promised visit to Prof. Max Müller in Oxford.

THE first number of a new weekly periodical, published at Manchester—the *Educational Chronicle*—will contain an article on "Universities—Scotch and English," by Prof. A. S. Wilkins, of the Owens College.

ONE book at least sold with Dr. Laing's library did not fetch an extravagant price. The surreptitious issue of the *Contemplations on Life and Death*, afterwards published in an authorised form under the title of *Manchester al Mondo*, was sold for fifteen shillings, and is understood to have passed into the curious library of a Lancashire collector who had been many years on the lookout for it. This little book of devotional essays, which at one time was considered a very appropriate gift for the attenders at funerals, is being reprinted by Messrs. Pickering, under the editorial care of Mr. J. E. Bailey, F.S.A., who is contributing a memoir of its author which, although brief, will be the most adequate yet written of Henry Montagu, first Earl of Manchester.

MRS. PFEIFFER's new poem, based on the tradition attaching to Roslin Chapel, and entitled "The Pillar of Praise," will appear in the February number of the *Contemporary Review*.

WITH the new year the business of Messrs. William Collins, Sons and Co., publishers, Glasgow and London, becomes a limited liability company. Two of the old partners retire—Mr. John Morison upon a well-earned competency, and Mr. John Walker, the latter to begin a new business as a publisher and wholesale manufacturing and export stationer, under the style of John Walker and Co., at 96 Farringdon Street.

Within a Circle, by Emily M. Harris, shortly to be published by Messrs. Marcus Ward and Co., will contain descriptions of work done by English Jews for each other.

WE understand that Messrs. W. H. Allen and Co. will publish in the spring an English-Persian Dictionary by Mr. A. N. W. Martin, of the India Office, the able translator of the *Anwari Suhaili*. This gentleman's attainments as a practical Oriental scholar are of a high order; and the exceptional opportunities which he has enjoyed of reading and translating native compositions and newspapers published

at the present day in Persia, and not obtainable, as a rule, in England, give him special advantages for the task he has undertaken. The main object of the Dictionary is to assist students in acquiring the modern idiomatic Persian; and the services of an intelligent Shirazi have been made available for revision of the MS. leaves. Some notion of the forthcoming volume may be formed from the fact that there will be in it probably 15,000 to 20,000 words, many of which have never been heretofore committed to writing, and are comparatively little known to any European.

THE opening of the Library of the British Museum till seven p.m., which the introduction of the electric light has rendered practicable for some weeks, has brought thither a great crowd of persons anxious to profit by their new privileges, and the return to Parliament of the readers for the current year will no doubt show a large increase in their number over those who have attended during previous years. To supply the additional accommodation rendered necessary by these fresh readers, nearly a hundred extra seats were provided by the trustees after Christmas. At the ends of the lines of seats which front the centre of the room have been erected some further shelves, on which will soon be placed the more recent books of reference. Although further improvements must be introduced into the management of the British Museum before it can be pronounced satisfactory to the reading world in every detail, all literary students will recognise with pleasure the desire of the trustees to bring home to the public the advantages of the great institution under their charge.

THE *Timber Trades' Journal*, which for the last seven years has been published fortnightly, will, on and after January 3, appear weekly. The size of the journal will be considerably enlarged.

MR. J. E. A. STEGGALL, B.A., Scholar of Trinity College, Cambridge, Mathematical Master at Clifton College, Bristol, has been appointed to the Fielden Lectureship in Mathematics in the Owens College, vacant by the appointment of Mr. A. T. Bentley, M.A., to the principalship of the Firth College, Sheffield. Mr. Steggall graduated as second wrangler in January 1878, and subsequently gained the First Smith's Prize. There were twenty candidates.

Sketch is announced to appear weekly under the editorship of Mr. Reginald Shirley Brooks, son of the late editor of *Punch*.

PROF. ROBERTSON SMITH has started for Jiddah, where he intends to spend several weeks for the sake of making acquaintance with the peculiarities of the Arabic dialect spoken in that part of the country. He will then proceed to Aden, and possibly strike from thence into the interior.

THE novelette in the forthcoming number of the *New Quarterly Magazine* will be entitled "Michael and I," by Julian Sturges. The same number will contain, among other articles, one on Middle-Class Education, by the Rev. Mark Pattison; and one on Westminster School, in continuation of the series on "Our Public Schools" which was commenced last year.

MESSRS. C. KEGAN PAUL AND Co. will publish next week a memoir of the late Dr. Philip P. Carpenter, whose labours as a naturalist, a philanthropist, and a sanitary reformer, both at home and abroad, show him to have been a worthy member of the family which included such names as those of Dr. William B. Carpenter, the eminent physiologist, and his sister, Mary Carpenter, the equally eminent philanthropist.

PROF. FRANKLAND's long-looked-for work on

Water Analysis will be ready for publication, by Mr. Van Voorst, during January.

A LIMITED liability company—the Grosvenor Library (Limited)—has been formed for the purpose of establishing a new circulating library in the West End of London. The site selected adjoins the Grosvenor Gallery.

TO-DAY a new journal entirely devoted to the interests of the Eastern and Mediterranean Powers, and to the development of their relations with the West—to be called *The East*—is to make its appearance in London.

M. MARIETTE, who has lately been created a Pasha, has just returned to Cairo from Paris in considerably better health.

THE Librarian Bodemann, of Hanover (as we learn from the *Bund*), has discovered in the Göttingen Library the famous "Reckoning Machine" of Leibnitz. This wonderful instrument, which at one time attracted the astonishment and admiration of all Europe, was invented by the philosopher during a long stay in Paris in 1672. The machine can not only add and subtract, but even divide and multiply. Herr Bodemann has recovered this unique treasure for Hanover.

THE present flourishing condition of journalistic literature in Hungary makes it a matter of interest to note that the first native Hungarian newspaper, the *Magyar Hirmondó* ("Hungarian Courier"), was started on January 1, 1780, exactly a hundred years ago, by Mathias Ráth, at Pozsony (Pressburg). As to the progress made from time to time in the publication of journals in the national language, we may mention that fifty years ago the number of Magyar periodicals was ten, that during the Revolution of 1848-49 it was over eighty, but after the suppression of the Revolution fell to nine. From 1867, the date of the restoration of the Constitution, to the year 1878 the number of Magyar periodicals rose from eighty to 284, of which latter nearly half were published at Budapest, and the remainder at seventy-one other localities.

PROF. FRANCIS J. CHILD, of Harvard, has printed a specimen of his proposed new comparative-text edition, in quarto, of his well-known collection of English and Scotch ballads. *Gil Brenton* is the ballad chosen; seven versions of it are printed from Jamieson's MS., Scott's *Minstrelsy*, Cromek's *Nithsdale and Galloway Song*, Buchan's *Ancient Ballads*, Elizabeth Cochrane's *Song-Book*, Motherwell's MS. and *Minstrelsy*, and Herd's *Scots Song*. An exhaustive Introduction sums up the differences of the seven versions, and gives an account of all the like Swedish and Danish ballads, and the Billie Blin, or Burlow Beanie, of ballad-lore—a demon sometimes serviceable, sometimes malignant. No such thorough work has been done elsewhere in English on this ballad as Prof. Child's Introduction and texts.

THE late Prof. Shirley, in his *Catalogue of John Wiclif's Original Works*, calls the attention of scholars to Wiclif's unpublished writings. Dr. Buddensieg, of the Vitzthum Gymnasium, Dresden, has recently transcribed all Wiclif's polemical tracts out of the MSS. at Vienna and Prague, and is preparing the most important of them—that entitled *De Christo et suo Adversario Antichristo*—for publication in the annual Programme of his school. The tract consists of fifteen chapters. Dr. Buddensieg has collated six MSS. to ensure the correctness of the text, and will add an Introduction, a description of the MSS., and critical notes. Messrs. Teubner, of Leipzig, will supply copies of the Programme.

MESSRS. HARPER AND BROS. have just published a book on *Civil Service in England*, by the Hon. Dorman B. Eaton, the successor of

Mr. G. W. Curtis as chairman of the United States Civil Service Commission. It is described as a "historical and practical report on the evils of the spoils system in England, and on the successful working of the remedy."

In the November number of the *Propugnator* Signor A. Neri publishes an "Epistola di Fra Leonardo da Fivizzano, dell' Ordine di Sancto Augustino, a tutti i veri amici di Jesu Christo Crocifixo." It is directed against Savonarola, and was written May 12, 1487, after Savonarola's protest against the decree prohibiting all friars from preaching in consequence of the disturbances in Santa Reparata. Fra Leonardo's letter is reproduced from a contemporary printed copy, which the editor believes to be unique, and which is unknown to the collectors of Savonaroliana.

The History of Esarhaddon, King of Assyria, B.C. 681-668, is the title of a new volume in preparation for Trübner's Oriental Series, and is by Ernest A. Budge, M.B.A.S., Christ's College, Cambridge. It is to contain the Assyrian text copied from the original cylinders and tablets in the British Museum collection. Each word will be fully analysed, and, where possible, compared with the cognate roots in the other Semitic languages; and the ideographs will be explained by extracts from the bilingual syllabaries. This is, we believe, the first attempt to explain and analyse a whole Assyrian text yet made in England. Mr. Budge is also engaged on the preparation of an Assyrian Reading Book.

THE edition of the *Captivi* of Plautus by Mr. E. A. Sonnenschein, M.A., Assistant Professor of Humanity in the University of Glasgow, announced as in preparation some months ago, will be ready next week. It will contain a revised text and complete collation of the Vatican and British Museum MSS., a facsimile specimen of the *Codex Britannicus*, and an Appendix containing a large number of emendations of Bentley upon the whole of Plautus existing in MS. in the British Museum, and now published for the first time. The work will be published by Messrs. W. Swan Sonnenschein and Allen.

THE forthcoming number of the *Revue Historique* contains: "Condition civile des Juifs du Comtat Venaissien pendant le Séjour des Papes à Avignon," by L. Bardinet; "Un Corsaire normand, Jean Doublet de Honfleur," by Ch. Bréard; "Napoléon I. et le Roi Louis," by Du Casse, &c.

UNDER the title *We are Brothers*, a collection of poems in German and Italian has been published at Milan by Prof. Nicolo Claus, the author of several of the poems. His "Die Zwei Sterbenden" is rendered into Italian by Stoppani. It is an episode of the war of 1870-71. The ballad, "Zwei Völker," by Felice Cavallotti (born 1842), was written on the occasion of the visit of the German Emperor to King Victor Emanuel. Felice Cavallotti, Deputy to the Italian Parliament, has been for many years a public character in Italy as duellist, warrior, and writer. He is the author of prize poems on Guido, Agnese, and Alcibiades. Other pieces in Prof. Claus's collection are by Baravalle, Carducci, Stoppani, &c.

DR. KARL VOLLMÖLLER, Professor of Romance Languages and Literature at the University of Erlangen, has just edited, with notes, a Spanish Treatise on Precious Stones of the Fifteenth Century, by an unknown author, from the unique MS. in the British Museum (Add. 21,245). The same industrious editor is also publishing the *Poema del Cid*, from a unique MS. at Madrid, with Introduction, Notes, and Glossary; and has in preparation the Old-French romance, *Octavian*, from a MS. in the Bodleian Library (Hutton, 100).

MR. WARREN asks us to notice the following *errata* in his letter on "Irish Missals" in the last number of the ACADEMY:—In 3 the thirty-fourth letter should be "q;" and in 5 for "diclir" read "dichir."

M. W. VAN EYS writes:—

"Prof. Sayce's words carry such weight in philological matters that he will, no doubt, allow me to point out in his friendly review of my *Grammaire comparée des Dialectes basques* a statement which may possibly be misunderstood, namely, the influence of Prince Bonaparte's *Verbe basque* on my own theories on this subject. I do not possess Prince Bonaparte's work, and all I know of it is through M. Vinson's articles in the *Revue de Linguistique*. Two theories on the same subject could not be more opposed to each other than the Prince's and mine; the one excludes the other."

AT a meeting of literary men, held on October 14 at Tilsit, it was resolved to found a Lithuanian Folk-Lore Society, for the preservation of the ancient language and popular traditions of Lithuania. The ancient language of the Lithuanians, the most archaic among the living languages of the Aryan family, is fast dying out, as German, Polish, and Russian are daily gaining ground upon it on all sides; and the popular songs, tales, and myths of the Lithuanians are threatened with the same fate. It is high time, therefore, that the existing remains of their primitive civilisation, which have long since attracted the notice of scholars, should be collected and preserved from unmerited oblivion. Though a great deal has been accomplished in that way by the researches of Schleicher and others, the stock of ancient legends, traditions, and words is so considerable that the united efforts of many scholars are required in order to collect and sift it. Among the members of the committee which has been formed, we find the names of Miklosich, Nesselmann, Pott, and others prominent in the field of Slav philology. Intending members are requested to send their contributions to the treasurer of the Lithuanian Folk-Lore Society, Dr. F. Siemering, Tilsit, Prussia. The publications of the society will be sent *gratis* to members.

MAGAZINES AND REVIEWS.

The Antiquary. Edited by Edward Walford, M.A. No. 1 (January, 1880). The first number of a new magazine is commonly a very good one. *The Antiquary* is certainly no exception to the rule. If its editor can keep up to the very high level which he has attained, it will be a valuable addition to historical literature. Dr. Hayman contributes the first portion of what seems likely to be a most interesting account of Tewkesbury Abbey. There have been several ignorant little books written about this place before, but we imagine that in future Dr. Hayman's memoir will be the one which historians will consult. Mr. George Seton's short article on the Parochial Registers of England is important, but we wish it had been longer. Every antiquary knows that they are at present treated in a most careless manner. As they contain information of a priceless kind which does not exist elsewhere, it is the plain duty of the Government to put them in a place of safety, where they may be consulted with ease. The account of the siege of Colchester from a broadside in the British Museum is valuable. We doubt whether it contains any facts which may not be gathered by a painstaking person from the great mass of Civil War literature that has come down to us; but we have it here in a compact form, and accompanied by a very useful plan of the old town. It is not quite fair to speak of the resistance of "the loyal town to a body of fanatical and unprincipled rebels." Fairfax and the officers—Ireton, Rainborowe, &c.—who were with him on that occasion were not fanatics, and the loyalty spoken of was in

the defending army who had got hold of the town, not by any means in the Colchestrians themselves.

THE current number of the *China Review* opens with a translation by Mr. Jamieson of a chapter from the General Code of Laws regulating the export and shipping trades of the empire, as well as the relations to be observed between the Chinese and the Miaou-taze and the less civilised inhabitants of Formosa. In it we find that, with a caution suggestive of weakness, the law forbids Chinamen from entering the parts of Formosa occupied by the natives under pain of receiving a hundred blows, and any man marrying a Formosan woman renders himself liable to banishment for three years. The regulations limiting the article of export are stringent in the extreme, and any infraction of them is declared to be punishable by death. This chapter, in common with the whole Chinese law, is evidence how the Government, by the loss of its legitimate control over the people, is driven to maintain the outward appearance of order by force and oppression. The list of new Cantonese words contributed by Mr. Parker is interesting as showing how rapidly that dialect is breaking loose from the written language, and overstepping the hard-and-fast line within which the inelastic characters have so long bound it. Only two instances are given of the recent adoption of English words into the dialect, namely, *kot* for (the supreme) court, and *mak* for mop; but, as might be expected, the onomatopoeic element is largely represented. Another list of some value is that of the Korean pronunciation of a collection of about 400 Chinese characters. The importance of such lists in enabling us to arrive at the ancient pronunciation of Chinese is well known; and this one, though evidently preserving a more modern pronunciation than that found either in Japan or Cochin-China, will repay study. Among the Notes and Queries is a note by Dr. Bushell, of Peking, on the "Terra-cotta Vase with Supposed Chinese Inscription" discovered by Dr. Schliemann at Hisarlik. It is almost unnecessary to say that Dr. Bushell finds nothing Chinese in the inscription.

THE CONFERENCE OF HEAD-MASTERS.

THE annual conference of head-masters was held at Eton on December 19 and 20, under the presidency of Dr. Hornby. The meetings for discussion took place in the new drill-hall, which, with a number of workshops, has recently been built for the school by one of the most popular of Eton masters and old Etonians, Mr. Warre. The first subject brought forward was the Teaching of Modern Languages, papers on which, by Mr. Bowen, of Harrow, and Mr. Bull, of Marlborough, had been already circulated among members of the conference. The opener of the discussion held that the disciplinary value of French and German was similar in kind, but inferior in degree, to that of classical training; that if an average boy, with comparatively short time for study, were trained in modern languages, his attainments, besides being practically useful, were more likely to serve as a basis for future study; and that scholarly, intellectual teaching was indispensable. In the course of the discussion, Dr. Butler pointed out the difference between the intellectual effort required to turn English into a modern language and that demanded by the writing of Latin prose. The latter he characterised as a "macadamising" process, and illustrated the difficulty by suggesting for translation a passage from an election speech of Mr. Disraeli's:—"The spirit of the age points to unrestricted competition, and no statesman can withstand the genius of his epoch." He also charmed his audience by illustrating the value of original composition in modern

languages from Villette, and from the personal experience of Charlotte Brontë as related by Mrs. Gaskell. Then followed a short but animated discussion of Dr. Lyon Playfair's Bill for the Registration of Teachers. On the one side, it was urged that it was the thin edge of the wedge that might imperceptibly extend the range of Government interference, and encroach on the independence of the higher schools; on the other, attention was called to the real danger to the community from the present state of things, when any person, however illiterate, may open a school, and to the long-continued and earnest efforts of private schoolmasters to obtain the protection and the professional status which a measure like that organising the medical profession would afford. On Friday, after the report of the committee, including a letter from Mr. Oscar Browning on the work of the Cambridge Syndicate for the training of teachers, had been read, the conference passed to the question of Entrance Scholarships at the Universities. The committee had recommended limitation of such scholarships to £50 for two years, to be continued if the scholar deserved it by his work at college, and to be augmented in cases of poverty. They also desired that competitions should be less frequent. The discussion was the most animated of the meeting, and showed how important a factor in the life of schools the competition for college scholarships has become. That it has opened the doors of the universities to many deserving men, that it has largely contributed, by the infusion of new blood, to the present vigorous life of the universities themselves, and that it has acted as a healthy stimulus to the schools is undeniable. But is there no danger lest, on the one hand, the aims of the schoolmaster should be vulgarised, and lest, on the other, the higher education should be looked upon as an expensive luxury which a lad of narrow means can only pursue by the aid of endowments, spent rather to lighten his personal expenses than to improve the teaching he receives? The meeting concluded with an eloquent tribute from Dr. Butler to the past glories of Eton, and anticipations of an equally glorious future (*sua si bona norint*), which those who were privileged to hear it will not easily forget.

OBITUARY.

MR. HEPWORTH DIXON.

A FEELING of regret at the sudden removal from this world of a man of letters who for thirty years has been unwearied in supplying amusement and instruction must have risen in the minds of most readers in our country a few days ago. When Mr. Hepworth Dixon had composed his first work (*John Howard and the Prison World of Europe*) it was only after repeated refusals that he could find a publisher sufficiently enterprising to venture on its publication. At the time of his death the products of his pen were anxiously sought for by competing publishers, and were translated into the language of every Continental nation. Mr. Dixon was a native of Lancashire, being born in Newton Street, Ancoats, a suburb of Manchester, on June 30, 1821, and was educated at Over Darwen. Like many other men of talent, from the present Prime Minister downwards, he was at first doomed to the drudgery of a lawyer's office, but followed the natural bent of his mind in penning "a stanza when he should engross." He tried his "prentice-hand" in literature on the *Cheltenham Journal*, but soon abandoned it for life in London, and made his appearance before a larger circle of newspaper readers with a series of letters in the *Daily News* on the literature of the lower orders and the London prisons. When his volume on *John Howard* (1849) had attracted the attention of

the public and passed through several editions, these contributions to the *Daily News* were republished in a book-form. Mr. Dixon's historical biography of *William Penn* (1851) materially increased his reputation by his vigorous defence of the character of the great Quaker against the charges brought by Lord Macaulay in the first two volumes of his *History of England*. The historian never acknowledged the justice of Mr. Dixon's defence by moderating his censures on William Penn; he treated Mr. Dixon, as he did the rest of his assailants, with an unbroken silence: but when death seized him the volume which he held in his hand was Mr. Dixon's biography of Penn. His next biography was that of one of England's greatest admirals, Robert Blake, and every reader of that stirring life will remember with delight the description of the career of the great Somersetshire hero. For many years he had been a valued contributor in historical criticism to our contemporary the *Athenæum*; and on his return, in 1853, from a lengthened tour through Europe, he was summoned to fill the post of editor. For sixteen years, during a period of great activity in the book-world, he was responsible for its verdicts on the literature of the day; and when the time shall arise for a detailed history of English letters since 1851 the criticisms which he suggested and directed must not be overlooked. The travels of Mr. Dixon extended far and wide into both hemispheres, and every country he visited formed the subject of an entertaining volume. He explored the Biblical scenery of Palestine and the surrounding countries in 1864, and the result was seen in a vivid picture of the *Holy Land*. A protracted visit to the United States supplied the local colouring for two of his most popular works—*New America* and *Spiritual Wives*. Both these works were frequently reprinted in this country and in the New World, and provoked a vigorous rejoinder in German from Count E. von Kranitz. An equal measure of success attended his portraiture of *Free Russia*, which was translated into French, German, and Italian. Hardly a year has passed since he suspended the compilation of his closing volumes on *Royal Windsor* for a visit to our recent acquisition in the East, and for the production of his popular description of *British Cyprus*. It was during a visit to Spain in 1873 that he formed the idea, and laid the framework, of his *History of Two Queens*, Catharine of Aragon and Anne Boleyn. Mr. Dixon was an enthusiastic worker in the field of historical literature; and, although the experts in special subjects loudly asserted that the works which he produced in swift succession proceeded rather from a skilful use of the toils of others than from days passed by himself in exploring the hidden treasures at the Record Office and the Museum, these depreciating criticisms were powerless to avert the popular applause which always attended him. Such works as *Her Majesty's Tower* and *Royal Windsor* have circulated in thousands when the volumes of more laborious students have as yet only been sold by tens. Mr. Dixon ventured upon every branch of literature. He was by turns poet, novelist, and politician; for two of the latest creations of his fertile brain were in fiction, and his political opinions tempted him into printing several addresses on free voting and our representative system. But it is as a vivid portrayer of foreign travel, and as a brilliant painter of historic scenes in picturesque English which came to him only too easily, that his name will be best remembered. While travelling in Cyprus during 1878 he broke his shoulder-bone, through a fall from his horse, and the sad death of his eldest son in October last threw a gloom over his life; but his end was unexpected, and few out of the mighty host who, on the morning of last Monday, took up their accustomed news-

papers expected to find the announcement of his decease. On Friday, December 28, he superintended the correction of the proof sheets of the third and fourth volumes of the *Royal Windsor*, and the work is now announced as shortly to issue from the press; but on the following morning he was seized with an apoplectic fit, and ere the day was dead his spirit had passed away.

WE regret to learn by the last Indian mail that Capt. C. J. F. S. Forbes, Deputy-Commissioner of Tharawadi, in British Burmah, died on November 28 of heart disease. His work on *British Burmah and its People*, reviewed in the ACADEMY of March 29, 1879, scarcely received in this country the attention that it deserved, having to compete with other books on the same subject to which more popular names were prefixed. But, as a scientific linguist, Capt. Forbes had no superior in the vast and complicated field afforded by the many dialects of Burmah. The *Journal of the Royal Asiatic Society* for April 1878 has two valuable articles from his pen on "Thibeto-Burman Languages" and "The Connexion of the Mons of Pegu with the Kols of Central India." In both of these he shows a grasp of true philological principles rare in an Indian official, and indirectly throws light upon some obscure questions of ethnology.

THE death is likewise announced of the Rev. E. Dudley Jackson, author of *Nugæ Lyricæ*, &c.; of Dr. Röder, Honorary Professor in the Faculty of Law in the University of Heidelberg; of M. Cokinos, Professor of Law in the University of Athens; and of Gen. Cavalli, of Turin, the author of many works on military subjects.

CORRESPONDENCE.

PROF. BUGGE'S RESEARCHES ON NORTHERN MYTHOLOGY.

London: Dec. 29, 1879.

The results of Prof. Bugge's researches on Northern mythology are, as summarised in your issue of November 30, of such exceeding novelty, that students will await with keen interest the full presentment of his argument in some accessible language. Will you allow me, however, to point out that the facts from which the professor draws such startling conclusions are by no means new? They have been before the world for nearly a quarter of a century; they were well known to the men who have made comparative mythology the science that it is, and who, with these facts before them, deliberately rejected the conclusions which Prof. Bugge now seems to have arrived at.

I am by no means overstating the case when I say that the parallelism of the Greek and Norse mythologies has been a commonplace of comparative mythology for the last twenty-five years—at all events, ever since the publication of Hahn's *Mythologische Parallelen* in 1859. This parallelism had been hinted at before, notably by Forchhammer, and in the earlier editions of the *Deutsche Mythologie*, but Hahn was the first to work out the idea fully and scientifically. Nearly every one of the points on which Prof. Bugge relies was made by Hahn twenty years ago. The identity of Thor with Hercules, of Loki with Prometheus, of Balder with Patroclus, was brought prominently forward, and, so far as I am aware, no one comparative mythologist of any standing has ever doubted Hahn's priority in the matter. All succeeding writers (I would instance more particularly Schwartz, *Ursprung der Mythologie*, 1860, and *Naturanschauungen der Griechen, Römer und Deutschen*, 1864-79, and Henne Am Rhyn, *Deutsche Volkssage*, 1875) are in full accord with Hahn as to the facts, though in their application of them they often differ widely from him. Hahn himself published in his *Sagwissenschaftliche Studien* (1876) a second and very much enlarged edition of the *Parallelen*, and in this book is to be found literally everything used by Prof. Bugge to support his theory.

The construction Hahn puts upon the facts is, I need not say, very different from that of Prof. Bugge. The two mythologies are, according to him, allied, because the Greeks and Teutons had a common origin. The differences between them are such as would naturally arise from the fact that the one race dwelt in the north and the

other in the south. Their conceptions of nature would, as a matter of course, influence their nature-myths. This is sufficient, Hahn thinks, to explain all the variations between the two mythological systems, and he certainly makes out a very strong case in favour of his opinion.

A few other points in the professor's article seem to call for notice. The Midgard snake is not an imitation of the Early-Christian Leviathan; the very reverse is the case (see Grimm, *Deutsche Mythologie*, fourth edition, p. 834). In like manner, Loki is not Lucifer, but rather Lucifer Loki, i.e., the mediaeval conception of the Devil was profoundly influenced by the belief respecting a personage in whom both the Christian missionaries and the great mass of their converts recognised a prototype of Satan (see Grimm, *D. M.*, fourth edition, articles "Loki," "Teufel"). Nor is this suggestion of Bugge's novel; Grimm had already hinted at it (see *Nachträge zur D. M.*, p. 82; and for the mutual action and reaction of Norse mythology and Christian tradition see *D. M.*, pp. 152, 834). It is well known, too, that Loki is the northern Prometheus (Hahn, *Mytholog. Parallelen*, p. 21), and it has been most convincingly shown that he is only explainable on nature-mythical grounds. As regards Phol and Apollo there is nothing new in Bugge's belief; Grimm had thrown out a suggestion to this effect on p. 80 of the *Nachträge*. There is no reason to believe, however, that Grimm ever saw cause to doubt the identity of Phol and Balder so convincingly established in the *Deutsche Mythologie* (see article "Paltar").

I do not wish to take up your space or I could multiply these instances almost *ad infinitum*. In almost every case Prof. Bugge has simply misinterpreted well-known facts, from which the legitimate inferences have long ago been deduced. Admitting, however, his hypothesis to be well grounded, admitting that the Norsemen did borrow their myths and their hero tales from Celtic imitations of the Greek stories, ought we not to find among the Celts a mythology and a "Heldensage" intermediate, as it were, between those of the Greek and those of the Norsemen? That this is hardly the case I will try to show in another letter.

ALFRED NUTT.

CAXTON'S "CHRONICLE."

Trinity College, Dublin: Dec. 30, 1879.

Will you allow me to mention, with reference to a paragraph in your "Notes and News" of December 20, that the Library of Trinity College, Dublin, possesses a copy of Caxton's *Chronicle*, printed by Gerard Leuw at Antwerp in 1493? Unfortunately, though otherwise in excellent condition, the copy is imperfect, wanting several leaves. I may add that it contains a few leaves in duplicate.

JOHN K. INGRAM.

HENRY SMART'S BIOGRAPHY.

Brook House, Apperley, near Leeds: Jan. 1, 1880.

May I be permitted through your columns to say that I have now collected what I think may be deemed the chief points of interest in the late composer's early career up to the time when he was appointed organist of St. Philip's Church, Regent Street, London; and that any information of Smart's musical doings, &c., likely to be of use in my account of him, no matter how roughly given, will be gratefully accepted and acknowledged by me?

This opportunity may be taken to express my obligations to the numerous publishers who have so kindly and generously sent me copies of nearly all the known works of Smart, and from them I have been enabled to compile a catalogue which will prove most interesting and useful to those—and their name is legion—

who regard my late lamented friend as one of the greatest English composers.

WM. SPARK.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Jan. 5, 8 p.m. London Institution: "Solar Radiation," by Capt. Abney.
- 8 p.m. Victoria Institute: "Late Assyrian and Babylonian Research," by Hormuzd Rassam; or, "The Druids and their Religion," by J. E. Howard.
- TUESDAY, Jan. 6, 3 p.m. Royal Institution: "Water and Air," V., by Prof. Tyndall.
- 8 p.m. Society of Arts: Juvenile Lecture.
- 8.30 p.m. Zoological: "Preliminary Notes on Individual Variations in *Equus asinus*," by J. H. Steel; "Notes on *Chlamyphorus truncatus*," by E. W. White; "On the Mammals of Asia Minor," II., by C. G. Danford and E. R. Alston.
- 8.30 p.m. Biblical Archaeology (Anniversary): "The Monuments and Inscriptions on the Rocks on the Nile-Kil River," by W. St. O. Boswell.
- WEDNESDAY, Jan. 7, 8 p.m. Geological: "On the Portland Rocks of England," by the Rev. J. F. Blake; "On the Correlation of the Drift-Deposits of the North-West of England with those of the Midland and Eastern Counties," by D. Mackintosh; "On the Genus *Pleuracanthus*, Agassiz," by J. W. Davis.
- 8 p.m. Archaeological Association.
- THURSDAY, Jan. 8, 3 p.m. Royal Institution: "Water and Air," VI., by Prof. Tyndall.
- 7 p.m. London Institution: "The Man of the Caverns," by Prof. W. Boyd Dawkins.
- 8 p.m. Mathematical: "A Theorem in Spherical Trigonometry," by Prof. Cayley.
- 8.30 p.m. Royal. Antiquaries.
- FRIDAY, Jan. 9, 8 p.m. Astronomical. Quekett.
- SATURDAY, Jan. 10, 3.45 p.m. Botanic.

SCIENCE.

Dictionnaire d'Etymologie Daco-romane: Eléments slaves, magyars, turcs, grecs-modernes et albanais. Par A. de Cihac. (Frankfort: Ludolphe St. Goar.)

AN interval of nine years has elapsed since M. de Cihac published the first volume of his interesting work on Roumanian etymology—a thin octavo of 332 pages, dealing with the words of Latin origin. This has been followed in the present year by a second instalment, a book of 816 pages, which contains the Slavonic, Magyar, Turkish, Modern-Greek, and Albanian elements. It is with the latter of these volumes especially that I have to do on the present occasion. The philological parentage of the Roumanian language has long been satisfactorily ascertained; it has taken its place as a member of the Neo-Latin family, to which its grammatical structure very decidedly assigns it, even if we do not altogether adopt the somewhat exploded dogma that there can be a mixed vocabulary, but not a mixed grammar, of a language. For example, to say nothing of some of the Eastern languages, where mutual influences may be traced in members of different families, we have distinct evidences in Finnish of the grammar being modified by Teutonic.

I shall in the present notice confine myself almost entirely to the Slavonic element in Roumanian. This subject has already been handled in a masterly manner by Prof. Miklosich, *Die slavischen Elemente im Rumunischen*, of whom I may truly say, borrowing the words of the epitaph of one of our own authors, "*Nihil quod tetigit non ornavit.*" On the subject of the predominance of these Slavonic words, M. de Cihac speaks very frankly. He tells us, as the result of his own labours, that in an analysis of the Roumanian vocabulary the Latin elements only constitute one-fifth, while Slavonic are almost double, or two-fifths, and he has been very careful to select words that form part of the actual spoken language. In this frank avowal he is in direct opposition to the fanatical and pseudo-patriotic party, who affect to treat all these Slavonic

forms as intruders, and are occupied in coining new words and constructing a system of orthography based upon the Italian, now that the Cyrillic letters have been banished. The head of this school is M. Hajdeu, a man to whom Roumanian literature is in some respects much indebted for his spiritedly edited journal, *Columna lui Traian* (the Column of Trajan), in which he has reprinted many valuable documents relating to Roumania, and his *Critical History of the Country (Istoria Critica a Romanilor)*. His soundness as an etymologist may, however, well be doubted when we read his derivation of the word "Dunare," the Roumanian for Danube, which is cited by M. de Cihac in the present volume on p. 105; this etymology is as eccentric as any of the Slavonic derivations of Kollar and Dankowski, and may fairly rival Dr. Mackay's Celtic explanation of Greenwich as the Town of the Sun. I will give it in *extenso* for the benefit of the readers of the ACADEMY:

"Dunare vient de la radicale da-dan donner et de l'albanais re-vre nuage; donc duna-re 'donnant des nuages,' νεφελοφόρος, ancien nom thrace du Danube, dont les Daco-Romans ont fait Dunare."

It is in vain that we try to follow M. Hajdeu into the labyrinths of Thracian and Dacian—languages as yet unclassified and still remaining a puzzle to philologists.

The same desire to expel all words the roots of which cannot be traced to Latin has actuated the compilers of the new Dictionary in process of publication at Bucharest. It has been the fashion in the present century in the case of many languages which have been regenerated to substitute these new words coined by scholars for the old popular expressions, thus causing the spoken language to vary more and more from the written. The Magyar and Cech languages form two complete parallels. In the case of Roumanian, however, the attempt appears more incongruous, as the Latin elements really constitute so small a part of the vocabulary. Thus, with a literature hardly thirty years old, the language is obscured by the labours of pedants and a multiplicity of systems of orthography.

M. de Cihac holds far more temperate views; he speaks of the great influence and even *preponderance* of Slavonic. Not only has the vocabulary been influenced to the extent just mentioned, but the structure of the language has been considerably modified—to take the Slavonic suffixes, for example. Again, the names of places are in the majority of instances Slavonic—*cf.* Dumbovitz, the river on which Bucharest is situated, and of which the Roumanian proverb says,

"Sweet water of the Dumbovitz,
Whoever drinks it never more departs;"

Tirgovitz, Cernavoda, Jablonitz, &c., &c., and also the names of families. Finally, the popular mythology, the folk-lore (as is the case with the Magyars), are almost entirely Slavonic.

The Roumanians would do well to bear in mind these facts, which only corroborate the incisive criticisms of Rösler, whose book is as destructive of illusions as Fallmerayer's for the modern Greeks. The great gap in the Roumanian history of a thousand years, and

the constant migrations of the small remnant of Trajan's colonists, are pointed out in this work; nor has this suggestive writer been sparing in his criticisms of the chronicles which, purporting to be ancient, come to us in such a dubious guise.

These Slavonic elements introduced into Roumanian are to be traced to two main sources—first, the Old Bulgarian (or, to follow the nomenclature of Miklosich, the Old Slovenish), which has naturally had great influence upon Roumanian as the language of the Church, and the one chiefly employed in such literature as the country boasted—scanty enough—till the close of the eighteenth century. In the same way it crushed the development of Servian till the days of Dositei Obradovich and Vouk Stephanovich. Secondly, those elements which have been derived from the Ruthenian or Red Russian (for all practical purposes identical with the Malo-Russian) of the Bukovina or Polish, which was sometimes used as the official language of the country. As Polish has itself so largely influenced Red Russian it would not always be possible to separate these elements accurately. As regards the Slavonic words which have been taken from the Old Bulgarian, we see their antiquity by the preservation of the nasals (and the Magyar shows the same influences), whereas they are lost in the Neo-Bulgarian, except in a single dialect, specimens of which were given in a late number of Prof. Jagić's *Archiv für slavische Philologie*. The following interesting instances are given by Rösler (p. 128):—

Rou., porunca, order.	Old-Bulg., poraka.
Rou., dumberava, wood.	Old-Bulg., dabrava.
Rou., sfint, holy.	Old-Bulg., svat.
Rou., simbata, Saturday.	Old-Bulg., sabota.
Mag., szombat.	

In a short article like the present I can only call attention to a few words which seem to possess special interest. *Colinda*, the Christmas song; this word has been transferred to Roumanian from the Slavonic dialects, where it is well known; the collection of words derived from it, as given by M. de Cihac, is very striking, and shows the deep-seated influence of the Slavs. Thus, in Hungarian, it has become *koledalni*, to beg; and in Albanian *kolendre*, a round cake baked on Christmas Eve. It is undoubtedly the Latin *calendae*, derived through a Slavonic medium, and the nasal preserved in Roumanian shows how early it must have been introduced. We get the well-known Slavonic root *grad*, a hedge, enclosure, with the interesting variation *po-grada*, a cemetery; *gospod*, in the sense of master or lord, is still in use, but in many instances has been superseded by *domnu*, Lat. *dominus*. *Joimir*, a mercenary soldier, looks like a transformation of the Polish *zolnierz*. *Pinzarie*, money, gives us a Roumanian form of the Slavonic *penez*; *iubesc*, to love, is a curious instance of the loss of the initial *i*, for it is the same as the Russian *liubit*; parallels may be given from many languages, in Swedish, for example, it is sometimes lost in the beginning of a word.

Among the words of Magyar origin are many very curious; thus, *Netot*, a Hungarian Gipsy, literally not a Tot or Slovak, the word

Tot being the regular Magyar name for Slovak, said to be from the demonstrative pronoun. The Magyar affects to despise this race, from which many of his most valuable fellow-citizens have been taken, Kossuth among the number. A strange word, too, is *ujoara*, which is simply the Latin *usura* filtered through a Magyar channel. The Modern-Greek elements in the language are very extensive, as in Bulgarian, and we must not forget that the country was for some time under the Phanariot governors, who mercilessly plundered it during their short and precarious terms of office.

The history of the Roumanians will fully explain the peculiarities of their language, nor must we forget that till lately it was as much a language of peasants as Lithuanian has continued to be. The strange modification some of these Greek words have undergone must invest them with interest for the classical student. Take a word like *sosesc*, for instance, which, from the Greek *σώζω* (I will not say *parce detorta*) has come to mean "to arrive." Many of the articles in this Dictionary are so copiously illustrated that they furnish ample material for philological study.

Some of the etymologies contained in this elaborate work must undoubtedly be tentative, but we may well congratulate M. de Cihac on the production of a work of considerable research, which has cost him many years of toil, and which must have its fascinations both for the Romanic and Slavonic scholar. The Roumanian provinces have now a clear course before them since they have shaken off the Turkish yoke. Their literature is in its infancy, but begins to show signs of vigour, although I regret to see them so much influenced by Gallomania, which, however, some of their own authors have not failed to ridicule.

M. de Cihac has done well in exercising sobriety where so many of his countrymen have been led astray, and in preferring scientific accuracy to the wild dreams of heated patriotism.

WILLIAM R. MORFILL.

CURRENT SCIENTIFIC LITERATURE.

Science Teachings in Living Nature. By W. H. Watson, F.C.S. (Stanford.) The title of this book is not perhaps very happily chosen; at least it is somewhat misleading, or does not fully express the scope and object of the book. It is a popular introduction to the study of physiological chemistry and sanitary science, which it discusses in five chapters, well arranged, and full of useful information. Commencing with the origin of life and the composition of our bodies, the author passes on to plants, their food, and place in nature; afterwards he discusses the chemistry of the respiratory process, and of digestion and nutrition, and, in conclusion, disease, decay, and death. The work seems to occupy that unfortunate position between a strictly scientific treatise and a popular essay which so many semi-scientific publications occupy. Nevertheless it will be read with profit by the medical student before he commences severer studies, and by the general reader interested in the problems of life.

Units and Physical Constants. By G. D. Everett, M.A., F.R.S. (Macmillan.) This work was originally published by the Physical Society of London in 1875. The present volume is substantially a reprint, supplemented, however,

by a large addition of physical data. After a discussion of the general theory of units, the author makes choice of three fundamental units, and then passes on to the special units employed in the various branches of physical science and astronomy. The work abounds in formulae and constants, and it is arranged with care and precision. It must form an essential component of the libraries of all physical laboratories, and the investigator in physical science will find it one of his most useful companions. The arrangement is good, the work is conscientiously done, and a great mass of useful information has been collected from very diverse sources.

Natural History Rambles: Lakes and Rivers, by O. O. G. Napier, F.G.S.; *Mountain and Moor*, by J. E. Taylor, F.L.S., F.G.S. (S. P. C. K.) These are not only very pretty books, but contain much useful information conveyed in a popular and pleasant manner. The plan pursued is a capital one, inasmuch as it shows in a convenient way all that is most characteristic in the various fields for observation which Great Britain offers to the naturalist. For instance, the volume which treats of *Lakes and Rivers* begins with a brief account of the few mammals which inhabit our waters, and then describes at greater length the aquatic and marsh birds, the *amphibia* and the fishes, which frequent our fresh-water system. A chapter is also devoted to the *mollusca*, and another to the flowering plants and *algae*. Some variety is given to the treatment by the description of a ramble among the marshes of Sussex during the month of May, which we hope will not stimulate its readers in the too fascinating pursuit of bird-nesting. The illustrations are numerous and good, and the letterpress so far above the ordinary level of similar books that we are at a loss to understand how the volume could be produced for the modest sum of half-a-crown. The same observations apply in great measure to Mr. Taylor's *Mountain and Moor*, which, however, possesses one additional merit. Its author very rightly prefaces his treatise with a sketch of the geology of our mountain system and the origin of hills and vales. There can be little doubt that some knowledge of the creative forces that have been at work largely helps toward the intelligent enjoyment of natural scenery.

NOTES OF TRAVEL.

AT the last meeting of the Leipzig Geographical Society, on December 17, a paper was read on the glaciers of Norway by Dr. Penck, who has personally examined them, and has carefully explored the two great groups, the *Iostedabæra* and the *Folkfons*, the former of which is very extensive. Additional interest was imparted to the subject by the comparison drawn between the glaciers of Norway and those of Switzerland, in which the points of resemblance and difference were duly noted.

HERR SCHÜTT's preliminary report on a visit to the Luba king Mai has been published in the *Mittheilungen* of the German African Association. The German traveller left Malanje on July 4, 1878, and reached Mai's capital, in lat. 6° 53' S., long. 22° 10' E., on January 18, 1879. His hope of being permitted to visit the country of the cannibal Kaselange and the shores of a huge Lake Mukanda, or Lufua N'Gimba, reported to exist in the north, was doomed to disappointment, mainly owing to the machinations of the Muata Yamvo, who is inimical to European explorers. After a stay of only five days, Herr Schütt was obliged to retrace his steps to the south. Whether Dr. Buchner, whom he met at Malanje, will be more successful remains to be seen. In the meantime we look forward with interest to a more ample account of his

explorations, which have substantially added to our knowledge of the basin of the Zaire.

DR. ROHLFS is back at Rome. His mission, though a failure as regards its main object, has nevertheless resulted in considerably enlarging our knowledge of the eastern Sahara. The farthest point reached by him is Boéma, a small oasis of Kebabo, in lat. 24° 32' N., long. 23° 13' E., and at an elevation of 1,310 feet above the sea-level. Rohlf's Diary and Dr. Stecker's Meteorological Journal have not hitherto been recovered, but the map is safe.

THE *Bollettino* of the Italian Geographical Society contains a map of Epirus by E. de Gubernatis, for many years Italian consul at Yanina. The map, drawn on a scale of 1:400,000, is based in a large measure on the author's own route surveys. In discussing the various cartographical materials of which he has availed himself, and among which Kiepert's general map of Turkey occupies the foremost place, Signor de Gubernatis speaks in the highest terms of the Austrian charts, but says, with reference to the English ones, that the one published in 1824 is "less defective" than that issued in 1864. The Austrian staff map is not well spoken of. Estimating the area of Epirus at 8,400 square miles, with 480,000 inhabitants, the author assigns 5,060 square miles, with a population of 290,000 souls, to the Greeks, or to districts in which Greek is spoken by a portion of the population.

THE first instalment of Dr. Junker's Report on explorations in the equatorial provinces of Egypt has appeared in Petermann's *Mittheilungen*, accompanied by a map drawn on a scale of 1:750,000. The region explored by Dr. Junker lies to the west of the Upper Nile, and extends southward to the country of the Lubari, in lat. 2° 45' N., and within thirty-five miles of the northern end of Baker's Albert Nyanza.

WE hear that the American Board of Commissioners for Foreign Missions have resolved to despatch a missionary expedition to Central Africa in order to join in the great civilising movement initiated by European societies. After careful investigation as to what localities, not already occupied, would be most suitable for their enterprise, they finally selected two. The first of these was the great tract of country in the Zambesi basin which has been conceded to M. Paiva de Andrada, as already recorded in our columns, and which extends from the mouth of the Shire some 600 or 700 miles to the westward, with a reported area of 9,000 square leagues. The other region comprises the elevated plateau of Bihé and the basin of the Quanza (or Coanza) in Western Africa. It is believed that the Board will finally select the last-named field of labour on the ground of its healthiness, and also because it is easy of access and occupies a favourable position for reaching the centre of the continent.

MR. STOKES, a member of the Church Missionary Society's Nyanza Expedition, has recently made a journey from Rubaga, the capital of Uganda, to the Ripon Falls, where the Nile issues from the Victoria Nyanza.

THE second French missionary expedition which was despatched from Algiers at the end of June to reinforce the parties on Lakes Tanganyika and Victoria have passed Mpwapwa on their westward journey. They report that the Algerian mules which they took with them have proved almost useless, having arrived at Mpwapwa in a very bad state. When last heard of the expedition was proceeding slowly through Ugogo.

THE question of an interoceanic ship-canal through the American isthmus is being taken up in the United States, and schemes differing

from that of M. de Lesseps are most in favour. One of these is the lock-canal through Nicaragua advocated by Admiral Ammen, who is stated to have received influential support. Another project is the cutting of the canal from San Blas Bay on the Atlantic side to the Chepillo Roads and the head of the Panama Gulf on the other side. San Blas Bay is undoubtedly a magnificent harbour, but the adoption of this route—the shortest of all—would necessitate the construction of an enormous tunnel through a mountain range varying in height from 500 feet to 700 feet.

SCIENCE NOTES.

THE "*Courant Ascendant*."—Dr. Hann, whose views on this ancient hypothesis of Saussure's, as incorrectly set forth in modern textbooks of meteorology, were noticed in the *ACADEMY* for March 1, 1879, has published in the Austrian *Zeitschrift* for September some further remarks on the question, in which he points out the absurdity of attributing the diurnal range of the barometer to this cause, for then the phenomenon would be different over forests from what would be manifested over bare plains. He also shows that the air is never so dry at the earth's surface that a mass could ascend, say, 50,000 feet, without producing clouds by the condensation of its contained moisture, and yet the "*courant ascendant*" must be strongest on a cloudless day. Dr. Hann, like von Lamont, believes in local ascending and descending currents causing a general mixture of the atmospheric strata.

THE *Theory of Atmospheric Motion*.—The Deutsche Seewarte has commenced the issue of papers entitled *Aus dem Archiv*, and the first of these is by Dr. A. Sprung, "*Studies on the Wind and its Relations to Pressure*." The question is treated from a purely mathematical point of view, as it has been by Ferrel and Mohn, and Dr. Sprung sums up his conclusions by saying that he shows that the old ideas of the influence of the earth's rotation on trade and anti-trade winds are not contradictory to modern views, but that, as the former theory only recognised a part of that influence, it could not explain all the facts. He draws special attention to his treatment of the action of inertia as the most important part of his work.

African Ethnology.—Several ethnological papers on the dark-skinned peoples of Northern and Central Africa were written by Dr. Robert Hartmann, of Berlin, on his return from Sudan. Desiring, however, to present a more substantial contribution to African ethnology, he wrote some time ago an elaborate monograph on this subject. The first part of this monograph, forming an octavo volume of upwards of 500 pages, has just appeared as a Supplement to the *Zeitschrift für Ethnologie*, the organ of the Anthropological Society of Berlin. The volume is entitled *Die Nigritier: eine anthropologisch-ethnologische Monographie*—the author giving his reasons for preferring the term *Nigritier* to *Neger*. The value of the volume is much increased by a series of thirty-five lithographic plates showing the physical features of the various peoples described in the text. These plates are admirably executed, and in some cases are coloured after nature.

THE *Diurnal Range of the Barometer in Russia*.—To volume vi. of the *Repertorium* Capt. Rikatcheff has contributed a most elaborate paper on this question, and has appended to it a new theory of the phenomenon. His discussion has been conducted with great care, and the list of *errata* discovered by him in Kupffer's bulky volumes covers thirty pages. Capt. Rikatcheff points out that in most previous discussions it has been assumed that the reading at 24h. is the same as that at 0h., whereas the pressure is

never exactly the same at the end of the day as at the beginning. He therefore takes account of this regular change. The chief new feature in the results is the discovery of a third maximum at about two a.m. It is urged that it is absolutely necessary to take account of anemometrical data in the discussion, and the following principles are proposed for the explanation of the phenomenon:—(1) The differences of temperature on different meridians, due to the daily march of temperature; (2) daily currents produced by these differences in the upper and lower strata; (3) the motion of the entire phenomenon from east to west, which displaces the culminating points of the daily currents to the east of the meridians of maximum and minimum of temperature; (4) the influence of the differences in velocity of rotation at different altitudes, which, as Liais has shown, accumulates a greater mass of air over the morning meridians than elsewhere; (5) the formation of vapour and its condensation at night, which reduce the differences between the two minima.

M. C. H. GODET, author of the *Flora of the Jura*, died recently at Neuchâtel in his eighty-third year.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, Dec. 5.)

DR. J. A. H. MURRAY, President, in the Chair.—The paper read was by Mr. H. Sweet, on "The History of English Sounds and Dialects, Part I." The present paper dealt with the history of the English dialects in the middle period, and their development out of the Old-English ones. Mr. Sweet gave a survey of the materials for the study of the old dialects, and of the principles of determining the value of MS. evidence, remarking that only a small proportion of existing MSS. represent a pure dialect, or, indeed, a possible language. He gave great prominence to the influence of the dialects on one another, and described their history as a series of partial levellings over varying areas at different periods. West-Saxon as a separate dialect became extinct in the twelfth century, being absorbed into Mercian, although it communicated many of its own distinctive features to the latter.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, Dec. 17.)

JOSEPH HAYNES, Esq., in the Chair.—A paper was read by Dr. Waldstein, "On the Group of *Hermes and Dionysos*, by Praxiteles, recently discovered at Olympia" in the Heraeum at that place, the existence of which has been noted by Pausanias (v. 17. 3), and stated by him to have been the work of that famous sculptor. In this paper, Dr. Waldstein pointed out that doubt had been cast on this attribution by some recent German critics, who were inclined to give it to a grandson of Praxiteles, who bore the same name. He, however, argued from a minute criticism of the sculpture that there was really little ground for this theory, as the artistic character of the *Hermes* harmonises completely with that of all the works which have been hitherto associated with the name of the elder Praxiteles; who is believed, also, to have greatly influenced Lysippos in the canon of human proportion constructed by that sculptor. Between the "figurae quadratae" of Polycletus, and the slim graceful forms of Lysippos, Dr. Waldstein urged that the sculptures of Praxiteles were the natural transition. But the *Hermes* was really more than a point of transition in the development of Greek sculpture; it was a type by itself, as is clearly shown by the numerous replicas we have of it. Dr. Waldstein then discussed the sad and pensive element characteristic of Praxitelian art, and accounted for this, both psychologically in the sculptor himself, and historically from the times in which he lived, concluding his paper with a comparison of the age and works of Pheidias as contrasted with those of Praxiteles.

NUMISMATIC SOCIETY.—(Thursday, Dec. 18.)

W. S. W. VAUX, Esq., F.R.S., in the Chair.—

A paper was read by Mr. Percy Gardner on the coins of Elis. The writer divided the history of the district into fifteen periods, beginning with the Persian wars and ending with the reign of Caracalla, and assigned to each period its appropriate coins. He also attempted an explanation of the principal types of Elis, such as the eagle and the thunder-bolt, and pointed out their close connexion with the Olympic festival, over which the inhabitants of Elis presided.—Another paper by Mr. Gardner was laid before the society, treating of solar symbols on the coins of Macedon.—Miss Hogg communicated a paper on a hoard of late Roman coins recently discovered at Baconsthorpe in Norfolk.

PHILOLOGICAL SOCIETY.—(Friday, Dec. 19.)

DR. J. A. H. MURRAY, President, in the Chair.—Two papers were read:—(1) "*Dare*, to 'give,' and *-dere* to 'put' in Latin," by J. P. Postgate, M.A., in which the current view of *credere*, &c., containing the root *dha* (place) was opposed on the ground of *dh-* never becoming *d-* in Latin, but regularly *f-*, as in *facio*, *frenum*, from *dha*. The view that *dh* in these words might have been regarded as medial, in which position the change to *d* is regular, was also opposed. The general conclusion was that these words are compounds of *da* (give).—(2) "English Etymologies correcting some of Prof. Skeat's, Part II.," by Mr. H. Nicol. It was shown that the derivation of French *effrayer* from the half Germanic *exfridare*, "put out of peace," "disturb," due to Prof. G. Paris, was confirmed by the meaning of the English *affray*. The other etymologies discussed were:—*attire*, from Old-French *tiarier*, "arrange," and that from Germanic *tiari* = Modern-German *zier*; *badger*, from Old-French **blaagier* = Latin **ablātāticūrium*; *breeze* (cinders), from Old-French *brese* = Modern-French *brasse*, and ultimately from Germanic *brasa* (fire); *costive*, from Old-French **costevē* = Latin *convitptum*.

FINE ART.

ARCHAEOLOGICAL NOTES ON A TOUR IN SOUTHERN ITALY.

I.

INTERESTING in the highest degree by reason of their ancient memories, the provinces of the southern extremity of Italy are very little known to tourists; even archaeologists visit them very rarely, and they still have many a discovery in store for those who will take the trouble to explore them carefully. I have just made a very hurried journey through certain portions of them, and, despite the shortness of my sojourn, I have been able to glean on the way certain observations which are, I think, not wholly devoid of novelty. Hoping to be able to extend and complete them on a future tour, I will give a brief summary of them here.

APULIA.

My first stay in this province was at Canosa. I was fortunate enough to be able to visit a tomb of some importance, dating from the beginning of the fourth century B.C., which had been opened a few days before by some workmen engaged in constructing a cellar. It was composed of a chamber hewn entirely out of the *tufa*, in the shape of a tunnel, with a pointed roof, supported in the centre by a square pillar, formed by allowing the natural *tufa* to stand. This tomb had already been violated in ancient times, and then despoiled of all the metal objects that it might have contained; but the clay vases all remained in their original position. I was also able to study the whole of the pottery contained in two other tombs, of different epochs, recently discovered. Finally, I succeeded in climbing up, with considerable difficulty, into the great tomb, with eleven chambers, excavated about 1840—the largest and most important ever found at Canosa—a tomb which, in the second century B.C. and the early part of the first, was the burial-place of the family of the Dasmis, one of

the greatest aristocratic houses of Apulia. This tomb was truly magnificent, and well deserves to be drawn by an architect before it is completely and irretrievably ruined. In front of it is a kind of square *atrium* open to the sky; and on three of the sides of this *atrium* the wall of rock, cut vertically, presents a *façade* surmounted by a pediment, which is supported by Doric pilasters stuccoed in colours, the whole in a very fine and elegant style of architecture. The chief vestibule, which is entered by the central door, likewise shows numerous traces of paintings on its walls representing trees and flowering plants, in the midst of which are birds flying.

Two new facts result from my observations at Canosa. The first is the discovery of a class of painted potteries hitherto unknown, and which I afterwards found throughout the whole of Apulia side by side with vases with black and red figures painted on them. They consist of very small vases with geometrical patterns in imitation of those of the primitive ages, executed in black and violet on a creamy white ground. The forms are very original, and one type represents a duck swimming on the water. Both forms and decorations very forcibly recall the potteries of Cyprus. This kind of ceramic ware continues the traditions of the industry of the primitive ages, but its archaism is only imitative, for it is found in association with the vases decorated with red figures of the great classical and severe style. It only disappears toward the time of Alexander, when we begin to trace in the red-figure vases the style of exuberant richness and overcharged decoration which characterises the whole class of strictly Apulian vases. The ceramic ware of which I am speaking maintained itself, therefore, up to that date, in the native furnaces; and, by the side of the vases with black or red figures, imported by commerce from the Greek cities, it represents the common household pottery—that sold at low prices.

The second fact relates to the unglazed terracotta vases, painted after baking with bright colours which were never fired—vases which have numerous little figures in relief. This is a speciality peculiar to Canosa, and the richest series known is that which became the property of the Louvre with the Campana Museum. By combining my own observations with the information supplied me by professional *scavatori*, I have been enabled to satisfy myself that remains of this kind never occur in juxtaposition with painted vases, even those of most recent date. They represent a later epoch, which must begin in the second century B.C., and come down to the times subsequent to the Social War. This last conclusion results from a positive fact. The finest and most numerous of the vases in question—those of the Campana collection, and those which formed the Biardot collection, dispersed at a sale in Paris some years ago—were taken from the great eleven-chambered tomb of which I have just spoken. Now, on the wall of one of the chambers of this tomb is engraved the Latin epitaph of Medella, daughter of Dasmus, buried on the 3rd of the Kalends of January under the consulship of C. Calpurnius Piso and M. Acilius Glabrio, 687 A.U.C. (65 B.C.), the same year in which the *Lex Gabinia* was voted giving Pompey the command in the war against the Pirates. This Medella seems to have been the last person buried in the tomb. The epitaph to her memory is well known; it is given in all the great collections of inscriptions by Mommsen, Ritschl, and Father Garrucci. But, hitherto, no one had pointed out the connexion which this inscription compels us to recognise between its date and the nature of the objects found in the tomb on which it is engraved.

The necropolis of Canosa, which is of very great extent, is by no means exhausted. A

search is still always successful, and regular excavations would be easy and profitable. There are some spots belonging to the State which have never been explored, where the soil sounds hollow under one's feet, and where the topmost tombs cannot be more than a yard or a yard and a-half below the surface. We must, it should be added, distinguish two different districts of tombs. The ancient Apulian necropolis, which was still used for burial in the first century B.C., was partly covered by the Roman city of the Imperial epoch. The latter was very large. Canusium, which was rapidly declining in the time of Strabo, regained much of its importance under the Emperors, especially when it became the Colonia Aurelia Augusta Pia of which inscriptions tell us. This new city extended principally in the direction of the River Aufidus, extending down into the valley to a great distance from the old acropolis, and far beyond the limits of the Apulian city. The point which its walls, now destroyed, once reached in this direction is marked by a great gate, built of brick, and still standing amid the fields. This was the gate through which the road from Beneventum ran, the course of which, as far as the river, is marked by the ruins of some brick mausolea. Beyond the line of walls indicated by this gate extends the Roman necropolis, where excavations yield but trifling results.

The bronze colossus of Barletta is one of the archaeological marvels of the former kingdom of Naples. It was, according to tradition, taken out of the sea in the Middle Ages, and it is scarcely probable that a metal statue of such exceptional dimensions can have been executed for a locality so unimportant as Barduli, the predecessor of Barletta. I am decidedly of opinion that this colossus represents Theodosius rather than Heraclius, though the latter is the more generally received view. I cannot recognise in a statue so remarkable in point of art, with its haughty bearing, its striking and lifelike aspect, especially in a statue so purely Roman in style and costume, without any Byzantine element, a work of the seventh century. It seems to me impossible to attribute it to a later date than the end of the fourth. It is greatly to be wished that the Government, or the municipality of Barletta, would make up its mind to remove the absurdly small cross which has been placed in the right hand of the statue. To restore the original aspect of the colossus and the fullness of its imposing effect, it would be needful to replace the great sceptre, in the shape of a *hasta crucigera*, which the Emperor held in his uplifted hand and on which he leaned.

Ruvo had no less attractions for me than Canosa, by reason of the brilliancy and rapid succession of the discoveries—especially of its painted vases—which have taken place at the city of the Rubastini. There are no tombs there, as at Canosa, hewn out of the solid rock and surviving all excavations. The sepulchres are of a purely Greek type. They consist of a square sarcophagus of *tufa*, or else of a small square chamber, without an entrance, formed of blocks of stone or large tiles, and covered with blocks of stone. Once only on the walls of one of these little chambers paintings have been found—those published by Raoul-Rochette and preserved in the Naples Museum, representing a dance strongly resembling the *ῥάρρα* of the modern Greeks. The necropolis of Ruvo, which is much less extensive than that of Canosa, has now been turned over in every direction by excavators, and only yields a few objects at long intervals. All, therefore, that the antiquary has to see in this locality consists of the two collections formed in the palmy days of excavations. The first, that of Signor Jatta, forms a regular museum, worthy of a great

State. It contains several thousand vases, all important and well chosen. All the principal specimens have been published, and Signor Jatta himself printed an excellent general catalogue of his museum some years ago. The other collection, that of Signor Caputti, is much less numerous, but contains ten first-class pieces, including the famous *hydria*, which represents the interior of the studio of a painter on pottery with Athena coming in to crown him in the midst of his work. Signor Caputti's most important vases belong to the age of the great and severe style of the red figures. They were found in a plot of ground which is the property of their present owner, where that part of the necropolis seems to have been which was used habitually for purposes of burial at the end of the fifth and the beginning of the fourth century B.C. This is perhaps the only spot in the neighbourhood of Ruvo where excavations would still yield considerable results. Signor Jatta has, in the course of the present year, devoted a special volume to the Caputti collection.

One general remark which is applicable to the tombs of Canosa and Ruvo, and indeed to those of the whole of Apulia, is the small quantity of bronze objects met with as compared with the development and magnificence of the pottery remains and the richness of the gold ornaments which have been discovered in some of them. Bronze appears almost exclusively in the form of armour. The breastplates are generally of an Attic type, decorated in front with medallions in relief in a very beautiful style. In every well-attested case, only one greave has been found with the skeleton instead of two, a circumstance which surprised Millin, but which proves that the Apulians had adopted the same practice as the Samnites, of only protecting one leg with defensive armour.

I was not able to see the museum which, it appears, is being formed at Molfetta, as it was closed; but I was permitted to study the little provincial museum which is in course of formation at Bari. It is still in germ, and is entirely comprised in three cases. Hitherto it possesses only some small vases, of which but a few are at all interesting, and two or three very fine terra-cottas. At all events this museum may henceforth serve to convey an idea of what is generally to be met with in the second-rate necropolises of Bari (Barium), Trani (Turenium), Bisceglie (Natiolum), Bitonto (Butuntum), Monopoli (Minopolis), Altamura, Binetto (Ypinum), and other places in the neighbourhood. Apulian vases of the decadence almost exclusively prevail, together with the so-called "Gnatic vases," with light white decorations on black glaze. I use the expression "so-called" because there is really no serious reason for preserving this appellation, which was invented by the Neapolitan dealers. Nothing gives any pretext for placing at Gnatic the centre of the manufacture of a class of potteries which must have been made in more than one place, and which are equally met with in all the necropolises of the district between Canosa and Tarentum.

Everywhere, too, in this same region we continually find the little *skyphoi* with red figures, bearing an owl on each side between two olive branches; but they occur in even greater abundance than elsewhere at Ruvo and Tarentum, two cities which, at certain epochs, chose the owl as their monetary emblem. These *skyphoi* bearing the owl never occur in the same tombs as the vases with red paintings in a severe style, but from the moment of the appearance of the Apulian vases strictly so called, with their large and intricate decorations, later than the days of Alexander, down to the utmost period of the manufacture of painted pottery. We find, by-the-way, the same vases with the owl at Cumae and at several places in Campania.

There are, therefore, considerable chances in favour of our recognising in them commercial importations from Attica rather than products of local potteries. And, in any case, even supposing them to have come from Italic furnaces, they were at all events copied from models of Athenian origin.

The provincial museum of Bari, side by side with the wares bearing imitative geometrical patterns which I have already mentioned in speaking of Canosa, likewise possesses a few genuinely archaic vases of the period of primitive geometrical ornamentation, which came from the little necropolis of Canneto. They are truly original in appearance, and are all the more worthy of attention inasmuch as hitherto Apulian ware of this epoch was absolutely unknown.

I am speaking here exclusively of the remains of antiquity. If I were more competent to treat of mediæval archaeology, Puglia would supply me with ample material, for the architecture of the eleventh and twelfth centuries is simply triumphant in Puglia. There is scarcely a single city in the district but possesses some great and noteworthy church of that period. The study of these buildings, with their noble exteriors, would furnish a magnificent subject for the researches of connoisseurs in architecture. The work executed by Victor Baltard under the auspices of the Duo de Luynes only just skims the surface of the subject, and much remains to be done before it can be dealt with thoroughly. I am surprised that it has not tempted somebody, and I would recommend it to the best attention of those who interest themselves in the history of the arts in the Middle Ages. Although the interior of some of them has been deplorably modernised within the last century, the cathedral of Canosa (which remains inviolate), with the mausoleum of Bohemond, Prince of Antioch, adjoining it; the stately cathedral of Trani, with its fine bronze gates; those of Barletta, of Ruvo, and of Bitonto; those of Bari and, still more, the caputular church of St. Nicholas in the same city—all in the highest degree deserve to be drawn and made the subject of a special publication. During the domination of the Normans, Puglia reached an unexampled height of prosperity; it was, in the strict sense, the heart of their empire on *terra firma*. Then a great school of architecture arose, with a very sharply defined style, distinct from that which flourished simultaneously in Sicily, but worthy to compare with it, although it has never hitherto acquired the same renown. This school, in which is perceptible a truly Norman influence more accentuated than in Sicily, produced the fine churches which I have just enumerated, and also many others in the inland districts toward Melfi and Andria which I had no opportunity of visiting. It is absolutely necessary that the works of this school should be studied and its history written. The careful exploration of the province of Puglia possesses no less interest for the Semitic scholar. From the end of the Roman empire, during the whole of the earlier portion of the Middle Ages, this district was the seat of numerous singularly flourishing Jewish settlements, which were only disorganised and persecuted by the brutal and fanatical government of Charles of Anjou. These Israelitish communities, which continued for a long course of centuries, have left behind them numerous memorials of their existence. For instance, there are still to be seen at Trani the remains of large and ancient synagogues. But Jewish inscriptions are peculiarly plentiful in Puglia. The time between the fourth and sixth centuries of the Christian era is represented by the important catacombs of Venosa, which have never been minutely investigated. Still more precious are the vestiges of the later

epoch, which are spread through almost every city in this region. It is well known that in many districts of Europe there is a considerable wealth of Jewish epigraphy down to the seventh century, and that after the eleventh its remains are everywhere numerous. But hitherto, except in the Crimea, the period extending from the seventh to the eleventh century has presented an absolute *hiatus* in the series of the remains of this epigraphy, a *hiatus* the more to be regretted as this period was that of the change of customs which brought the Jews to return to Hebrew as the language of their epitaphs, instead of Greek and Latin, which they had preferred in the previous centuries. The ancient Jewish cemeteries of Puglia, hitherto neglected and unknown, fill up this *lacuna*, and furnish us with the elements of a rich Hebrew epigraphy from the seventh to the eleventh century. Last year, at the Florence Congress of Orientalists, Prof. Ascoli presented, with comments, the important collection of inscriptions of this class brought together by the venerable and accomplished Archdeacon Tarantini, of Brindisi. This was, it may be said, the event of the congress, and the value and novelty of these discoveries were highly appreciated by the most competent scholars gathered together from all parts of Europe. But Archdeacon Tarantini's researches were only concerned with a small number of localities; they can by no means be considered exhaustive. After them much remains to be done in the same track; the majority of the cities of ancient Apulia must be carefully explored from this point of view, and those who are specially interested in the history of Judaism in the Middle Ages will find here a very fruitful field which it is high time to cultivate.

FRANÇOIS LENORMANT.

GROSVENOR GALLERY.

[First Article.]

THE winter exhibition at the Grosvenor Gallery consists, as heretofore, of water-colour drawings and studies in monochrome. In both sections, however, the works now displayed are from the hands of living artists, and there is thus a favourable opportunity of contrasting the present resources of the English school with the record of its progress supplied by the collections of former years, and of comparing the sketches and designs of our own painters with the drawings by masters of an earlier epoch. It will be remembered that in the exhibition of last year the history of English water-colour painting was brought down to our own day; but the drawings which were then presented to the public, although bearing the names of living artists, had, in nearly every case, been previously exhibited. They represented, in fact, the labour of many years, and they had been carefully chosen by the artists themselves as representative examples of the successive stages of their art. The present series of drawings brings us to a still later phase of English water-colour painting. Many of the elder professors of the craft are to be found among the contributors, but their contributions are of recent date, and are now displayed side by side with the works of younger painters, many of whom were perforce excluded by the regulations of previous years. It is satisfactory to find that these younger men are fully competent to sustain the character of the particular branch of art to which they have devoted themselves; and the existing societies of water-colour painting will be gratified to discover that the annual exhibitions of their members do not by any means exhaust the existing resources of the school. This is the more satisfactory because there was at one time a fear that the exhibition at the Grosvenor Gallery could not be successfully organised without

some injury to the interests of these two societies. The experiment that has been made proves, however, that there is ample room for all; and its effect will be to free the two bodies to which we have referred from complaints of exclusiveness, which, indeed, find a sufficient answer in the limited space at their command.

But, reserving for the moment all particular reference to the works of English artists, we may draw attention at once to a feature of the present exhibition which gives it a distinct character of its own. We refer to an important series of drawings contributed by the members of the Society of Water-Colour Painters of the Hague. Any effort to give to contemporary art an international character is sure of a welcome; and in this instance it is peculiarly interesting to be able to study the practice of a foreign school in the use of a material that we are wont to regard as specially our own. Englishmen are somewhat too quick to assert and to believe that here, and here only, are the mysteries of water-colour painting understood. The merest glance, however, at the drawings we have named will serve to convince even the most patriotic spirit that such a belief cannot be supported. That our painters have any reason to fear the comparison need not be said; but the ablest of them will doubtless be among the first to admit that they have here to compete with men many of whom have acquired complete mastery over their material. It would be idle to contend for the superiority of either style, for they are so completely distinct as scarcely to admit of any contest. The Dutchmen, it may be remarked at once, are scarcely conscious of the later aims of English water-colour painting. They do not affect to use the material as a means of complete realisation, nor do they seek for the imitative strength and reality of colour which many of our painters can command. In their hands the art still retains much of the simplicity of effect which belonged to the English drawings of a past generation, and they have not, save in a few isolated instances, attempted to break through the limitations which this earlier style imposes. Within the chosen scheme of their labour they prove themselves, nevertheless, to be possessed of a distinct originality both of aim and method. The early efforts of English water-colour were strictly limited in tone no less than in colour; but in the finest of these Dutch drawings, although the local tint rarely approaches to the strength of effect which is constantly attempted in oil, the facts of tone are rendered with a force and fullness that are independent of any conventions of style. This fullness of tone, combined with a strict moderation of colour, produces a general impression of sobriety, which sets these drawings in marked contrast with most of the contributions of our own artists. For it may be observed that the results of the so-called pre-Raphaelite movement, which was mainly directed towards a more complete and precise imitation of natural colour, still linger about the products of our younger school of painters; and the tone where it is true is rarely of great depth or of varied and subtle gradation. But, apart from this command of the facts of light and shade which is common to all the best of these Dutch drawings, and in virtue of which they are distinguished as a class from the contemporary examples of our own school, there is to be noticed in several individual instances a peculiar quality of execution which bears witness to a distinct technical method. Many of these drawings, although apparently painted with the utmost simplicity, have a delicate beauty of surface that is difficult to describe. The transparent colour retains a richness of effect such as would almost suggest vellum, and not paper, as the substance employed by the artist; and yet this effect is obviously the

result of no extraordinary elaboration, but of a particular mode of working.

It is time, however, to pass from these general characteristics of the school to a consideration of some of the more prominent examples. All the qualities we have been discussing are seen in the highest perfection in the several works contributed by J. Maris, whose landscape studies sometimes remind us in their spirit of the earlier art of Holland. His *View at Schiedam* (19) shows a choice and arrangement of composition such as Rembrandt or de Konigh might have adopted; and yet it is marked at the same time by an entirely modern feeling for the truth of a momentary and passing effect of weather. With its mass of illumined cloud suspended above the little town, and the bright glow of evening light upon the red roofs of the picturesque group of houses, it stands out as a direct and powerful study of a phase of beauty actually seen and faithfully recorded. The scope of the artist's powers and the breadth of his artistic sympathies are attested by a small interior (20) executed in a wholly different key of colour, and by a full-length figure of a little girl holding in her hand a peacock-feather (2). The vigour and freedom of handling characteristic of the school are exemplified in the two drawings contributed by H. W. Mesdag, the president of the society. The first of these, representing a line of fishing-boats at anchor (5), is painted with a slowness of touch that is half concealed by the absolute certainty with which every stroke of the brush is laid; while in the second (44), showing a winter scene, a more careful method is employed, without any loss of breadth in effect. The claims of landscape again find worthiest support in the several contributions of du Chattel, W. Roelofs, and Joseph Neuhuys. A *Dutch Lake* (22), by the last-named of these artists, is specially remarkable for that delightful quality of surface to which we have already directed attention. A low horizon leaves full space for the wide expanse of cloud-covered sky, the delicate tones of which are perfectly mirrored in the tranquil water. The picture is altogether a balanced harmony of different gradations of white, and yet within the narrow compass of its colour scheme the artist has found occasion for the exercise of the subtlest qualities of art. We have scarcely spoken of the figure subjects, although they hold no mean place in the collection, comprising, besides several interiors, a masterly portrait by Israels (27) and one or two groups of rustic figures by Blommers and Astz. Nor have we spoken of the flower and fruit pieces by Mdme. Mesdag and Mdle. Backhuysen, but enough at least has been said to give an idea of the great interest that attaches to this particular feature of the exhibition.

J. COMYNS CARR.

OBITUARY.

By the death of Mr. Dominic Colnaghi—which took place the other day at the great age of ninety-one—we have lost the oldest of the old print-sellers, a whole group of whom, including Mr. Tiffin, Mr. Benoni White, Mr. Halsted, and Mr. Hogarth, have been removed by death within the last year or two, and some very lately indeed. Mr. Dominic Colnaghi was for a long time, though not at all recently, we believe, the chief of the historic print-shop in Pall Mall, and he was a man whose critical judgment and whose honesty were trusted entirely by two generations of connoisseurs.

THE historical painter, Christoph Nilson, died at Munich on December 19. He was born at Augsburg in 1811. During the years 1841–44 he painted the thirty-nine pictures from the Greek War of Liberation, as a type of the

German *Befreiungskriege*, from the cartoons designed by Peter von Hess. He also adorned the magnificent staircase of the State Library with an allegorical composition of his own invention, and with the ideally costumed figures of eminent moderns, and in union with other artists executed the series of frescoes after Kaulbach's drawings, which King Ludwig I. arranged for the decoration of the exterior of the new Pinakothek, but which have now almost wholly yielded to destructive climatic influences. The most famous of his original works is his series of compositions from Schiller's *Song of the Bell*.

THE Antwerp School has just lost one of its most eminent artists in the person of Jacob Jacobs, who for a long time past has held the post of professor of landscape and animal painting at the Antwerp Academy of Art. Jacobs belonged to the school of painters which rose into prominence after 1830 and founded the Belgian patriotic band who contributed not a little towards the recognition of their newly constituted fatherland. He was born at Antwerp in 1812, and also studied there, and only later visited Italy, the East, and Scandinavia. He exhibited at the early age of twenty, and his fame quickly spread. Belgium, and especially Antwerp, retained most of his works, and his funeral was followed by all his artistic brethren of the Antwerp Academy, besides other eminent Belgian artists.

ART BOOKS.

The Gentle Shepherd. (Edinburgh: W. and A. K. Johnston.) The effort to reproduce this classic pastoral worthily has been greater than the success; for, notwithstanding all the endeavours of Messrs. Johnston, this is not a volume for which we can say much as a whole. And yet the type is excellent, the paper luxurious; there is a memoir, there is a glossary; the Prologue is published for the first time, and there are given all the original airs to the songs. We do not like the binding; it is undeniably gaudy, and its "entirely new style" is one we do not wish again to encounter. Nor do the illustrations altogether please us, though they are David Allan's, and though they may fairly be considered to be "graphic." But it seems ungracious to take so much exception to a volume which has received care, which must have been produced at serious cost, and which is undoubtedly fine and to the taste of many people not over scrupulous in matters of duty.

The Pied Piper of Hamelin. By Robert Browning. Illustrated by Jane E. Cook. (London: Autotype Company.) The work of illustration now before us is not the first of Jane Cook's, nor the first that has been meritorious, but it is distinctly the best. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work. Never before was the plague of rats so easy to realise, or the discomfort which caused the townsfolk to come flocking to the mayor. And in the different aspects of the varied population of the quaint German town the artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has justified very amply that opinion of the civic authority held by the townsfolk, and summed up by Browning in the expression—"Our mayor's a noddie." And children will like to pore over this book for its vivid pictures—albeit not invariably drawn with correctness or great learning—of the strange adventures of "all the little boys and girls" of Hamelin. The volume affords, in brief, adequate illustration of a poem already classic.

NOTES ON ART AND ARCHAEOLOGY.

THE free Sundays at the Royal Manchester Institution ended on the 28th ult., as the Exhibition closes with the present week. On the eleven Sundays the visitors have averaged 4,698 each day. As the rooms were only opened between two and five o'clock, it is evident that the conduct of these great crowds has been exemplary, since not the slightest damage has been done to any of the pictures.

A COMMISSION has been formed in Paris for the purpose of organising a museum of casts from the antique. This project has long been talked of, but it seems now as if it would be definitely carried out. The right wing of the Trocadéro building is to be used for this purpose.

THE Louvre was necessarily closed to the public during the late snow blockade in Paris, as all the attendants and servants of the museum were required for the work of removing the snow from the roof and windows of the building.

THE January part of the *Etcher* will contain an etching by Robert W. Macbeth, entitled, "Weary with Watching"—a girl sitting in the twilight before the dying embers of a fire. The other two etchings in this part will be by the late Edwin Edwards and Dr. A. Eyarshed.

THE vexed question of the restoration of St. Mark's and the outcry that has been raised about it in England seem at all events to have led to one desirable result, that of reminding all countries of their duties and responsibilities in the matter of affording protection to their ancient buildings and historic monuments. England undoubtedly is not in a position to throw stones at other nations for their neglect of this duty; but, having lately been led to see to a certain extent the error of her former ways, she is now, like all new converts, extremely desirous of propagating her recently acquired views. In a letter to the *Chronique des Arts* of December 13, Mr. Henry Wallis, pursuing a subject before mooted in that journal by the French painter, M. Adolphe Guillon, points out the advantage that would accrue if France would follow the example of England and institute some such association as our "Society for the Protection of Ancient Buildings." The influence of France would doubtless be great over other countries of the Continent, and would be more likely to have a good effect than the violent protests of the English press, which have lately excited both ridicule and bitter feeling in Italy. But it must not be forgotten that France has already a Commission des Monuments historiques, which is responsible for all the works undertaken for the preservation of its really important buildings; and that, though a society of the kind proposed would be likely to be of service with regard to smaller buildings and unregarded relics of antiquity, it could not have the same utility as in other countries where no Commission des Monuments historiques exists. The line to be drawn between preservation and restoration is very difficult to fix. Even the most skilled experts cannot sometimes determine its position. It would be lamentable if, in our present anti-restoration zeal, we should lose sight of the plain duty of preserving as far as possible the artistic monuments left us by our forefathers. In the opinion of M. Louis Goussier, the editor of the *Chronique*, France sins more by neglecting such works of preservation than by any excess of restoration.

THE Society "Arti et Amicitiae" of Amsterdam are organising a retrospective exhibition of works in gold and silver to be opened next April.

AN exhibition of the works of the Russian painter Vereschagin is now open at the Cercle of the Rue Volney.

A PAINTING by the distinguished French artist M. Feyen-Perrin has just been bought by the French Government. It deals with the same subject as Rembrandt's celebrated *Anatomy Lesson*—that is to say, it represents the well-known surgeon Vespaleu dissecting a corpse before his pupils. It is to be placed in one of the salles of the Ecole de Médecine in Paris.

M. GEORGE BERGER has just published with Messrs. Hachette the course of lectures on the French School of Painting which he gave at the Ecole des Beaux-Arts in 1876-77.

THE number of *L'Art* for December 21 is entirely devoted to the subject of "Art in Wood," including wood engraving, wood carving, and upholstery work in general. Some splendid specimens of carved furniture are given by way of illustration.

MR. W. CAVE THOMAS contributes this month to *Social Notes* a short article on Michelangelo, illustrated with a design representing the arts of painting and sculpture.

THE most important article in the new *Zeitschrift für bildende Kunst* is by Josef Wastler, and is entitled "Mantegna's Triumph of Petrarch." It has been supposed that Mantegna painted this subject on the opposite wall to his celebrated *Triumph of Julius Caesar*, the great tempera series now at Hampton Court; but, if so, all traces of his work have long since disappeared. Herr Wastler, however, has lately discovered at the Castle of Colloredo at Udine a series of six small tempera paintings on wood representing the *Triumph of Petrarch*, which he considers to be the studies for the larger series in the theatre at Mantua. He brings forward strong evidence to show that these works were not executed, like the *Julius Caesar* series, by Andrea Mantegna, but by Francesco Mantegna and an artist of the same school named Tondo. The subjects depicted in this series are the *Triumphs of Love, Chastity, Death, Fame, Time and Eternity*. These were subjects frequently treated by the art of the time, and their rendering in this series appears to have been only an adaptation from a celebrated ivory bas-relief which is still preserved in the Cathedral at Grätz. This relief, however, judging from the one illustration given of it, has even a more decided Mantegnesque character than the painting supposed to be copied from it. Herr Valentin finishes in this number his sketch of Philipp Veit; and a long review of Mrs. Mark Pattison's *Renaissance of Art in France* and M. Léon Palustre's magnificently illustrated work *La Renaissance en France* is contributed by Prof. Thausing.

WE have received the first number of *The American Art Review*, a magazine intended to occupy, in the United States, the same position as the *Portfolio* occupies in England. It is a handsome quarto of forty-eight pages, with numerous illustrations and three etchings *hors texte*; the "managing editor" is Mr. S. E. Koehler, and the publishers are Messrs. Estes and Lauriat, of Boston. The articles on American subjects ("American Etchers," "The Washington Monument," "The Barge Bronzes in the Corcoran Gallery, New York," &c.), which are the strength of the *Review*, are all up to a good level, and bear witness to the rapid growth of the artistic and literary class in the United States. But the best thing in the number is the admirable etching by Mr. R. Swain Gifford, of Massachusetts, entitled "The Way to the Shore," a vigorous and truthful study of wind-stunted trees and coarse grasses, and the distant sea. Mr. Gifford, a sketch of whose history and work is given in the number, ought to be better known in Europe than he is, for he is a true artist. The other plates are by Mr. Smillie after Ch. Jacque, and by Rajon after

Murillo, the latter a brilliant rendering of the artist's little-known portrait of himself, now in the Gallery at Buda-Pesth.

Messrs. CASSELL, PETER, GALPIN AND Co. write:—

"Our attention has been called to the notice of *Our Own Country* which appears in your issue of the 27th ult. The expression there made use of in reference to the scheme of the entire work will, we fear, mislead your readers as to the range of the undertaking. We shall, therefore, feel much obliged by your mentioning in your next issue that the volume noticed by you forms the *first section only* of the complete work, which will be extended to several volumes."

THE STAGE.

THE present holidays offer, at all events, the interest of variety at the theatre. There is something for everybody's taste, from poetical comedy to realistic comedy, and from realistic comedy to pantomime. Unfortunately, certain of the pieces appear more remarkable by the expectations they have excited than by those which they have gratified. It is much to have a play from the Poet Laureate, but something still hangs upon the excellence of the play, and there is nothing in Boccaccio's little story, which the Laureate has used, to quite account for the frequency of its selection. Nor does Mr. Tennyson appear to have enriched the tale with any special graces of treatment. Pleasant lines there are, indeed, of Tennysonian simplicity and Tennysonian terseness; but neither poetical nor dramatic excellence appears, as a whole, to have been attained, and some broader comedy introduced into the piece gives little pleasure to the audience. The performance on our stage of slight pieces, full of literary work, and confessedly abstaining from great dramatic situations, has been frequently recommended. The effort on the part of the management of the St. James's is undoubtedly creditable, but the very people who have most recommended such pieces may, without inconsistency, be but lukewarm in their praise of this present one. Little literary pieces by writers hardly less accomplished than Mr. Tennyson himself are presented not seldom in France. Hence the recommendation. But in France, when such a piece succeeds, it does so partly by reason of the skill with which the writer, while eschewing great dramatic effects, is continually busied with smaller dramatic effects—with turns of thought and expression which give opportunity to the actor. Work that is almost entirely literary, or work which, when it ceases to be so, is occupied with broad effects of comedy in that which is deemed to be needful deference to the vulgarer traditions of dramatic effect, has less chance of pleasing. The writers, it may be, hardly exist in England who can be certain of success in stage pieces which are brief and of slight construction and yet aim to be literature. Another method of treatment than that adopted in *The Falcon* is probably necessary, and another order of story may be hardly less essential. The appearance on the stage of work of Mr. Tennyson's could hardly be unaccompanied by a more than ordinary refinement of rendering, of dressing, and of decoration. At the St. James's Theatre this is satisfactorily seen; but, as regards acting proper, Mr. and Mrs. Kendal have no great occasion for the display of their art, and of small occasions, the continuousness of which is wont to save to the stage such a piece in France, there is but an insufficient number. Mr. Tennyson's appearance in stage literature—or, to speak more correctly, his return to it—does not seem likely to have a very revolutionary influence, and Messrs. Gilbert, Byron, and Burnand will probably continue masters of the situation.

THE general expectations have been fulfilled,

and Covent Garden has again whatever credit may attach to the achievement of having produced the greatest spectacle of the year. *Sindbad the Sailor* is spectacular chiefly; the scenes are strung but loosely together, the familiar story is not told with particular clearness, nor is it clear to tell, and reliance is placed on gorgeousness of raiment, glitter of accessories, troops of stage-folk—and folk to whom the stage is probably only known at Christmas-time—dances, music, and colour. At Drury Lane the literary merit of the pantomime—since clearness of construction is of itself literary merit—is due to Mr. E. L. Blanchard, who, under his own name or that of the Brothers Grinn, has so long contributed to the entertainment of all at what used to be "the national theatre." *Blue Beard* is this year Mr. Blanchard's theme. Of other London theatres producing pantomime, it is hardly necessary to mention more than the Gaiety, whose Christmas entertainment enlists a number of performers sufficient of themselves to fill the auditorium of many a provincial theatre. The programme at this house would appear to have been changed not in the least because the earlier entertainment had not been successful—for it was highly popular, and will be resumed—but because Mr. Hollingshead is of opinion that there is a time for everything, and that this is not the time for pure burlesque. All times, however, at the Gaiety are for Miss Kate Vaughan, and the Gaiety audience is not even at Christmas to be deprived of her presence. The Standard and the Surrey—the two large, distant houses, which by the aid of the railway the enterprising playgoer may yet hope to reach—both of them present their wonted form of entertainment. And at Sadler's Wells it is not only for the inhabitants of the district of Clerkenwell and the New River that Mrs. Bateman has provided her holiday fare. At Sadler's Wells the thing is done with intelligence. But it would be difficult to say that in any one of these entertainments there is to be discovered the brightness and freshness of literary wit which alone could make them proper subjects of prolonged notice. The modern theatre is not often intellectual, but at Christmas-time there is not even the pretence of intellect. Why does nobody introduce the French *Revue*, in which the topics of the year are the main theme?

THE Vaudeville Theatre has re-opened after a holiday of two or three weeks. Suitable decorations have been introduced into this pretty and convenient little playhouse, and the place has been cleansed. Moreover, on the night of re-opening, and subsequently, there has been revived a comedy excellently played at this theatre five or six years ago. *The Road to Ruin* has hardly a fault in the eyes of modern playgoers, save this one—that it contains no very attractive part for a "leading lady," or a "juvenile leading lady." Its performance at the Vaudeville now, as formerly, is associated with two excellent impersonations by Messrs. James and Thorne. The piece is funny, and will have a fair run.

GEORGE NELSON, DALE, & CO., 14, Dowgate-hill, London, E.C.
Specially Adapted for ANGLERS, ARTISTS, TRAVELLERS, &c.

EMILY PFEIFFER'S WORKS FOR THE NEW YEAR.

SONNETS and SONGS. A New Edition. 16mo, handsomely printed and bound in cloth, gilt edges, 4s. [Now ready.]

"Mrs. Pfeiffer's sonnets are, to our mind, among the finest in the language."—*Spectator*.

SECOND EDITION, Revised, crown 8vo, 6s.

GLAN ALARCH: his Silence and Song.

"We read it with keen and continuous interest. . . . It is vigorous in picture, profound in its lessons . . . with rare constructive powers and subtle use of metre."—*British Quarterly*.

"It makes a real addition to our possessions."—*Academy*.
"A distinct and valuable contribution to modern poetry."—*Mrs. Pfeiffer has a fair chance of herding with the immortals.*—*Contemporary Review*.

SECOND EDITION, Revised and Enlarged, crown 8vo, 6s.

GERARD'S MONUMENT, and other POEMS.

"An original and well-told story, with an entrancing plot. . . . To a delicate taste and refined feeling is added a high degree of literary skill and genuine imaginative power. Mrs. Pfeiffer's poems are those that scarcely care to quench their thirst with anything less than the nectar of the gods."—*Times*.

"Both scenery and character are touched with genuine skill; the verse is melodious and flowing."—*Spectator*.

"It is long since we have read poems with such intense pleasure."—*Liverpool Advertiser*.

SECOND EDITION, crown 8vo, 6s.

POEMS, including "The Red Lady," "Ode to the Teuton Women," "The Dark Christmas, 1874," &c.

"Scarcely a poem which is not full of beauties of thought and expression, and some are masterpieces of lyric poetry."—*Scotsman*.

"Mrs. Pfeiffer has undoubtedly the true spirit of a singer."—*Saturday Review*.

"Marked by high imagination."—*Pall Mall Gazette*.

"Writes with delightful results . . . 'Broken Light' especially lovely."—*Examiner*.

QUARTERMAN'S GRACE, and other POEMS; including "Madonna Danya," "The Vision of Dawn," and "Translations from Helne." 8vo, 5s.

"A note of true poetry, impossible to mistake."—*Examiner*.
"Pathetic and graceful. Madonna Danya's one is inclined to learn by heart, so as to have it always with one."—*Graphic*.

"The Helne translations have a fidelity and felicity unequalled by any previous author."—*Scotsman*.

London:

C. KEGAN PAUL & Co., 1, Paternoster-square.

W. S. SONNENSCHN & ALLEN'S

ALICE; and other Plays for Children.

By KATE FREILIGRATH-KROEGER, being a dramatized version (under sanction of Lewis Carroll) of "Alice in Wonderland," and "Through the Looking-glass," "Snowdrop," "The Bear-Prince," and the "Princess who never laughed," with *Eight charming Plates and Four Picture-initials* by MARY SIBREE. Crown 8vo, extra cloth, gilt edges, special design, 4s. 6d.

"Will be very cordially welcomed; . . . beautifully embellished."—*Civil Service Gazette*.

"We can fortunately recommend it without hesitation. . . . The author possesses a delicate fancy, a refined taste, and great powers of invention."—*Daily News*.

CHIT-CHAT by PUCK: Tea-time Tales for

Young Little Folks and Young Old Folks, from the Swedish. With Twenty-eight charming Illustrations, and a Frontispiece by MARY SIBREE. Crown 8vo, cloth extra, gilt edges, special design, 2s. 6d.

"Delightful tales, remarkable for the freshness and delicacy of their conceits."—*Delicate and original; shows a true vein of poetry. . . . far above the average, and should please all minds and tastes.*—*Times*.

GRIMM (JACOB), TEUTONIC MYTHOL-

OGY. Translated from the Fourth Edition by JAMES STEVEN STALLYBRASS. In 3 vols., vol. I, 8vo, pp. 420, cloth extra, 15s.

"This book deserves nothing but praise."—*Examiner*.

THE GROSVENOR GALLERY, NEW BOND
STREET, W.

PROSPECTUS.

This Company has been formed for the purpose of estab-
lishing a Circulating Library at the West End of London,
offering exceptional advantages to the Subscribers and Share-
holders.

A provisional Agreement has been entered into on behalf of the Company for the granting to the Company a 30 years' Lease of the noble and desirable block of buildings adjoining the Grosvenor Gallery, in a portion of which the business of the Grosvenor Restaurant has already been established. And the Agreement also provides for the purchase of the valuable Plant and Furniture belonging thereto.

A copy of the said Agreement is deposited at the Offices of the Company, and will be produced to any person desiring to see the same.

These Premises are second to none in London for carrying out the objects of the Company, and the plan of the building, showing the position of the various rooms, and how it is intended to utilise them, will be found attached hereto.

The objects of the Grosvenor Library are fully set forth in the Memorandum of Association, but the following deserve especial attention, as exhibiting the advantages that will accrue to the different classes of Subscribers.

- 1st.—To establish a Circulating Library, with a constant supply of all new books in every branch of English Literature, including the various Periodicals and Magazines, and all new Foreign and Colonial Books of interest and importance.
- 2nd.—To provide a Library of selected and Standard Works in various branches of knowledge, which shall be always available for reference.
- 3rd.—To provide spacious Reading and Writing Rooms, amply stored with all the leading Newspapers and Reviews, both English, Foreign, and Colonial.
- 4th.—To provide Dining and Refreshment Rooms, where Dinners and Luncheons will be served in the style of first-class London Clubs.
- 5th.—To provide commodious Cloak Rooms for the reception of parcels, &c., together with Furnished Lavatories, Retiring and Dressing Rooms.
- 6th.—To book seats for all the London Theatres, Concerts, and other places of Entertainment: which will be done by telegraphic communication with the Theatres.
- 7th.—To provide a Circulating Library of all New Instrumental and Vocal Music.
- 8th.—To provide for the sale of all new books, and for the disposal, at exceptionally advantageous rates, of the surplus stock of such works of permanent interest as have passed out of circulation.

TERMS OF SUBSCRIPTION:—

Subscribers of the annual value of Three Guineas shall have the full benefit of all the advantages offered by the Institution, including the use of the Reference Library, the Reading and Writing Rooms, &c., together with the right to six volumes from the Circulating Library.

Family Tickets for Country Subscribers, with the right to Fifteen Volumes from the Circulating Library, Five Guineas per annum.

Subscribers who wish only to make use of the Circulating Library will be received on the same terms as are now offered by existing Libraries, of which full particulars may be obtained by application at the Office of the Company.

It is believed that the exceptional privileges offered to Subscribers will be specially acceptable to dwellers in the country, or large provincial towns, whose business constantly brings them to London, and who will find in the Grosvenor Library nearly all the advantages of a first-rate London Club.

The want of such an Institution, based upon a large and liberal conception of the public requirements, has been long felt and acknowledged, and the demand for an adequate supply of the works of Contemporary Literature is established beyond dispute by the success of those existing Circulating Libraries, which do not, however, offer the advantages presented by the Grosvenor Library.

Having regard to the numerous advantages offered to the Subscribers, the large amount of support promised by those who have already invested in the undertaking, the favourable opinion of Authors, Publishers, Literary and Scientific men who have been communicated with and consulted as to the advisability and necessity of establishing such an Institution, the Directors anticipate such a body of Subscribers as to justify them in the belief that the undertaking will be a commercial success.

No promotion fees whatever will be paid, the only expenses incurred being those incidental to the formation of the Company.

The only Contract that has been entered into is an Agreement dated the 17th day of December, 1879, between Sir Coutts Lindsay of the one part, and Alexander Rivington, for himself and on behalf of the Company therein stated to be about to be formed under the name of the Grosvenor Library Limited, of the other part.

Prospectuses and Forms of Application for Shares may be obtained at the London and County Bank, 21, Hanover-square, or any of its Branches, the Solicitors and Auditors, and also at the Offices of the Company in New Bond-street.

The TIMES has no Travelling Agents.

THE ATTENTION of SOLICITORS,

PROCTORS, and others is called to LANCASTER HOUSE, in the Savoy, which has been constructed with especial regard to its suitability for SUITES of OFFICES. The Ground and First Floors are arranged so that there is communication between Sets of Two, Three, Four, or more Rooms. The rooms are lofty and spacious, and, as the divisions are not yet all made, tenants can have their own particular requirements attended to. Rents moderate. There are a few rooms on the Second Floor to Let, suitable either for Residential Chambers or Offices, but a great part of that floor and the remainder of the third, fourth, and fifth floors are all let.—Apply to the HOUSEKEEPER on the premises, or to

MESSRS. THURGOOD & CO., 37, Chancery-lane.

SOCIETIES, SCIENTIFIC, PHILAN-

THROPIC CLUBS, and others can find suitable ACCOMMODATION in Sets of Two, Three, Four, or more Rooms on the Ground and First Floors of LANCASTER HOUSE, the Savoy, Strand. It would be possible to arrange for a large Board-room, to be occupied only when required. A Housekeeper and large Kitchen on the premises afford unusual facilities for the comfort and convenience of Secretaries, Clerks, &c.—Apply on the premises, or to

MESSRS. THURGOOD & CO., 37, Chancery-lane.

MAGAZINE and NEWSPAPER PRINT-

ING.—WYMAN & BONS, Printers of the Builder, Brief, and other high-class Papers, call attention to the facilities presented by their Establishment for the Economic Production of every description of Periodical Literature in the best style. WYMAN & BONS will be happy to forward Estimates, and to place their large and varied experience at the command of those engaging in Newspaper enterprise.—WYMAN & BONS, 74, 75, and 81, Great Queen-street, London, W.C.

BOOKS.—Upwards of 100,000 Volumes

In various departments of Literature constantly on Sale at SANDELL & SMITH'S Cheap Book Warehouse, 136, City-road, London, E.C. Estab-

lished half-a-century. Catalogues gratis.

Books bought in any quantity, and the utmost value given in cash, thus avoiding the expense and uncertainty of a sale.

THE ONLY COMPLETE EDITION.

1 vol., 518 pp., folio, handsomely bound, cloth, gilt edges, price 21s. An
entirely new and carefully revised edition of

**MENDELSSOHN'S ORIGINAL COM-
POSITIONS for the PIANOFORTE**, including the "Lieder ohne
Worte." Also a New 6th Edition (518 pp.). Price, in paper cover, 7s. 6d.;
cloth, gilt edges, 10s. 6d.

"The volume before us is indeed a model of cheapness combined with
elegance and convenient arrangement. It contains, in 518 neatly printed
pages, everything Mendelssohn has written for the pianoforte, from the
capriccio in F sharp minor, op. 5, composed in 1825, at the age of sixteen,
to his latest works, including several published after his death. . . .
A student will find no end of interesting points in the works here collected,
but to the more advanced amateur also they will be a source of purest
enjoyment. We need not add that the stately volume before us is eminently
adapted to serve as an elegant and valuable gift-book at this, or indeed at
any, season of the year."—*Times*.

A New Edition of the

LIEDER OHNE WOERTE, from the above
(Eight Books complete), is also published separately. Price, folio,
paper cover, 5s.; cloth, gilt edges, 8s.; 8vo, paper cover, 2s. 6d.; cloth, gilt
edges, 4s. 6d.
* * * The only complete edition.

**ELLIOTT'S HARMONIUM VOLUN-
TARIER**, in one volume, price 4s.; or in three books (each containing
Sixty Voluntaries), price 1s.

Just published.

THE SILVER CLOUD: a Cantata for
Female Voices. The Words written by EDWARD OXFORD. The
Music composed by FRANZ ABT. Price 2s. 6d.

Just published.

LA LONTANANZA. Romanza Composta
da G. ROSSINI. 2s. net.

* * * This song is printed from the MS. left by the Composer, and is now
published for the first time.

BLACKBURN and CALDECOTT'S

"BRETON FOLK": an Artistic Tour in Brittany. Text by HENRY BLACKBURN. Illustrations (171 in number) by Randolph Caldecott. Imp. 8vo, cloth extra, gilt edges, 21s.

"And wonderful illustrations the artist has! . . . To set aside the rare artistic merit of his work, in humour, in the facility of selection, in ease without carelessness, in finish without laboriousness, it is long since so consummate a master has appeared in this particular field of art."—*Times*.

UP and DOWN; or, Fifty Years' Experiences

in Australia, California, New Zealand, India, China, and the South Pacific. Being the Life History of Captain W. J. BARRY, written by himself. With several illustrations. Crown 8vo, cloth extra, 6s. 6d.

From HER MAJESTY the QUEEN.

"Lieut.-General Sir Henry F. Ponsonby presents his compliments to Mr. Barry; he has received the Queen's commands to thank Mr. Barry for the volume which he has forwarded for Her Majesty's acceptance."

From the *Times* Review, December 22.

EXTRACT.—"It is a true record of a life spent in 'roughing it' among many men in many lands. . . . Very varied and interesting. . . . His blunt, homely style, extenuating nothing and setting down naught that he cannot vouch for, lends an additional charm to a narrative from every page of which the truth speaks out. The book is thoroughly worth reading, and worth thinking over as well."

ILLUSTRATED BIOGRAPHIES of the

GREAT ARTISTS. Each volume is illustrated with from Twelve to Twenty Full-page Engravings, printed in the best manner, and bound in ornamental cloth cover, 3s. 6d.

The NEW VOLUMES now ready in this Popular Series are:—

LEONARDO DA VINCI. From Recent Researches.

By Dr. J. PAUL RICHTER, Author of "Die Mosaiken von Ravenna." With sixteen illustrations.

FIGURE PAINTERS of HOLLAND. By Lord Ronald

GOWER, Trustee of National Portrait Gallery. With Eighteen Engravings.

NOTICE.

THE FERN PARADISE is being published

in Shilling Monthly Parts, of which the first is ready this day. Containing forty-eight pages, the Pictorial Title-page and Photographic Frontispiece of the work (a Devonshire "green lane"), a Full-page Engraving from a Drawing by Birket Foster, and an Engraved Plate of Grouped Ferns. The volume will be completed in Twelve Parts at One shilling each.

THE MUNSTER CIRCUIT: Tales, Trials,

and Traditions. By J. H. O'FLANAGAN, Barrister-at-Law, Author of "The Irish Bar," "Lives of the Lord Chancellors of Ireland," &c. 1 vol., crown 8vo, cloth, 10s. 6d.

From the *Times*, December 27.

"The 'Munster Circuit' becomes a very lively volume indeed when it brings us down to times comparatively recent. We need hardly add that on a 'Munster Circuit' there must be many excellent stories of the Bench and Bar, and we can recommend the book as capital reading."

CHRIST in SONG. By Dr. Philip Schaff.

A New Edition, Revised and Enlarged. Crown 8vo, cloth extra, 6s.

ERCHOMENON; or, the Republic of

Materialism. Small post 8vo, cloth, 6s.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Life and Work of St. Paul. By F. W. Farrar, D.D., F.R.S., late Fellow of Trinity College, Cambridge; Canon of Westminster, and Chaplain in Ordinary to the Queen. 2 vols. (Cassell, Petter, Galpin & Co.)

DR. FARRAR'S book has been now so many months before the public, and has obtained so wide a circulation, that we need not spend much space on the description of it. The two handsome and portly octavo volumes remind us closely of the author's *Life of Christ*. Each of these volumes is divided (in a somewhat illogical manner) into a number of "books." The first four chapters of volume i. discuss various introductory matters of unequal interest; the next four take us through the earlier part of the book of the Acts; and with chapter ix. (p. 169) we enter at length in earnest upon the life of St. Paul. We are not sure whether, as a matter of art, in writing a Life of St. Paul, Dr. Farrar ought to have yielded to the temptation to expatiate so largely upon Acts i.-v., or ought rather to have gathered up the whole previous history in a single forcible chapter such as he knows how to write; but for bringing out the meaning of such interesting events most readers will forgive him. The first volume closes with the end of St. Paul's first stay at Corinth, so that the second volume contains a much larger share of St. Paul's literary work, with a much smaller proportion of incident. Both volumes contain neat coloured maps (we cannot say much for the confusing uncoloured one on p. 188 of volume i.) and numerous excursuses, of which some (e.g., those on Gamaliel, the Herods of the Acts, and the Pastoral Epistles) are useful, and will be read with interest; few, we venture to think, will care much for the excursus which consists of an odd and scanty selection of testimonies to St. Paul's style, or for its pedantic neighbour, which deals (as Dr. Farrar does *ad nauseam* throughout both volumes) with his rhetoric. The book is introduced with a dedication, neither graceful nor at all adequate, to the Bishop of Durham. It closes with a carelessly compiled Index.

Dr. Farrar's work divides itself naturally into two portions, viz., that which consists of actual narration or historical disquisition, and that which consists of theology and is connected with the Apostle's writings. To treat with equal success of these two widely different branches of the subject would require a very first-rate genius, and no one would be surprised to find a considerable inequality between what may roughly be called the first and second volumes of Dr. Farrar's book.

Of the laborious diligence with which the

author has worked at the enormous literature of the subject it is impossible to speak too highly, and the material which he has amassed has been woven together with the greatest skill. The result is a narrative which will be devoured by many thousands of English people who would never have dreamt of reading the less brilliant works of the Dean of Chester and Mr. Lewin. Persons who are unable for themselves to draw a very lifelike picture from the perusal of the Acts and Epistles will here find, at any rate, something very tangible. They will find (according to Dr. Farrar's quotation) that *εἰ καὶ Παῦλος ἦν, ἀλλ' ἄνθρωπος ἦν*. It is undeniable that a book of this kind was greatly needed. We cannot candidly say that justice is, in our opinion, done to St. Paul's character, but his adventures and heroic endurance are set forth in glowing colours and with that enthusiasm which overbears all carping criticism. Next after M. Renan's treatment of the same period this may be considered the most charming popular history of the origin of Christianity; while it is needless to say that it exceeds its French rival in sense of responsibility and regard for facts.

Dr. Farrar's gifts for narrative and description are too well known to need exemplification, but we might perhaps point, as instances of the author's best style, to chapter xiv., containing the history of Philo's legation; to the fine passage about St. James (i. 423); to the admirable description of the riot at Ephesus (volume ii., pp. 33-43), where Dr. Farrar forcibly shows how vast had been the effect of the Gospel in Asia during St. Paul's stay there, and clearly explains the reasons of the Jews in putting Alexander forward; and to the riot at Jerusalem (ii. 308-17). We propose to touch somewhat carefully upon a few of the points of special interest.

Though the appearance of St. James can kindle the author's imagination, Dr. Farrar throughout his book does but scant justice to the Bishop of Jerusalem, or to the Church of Jerusalem, or, indeed, to the Twelve. He loses no opportunity of heightening the antagonism between these and the subject of his memoir. It is certainly well that we should be reminded that men took sides very strongly even in those days in the Christian Church; and it is clear that the Judaistic party claimed to be thought loyal adherents of James; but Dr. Farrar has no right to deduce from St. Paul's words, "Other of the apostles saw I none, save James, the Lord's brother," the lecture on James' narrowness, and the formal character of this interview, which he gives us in volume i., p. 233. He entirely mistakes St. Paul's mind when he says, "Even now," at the time of the Congress at Jerusalem, "Paul must have chafed to submit the decision of truths which he felt to be true to any human authority;" and adds that St. Paul had but one consolation to make his case less depressing than that of a Dupanloup awaiting a Papal decision—the consolation being that Paul had "the inward voice, the spiritual intimation, which revealed to him that this course was wise and necessary." It might, perhaps, be thought that a Dupanloup would have quite as complete a conviction of the wisdom and necessity of the appeal; but however that may be, we can be absolutely certain that St.

Paul had sufficient faith to believe that the conference could only issue in a wise decision, when we read his *ἀνέβην δὲ κατ' ἀποκάλυψιν*. In face of the clear distinction drawn in Acts xv. 4, 5, between the Church of Jerusalem and the apostles and elders on one side, who "received" the missionaries, and the Pharisees who marred the unanimity of the reception, how dare Dr. Farrar keep on in this strain? "In the very hottest moment of displeasure against those who at any rate *represented themselves* as emissaries of James" (i. 410; the italics are his own); "Whatever may have been the action of James, or of those who assumed his authority, neither in the New Testament, nor in the earliest Christian writings, is there any trace of enmity between Paul and Peter" (i. 447); "His opponents could produce their 'commendatory letters,' and, at least, claimed to possess the delegated authority of the apostles who had lived with Jesus" (ii. 97);

"It was true that this class of men came from Jerusalem, and that they belonged to the very Church of Jerusalem for whose poorer members he was making such large exertions. It was true that, in one flagrant instance, at any rate, they had, or professed to have, the authority of James. Could it be that James, in the bigotry of lifelong habit, had so wholly failed to add understanding and knowledge to his scrupulous holiness, &c., &c.? If so, it could not be helped. James was but a man" (ii. 131).

So determined is the Doctor to find antagonism between St. Paul and the Church of Jerusalem that, in spite of the *ἀσμένως ἀπεδέξαντο ἡμᾶς οἱ ἀδελφοί* of Acts xxi. 17, he writes:

"As we read the narrative of the Acts in the light of the epistles, it is difficult to resist the impression that the meeting between the Apostle and the elders of Jerusalem was cold. . . . There lay all this money. . . . Yet we are not told about a word of thanks, and we see but too plainly that Paul's hardly disguised misgiving as to the manner in which his gift would be accepted was confirmed" (ii. 294).

On the next page Dr. Farrar undertakes to correct the A.V. for rendering *κατηχήθησαν* "they are informed;" he himself renders it, "they have been studiously indoctrinated." If his own scholarship had been a little less hasty, he might have seen in this one aorist a sign of relenting and repenting after a wrong judgment. St. Paul's loyal return to Jerusalem had quite falsified all this teaching already; "they *were* schooled to think that you taught apostasy," but now it will be impossible to think it. There are very serious sanctions against bringing unfounded accusations against any person, which Dr. Farrar can hardly have thought of when he allowed himself to pen the following:—

"So unanimous, . . . even, we fear, among some nominal Jewish Christians, was the detestation of the man who taught 'apostasy from Moses' that in most circles there was no need of concealment [of the murderous conspiracy of the forty Jews]. When St. Peter had been in prison and in peril of execution, the Christian community of Jerusalem had been in a ferment of alarm and sorrow, . . . but St. Peter . . . was regarded with feelings very different from those with which the Judaic believers looked on the bold genius whose dangerous independence treated Mosaism and its essential covenant as a thing of the past for converted Gentiles. We hear of no prayer from any one

of the elders or the 'many myriads' on behalf of St. Paul."

Most readers will be convinced, after reading Dr. Farrar's statement of the case, that Titus was circumcised on the occasion of St. Paul's second visit to Jerusalem. It is true that Dr. Lightfoot has decided against this view, but Dr. Farrar has had the boldness to reopen the question, and we think he has the best of it. If St. Paul meant that Titus was *not* circumcised, we agree with Dr. Farrar that it would have been more natural, even in the excited state in which St. Paul wrote, to have said οὐδὲ . . . περιετμήθη. There are two points, however, which Dr. Farrar misses in a very odd manner, one of which, at least, would considerably strengthen his argument. Why does he, in the name of common sense, translate Ἑλλην ὄν, "Greek though he was," as if his Greek nationality were a natural reason for circumcising him? And why does he, in the name of Greek scholarship, translate τῇ ὑποταγῇ, "by way of submission," as though demonstratives meant nothing? Surely St. Paul is conscious of having made an act of ὑποταγή, or personal self-denial for the sake of others, in which Titus joined? This, which was merely a personal matter, had been construed by the Judaizing teachers of Galatia as an acknowledgment of error in not having taught the necessity of circumcision. St. Paul accordingly says that he laid fully before the heads of the Jewish Church the Gospel which he preached among the Gentiles. Possibly they urged him first to teach the general necessity or advisability of circumcision; then, finding that he would not consent to this sweeping change, they urged that at least Titus, as being there in Jerusalem, had better be circumcised; and this, for such reasons as Dr. Farrar alleges, he agreed to. "But," he says, "not even Titus, though he was with me there upon the spot, was under any compulsion to be circumcised—for he was a Gentile—but because of the sham brethren smuggled in, some men who sneaked in to spy out our liberty which we have in Christ Jesus, in order that they might, for the future, reduce us to slavery—not that we yielded to them even for an hour by the self-suppression—in order that the Gospel truth might throughout abide with you." A glance at the use of ὑποταγή and ὑποτάσσεσθαι in Bruder's Concordance is enough to show that it expresses that personal subjection of one's own inclination to the advantage—even to the caprice—of others which is one of the first demands of Christian ethic.

It will be a surprise to many to find that Dr. Farrar maintains that St. Paul had been married. In the first place where he touches upon the subject, the fact is stated with a somewhat offensive coolness. Speaking of St. Paul's early training, he says:—"That training, as we can clearly see, was the ordinary training of every Jewish boy. . . . At thirteen, he would, by a sort of 'confirmation,' become a 'son of the commandment.' . . . At twenty, or earlier, like every orthodox Jew, he would marry" (i. 43). It is, we fear, a confession of blindness to say that we cannot "clearly see" the necessity of the supposition. Dr. Farrar's argument from 1 Cor. vii. 8 is a curious one

(i. 80). He thinks that ἀγάμους there must needs mean "to widowers," for which he says there is no Greek word (he forgets that χήρα is the feminine of χήρος), "because he has been already speaking, in the first seven verses of the chapter, to those who have never been married." We should like the learned author to take the trouble to read through those first seven verses and see whether he still thinks they are addressed "to those who have never been married." There can be little doubt that the expression ἀγάμος, "unmarried," means in the first instance one who never has been married; and in verse 34 it may be said to represent the foregoing ἡ πάρεσος. It is only by transference that it is used, as in verse 11, of one who has been parted from a spouse, as we speak of a man leading "a bachelor life" when his wife is away. Thus, all we can say is that τοῖς ἀγάμοις καὶ ταῖς χήραις means "to all unmarried persons and to widows," with a preponderant reference to persons who have never been married. This becomes clearer when we read the beginning of the chapter a little more carefully than Dr. Farrar has done. St. Paul is asked to decide between the married and the unmarried state (whether virginity or widowhood). He answers unhesitatingly for the unmarried state: "It is a grand thing for a person not to touch a woman." He then just concedes that there are advantages to be gained by marriage, and that married life has its duties. Married people are not, without mutual consent, to leave each other. If they *do* thus leave each other he allows them to re-unite, but prefers that the separation should be permanent ("But my will is that all persons should be as I myself am"); only there are obvious difficulties in the way. After this digression addressed to the married he resumes what he had left in verse 1—"But to unmarried persons and widows I say it is a grand thing for them if they continue in the same condition as myself," i.e., unmarried. There is therefore here not a word to indicate whether St. Paul was a widower or never married at all, and we have to conclude from other grounds. If he was a widower we gather that his marriage must have been an unhappy one and a source of anxiety to him. Dr. Farrar appeals to "the deep and fine insight of Luther" to show that none but one who had tried the experiment could have written so wisely and tenderly on the subject; but the incontinent Reformer was no disinterested judge. We should indeed venture to say that the peculiar homely tenderness which is so marked in St. Peter is conspicuously absent from St. Paul. It is useless, however, to guess from character; and when we turn to the facts which Dr. Farrar alleges, they are not worth much. Granted that the Rabbis made matrimony a duty, celibacy was not a thing unknown, and Barnabas—not to speak of James—seems to have been a case in point. The grand argument of Dr. Farrar depends on a great many "ifs." It is by no means certain that Saul was ever a member of the Sanhedrin—in fact, quite improbable. If he was, Dr. Farrar allows that, according to the Mishna, marriage was not an indispensable qualification for membership; while the later works to which he refers state, not

so much what was in fact required, but what their authors deemed good for an ideal Sanhedrist. Clement of Alexandria only makes him a married man in order to explain the γυνήσιν σύνεργε of Phil. iv. 3, which (like M. Renan, who thinks it means Lydia) he understands, in defiance of grammar, to mean "my true wife." As Dr. Farrar rejects this interpretation (he takes Synzygus for a proper name), he cannot claim Clement's support, and finds himself confronted with an almost universal Christian tradition that Paul lived from first to last a life of virginity.

It is a pity that Dr. Farrar, in writing his account of the voyage and shipwreck, has not submitted his narrative to the censorship of some competent nautical authority, and, if possible, to one who is well acquainted with those particular seas. Nothing can be more excusable than that a Canon of Westminster should himself be unacquainted with the technicalities of the sea; but the book might thus have been made more correct and less perplexing. A friend of the reviewer's, who was for many years a captain in the Peninsular and Oriental service, and is intimately acquainted with the Mediterranean, points out a large number of details in which the author's ignorance of seamanship has misled him, sometimes into blunders which appear a little ludicrous to a professional mind. What makes Dr. Farrar assume, for instance, that they started from Caesarea with a westerly wind (ii. 365), which would be blowing home into the harbour of Caesarea, and make it extremely difficult for a heavy craft to beat out of the harbour and weather the rocks off the northern point, as well as give her a lee-shore to sail along all the way to Sidon? What does he mean (p. 366) by "beating to windward by the aid of land breezes and westward currents right across the sea which washes the coasts of Cilicia and Pamphylia?" The confusion of the sentence is by no means clarified by the foot-note on the next page—"It will, of course, be borne in mind that they could not work to windward." As a matter of fact, ancient ships could and did work to windward, though only so as to gain off each tack an angle of 11° 15'—not quite two miles to windward for every ten sailed, which would well account for Acts xxvii. 7. Dr. Farrar errs in good company when he renders ἀνεμος τυφωνικός "a tempestuous typhoon," as though there were any connexion whatever between the Greek word and the Chinese name which has passed into English; it is, perhaps, an instance of what Dr. Farrar, on the same page, calls a word *surfrappé*. The run described by the author as a kind of mad race which brought the ship under the lee of Clauda (if that be the right name of the island, not Καῦδα—the modern name being Gaudo, not, as Dr. Farrar states, Gozzo) was by no means so hopeless a matter as we are given to understand, but doubtless designed by the captain in order to get into the smoother water there. And why in the world does Dr. Farrar think they left any part of the mainsail set? or that they set the *artemo* (here called a storm-sail, though he rightly calls it later on a foresail), which was the very last a captain would think of setting when the object was to keep her up to the

wind, and to prevent her from running to leeward in the direction of the Syrtes? Or what would Dr. Farrar himself, on a few moments' reflection, think of the wisdom which, thus "having made all as snug as their circumstances permitted, let her drift on, broadside to leeward, at the mercy of the wind and wave!" But, perhaps, the crowning piece of seamanship is what we find on p. 375. That ἡ σκεπή means the mainyard cannot be doubted, nor that it was cast out; but our excellent naval friend assures us that he would have taken away the captain's certificate had he done what Dr. Farrar and others think he did. It was not for the purpose of lightening the ship that it was cast out; for it was useful, when well secured above the decks, to steady the vessel, as also fore and aft the ship to give the soldiers and prisoners something to cling to. To part with this spar without hope of recovery would have been to render the ship helpless when the gale abated. The word which is used (ἐπιβάτης) is the regular technical word for casting an anchor, and there can hardly be a doubt that these admirable seamen (whose object was to retard the drifting of the ship as much as possible) made of it what is called a sea-anchor. This would give a much better account of the slowness of their progress towards Malta than that which Dr. Farrar takes from Smith of Jordanhill. Dr. Farrar omits also to account for Euroaquoilo carrying the vessel to Malta at all, instead of on the Syrtes, which was due partly to the effect of a sea-anchor cast from somewhere near the bows of the vessel, and partly to the fact that these Levanters invariably veer to the east, or even to the south of east, as soon as they escape from the Archipelago into the open Mediterranean.

The latter portion of the second volume gives us the impression of being huddled up to suit the demands of a publisher; and we cannot but hope that Dr. Farrar, in a new edition, will give more time to considering the Spanish journey, and also to the question of St. Peter's presence at Rome. It is absurd to characterise the Epistle of Clement of Rome as "tradition," as Dr. Farrar is content to do. For doctrinal purposes, indeed, it is all very well to draw a distinction between Scripture and tradition, but not for history. Clement shows a personal and familiar acquaintance with St. Peter and St. Paul, and his statements are no more to be snubbed with the title of "tradition" than those of the Acts.

We have already said that Dr. Farrar's treatment of the epistles of St. Paul is by no means equal to his treatment of the history. His analyses, indeed, are often very useful; and the introductions (we may, perhaps, name especially that to the Epistle to the Galatians) convey the usual statements in a very agreeable form. Each epistle is paraphrased—here a bit translated, here a condensation, there an expansion, the connexion being often very well displayed—and undoubtedly English readers who go through the two volumes will learn a great deal about the epistles which they would not have been able to make out for themselves, and which they would not have the patience to pick out of a commentary, even if a good English commentary were always to be found. We may therefore be very grateful to Dr. Farrar for

popularising much of the latest research on the subject. At the same time, to be done really well, even for the half-educated class at which Dr. Farrar aims, these epistles required the hand of a theologian. The Epistle to the Romans is especially disappointing; but then how few would be capable of dealing adequately with it! Dr. Farrar's off-hand and frivolous procedure with doctrinal points may be seen exemplified in i. 614 foll., in connexion with "the Man of Sin;" or in ii. 186 foll., in connexion with justification. We may just mention (not as a matter of theology) that the author adopts the theory that the salutations of Rom. xvi. are addressed to the Church of Ephesus, and were properly attached to the copy of "Romans" which was forwarded to Asia. The position is very well maintained. We only wonder that it has not occurred to Dr. Farrar that the concluding doxology seems much more in keeping with the style and purpose of the "Epistle to the Ephesians" itself than with the treatise to which it is now attached, and we should be glad to see some investigation of the question whether these are not really parts of the Ephesian copy of that letter rather than of their copy of the letter to the Romans.

We hope we have not spoken unkindly of a book for which we are sincerely grateful. If it be so, we feel compelled to remark in self-defence that the author's style is one which drives a reader into involuntary antagonism. Enough has been said by others on this point, and it would be ungracious to add more. If anything could have cured Dr. Farrar's tendencies, the strictures upon the style of his *Life of Christ* would have done so, but we must henceforth suppose the disease to be congenital. We may be allowed, however, to hope that, if Dr. Farrar presents us again with a work of the kind (we trust he will), he will put the proofs into the hands of someone of ordinary taste to strike out as much as he pleases without fear. We should then lose the little tags of gaudy quotation like "expressed in dithyrambs, and written in jets of flame," "clenched antagonisms," "rush of congregated wings," "gone glimmering down the dream of things that were." The ordinary "illiterate *am ha-arets*" or "humble *hediot*" who compose (we presume) the "*choots-learets*" would no longer be startled to find themselves called by such names; while the "*Chakam*" does not need to be reminded of them. "Ger" and "mesith" and "minim," "chaluka" and "mezuzoth" and "cherem," "tephillin and tsitsith," would disappear. Perhaps even we might be delivered from sentences like "Probably they regarded him, at the best, as the Ananias for future Eleazers," or "We have not a single instance of Gematria or Notarikon, of Atbash or Albam, of Hillel's *middoth* or of Akibha's method of hanging legal decisions upon the horns of letters." "Crypts of shame" would be refused admittance as the rendering of τὰ κρυπτά τῆς αἰσχύνης, as well as words like "charism" and "esemplastic;" and the author would not have been allowed to mar a very forcible passage by introducing a "finished specimen of courtly *eutrapelia*."

In a new edition, also, it would be well to remove the misprints, of which we have noticed considerably over a hundred, especially

in the Greek, which give the book a very unscholarly appearance. Those in ii. 465, 537, of "Thrace" for "thence" and "Lymus" for "hymns" are very ridiculous. By accident also Dr. Farrar puts "Domitian and Maximin" (i. 177) where he means "Diocletian and Maximian" (he is wrong, however, about the fact); "Maximius Galerius" (i. 318) where he means "Maximianus Galerius." On p. 377 (volume i.) he twice confuses us by "east" for "west" and "west" for "east." In one place (we have lost the reference) "Ægean" stands for "Adriatic." We might ask also to have the notes, in a subsequent edition, more carefully attached to the words they are intended to explain, instead of the somewhat random position they now occupy. But these are all but small blemishes in a book which will kindle a flame of new interest in the life of St. Paul throughout the whole of England.

A. J. MASON.

Sunshine and Storm in the East; or, Cruises to Cyprus and Constantinople. By Mrs. Brassey. Maps and Illustrations. (Longmans.)

MRS. BRASSEY'S record of a cruise to Cyprus and Constantinople will be received with pleasure by many of her old friends who followed with sympathetic interest the fortunes of the *Sunbeam* during its voyage round the world. True, the scenes now described are more familiar than were the lonely islands of the Pacific. Still, there are nooks and corners in the Mediterranean which a traveller confined by necessity to the use of public means of locomotion only rarely finds an opportunity of visiting; and some of these are described here. Besides, a description of our ancient haunts, if emanating from a kindred mind, often revives reminiscences of a pleasant nature, and proves more attractive than would an account of localities with which we are not personally acquainted.

Mrs. Brassey unreservedly takes her readers into her confidence. She introduces them into her charming family circle, and makes them participants of all the joys and woes which a voyage on the fitful ocean entails, even when undertaken in a yacht so luxuriously fitted as is the *Sunbeam*. For the nonce she chooses to live in a glass house, but who would be so ungallant as to throw a stone? On the contrary, few are likely to rise from a perusal of her confidences without being charmed by her simple frankness and impressed with her restless energy and perseverance. Who among us would persist in yachting if, after thirty years' experience of the sea, he were constrained to admit that he became as ill as if he had never been to sea before? Nor are there many who would outdo Mrs. Brassey as an indefatigable sight-seer. Not a single opportunity appears to have been missed by her, and occasionally even "Tom" preferred to stay on board his comfortable yacht rather than accompany his wife on her never-ending trips to museums, churches, castles, and places of amusement.

Perhaps the most interesting portion of the book is that which relates to Constantinople. In that much-coveted capital of the East Mrs. Brassey spent a considerable time,

and came into contact with all sorts of persons, not the least remarkable of whom must have been the "travelling professor from Oxford, come out to observe the transit of Venus, with very strong opinions of his own—among others, that Sir Isaac Newton was a fool." The author reproduces with zest the gossip of the place, and has a great deal to say about the idiosyncrasies of poor Abdul Aziz, whom all the world appeared to have agreed to treat as a madman. One of his manias, we are told, was a dread of fire, and he ordered that all flat candlesticks should be placed in saucers filled with water. We are gravely told that "he had two of the sultanas bowstrung for transgressing this rule." After an entertainment provided by the Khediv, then in Constantinople, the Sultan ordered the gold dinner service to be carried off to his palace, intimating "that no one could eat off it after him." M. Chlebowski, a Polish painter whom he employed to paint sea-pieces from sketches of his own, had a great deal to suffer from the Sultan's peculiar sense of humour, and at the end of nine years was obliged to give up his employment, quite broken in health.

"On Friday the Sultan used to say:—'You are a Christian, so you can work, though it is our Sabbath;' on Saturday, 'You are not a Jew, so of course you work to-day;' and on Sunday, 'I know this is your day of rest, but it is not mine, as I am a Mussulman; so you must work for me.'"

Very striking is the contrast between the Constantinople of 1874 and that of 1878.

"Constantinople has lost much of its glitter and glory, but the mud, squalor, and misery remain, and are increased tenfold."

The bazaars have very much gone off since 1874.

Everybody in Turkey—certainly in Constantinople—from the highest to the lowest, appears to be more or less hard up. The slaves from the harems are constantly bringing valuable jewels and plate to be disposed of for a little money, not having themselves the least idea of their value.

A friend of mine saw five splendid hoop gem rings, each worth nearly a hundred pounds, sold by a slave to a Jew for one pound each; and, on another occasion, some superb coffee-cup holders, a mass of rubies and diamonds, disposed of for next to nothing.

The bazaars themselves are picturesque, dirty, and dark, as of old, but the gay part of the crowd has departed. No more gorgeous silk-lined carriages, drawn by white horses, and guarded and attended by eunuchs, slaves, and soldiers; no more less pretentious equipages, from which step ladies, attired in silk and satin, and sparkling with jewels, their bright eyes imperfectly concealed by their yashmaks and feridjees. All these are past and gone, and all that can now be seen are a few poorly dressed ladies making their small household purchases.

One or two of our former intimate friends denied themselves to us from a feeling of dislike that their altered circumstances should be seen."

On the Women's Rights movement in Turkey Mrs. Brassey is able to communicate some interesting information, for, she came into contact with several ladies of the highest rank, whose harems she visited and who returned the visit on board the *Sunbeam*, a very bold step five years ago. One of her visits to the wife of Hilme Bey she describes as follows:—

"She was at home and received us in a French robe de matinée, a blue cashmere beautifully

embroidered with wreaths of roses, *crêpe lisse* ruffs and frills, a pile of dyed golden hair (naturally black) rolled and twisted and curled in the latest fashion. She laid down a French novel to rise and greet us—rather a contrast to the last harem I had been in at Tunis. All the women of the higher classes of the present generation are tolerably educated, have European governesses, and read European books—principally novels, I fancy—and all bemoan their present hard fate very much. To hear this poor little woman talk of her own and her lady-friends' feelings, you would think the revolution must soon come. The children of the present day in Turkey are brought up to think the system of *yashmaks* and confinement a most tyrannical custom, and not to be endured. Still I am afraid education does not prevent their using the cowhide frequently and very cruelly on their slaves."

At another harem "the conversation turned, as usual, on the wrongs of the Turkish women, and the most ardent longings for freedom and liberty were expressed by all." This was in 1874. Four years afterwards, in 1878,

"their costumes were more Parisian, their *yashmaks* thinner than ever, and the slaves, having forsaken their beautiful Eastern costumes since we were here before, looked more fashionable, but not half so pretty. The last four years seem to have added greatly to the amount of liberty they enjoy. They are now much less particular about seeing gentlemen, and, once in the cabin, laughed and talked with the greatest freedom and enjoyment."

These aspirations may at no distant date lead to a social revolution; but as long as the institutions of polygamy, white slaves, and black eunuchs are allowed to exist there can be but little chance of the emancipation of women. As long as the "proprieters" of these outspoken and superficially educated ladies are content to leave things as they are, no great change in the social position of Eastern women is likely to take place. And that the men, with rare exceptions, are not yet prepared to yield to the demands for "freedom and liberty" was shrewdly hinted at by one of the ladies concerned. "Though my husband is not so very particular himself," she said, "I don't believe he will ever do anything to emancipate us or get us places at the theatre. They are all alike—such *Turks*!—and are too glad of an excuse to go out alone and enjoy themselves."

Numerous woodcuts, some of the best from original drawings by the Hon. A. Y. Bingham, form a pleasing feature of the volume, the cover of which has been designed by no less an artist than M. Gustave Doré.

E. G. RAVENSTEIN.

The Letters of Charles Dickens. Edited by his Sister-in-law and his eldest Daughter. (Chapman & Hall.)

THE claim put forward by those who have arranged these two volumes of the *Letters of Dickens*, that they have given us "another book from Charles Dickens's own hands," it is easy to concede; and, though Miss Hogarth and Miss Dickens have gone no further in their professions as to the contents of this book, another claim might conceivably have been made with regard to it, and would likewise have been readily allowed—that the book is one which must exalt immeasurably the

popular estimate of the character of the writer. It was shown in Mr. Forster's volumes how constantly and fully Dickens lived in his writings till his own identity seemed lost in that of the people his art had created—and, indeed, more than once in his Prefaces the author had himself hinted at this. It is shown in the newer publication how thoroughly it was the character of the man, his own sympathy with men and women, his own activity of hatred and good-will, which was reflected in his work. It was a clever person—I forget his name—who said that there was one sufficient reason why he could never himself hope to write a popular story—he lacked the first qualification of a novelist, who is also a thoughtful and independent man, "the power of adroitly suppressing his own opinions." But Dickens never needed that power. He was himself in full sympathy with the popular mind, and in his novels, to be sure of popularity, he had no need to forget what he believed and what he wished for. He was on the stage indeed, but in *propria persona*. He was not playing a rôle.

This is one of the things made evident most clearly in the volumes which have had already, in so many quarters, so hearty and deserved a welcome. They make plain that Dickens, not only by his writings, was a leader of men: a leader by right of his energy and judgment, and impulsive affection. He was, of course, egotistical, as a leader is bound to be; there is something quite entertaining in the implied belief of the jog-trot critic, in society more than in journalism, that a man who knows he is born to lead and to originate must be, for modesty's sake and manners' sake, perpetually performing the elaborate farce of pretending that he desires only to follow and to copy. Dickens never played that farce. He was a great figure in the world, and he knew it, and enjoyed it. He was the chief figure in his own large group of relations, friends, and business associates. He was interested, and genuinely, in all their affairs. He did his best, at all times, with the energy that characterised him, to help, and counsel, and further them. Himself he never spared. But his career still remained above everything else. He rightly felt it was the most important thing that lay within his control. And the world, indeed, has every reason to be very grateful to him for the "egotism" which insisted on the accomplishment of his work.

The letters of Dickens—the public knows it by this time—extend from the early days before the publication of *Pickwick*, when he was ordered on journeys for the *Morning Chronicle*, and when fourteen pounds a month, "to write and to edit" for Messrs. Chapman and Hall, was "an emolument too tempting to resist," to the last day at Gadshill Place, when he had already long reached, and, in the face of rivalry, energetically maintained, his post as the most widely influential writer of the century. The early letters are, indeed, comparatively few, and they are also, generally speaking, somewhat brief and bald. It was not in the beginning of his career that Dickens formed the habit of addressing to many friends letters that, for fullness and completeness of detail, as well as for exactitude of statement, might compete with the more famous epistles of the eighteenth century, when

letter-writing was a very elegant accomplishment for the people of education, who were also the people of leisure. That as time went on Dickens acquired the custom of so much private writing is not only, as everyone has felt it to be, proof of his superabundance of activity—this curious engagement in literary labour not only gratuitous (for that is nothing), but often unnecessary—it is also a proof that written thought came from him so spontaneously that often what would to most men be labour was only an exercise and a recreation. The fact points in an interesting way to what must have been the facility of his professional work. And, indeed, a view of the MSS. of the novels written in his best period confirms the conviction of this curious ease. Where other men chattered Dickens wrote, and wrote with finish as well as with force, and wrote literature that was to be inevitably lasting.

One of the things in these now published Letters which will not fail to exalt the writer in the estimation of that younger generation of cultivated people which never knew the writer himself, and which has been accustomed to consider his pathos as little better than a profitable affectation, is the evidence the Letters afford of the warmth and grace of his sympathy. It was given to him to be able to feel strongly and to condole delicately. Take the excellent little letter addressed to Mark Lemon when he had lost a child:—

"Leech and I called on Tuesday evening, and left our loves. I have not written to you since, because I thought it best to leave you quiet for a day. I have no need to tell you, my dear fellow, that my thoughts have been constantly with you, and that I have not forgotten (and never shall forget) who sat up with me one night when a little place in my house was left empty."

And here is a part of a letter to Miss Mary Boyle, speaking of the death of Richard Watson, and of Dickens's first visit to the house since the death:—

"Yes, on that bright cold morning when I left Peterborough, I felt that the best thing I could do was to say that word that I would do anything in an honest way to avoid saying at one blow, and make off. I was so sorry to leave you all; you can scarcely imagine what a chill and blank I felt on that Monday evening at Rockingham. It was so sad to me, and engendered a constraint so melancholy and peculiar that I doubt if I were ever much more out of sorts in my life. Next morning, when it was light and sparkling out of doors, I felt more at home again. But when I came in from seeing poor dear Watson's grave, Mrs. Watson asked me to go up in the gallery, which I had last seen in the days of our merry play. We went up, and walked into the very part he had made and was so fond of, and she looked out of one window and I looked out of another, and for the life of me I could not decide in my own heart whether I should console or distress her by going and taking her hand and saying something of what was naturally in my mind. So I said nothing, and we came out again, and on the whole perhaps it was best; for I have no doubt we understood each other very well without speaking a word."

And, next to the deepening of men's impression of the warmth of Dickens's friendships, and of his sensitiveness to the sufferings of the people he liked and the people he did not know, there arises from a reading of the

present Letters—which express his mind so intimately—a conviction of the variety of his interests, and here and there of their strength. He was not the personal acquaintance of all the world of drawing-rooms, but the personal friend of many folk of all kinds, scattered over town and country; closely allied here and there to some representative of the Stage or of Literature—to Macready, to Fechter, to Barry Cornwall, to Wilkie Collins—closely allied, and just as likely to be, to pleasant people without rank or reputation, people whose merit was youth, or prettiness, or vivacity. With art of all kinds he, of course, came into contact; but of pictorial art his appreciation seems to have been guided by his friendships: the pictures he cared about were those by the popular men of his day. The greater work of some living men, who were less popular, or were less known to him, does not seem to have found in Dickens a very keen or admiring observer. The art of sculpture he has hardly occasion to mention; with regard to the art of music, he appears scarcely to have risen to the classical, certainly not to the "Future."

But, just touching many arts, there was one—besides his own great art of writing—that he knew profoundly. Of the Stage he was an almost faultless critic; it has been said only too often that he might have been a great performer. From the beginning of his career to the end it had freshness of interest for him. During part of his youth he was every night at the play, and in his mature age the theatre—wherever it was good—was just as fascinating. He appreciated perfectly the polished art of Regnier, the grace of Fechter, the quiet and tender naturalness of Miss Kate Terry; and long before he himself, so to say, almost brought the art of the stage upon the platform—I mean in the more dramatic of his readings—he made quite a business of the pleasure of private theatricals, and was engaged as busily with *The Frozen Deep* as in writing the *Tale of Two Cities*. He seems to have been determined to have as much as possible of the double career; nor when he devoted himself to the theatre was he actor alone—his stage contrivances were as shrewd and ingenious as Mr. Irving's.

Practically it was to his love of the Stage that his life was sacrificed. The iron nerve had borne up under the strain of writing a score of novels which he knew were to be, in a sense, for his own generation, the standard of fiction—it actually broke down only under the excitement of nightly contact with the public for whom he was both the player and the play. The hold which his readings—which were in truth the most arduous of his stage practice—took upon him was gradual. They began as a charity and as an amusement. But his temperament was sure to turn any artistic amusement into labour—into struggle for excellence. Physical exercise was the only thing that could have remained with him purely recreative. The two hours' reading, which at first was little studied—was taken much as it came—got gradually built up into a difficult part, each line laboriously yet lovingly studied, and the first creation of the novelist overlaid by the second creation, which is that of the actor. As time went on a greater physical strain

was to be put upon him. He had for years been content, in the *Carol*, in the *Chimes*, and in *Little Dombey*, with stage effects of light comedy or of quiet pathos. *Dr. Mari-gold*, with its abrupt transitions from the humour of the Fair to lamentation and up-braiding at the death of the child, must have been more trying; but Dickens was to be tried most when he could least of all endure the effort—when he determined to add to laughter and tears the harrowing art of the melodrama. The reading of Sikes and Nancy—"the murder in *Oliver Twist*"—was a tremendous assertion of his power as an actor, and as such, of course, delightful to him; but it cost him too much. Its success was unquestionable, and it is perhaps not too much to say that for a time it overpowered the maker of it. In his delight in the excitement of the effect produced he was nearly losing a sane appreciation of the just relations of things—a little of the earlier "egotism" for which he has been blamed would have been of service to him then; it would have helped him to feel at the necessary instant that he was spending himself too much, and that he owed to himself some greater care for his life. Probably he felt this later on; when the step of retirement had once been taken (though it was taken too late) he enjoyed the relief of limiting himself to a single excitement—the excitement of public writing—and this he continued with comparative ease in the quiet of his Kentish home. But the final readings were keenly felt by him as quite pathetic things. An actor who has no other voice for the world than his voice on the stage, instead of a novelist who is to be remembered perpetually, might have written thus of the great part in *Oliver Twist*, as it was done before a morning audience of the theatrical profession, and was to be done finally very soon:—

"It was a very curious scene. The actors and actresses mustered in extraordinary force and were a very fine audience. I set myself to carrying out of themselves and their observation those who were bent on watching how the effects were got; and I believe I succeeded. Coming back to it again, however, I feel it was madness ever to do it so continuously. . . . So I hope you may be able to come and hear it again before it is silent for ever. It is done again on the evenings of the 1st February, 15th February, and 8th March."

It was "done again," and three months after the last reading, the other art, on which he had then contentedly fallen back, was itself arrested. The admirable labour of *Edwin Drood* was left incomplete.

The merits of *Dickens's Letters*—apart, of course, from their necessary biographical interest for the world—lie in their resemblance to the most vivid of conversation; the best of them might have been talked laughingly over a dinner table, or said quietly to a single companion in moments of feeling. Amidst the hurry of the nineteenth century a better letter-writer can hardly arise. Even in the leisure of the eighteenth there was nothing more interesting, more piquant, or more vivid. There was this difference only—that the writer then wrote, often, his ripest reflection; his letter was an essay. The ripest reflection of Dickens was put into his books.

FREDERICK WEDMORE.

Reviews and Discussions, Literary, Political, and Historical, not relating to Bacon.
By James Spedding. (C. Kegan Paul & Co.)

MR. SPEDDING'S essays probably gain rather than lose from a circumstance which he mentions apologetically in his Preface. "Almost all of them were written," he tells us, "not because he wanted a subject for an article, but because an article on the subject was wanted at the time." That is to say, they did not arise incidentally in the course of his own special line of study—"relating to Bacon"—but the topics were suggested to him by the editors of the journals in which they were first published. It is good for a writer of discursive habits of study to be thus prompted. He does not know the extent of the knowledge he has amassed till he is called upon to give it forth. If left to himself, he falls into grooves, or goes on accumulating miscellaneous facts, without any attempt to reduce them to order. A summons to him from the outside to set forth all that he knows about a particular subject is a wholesome stimulus. In a volume of essays written under such extraneous impulses, we have the fruits of the action of more than one mind. A breadth and variety of purpose is given to them which they would probably have lacked if the writer had simply followed his own inclination, and reviewed and discussed books and subjects which fell within his own favourite beat.

The variety of subjects with which Mr. Spedding deals may be judged from the titles in the list of contents. The Working of Negro Apprenticeship in 1838, the Bill for the Suspension of the Jamaica Constitution in 1839, Tales by the Author of *Headlong Hall*, the Wakefield Theory of Colonisation, the Civilisation of Africa, Dickens's *American Notes*, Tennyson's Poems, Hartley Coleridge, *Twelfth Night* at the Olympic in 1865, the *Merchant of Venice* at the Prince of Wales's in 1875, are topics separated by considerable intervals. To all of them Mr. Spedding brings the same painstaking judgment and clearness of vision. He does not aim at brilliancy of style; his object apparently has been to make up his mind seriously and carefully, and to say what deliberation suggested with all plainness of speech. Most of the papers were written for the *Edinburgh Review*, when it was under the editorship of Mr. Macvey Napier. Mr. Spedding seems to have had occasional differences of opinion with his editor, and to have had to submit sometimes to alterations which did not commend themselves to his own judgment. He here reproduces the original text, and in one instance he certainly triumphs over the editor. He had obtained leave to review a new edition of Mr. Tennyson's first two volumes of poems, on condition that he would not commit the *Edinburgh Review* to any praises or prophecies that would endanger its reputation. But at the close of his article he could not refrain from prophesying that Mr. Tennyson's powers were equal to the production of greater work than these fragments and snatches of song, and that if he could find a subject large enough to take the entire impress of his mind, he might produce a work which should "as much exceed them in value as a series of quan-

ties multiplied into each other exceeds in value the whole series added together." Craftily qualified as this prediction was, it was too venturesome for the *Edinburgh*. Mr. Spedding takes a pardonable pride in calling attention to the fact that he foresaw the Laureate's greatness.

This is by no means the only instance of justness of judgment, of keen-sighted sagacity, which the collection contains. It would be difficult to name a critic who shows greater steadiness in appreciating things at their true value. The judicial clearness with which he sifts the unsound elements from the sound in such matters as the Wakefield Theory of Colonisation, or the project set on foot in 1841 for carrying civilisation into Central Africa, is not more remarkable than the delicate sympathy with which he estimates the poetry of Tennyson, the character of Hartley Coleridge, or the acting of Miss Ellen Terry. The somewhat stiff and constrained movement of Mr. Spedding's style, the comprehensive, circumspect, measured development of his theme, does injustice to the quickness and fineness of his perceptions. He fortifies his conclusions with such caution that one does not at first recognise how quickly they must have been reached. That the highest power of understanding is not always united with the highest power of expression is a truth which most people, upon reflection, would admit; but it cannot be classed among self-evident truths, and people often proceed upon the very opposite assumption. Fluency is oftener paralysed than helped by insight. Mr. Spedding's criticisms of the representations of *Twelfth Night* and *The Merchant of Venice* are not fluent, but they show the liveliest and most subtle attention to the significance of the smallest details in the movement of the plays and a fine sense of their proportions as harmonious works of art.

Mr. Spedding stands confessed in this volume as the author of the review of Dickens's *American Notes* in the *Edinburgh*, which gave such offence to the novelist. The sentence in the review against which Dickens more particularly remonstrated was to the effect that he had gone out to America as "a kind of missionary in the cause of international copyright." This Dickens resented as "a malicious misrepresentation," and expressed himself strongly on the subject both in a letter to the *Times* and in a private letter published recently in the volume of Mr. Macvey Napier's correspondence. The *Edinburgh Review* made a sort of retraction and apology, declaring itself to have been in error as to the motive of Dickens's visit to America. This retraction was printed without Mr. Spedding's being consulted; and in republishing the article he justifies his original statement by quoting from Dickens's letters in Mr. Forster's biography to show how warmly he interested himself in the copyright question. The letters recently published contain many other passages showing how prominent the question was in Dickens's thoughts. It was unnecessary that Mr. Spedding should defend himself from a charge of malice against the writer of the *Notes*, and it is not at first easy to see why the imputation of being a missionary in the cause of copyright should have given

Dickens such hot offence. The review itself, however, explains the mystery. It is not at all an ill-natured review, and it makes ample admission of Dickens's qualifications to write as a passing observer in a strange country. It was really in paying an implied compliment to the novelist by treating him as if he were a scientific and systematic traveller, giving an account of America as Mr. Mackenzie Wallace might do, that Mr. Spedding seems unintentionally to have wounded Dickens in one of his sorest points. After enumerating Dickens's advantages for describing the American people, and presenting "a just image of their existing social condition," he went on to deal as follows with his disadvantages:—

"To balance these, however, it must be confessed that he labours under some considerable disadvantages. His education must have been desultory, and not of a kind likely to train him to habits of grave and solid speculation. A young man, a satirist both by profession and by humour, whose studies have lain almost exclusively among the odd characters in the odd corners of London, who does not appear to have attempted the systematic cultivation of his powers, or indeed to have been aware of them, until they were revealed to him by a sudden blaze of popularity which would have turned a weaker head—who has since been constantly occupied in his own peculiar field of fiction and humour—how can he have acquired the knowledge and the speculative powers necessary for estimating the character of a great people, placed in circumstances not only strange to him, but new in the history of mankind; or the working of institutions which are yet in their infancy, their hour of trial not yet come—in their present state resembling nothing by the analogy of which their tendency and final scope may be guessed at? Should he wander into prophecies or philosophic speculations, it is clear that such a guide must be followed with considerable distrust. Nor, indeed, can his opinions be taken without abatement and allowance, even in that which belongs more especially to his own province—the aspect and character of society as it exists. As a comic satirist, with a strong tendency to caricature, it has been his business to observe society in its irregularities and incongruities, not in the sum and total result of its operation—a habit which, even in scenes with which we are most familiar, can hardly be indulged without disturbing the judgment; and which, among strange men and manners, may easily mislead the fancy beyond the power of the most vigilant understanding to set it right."

It might be thought that Dickens would have been more amused than angry at being reminded of his deficiency in "habits of grave and solid speculation," and his inability to observe society "in the sum and total result of its operation;" but, as the world has since been given to understand, there was nothing about which he was so sensitive as the defects, from an academical point of view, of his early training. Mr. Spedding had unconsciously put his finger, or rather one might say dealt a blow with the full weight of his hand, upon a point to which Dickens could not bear the slightest allusion without agony. Here, in all probability, lay the secret of the bitter warmth with which Dickens protested against the treatment of his *Notes* by the *Edinburgh Review*. Few persons will think that Mr. Spedding applied the right standard to them when he examined them as the observations of a dispassionate naturalist, though

everything that he says in the application of that standard is indisputably just and true.

WILLIAM MINTO.

CURRENT LITERATURE.

MESSRS. VINCENT AND DICKSON'S *Handbook to Modern Greek* (Macmillan) is, to our mind, quite the best book that has been published on the subject. The execution is scholarly throughout, and the method excellent. Speaking of the latter, Prof. Blackie, who has written a Preface to the work, says:—

"The principle of this plan is that the ear and the tongue should be exercised largely from the beginning, and not merely the memory and the understanding. This implies that no rules should be learned which are not immediately put in practice, and that it is wiser to educe the rule from familiar materials than to inculcate the rule and leave the materials to be painfully searched for as an after-business."

It is, in fact, a modification of Ollendorff's useful method, though the teaching is more scientific and the learning less a matter of rote. The authors call attention to the following features—viz., that the exercises are composed of sentences constantly used in ordinary conversation; that, for the convenience of those who wish to gain a rapid conversational knowledge, the English and Greek in these are given side by side; and that in the dialogues, which compose the second part, an endeavour has been made to give trustworthy information about Greece and the Greeks. Accordingly, while we have a dialogue on travelling in the interior of the country, we do not find one, as we used to in old conversation books, "On being thrown out of your carriage." The more important lessons are accompanied by a list of words to be exemplified, and by exercises in translation from English into Greek and *vice versa*, each having its own vocabulary. In respect of the Greek words, a due mean has been observed between the old Romaic and the classical expressions, while many books of the kind err in almost excluding the former element. We can mention one in which *ἵππος* is regularly used for "horse," *οἶνος* for "wine," and *ἄρτος* for "bread," and these words no doubt may be found in advertisements at Athens, but we pity the person who should try to obtain those articles by means of those names in the country districts; in this work the popular *ἄλογον, κρασί, and ψωμί*, which everybody uses in ordinary life, are employed, and the pig is allowed to retain his expressive name of *γούρουνι*. In some instances both forms are given, the less usual being put in brackets, as *οἶνος* by the side of *ἔτσι*, "thus"; *ἡμίονος* by *μούλδρι*, "mule"; *ἐφίππιον* by *σέλα*, "saddle"; and though *δύναμις* is admitted in some places, *ἡμικρῶς* is found in others. It is an excellent sign that the lists of conjunctions and adverbs are full, for the former of these are the joints and hinges on which sentences turn, and are of the first importance for a ready use of the language; while the latter contribute that shading to the signification, the need of which is soon felt. It would have been well, however, if some of the older and more complex expressions had been given; thus while we find *μαζί με* for "together with," we miss *ὕστερον ἀπό* for "after," and *ἐπάνω εἰς* for "upon." It should be the aim of books of this kind to be useful, not merely to residents at Athens, Constantinople, and Corfu, but also to travellers; and such persons ought not to be wholly cut off from communication with the natives, even those of the Greek-speaking part of Turkey, as will be the case if they are only acquainted with the classical dialect. The question is not exactly as it is put in the introduction to this book, whether the grammar now taught in Greece differs little from that taught

in our public schools, for the young Greek learns the familiar expressions at home in the same way as the young Englishman does, though his English grammar may be strict and classical; but the foreigner needs some instruction in the popular speech. However, as we have said, this book generally preserves a happy medium, and a person who had mastered it would start in the country with a good vocabulary, a knowledge of the various forms, and sufficient facility in the use of words to render conversation in a short time easy to him, supposing always that he had said the exercises aloud, and with the right pronunciation. It may be hoped that the demand for books of this kind will increase, and that visitors to Greece will not neglect the facilities they offer for obtaining a knowledge of the language.

Hymns in Prose for Children. By Mrs. Barbauld. Illustrated. (Murray.) This book, first published more than a century ago, will hardly be brought back to popularity by the rich setting of paper and print with which its publishers have adorned it. An old edition of Mrs. Barbauld, thumbed and torn by generations of children who have themselves passed away long ago, has a pathetic interest of its own, like a Family Bible or a Cocker's Arithmetic. But an *édition de luxe* of the same, with modern illustrations, becomes little else than an anachronism. Of the illustrations, the best are the landscapes and the flower-pieces, which never change. The scenes of human life are, in some cases at least, very coarsely drawn. "The Toad Spitting its Venom amongst Turtle Doves" is wisely separated into a toad at the bottom of the page and a dove at the top. But children of the present day are accustomed to learn their natural history from writers who do not sacrifice truth to an imaginary moral.

Thornton Hall. By Phebe F. Mackeen, author of "Theodora Cameron." (Hodder and Stoughton.) If young ladies receiving a "higher education" in America talk and act in the manner described in this volume, one can only wonder what their less refined sisters must be like who have not had the advantage of the culture of "Thornton Hall." As a specimen of the style of the book, we quote the following conversation between two of these young ladies who have just learnt that "when caloric fluoride is acted upon by sulphuric acid a very corrosive gas is obtained called hydric fluoride. The reaction is shown in the following equation:— $H_2SO_4 + CaF_2 = CaSO_4 + 2HF$." As a reaction possibly after this equation, they "prink" themselves out for a walk, and meet two "jaunty-looking sophomores, twirling their newly allowed canes," at whom they make eyes in passing. After managing a little by-play flirtation with these same young men, with whom they were not acquainted before, in a sweet-stuff shop, one of the young ladies remarks to the other,

"Yes, but *did* you mind Clough's gloves? Gracious! They look as if his hands were melted and run into them."

"Never saw such a fit in all my life," said Sue.

"I didn't like his necktie anyhow, great flashing thing. I think it's horrid," objected Connie.

"It isn't either! It's real nobby; enough handsomer than that little scrimp one of Coggin's," retorted Sue.

"I don't care," returned Connie; "Clough looks as if it took him all his time to get himself up, and Coggin as if he was stylish because he couldn't help it!"—

a discriminating remark by-the-way on the part of Miss Connie. Of course, all the girls at Thornton Hall are not quite as bad as this, but even the high-toned ones talk and think in a way we should be sorry to find imitated by English young ladies. It must be said, however, that the conversation of the book, although

vulgar, is very amusing, and the characters graphically depicted. If it were not for the utterly misplaced religious element in it it might pass as an amusing caricature of school-girl life in America.

Up and Down; or, Fifty Years of Colonial Experiences. By Capt. W. J. Barry. (Sampson Low and Co.) Here we have an autobiographical sketch by Capt. Barry of his adventures in Australia, California, New Zealand, India, China, and the South Pacific, which affords ample evidence that the author is something of a "rolling stone." He has not done rolling yet, it would seem, for he announces his intention of returning to New Zealand, which appears to be his Elysian Fields. There is much more amusement in the book than might have been expected from the feeble joke with which the Preface concludes.

Political Studies. By the Hon. George C. Brodriek. (C. Kegan Paul and Co.) Mr. Brodriek is well known as a prominent member of that earnest band of "Oxford Liberals" of whom very few have hitherto been successful in winning their way into Parliament. In view of the forthcoming election and a new constituency, he now publishes a selection from his writings, to illustrate rather than to defend the political consistency of his career. Beginning with two Oxford Prize Essays of 1855, he carries us down to papers on "Liberal Organisation" contributed to a provincial newspaper in the present year. Few public men, and perhaps still fewer public writers, would care to institute such a direct comparison between their youth and their middle age. But it is one of the characteristics of the school to which Mr. Brodriek belongs that their political views were moulded, not by their individual characters, but by the common influences of their academical training. As the great Marquis of Wellesley represented a departed type of public men nurtured upon Latin verses, as in later days religious conscientiousness has been the mark of the still surviving Peelites, so a faith in the higher education pervaded all that generation which passed through Oxford at the time when free competition was first introduced. The letters on "College Fellowships," which fitly conclude this volume, show that Mr. Brodriek has adhered more closely than most to the programme of that time.

Modern India and the Indians: being a Series of Impressions, Notes, and Essays. By Prof. Monier Williams. Third Edition. (Trübner.) The author informs us that this edition, "revised and augmented by numerous additions," . . . "will be found a great improvement on those that preceded it." As to the revision of particular passages we cannot speak; but it is our deliberate opinion that the new chapters directly tend to spoil what was before a good book. No traveller ever visited India better equipped than the Professor with linguistic learning and hereditary sympathy. Wherever he describes scenes that passed before his own eyes, or traces back the manifold phases of the Hindu religion at the present day to their Sanskrit origin, we read with equal interest and respect. But unfortunately he has been induced to take all India for his province, and to attempt, as it were, the compilation of a handbook to a continent, without knowing the value of his several authorities. His new chapters are headed, "Villages and Rural Population of India" and "Progress of our Indian Empire." Either of these subjects would be enough for one book or one ordinary man. Prof. Monier Williams, in his desire to be popular and concise, has become untrustworthy, and imperilled a reputation which stands deservedly high. Let one example suffice. He thus (p. 274) describes the alliance of Warren Hastings with the Nawab of Oudh

against the Rohillas:—"We were compelled to clear Hindustan of certain troublesome Afghan tribes in the Rohilla War of 1775." Not even the date of this is accurate; and it is taken without acknowledgment from Dr. Birdwood's *Report on the Miscellaneous Old Records of the India Office*, where we read (p. 89), "Hindustan was swept clear of its Afghan pests during the Rohilla War of 1775."

Monarchy and Democracy: Phases of Modern Politics. By the Duke of Somerset. (James Bain.) Some few years ago, if we remember rightly, his Grace of Somerset was pleased to let the world into the secret of his religious scepticism. He has now applied the same touchstone of a keen and unimpassioned intellect to the problems of modern politics, among which he at one time moved. His mind is full of matter, and he wields an incisive pen. We know of no better example, apart from daily or rather evening journalism, of that growing reaction against popular freedom which dates from the death of John Stuart Mill. In his time free-thought and political Liberalism went hand-in-hand as they do to-day in France. We seem now to have entered upon an epoch when intellectual culture runs a risk of being divorced from democratic enthusiasm. Such epochs have occurred before in the world's history, and the popular cause has in the end emerged triumphant. If one duke expends a princely fortune upon excavating for himself a subterranean palace, another may be allowed to solace his old age with cynical reflections upon the tendencies of the day.

Akbar: an Eastern Romance. By Dr. van Limburg-Brouwer. Translated from the Dutch by M. M. With Notes, &c., by Clements Markham. (W. H. Allen.) The author of this book, who died in 1873, was an Oriental scholar and a native of Holland. Following the example of the well-known Egyptologist, Dr. Georg Ebers, he attempted to bring his learning to bear indirectly upon the public mind through the medium of an historical romance. The period chosen for illustration was the reign of Akbar, "the greatest and best native ruler that ever held sway over Hindustan." In civil administration and in foreign conquest, Akbar equally deserved the epithet of "great;" but it is characteristic of our author's nationality that he should lay special stress upon the toleration which Akbar extended to the professors of all religions, and upon the eclectic and half-sceptical form of faith which Akbar himself promulgated. The Great Mogul asking his Jesuit guests what they would do to him if they got him to their own country is a satirical touch worthy of a Dutchman. The translator, whose identity is scarcely concealed under the initials of M. M., has done her work with admirable smoothness. Mr. Clements Markham takes the opportunity to pour out a wealth of bibliographical knowledge which is by no means the least valuable part of the volume. He points, also, the moral of the whole by calling upon his readers to reflect whether India is better governed and more happy now than it was in the sixteenth century. An opinion, we fancy, is widely prevalent that before English rule extended over the country India had never known the meaning of order, religious freedom, material prosperity, and intellectual life. The truth is that there have been many prosperous epochs in Indian history, to one of which we are here introduced.

NOTES AND NEWS.

THE Rev. J. E. Vaux and Mr. J. T. Micklethwaite are preparing a collection of usages connected with the English Church locally prevalent but not universally accepted. In them much historical information often lies

latent, and they always offer considerable interest to archaeological eyes. The editors ask for the co-operation of all who are aware of the existence of the kind of usages they are about to describe in their forthcoming work, which will bear the title of *Church Folk-Lore*.

WE understand that the old-established business of Messrs. William Collins, Sons and Co., publishers, bookbinders, and wholesale stationers, of Glasgow and London, of which the Lord Provost of Glasgow is the senior partner, will in future be carried on under the Joint Stock Companies Acts as a limited company. The nominal capital is £200,000, of which £176,000 has been paid up. None of the shares will be offered to the public. The Lord Provost is the chairman of the company, and all the other directors are gentlemen who for many years have been in connexion with the late firm, and will continue personally to superintend the management.

WE regret to hear that Mr. Robert Louis Stevenson, author of *Through the Cevennes* and other works, is reported to be very seriously ill in the United States.

WE understand that Messrs. W. H. Allen and Co. are about to publish a book on Herât. The author, Col. Malleson, C.S.I., proposes to prove the necessity of the immediate occupation of that place by England. The book is expected to appear about the 20th inst.

MISS AMELIA B. EDWARDS' new novel, promised some time back for the first week in January, has been postponed till the first week in February, when it will begin and continue weekly in the *Graphic* under the title of "Lord Brackenbury."

MESSRS. C. KEGAN PAUL AND Co. will publish in a few days, as a companion volume to the *In Memoriam* issued at Christmas, a small edition of *Poems selected from Percy Bysshe Shelley*, printed on rough hand-made paper and bound in parchment. The volume is dedicated to Lady Shelley, and has a Preface by Mr. Richard Garnett, of the British Museum.

WE understand that Messrs. Macmillan and Co. have in the press, and will publish about the opening of Parliament, a small volume by the Marquis of Bath on the social conditions and political prospects of the Bulgarians in their new Principality and in Eastern Roumelia, the result of his lordship's recent journey to those regions, where he had the fullest opportunities of observing the state of things.

THE German students of the University of Vienna have sent an invitation to Prof. Max Müller to ask him to lecture to them during the coming year.

WE understand that the first edition of the first number of *The Antiquary* has been exhausted in a few days, and that a second is now being issued.

Young Lord Penrith, the new story by the author of *Lady Flavia*, *Lord Lynn's Wife*, &c., will be shortly published in three volumes by Messrs. Hurst and Blackett.

MR. WILLIAM CORY, better known to old Etonians as Mr. William Johnson, has completed the first part of his *Guide to Modern English History*. It treats of the events belonging to the period from 1815-30, and will be published next week by Messrs. C. Kegan Paul and Co.

Enga, a new novel by Mrs. Prestwich, author of *Harbour Bar*, will be published by Messrs. Macmillan and Co. in the spring.

THE Philological Society's English Dictionary is now so well in hand that Dr. Murray has been able to issue a first list of his wants down to *Adj.*—A. Words, for which no quotations have been sent in; B. Words, mainly obsolete, for which later quotations are wanted than the

date set after each; C. Words, for which earlier quotations are wanted. In List A. we are surprised to see "about—nearly, absently, academicals (robes), acetose, acidifica, acrimoniously, actionably, adjacently," among awful forms like "accrescents," "acetabuliferous," "adessenarian," &c. In B. the latest instance of "abusiveness" is in 1662, and of "ademption" in 1765. In C., "adjust" is not yet known before 1611, or "actor—player" before Shakspeare, while the first date of "aboriginal" is 1788. The Lists have gone out to the "six hundred" who are reading for the Dictionary, but there is work for 600 more if they will write to Dr. Murray, at Mill Hill, N. W., and help. A specimen Dictionary-article—"Address"—has been printed by him, tracing the meanings and uses of the word from its first introduction in 1375 A.D., "to stand up, to stand erect," till the present day.

MISS BRADDON'S new novel, *Barbara*, will be issued by Messrs. J. and R. Maxwell towards the close of January.

DR. GEORG NÖLLE has published at Halle an interesting Dissertation on the "Fifteen Tokens before the Day of Doom" so popular with Early-English writers. He shows that there are five types of the legend, of which that by Petrus Comestor is far the most widely spread. Of thirty-four versions of it in different languages, Dr. Nölle gives an account; and we have little doubt that the number will be doubled by the time that the Early-English Text and the Old-French Text Societies have done their work.

THE Belgian Government has announced its intention of awarding prizes for the two best historical poems in French and Flemish dealing with the most memorable events of the past fifty years; and for the best lyric ode in the same languages, in honour of the Belgian Fatherland. Juries have also been appointed to decide what pieces in French and Flemish shall have the honour of representation at the public expense on the occasion of the national fêtes.

THE reception of the Duc d'Audiffret-Pasquier at the French Academy is fixed for February 19. M. de Viel-Castel will reply.

THE Governors of the Bank of England have republished, with Mr. Effingham Wilson, the first Lord Liverpool's Letter to the King on the Coins of the Realm, which has been for some time virtually out of print.

M. DE PRESSENSÉ is a candidate for the vacant seat in the Academy of Moral and Political Sciences.

A NEW Catholic and Legitimist quarterly is to appear immediately in Paris. The principal members of its staff are MM. Fresneau, de Margerie, and de Lapparent.

THE subject set by the Academy of Inscriptions for 1879 was "A Study of Literary History on the Greek Writers who were born or lived in Egypt from the Foundation of Alexandria to the Conquest of the Country by the Arabs." Not a single essay was sent in, and the subject has been again set for 1882.

MR. JOHN PINCHBECK, C.E., writes to the *Times* that the real authors of *Sir Edward Seaward's Narrative* were Dr. Porter, of Bristol, and the widow of the late Col. Booth. The MS. was simply submitted to Miss Jane Porter, the nominal editor, by her brother, before it was sent to the printers.

THE *Times* states that the Pope contemplates publishing the various catalogues of the Vatican Library, and has named a commission composed of the librarian, Cardinal Pitra, the under-librarian, the two first custodians, and the eminent archaeologist, the Commendatore Giovanni Battista de Rossi, to consider the best means of carrying his intention into effect. The Pope has

also given orders that one of the rooms of the Vatican archives shall be set apart for the convenience of those who, provided with the requisite commission, desire to consult the documents it contains.

DR. SPITTA is engaged in printing a scientific grammar of Egyptian Arabic. The work will be of great value to the philologist, since accurate information on this interesting Arabic dialect (or rather dialects) has hitherto been very scanty.

PROF. DE LAGARDE has made a valuable addition to the critical apparatus of the Septuagint version by printing the Paris portion of the important Codex Sarravianus (Lagarde's G). The leaves of the same codex preserved in the Leyden Library were printed by Tischendorf in the *Monumenta sacra inedita* (1870). The newly printed portion forms the second fasciculus of Prof. de Lagarde's *Semitica*.

THE same "unhasting, unresting" (we wish we could add indefatigable) scholar has also published a miscellaneous volume called *Prætermissorum Libri Duo* (Göttingen: in Commission bei Dieterich). The passages here printed from MS. sources, though largely theological in subject, will be of most interest to special Arabic and Syriac scholars. The first in order is a most instructive Arabic-Syriac vocabulary, first printed at Rome in 1636, but much too little known and exceedingly rare; it is the *Kitāb el-targumān* of Elūjā of Nisibis. The second is the Commentary on the Psalms of Bar Hebraeus, for the first time completely published from a Göttingen and a Berlin MS. The commentator's love for archaic words, and his remarks on Syriac pronunciation, give a special value to this treatise. The other passages are smaller in extent, but seem of considerable importance.

A CORRESPONDENT of the *Novoye Vremya*, writing from Finland, gives some account of recent publications in the Finnish language. It appears that Christmas is the season of greatest activity in the publishing world of Finland. Every intelligent Finlander considers it his duty to procure one or other of the numerous books appearing at that season. The Christmas of 1879 has been signalised by the issue of several works which attest the literary solidarity of Finland with the other European nations. One of these is *A Biographical Dictionary of Eminent Men connected with Finland Past and Present*, the first part of which has just been published by the Historical Society of Finland. This part contains notices of about a hundred and fifty persons distinguished in the political and literary history of Finland. Another work, entitled *Leading Ideas in the History of Mankind*, by Prof. Koskinen, of the University of Helsingfors, is the first original composition on the philosophy of history which has appeared in the Finnish language. Among recent translated works, Shakspeare's *Hamlet* and Dickens' *David Copperfield* are announced.

THE new year brings an increase in the number and size of the multitudinous newspapers of Switzerland. A fourth daily journal appears in Bern under the name of the *Berner Stadtblatt*, while the *Berner Post* and the *Berner Bote* are enlarged. Zürich has two new political journals, a daily *Schweizerisches Centralblatt* and a weekly *Zürcher Wochenblatt*. The *Eidgenosse* of Luzern, the *Walliser Bote*, and the *St. Galler Zeitung* also appear in a larger sheet. A *Schweizerisches Gewerbeblatt*, edited by the architect, Ernst Jung, of Basel, is published at Winterthur, with illustrations in the text, and stitched in a coloured wrapper.

THE forthcoming English-Persian Dictionary mentioned in our last number is by Mr. A. N. Wollaston.

We are sorry to find that a printer's mistake

escaped us in our notice of Miss Maive Stokes's *Indian Fairy Tales*. Instead of saying that the notes had been written by "Mr. Stokes," it should have been by "Mrs. Stokes." Also, in the notice of *British Goblins* (ACADEMY, December 27, 1879), for "Silvestre" read "Souvestre"; and for "a Welsh writer edited by Croker," read "a Welsh writer cited by Croker."

WE regret to record the death, at Halliford, on the 2nd inst., of Mr. W. Wells Gardiner, of 2 Paternoster Buildings, aged fifty-eight.

THE death is announced of Mr. James R. Napier, F.R.S.; of Mr. Henry Hancock, F.R.C.S.; of Dr. Thomas Cutler, author of *Notes on Spa*; of T. E. von Tscharnner, editor of the *Bund*; of Franz Boll, Professor of Comparative Physiology in the University of Rome; of Dr. A. Sadebeck, Professor of Mineralogy and Geology in the University of Kiel; of M. Ferdinand Henaux, of Liège; and of Don Adelardo Lopez de Ayala, author of *El Hombre de Estado*, *Los dos Guzmanes*, *El Tanto por Ciento*, *Culpa y Perdon*, *El Tejado de Vidrio*, *Los Comuneros*, and the drama of *Consuelo*.

MAGAZINES AND REVIEWS.

THE *Nineteenth Century* begins the new year with a very readable number. Chief among the literary articles is one by Mr. Lionel Tennyson on "*Phædra and Phèdre*"; he dexterously uses the interest created by Sarah Bernhardt's acting, and the comparisons so frequently instituted between her and Rachel, to consider the nature of her great rôle in *Phèdre*, and while so doing to criticise the development of Racine's play from the original of Euripides. In so doing he says many good things, both about Greek tragedy and the French stage in Racine's time, with the general conclusion that Euripides represented Phædra "as an incarnation of evil from above," while Racine made her "a weak, emotional woman, full of excuses for the commission of crimes which she has no strength to forego." Sarah Bernhardt embodies in her personation the elements of character that are more purely Racine's own; Rachel embodied those which came from Euripides. In an article on "Russian Nihilism" Mr. Cunliffe Owen gives a sketch of the plot of a Nihilist novel by M. Tschernyschewsky, which will be read with interest by those in search of an ideal life. Lord Stratford de Redcliffe gives his impressions of "George Canning," dwelling on his straightforwardness, geniality, good nature, and high character; it must be owned that the stories about Canning and quotations from his letters are more weighty than Lord Stratford de Redcliffe's rather ponderous remarks. Mr. Alfred R. Wallace, in a paper on the "Origin of Species and Genera," tries to give his readers a clear conception of the meaning of the origin of species by means of natural selection, and so clear away many of the popular objections which arise from misunderstanding. He also shows that the causes which have produced the separate species of one genus are not necessarily the same as those which have produced the separate orders or classes from more remote common ancestors; natural selection accounts for the former, but is not proved to be adequate to account for the latter. Mr. Spedding, in a paper headed "Dr. Abbott and Queen Elizabeth," defends Elizabeth's "Declaration of the Earl of Essex' treasons" against Dr. Abbott's charge that it is a "pestilent libel;" the controversy turns on points of detail which must be judged by the professed historian. Mr. Mallock answers his critics in a style which is formed in the "Olympian manner" of Mr. Matthew Arnold, but which sadly lacks delicacy of touch. Mr. Archibald Forbes writes on "War Correspondents and the Authorities;" he has

no very difficult task to perform in convincing the public that war correspondence ought not to be mutilated by the authorities, but he manages to do it with a vehemence of language which is quite amazing. His style seems to have formed itself on military models, as may be judged from the following:—

"If a nation is so supine as to tolerate that for the future independent correspondence is to be throttled, it may lay its account with pitiful degeneracy from adult intellectual robustness into limp, sycophantic credulity, feebly dashed with impotent, querulous suspiciousness tempered by moody indifference."

Classical phrases are no doubt an ornament even to a "military" style; but Mr. Forbes' editor should not let him write *mens æquus*.

THE *Contemporary Review* is somewhat dull, and ought not to publish an article of Herr Karl Hillebrand, which has been already noticed in these columns, on "England in the Eighteenth Century," without a statement of the fact that it appeared in the *Deutsche Rundschau* for December. Prof. Blackie attempts to settle the land question by an appeal to the "law of nature," which wondrous code we thought had now been abandoned. Prof. R. K. Douglas gives a sketch of the "Chinese Drama" which does not lead us to think that even the existing taste for Chinese art will lead any devotee to agitate for the establishment of a Chinese theatre. The most striking of the contents of this number is a poem by Mr. Robert Buchanan called "Justinian," which, however, has nothing to do with the Emperor, but is the account of an amiable scientific atheist who begat a son that he might nurture him without superstition, stimulated his desire to work until his health gave way, saw him die with despair, and had none of the comforts of religion. Mr. Buchanan does full justice to the atheist and his good intentions, and the poem has much discrimination of character and much pathos. It is a pity Mr. Buchanan does not know more about obvious things. He makes the father choose for his son "the learned name Justinian," because he wants a name whose associations are "heathen no more than Christian;" but surely Justinian was not learned, and was eminently pious and superstitious. He gives us a picture of an Italian lake which is positively exorcising. He showers upon it all the colours of the rainbow, and then makes *châlets* hang upon its sides and *gondolas* crawl across its stillness.

THE number of the *Revue des Deux-Mondes* for January 1 contains an article by M. d'Haussonville on "The Salon of Mme. Necker," with the alternative title, "The Youth of Mme. Necker." A point of peculiar interest for English readers is the romantic account of the future Mme. Necker's love-affair with the historian Gibbon, some lengthy unpublished letters by whom are quoted by M. d'Haussonville. Gibbon has himself related this episode in his *Memoirs*, but his memory seems to have played him false on more than one point. The article ends with Mme. Necker's marriage and her establishment at Paris. To the same number M. Leroi-Beaulieu contributes an article on the press and the censorship in Russia, which is rendered highly interesting by the abundance and accuracy of the writer's information; and M. G. Valbert (Victor Cherbuliez) a *chronique*, on new Parliamentary practices, which seems specially intended for English readers, and the spirit of which is summed up in a truth that might well be more commonly accepted than it is, viz., that it would be well not to wait till one is in power before joining the party of good-sense.

THE *Revue de France* for January 1 contains an article by M. E. Laboulaye, the senator, on "Freedom of Instruction in France, from 1789

to 1876." The author's object is to show that M. Ferry's Bill should be opposed by Liberals as well as Clericals.

CORRESPONDENCE.

MR. SWINBURNE'S "STUDY OF SHAKESPEARE."

Jan. 3, 1880.

You may perhaps find room for the recognition of an inexactitude in expression on my part which has been indicated by Prof. Dowden in this morning's number of the ACADEMY. I hasten to admit the accuracy of his animadversion on the wording of my remark that an attempt had been made to confute the argument now standing in my text with regard to the versification of *King Henry VIII.* That argument, as it originally stood, was advanced in too sweeping and unqualified a form, which I was careful so to modify on reproducing it as to bring my assertion into precise accordance with the most literal and punctilious accuracy. The attempt, therefore, successful or not, which was made to answer my original argument was made to answer a statement, certainly not "very different," but undoubtedly somewhat different, from that which appears in my revised text. Somewhat different, that is, as to the letter: for the whole gist of the reasoning, the whole principle of the general argument, remains on either side radically the same.

As Prof. Dowden, out of the plenitude of his courtesy, is gracious enough to abstain from branding my "statement" on this matter as "disingenuous," I feel myself bound to reciprocate his forbearance by a similar abstinence from applying the same, or a stronger, epithet to his subsequent remark on the "foible of infallibility" displayed, it should seem, in my immediate rectification of every misstatement and inadvertence which could be proved against me with reference to the text of *King Edward III.* But to any not professional or professorial student I should imagine that this would seem the most singular method conceivable of displaying a self-confident and arrogant obstinacy

in defence of a disputed point or maintenance of a refuted proposition. A. O. SWINBURNE.

3 St. George's Square, N.W.: Jan. 3, 1880.

In your last number, p. 1, col. 3, Prof. Dowden has noticed the change of Mr. Swinburne's words in his controversy with me about the triple endings in *Henry VIII.* But no change, or shift, or sneer can save Mr. Swinburne from utter confusion in his metrical argument against Fletcher's share in *Henry VIII.* The question lies in a nutshell, and the test is easily applied. Mr. Swinburne acknowledges that Fletcher wrote a considerable part of *The Two Noble Kinsmen* and Shakspeare the rest. Let, then, Mr. Swinburne produce from the Fletcher part of *The Two Noble Kinsmen*, if he can, instances of "the perpetual predominance of those triple terminations so peculiarly and notably dear to the poet;" let him produce, if he can, from the Fletcher part of the play, the same proportion of triple endings that I have produced from the Fletcher part of *Henry VIII.*; and then we shall see the absolute worthlessness of his metrical argument against Fletcher's share in *Henry VIII.*, and the stupidity of his sneer at those "metre-mongers" who, at any rate, know their business, are accurate in their statements of fact, and can upset (as they have done) Mr. Swinburne's reckless and random assertions. It is only natural that Fletcher, when completing his master's work, should indulge freely in those double endings which he copied from that master, but should abstain from the use of very heavy triple endings which Shakspeare rarely employed.

F. J. FURNIVALL.

PS.—It is the rule that when an authorised report of a man's speech or words at a debate has appeared, that, and not a brief and hasty misreport, should be referred to and used in any controversy. For five years and a-half the following authorised report of a member's words at a discussion have been in print in the *New Shakspeare Society's Transactions*, 1874, p. 510:—

"Some parallel might perhaps be drawn between Aeschylus with his grand language (*ἡφαιστα γομφώδην*, Arist. *Frogs*, 824) and Marlowe with his 'mighty line.'"

But, to make a point against an opponent, Mr. Swinburne has preferred to quote the accidental slip in a journal's report of 1874, "Aeschylus was but a Marlowe."

THE TEMPLE OF ONIAS.

Cairo: Dec. 18, 1879.

As the site of the famous temple of the Egyptian Jews is one of the few unhackneyed spots which can be reached from Cairo, an account of a recent visit of mine to it may not be uninteresting to the readers of the ACADEMY. I went by train to the village of Shibín el-Kanâtir, and walked from thence through fields of cotton and sugar-cane and under groves of date-palms to the mound now called Tel el-Yehûdiyeh, between one and two miles distant from the station. The mound is a very large one, and must once have been of great height. At present the original height is preserved only in the central part, the rest having been excavated by the peasants in search of earth and stone. The view from the top is very extensive; on either side lie the honeycombed remains of the mound, the fertile plain of the Delta stretching far away towards the west, and the eastern horizon being bounded by the bare yellow hills of the desert. The mound is all that is left of the city which Ptolemy Philometor gave to the Jews. I could never have realised the size of it had I not visited the spot.

Descending from the summit of the mound on the western side, I came across two small

fragments of recently disinterred stone, one covered with ornamented stucco, the other inscribed with a couple of Hebrew characters. At the foot of the mound I met an Arab, and under his guidance saw all the other "antiquities" of the place. We made our way towards a shattered fragment of wall, pierced with a single window, at the south-west extremity of the ruins, and first passed a piece of building the calcined stones and charred woodwork of which showed that it had been destroyed by fire. Then we came to an unadorned stone sarcophagus, and then to the large blocks of alabaster excavated by Brugsch-Bey in 1871, which probably mark the foundations of the Jewish temple. Close to them are two baths, each cut out of a single block of stone. The largest, which is really of colossal dimensions, has a flight of steps cut from the top to the bottom of one of the sides of the interior; the other, though externally of rectangular shape, has been hollowed out into an oval form. At a little distance from these remains, and half buried in the *débris*, is a large block of red granite, on which is sculptured the standing figure of a man in profile. The rest of the surface of the block is filled up with hieroglyphs, among which the name of Ramses II. is prominent. In fact, this monument belonged to the sanctuary of Pasht, which Brugsch's excavations have proved to have been erected here by Ramses II. Except myriads of broken fragments of pottery and small stone, and numerous house-walls built of mud bricks, there is nothing else to be seen at Tel el-Yehûdiyeh.

I may add, for the benefit of future visitors, that there is a very fair—and, judging from my own experience, a very cheap—*café* at Shibín, kept by an Italian, and that, although I passed through two villages on my way to the mound and met numberless members of the younger generation, I never once heard the familiar cry of *bakhshish*.

Among the gems in Dr. Grant's collection, which he has been kind enough to show me, is one of considerable interest to students of Gnosticism. It represents an ass or dog crucified, with (apparently) a human head, transfixed by an arrow. The design reminds us of the famous Gnostic *graffito* in the Kircherian Museum at Rome, as well as of figures of S. Sebastian. On the reverse of the gem is the inscription **HATAM**. The second word probably

stands for the Hebrew *bârd*, and the two lines may possibly be translated "the sea he created."

Another gem in the collection is of Phœnician origin, and seems to belong to the Persian period. Two deities are delineated upon it with the winged solar disc between them, and an inscription in Phœnician characters below, which I would read AMIH'SPE. It is difficult to say to what nationality the owner of the name may have belonged.

I hear from Athens that the three colossal figures found two years ago near the spot at which the *Venus* was discovered have been purchased by the Archaeological Society, and that the cases in which they have been packed have already reached Athens. The finest and best-preserved of the figures is a *Poseidon*, which wants only the extremities of the hands and feet. The figure is naked to the waist, and has a dolphin attached to it. When found it was broken into a number of pieces, which have now been put together. In all probability one of the hands originally held a triton. A. H. SAYCE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 12, 5 p.m. London Institution: "Epiphytes and Parasites," by Prof. Bentley.
 8 p.m. British Architects.
 8 p.m. Royal Academy: "A Parallel between the Arts of Poetry and Painting," II., by J. E. Hodgson.
 8.30 p.m. Geographical: "The Grand Canal and Yellow River of China," and "Hankow to Canton Overland," by G. J. Morrison.
 TUESDAY, Jan. 13, 1 p.m. Horticultural.
 3 p.m. Royal Institution: "The Physiology of Muscle," by Prof. Schäfer.
 8 p.m. Civil Engineers: President's Inaugural Address.
 8 p.m. Anthropological Institute.
 8 p.m. Photographic.
 WEDNESDAY, Jan. 14, 8 p.m. Microscopical: "A Further Contribution to the Knowledge of British Oribatidae," by A. D. Michael; "Some Remarks on the Aerometer," by Prof. Abbe; "On a Means of Obviating the Reflection from the Inside of the Body-tubes of Microscopes," by J. W. Groves.
 8 p.m. Society of Arts: "Modern Autographic Printing Processes," by T. Bolas.
 THURSDAY, Jan. 15, 3 p.m. Royal Institution: "Modern Architecture since the Renaissance," by H. H. Statham.
 7 p.m. London Institution: "A Course of Reading in History," by Frederic Harrison.
 8 p.m. Linnean: "Remarks on the Birds and Mammals Introduced into New Zealand," by H. M. Brewer; "Synopsis of Aloineae and Yuccoideae," by J. G. Baker.
 8 p.m. Chemical.
 8 p.m. Royal Academy: "Architecture a Fine Art, and also an Art of Utility," by E. M. Barry.
 8 p.m. Historical: "The Early History of Sweden," by H. H. Howorth; "Known Lists of Actors, 1577-1612," by the Rev. J. G. Fleay; "Further Historical Notes on the Abbey of Cusar," by the Rev. Dr. C. Rogers.
 8.30 p.m. Royal. Antiquaries.
 FRIDAY, Jan. 16, 8 p.m. Philological: A Dictionary Evening.
 9 p.m. Royal Institution: "Investigations at High Temperature," by Prof. Dewar.
 SATURDAY, Jan. 17, 3 p.m. Royal Institution: "Coal," by Prof. T. Rupert Jones.

SCIENCE.

A Treatise on Chemistry. By H. E. Roscoe and C. Schorlemmer. Vol. II., Part II. (Macmillan.)

THE volumes of this first-rate manual of chemistry succeed one another with commendable rapidity. The present part—a volume itself in all but name—equals in merit its two predecessors; indeed, it may fairly be said to be superior to them in the more careful finish of its execution. But we may just as well at once say, in order to fulfil at the outset the disagreeable task of fault-finding, which the critic has no right to shirk, that we can discover but one weak point in the details of the volume before us. While recognising with satisfaction the prominence given to the mineral species which form the raw materials of the pure metals and of their artificial compounds, it must be confessed that the naming of the minerals mentioned is not in all cases satisfactory, while the formulæ assigned to them do not invariably correspond with the results of more recent and more exact analysis.

The present part of volume ii. completes the description and discussion of the metals. Some five hundred pages are assigned to concise accounts of twenty-four metals, of the spectroscopic and spectra, of the natural arrangement of the elements, and of the condensation of oxygen and hydrogen and other gases formerly called permanent. The authors have, in fact, now presented us with a systematic treatise on inorganic chemistry, comprising, within reasonable limits of size, all the more important subjects which students of this science might expect to find introduced into such a handbook. It may be assumed that the remaining volumes of the work (and there must be several of these that the design may be completed as it has been begun) will treat with adequate and corresponding fullness the main features of organic chemistry.

One of the chief excellences of the volume before us lies in the clearness and completeness of the accounts which Messrs. Roscoe and Schorlemmer give us of the chemistry of manufacturing processes. Notable examples of this characteristic of their work may be found under "Manganese and Iron." Here are to be found descriptions of the processes whereby manganese dioxide may be recovered from the residues obtained in the manufacture of chlorine, of the manufacture of the manganates and permanganates, of the composition and smelting of the several iron ores, and of the production of cast iron, malleable iron, and steel by the most recent methods. The value of these descriptions is immensely enhanced by the profusion of illustrative drawings and sections by which they are accompanied. For example, no fewer than twenty-two elevations or diagrams, some full-page size, accompany the account of the metallurgy of iron and steel in the volume before us. Indeed, the authors, though not pretending to write a technological work, are careful to notice many of those properties of the elements or compounds described which have been turned to account in the industrial or fine arts, while they also explain the chemical changes involved in the various operations on which the great chemical works of this country are founded.

The two dozen metals discussed in these pages are arranged in five groups, severally named from their most important, best-known, or most characteristic member. We have the iron group, including manganese, nickel, and cobalt; the chromium group, containing molybdenum, tungsten, and uranium; the tin group; the antimony group, and the gold group—the last-named containing platinum and palladium, and the four other closely allied metals.

We commend this volume to our readers' attention as worthily completing the first and inorganic section of a chemical treatise which, within the limits, as to size and scope, which have been imposed upon it, has no equal in judicious selection of material, in accuracy of detail, in soundness of view, and in orderly sequence of statement. A. H. CHURCH.

NOTES OF TRAVEL.

LETTERS have recently been received in Belgium from Dr. Dutrieux, formerly a colleague of M. Cambier in the first Belgian African expedition, but who is now on his way home, in which he furnishes many details respecting the state of affairs in Eastern Africa, more especially as regards foreign exploration. Not the least interesting part of Dr. Dutrieux's remarks is that which concerns that mysterious potentate, Mirambo, who first became known as the *soldisant* father-in-law of M. Philippe Broyon, and whose detention of the London Missionary Society's property was one of the proximate causes of Dr. Mullens' ill-fated journey. Mirambo, according to Dr. Dutrieux, appears to have been disposed to make war of late with his neighbours all round, but defeats in Usaguzi and Uhha and other circumstances have caused him to change his mind. He has generally been styled the King of Unyamwezi, a very large tract of country; but Dr. Dutrieux assures us that this is a mistake, and that he rules but a very small portion of it. Whatever importance he may have appears to be due to the ascendancy which he established over the

chiefs of Central Unyamwezi by his former successes against the Arabs. The hostility which he has at times shown to Europeans has cost him much of his popularity among the neighbouring chiefs, who are afraid of their trade in ivory with Zanzibar being ruined.

ON December 6 we noted the arrival of Mr. Alex. Forrest's expedition at Port Darwin in Northern Australia, and from the Australian papers just received we learn that they have reached Sydney on their voyage round the continent to Perth, in Western Australia, and have furnished some account of their adventurous journey. Mr. Forrest's expedition is considered to have been very successful, for he has determined a number of geographical positions, and in the course of his explorations he has discovered a vast extent of splendid country, suited for pastoral purposes. An unexpectedly large number of natives were met with, who are described as being fine big men; they had evidently never seen Europeans before, but do not appear to have attempted to molest the party.

THE January number of the *Monthly Record of Geography* is remarkable for the amount of Arctic matter which it contains—enough, we should imagine, to last the whole twelvemonth. Capt. Markham's paper on last year's campaign in the Barents Sea, with the discussion on it, occupies exactly half the number, and is illustrated with two maps. The geographical notes deal largely with the progress being made by the various missionary expeditions in Eastern Africa, and it is but just that prominence should be given to their work; but we are disappointed to find no account of Mr. Thomson's explorations on the road to Lake Nyassa, though Lord Northbrook on November 10 stated that it would appear in an early number. Among the other notes are some particulars respecting the geography of the Shansi province in North China and a summary of the results of Mr. Cornish's examination of the north-eastern angle of South Australia, as well as an abstract of a pamphlet, published some months ago by Mr. E. F. im Thurn, on the question of the boundary between British Guiana and Venezuela. The translation of Prof. Nordenskiöld's account of the *Vega* in her winter quarters is concluded from the December number, and occupies some twelve pages of small print. With the present number is issued a very full and useful Index to the 1879 volume.

THE London Missionary Society have received a telegram from Zanzibar informing them that their second expedition to Lake Tanganyika, under Dr. Southon and the Rev. W. Griffith, reached Ujiji on September 23.

NEWS has also been received of the arrival of the Rev. J. C. Price and Mr. H. Cole at the Church Missionary Society's station at Mpwapwa on October 22, after a journey of twenty-nine days from the coast.

MR. MOIR, who is engaged in examining the Nyassa region from a commercial point of view, and is connected with a trading company formed for the purpose of developing its resources, has recently made a journey of exploration to the high country west of Kaningua. He got as far west as Kamboimbo's district, when want of provisions compelled him to return. He is of opinion that Bandawa is the best site for a sanitarium of those which have hitherto been examined on and near the west coast of Lake Nyassa.

THE various sections of the International African Association intend to prosecute their work with renewed activity during the present year. The central committee at Brussels has already despatched M. Alphonse Burdo to Zanzibar to organise a fourth Belgian expedition.

M. Burdo accompanied M. de Semellé in his expedition to West Africa in 1875, but separated from him, and travelled on the lower course of the Niger and some part of its great affluent, the Binue, the account of which journey has but lately appeared at Paris. The French committee propose at last to make a start by establishing two "stations" in Africa, one in the Ogové basin, on the west, and the other in Usagara, near the east coast; but, though they have received a large subvention from the Government, we believe that their plans are still under consideration.

INTELLIGENCE has been received from Ceylon that Dr. Müller, the Government archaeologist, was about to examine the ruins of the ancient city of Alut-Newera.

SCIENCE NOTES.

IN volume xi., part i., of the *Annals of the Astronomical Observatory of Harvard College*, Prof. Pickering, its present director, publishes the first instalment of the results of the photometric observations to which, since the summer of 1877, the large equatorial has been chiefly devoted. Photometry was chosen as offering a field of research in which the results promised to be of much value, and in which there seemed to be no danger of duplicating work in progress elsewhere, as large telescopes had been so little used previously for this purpose. Serious difficulties, however, were encountered at the outset. A new class of auxiliary instruments had to be devised and constructed, and the lack of previous observations did not allow that comparison of results which generally forms so convenient a test of the quality of scientific researches. The description of the various photometers employed, of their disadvantages and defects, of their successive improvements, and of the examination of their systematic errors, will be found very instructive and of great value to observers who are intent upon cultivating this much-neglected field of investigation. The Journal inserted in the volume contains the results of the photometric observations made from August 1877 to September 1878, with a portion of those made from October 1878 to March 1879. The entire series represents over twenty-five thousand single measurements arranged in five thousand sets. It was found that many of the observations could be made with undiminished accuracy when the condition of the air was such that the observation of difficult objects was impossible. Care was therefore taken to select objects according to circumstances, and, in this way, observations were obtained on almost every clear evening, or on about two out of every three nights. The proximity of Saturn and Mars, and of Jupiter and Venus, at their conjunctions in 1877 afforded a good opportunity for comparing their relative brightness. The general result of six hundred comparisons of Saturn and Mars, made on twenty-five nights between August 18 and November 18, gives 4.01 as the ratio of the albedos of the two planets, or, in other words, Saturn reflects four times as large a proportion of the incident light as Mars. In like manner, three hundred comparisons of Jupiter and Venus, made on eleven nights, from October 27 to November 17, gave 0.86 as the ratio of their albedos. The bulk of the photometric observations refers to the relative brightness of the components of all the more conspicuous double stars visible in the latitude of Cambridge, Mass. The number of these pairs is 239, and the trustworthy determination of their relative magnitudes is of great value. The results of the measurements of objects, which, on account of their faintness, have demanded different methods of observing, are reserved for part ii. Among

these objects are the satellites of Saturn and of Mars.

The Temperature of Russia in 1878.—In an appendix to the *Bulletin* of the St. Petersburg Observatory for August last, Herr Brounow gives a paper on the anomalous conditions of temperature in European Russia during several months in 1878. The spring months were very warm, while July was exceedingly cold. He does not attempt to explain the phenomena, but simply correlates them with the persistence of conditions of low pressure caused by the passage of an unusual number of barometrical depressions over Russia, especially in the summer, which produced cool northerly winds.

On Squalls.—In the July number of the *Annalen der Hydrographie und Maritimen Meteorologie*, Dr. Köppen, of the Deutsche Seewarte, gives a most interesting paper 'on squalls and thunderstorms, which is reproduced in the Austrian *Zeitschrift*. The principal point which he endeavours to make good is that squalls always produce a sudden rise of the barometer before the gust of wind is actually felt—a phenomenon which photographic instruments are not sensitive enough to show. He contends that the squalls are really caused by the descent of raindrops, which as they pass impart to the air the horizontal velocity they have brought down from the strata above. Dr. Köppen reviews carefully the papers of Ley on the *Eurydice* squall, of Eliot on the irregularities of pressure noticed in India with north-west winds, and of Colladon on the origin of hail, which have been noticed in these columns.

The Origin of Cyclones.—Mr. Eliot has published a most elaborate report on the Madras cyclone of May 1877, which cannot fail to throw some light on the abstruse problem of the production of these disturbances. Mr. Eliot says that he commenced the enquiry with a predilection in favour of Meldrum's theory of the development of a cyclone between two parallel currents, and that he was converted to his present view of an immediate connexion between the cyclone and heavy rainfall by the evidence which came before him. A great portion of the paper is occupied with a discussion on Dr. Hann's theory of cyclone formation, which supposes that an area of low pressure of slight intensity is formed between two systems of high pressure, and that this gradually develops itself, the fall of the barometer at the centre being mainly due to centrifugal force. Mr. Eliot strongly disputes the validity of this theory, and, according to him, the following are the predisposing causes of all Indian cyclones, and most certainly that of May 1877. Cyclones of exceptional violence principally occur at the transition period of the monsoons in April and October, especially at the latter season. The conditions which precede them are:—Approximate uniformity of pressure over and round the coast of the Bay of Bengal, with light winds and dry weather; the vapour accumulates and, ultimately, heavy rainfall sets in generally, and is more serious near the centre of the bay, causing an indraught of air from the Indian Ocean. The probable path of the cyclone appears to lie along the line of least atmospheric motion immediately previous to its formation. The violence is entirely confined to the lower strata. The only instance of one of these storms crossing the Ghats was in October 1842. It is needless to say that Mr. Eliot strictly adheres to the idea of a spiral instead of circular motion of the air in a cyclone.

The Post-tertiary Geology of Cornwall.—Mr. W. A. E. Usher, of the Geological Survey, has just published an interesting pamphlet on this subject. It appears from the Preface that the body of this work was submitted to the Geological Society, but the papers were with-

drawn in consequence of the referee having recommended that they should be printed only in abstract and not in *extenso*. Mr. Usher has carefully collated the writings of those who had previously written on the subject, and has thrown the matter into a connected form. At the same time he has added a good deal of original work, the result of observations made during his vacation-tours. As the author has been engaged officially for several years in examining the superficial geology of Devon, he entered upon the study of the neighbouring country under peculiar advantages, and probably saw as much in a few weeks as an amateur could observe in as many years.

MM. E. VAN BENEDEN and CH. VAN BAMBEKE are about to issue the first part of a new scientific review, entitled *Archives belges de Biologie*.

PROF. SCHÄFER will, on Tuesday next, January 13, begin a course of ten lectures at the Royal Institution on "The Physiology of Muscle"; and Mr. H. H. Statham will, on Thursday, January 15, give the first of two lectures on "Modern Architecture since the Renaissance." At the first Friday evening meeting of the season, January 16, Prof. Dewar will describe his "Investigations at High Temperatures." On Saturday, January 17, Prof. T. Rupert Jones will give the first of three lectures on "Coal."

PROF. NORDENSKIÖLD acknowledges in the *Molva* the valuable assistance he received from two naturalists, Dr. Benedict Dubrowski and Julius Wimuth. The former of these is a native of Poland who had been exiled to Siberia but subsequently pardoned. His works on Siberian zoology are among the best that have appeared within recent years. Hitherto he has occupied himself principally with the Trans-Baikal country, but he now contemplates extending his researches to Kamchatka, for which purpose he has accepted an appointment as medical officer in Petropaulovsk. Very interesting results may be expected from his labours and those of his colleague in one of the most important but, at the same time, least explored regions of Siberia.

PHILOLOGY NOTES.

A Manual of the Chaldee Language. By David McCalman Turpie, D.D. (Williams and Norgate.) We learn from the title-page that Dr. Turpie projects a series of manuals for twelve different dialects or languages of the East, including Coptic, Armenian, Persian, and Hindostani, as well as the Semitic tongues. He has done well in beginning with Chaldee, for a grammar and reading-book superior to the manual of Petermann was a real desideratum; and the careful compilation of our author, in which the grammar is better set forth, with a full body of syntax rules, will probably displace the work of the Berlin professor in most lecture-rooms. More than a compilation the book does not pretend to be, and from a philological point of view it will be found a little old-fashioned. This comes out most in the Introduction, where the view is upheld that Chaldee is Eastern Aramaean learned by the Jews in Babylon. Here, too, the statement of the differences between Chaldee and Syriac overlooks the diversity between the eastern and western pronunciation of the latter tongue; *δ* for *d* is not a peculiarity of the Syriac language, but of the western dialect, and the eastern Syrians said *kol*, not *kul*. The reading-book contains selections from various Targums. The text appears to be printed from one of the many descendants of the Venice editions, and the punctuation is as usual full of irregularities. Dr. Turpie has given attention to these, and in his grammar and glossary often cites

variants. But the mere enumeration of variants is only puzzling to beginners, and it would have been well either to reduce the punctuation in the reading-book to a uniform system or to reproduce exactly the vocalisation of a good MS., or, failing that, of the edition of Felix Pratensis. The later editions are cobbled, and, if corrections are admitted at all, they ought to be carried through on critical principles with the aid of such helps as the Massora to Onkelos, and in certain cases of Syriac analogy. The reading-book has not, perhaps, been revised so carefully as the grammar. There are a good many misprints. Is it a misprint, by-the-way, which fathers on פונדקית *πανδοκτήρια* the sense *inn, hold*? And why is the spurious root נסך = סלק raised again from the dead after being slain by Roediger?

By a strange coincidence, the celebrated Arabic theologian and reformer, Abu'l-Hasan el-Ash'ari, has, it would seem, been simultaneously attracting the independent attention of two European scholars. At all events, Prof. Mehren, of Copenhagen, read a memoir upon him in 1876 before the third Oriental Congress, and published it in the following year at Leyden, without saying a syllable of a work on the same subject by Dr. Wilhelm Spitta, which was brought out shortly before at Leipzig under the title of *Zur Geschichte Abu'l-Hasan Al-Ash'ari's*. What makes the matter the more curious is that Prof. Mehren has used the very same Leipzig MS. of Ibn 'Asâkir (Befa'ija 149) as Dr. Spitta, but has apparently not known that a second copy of the MS. exists in Leyden (901 Dozy), a third in the Bodleian Library at Oxford (181 Uri), and a fourth in the Escorial (1796 Casiri), all of which have been examined and used by Dr. Spitta. It was not until Prof. Mehren's memoir was more than half-way through the press that he learnt from Prof. de Goeje the existence of the Leyden MS., so that the only use he could make of it was in his *Notes additionnelles et Corrections*. Had he known of Dr. Spitta's work, as he might have been expected and required to have done, he would have been spared the trouble of publishing an imperfect work on a subject which had already been thoroughly treated. He has done little more than give translations, not always free from error, of extracts from Ibn 'Asâkir; and not only adds no fresh information to that contained in Dr. Spitta's volume, but omits much of the new material brought together in the latter, among which two original works of el-Ash'ari may be specially mentioned. Dr. Spitta has also, it may be observed, given an exhaustive account of the Arabic theologian's life and age, based upon a variety of sources, and not upon Ibn 'Asâkir alone. For this Dr. Spitta's position, as director of the Viceroyal Library of Egypt at Cairo, has given him peculiar facilities. The library now contains about 23,000 volumes, mostly Arabic and Turkish, the greater part of which have been brought by Dr. Spitta from the mosques and other institutions where they had long remained buried and concealed.

THE first volume of K. A. Manitius's *Die Sprachenwelt* is an instalment of a new popular manual of the science of language which, we regret to say, has nothing to recommend it except its comparative cheapness. It would be unfair, no doubt, to tax a school-book with a want of originality, but *sunt certi denique fines*, and Dr. Manitius had certainly no right to incorporate in his work long extracts from an old edition of Prof. Max Müller's *Lectures on the Science of Language* without other acknowledgment than a short notice in his Preface. Again, the author of a popular work may, and ought to try to, be as amusing as he can, nor do we expect from him a great display of learning,

But it is not very entertaining to read a great number of continuous passages from translations, many of them old-fashioned, of very well known Oriental works; and if entire pages are filled with the names of authors and titles of books, as is repeatedly done in the present work, we may be justly surprised to find authorities quoted that were in vogue so far back as the beginning of the century. Thus, in his sketch of Indian literature, Dr. Manitius quotes very frequently statements of such scholars as Sir W. Jones, Schlegel, and Wilhelm von Humboldt (whom, by-the-way, he is constantly confounding with his brother Alexander), who lived in the infancy of Sanskrit studies. According to him, Chaho and Mahn are the most recent authorities concerning the Basque language, and the names of Prince Lucien Bonaparte, Vinson, van Eys, and others who have laid the foundation of a scientific study of the Basque do not seem to have reached him. Anquetil Duperron, whom he calls "unrivalled as an Orientalist," appears to have been his principal guide in everything he has got to say about the Zoroastrian system of faith, although that French scholar of the last century could not read a line of the Zendavesta in the original, and only became acquainted with it through the medium of a Persian translation. Dr. Manitius's English readers will be sorry to be informed by him that the Spanish tongue is far more widely spread than the English; but they will be consoled by his remark that the Japanese are very likely ere long to exchange their own tongue for the English language, and will thus swell the number of English speakers by "forty or fifty millions."

THE *Indian Antiquary* for November gives us further instalments of Mr. Fleet's series of Sanskrit and Old-Canarese inscriptions, and of Mr. Pope's papers on the Kurral, the popular didactic poem of the Tamil poet Tiruvalluvar. Mr. Pope translates the first of the 133 chapters which the Kurral contains—the chapter on God. It is very short and enigmatic, and leaves the real position of the author quite uncertain. Mr. Logan, the Collector of Malabar, contributes a description of some very ancient cells lately discovered by a fortunate accident in his collectorate, and of the curious old pottery which they contained. A paper by the late Mr. d'Alwis on the well-known six prophets or teachers who lived during the lifetime of Buddha is reprinted from a scarce tract. It adds scarcely anything to the details given by Spence Hardy on the basis of the Sumangala Vilâsini and by Remusat from the Chinese Cyclopaedias. A paper on the Weddahs, the Aryan-speaking outcasts who inhabit the forests in the central plains of Ceylon, is also reprinted from the *Fortnightly Review*. After a general description of the life and habits of the few survivors of this interesting tribe, the author, Mr. Hartshorne, "reserves for the present any full account" of their language. We trust he will be induced soon to publish his notes on the philological side of the question.

MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Anniversary Meeting, Tuesday, Jan. 6.)

DR. SAMUEL BIRCH, President, in the Chair.—After the nomination and election of new members, the usual Report of the secretary for the session 1878-79 was read, and the officers and council for the current year were elected.—A communication, giving an account of the Monuments and Inscriptions on the Rocks on the Nahr-el-Kelb River, Syria, by W. St. Chad Boscawen, was read. The description of the Tablets commenced with the one immediately opposite the ford, and proceeded in a reverse direction to that taken in visiting them from Beyrout. This order was chosen as the writer felt convinced that certainly as regards the Assyrian Monuments there was a chronological sequence,

commencing with Tablets Nos. 2 and 3, of the early Assyrian Empire (B.C. 1300–1050), and terminating in Tablet No. 9, at the highest point of the ancient roadway, with a royal record of Esarhaddon (B.C. 681). The Tablet No. 1 is Egyptian, erected by Ramses II. The next in the series (Nos. 2 and 3) are Assyrian; and are attributed, by Mr. Boscawen, the first to Assur-ri-ilim (?) (B.C. 1140), and the second to Tiglath-Pileser I. (B.C. 1100). Thirty yards higher up the pass, where the Egypto-Assyrian roadway joins the lower one, facing north-west, is placed the third Assyrian Tablet (No. 4). The opinion was expressed that it paired with Tablet No. 5—also Assyrian—and that they were to be respectively assigned to Assur-nazir-pal (B.C. 885) and Shalmaneser II. (B.C. 860), the latter being the King who erected the splendid bronze gates of the Temple at Balawat. Mention is made in the inscriptions of this King of images of his royalty having been erected in the regions of Syria and Lebanon. Tablet No. 6 was dedicated by Ramses II. to the Egyptian sun-god, Ra. It is now the best-preserved of those of the Egyptian series. The next Assyrian Tablet (No. 7) has been attributed by all who have examined it to Sennacherib (B.C. 703). Last in the Egyptian series is Tablet No. 8, erected, like Nos. 1 and 6, by Ramses II. Tablet No. 9, the last of the whole series, is Assyrian; and portions of an inscription are still to be traced on its surface. Mr. Boscawen assigned it to Esarhaddon, and held it to have been erected B.C. 671 to commemorate the successful termination of his Egyptian campaign. It may be mentioned that of this tablet a mould was taken by Mr. Bonomi in 1834, a cast from which is now preserved in the British Museum, representing the Tablet in a much more perfect state than at present.

FINE ART.

ARCHAEOLOGICAL NOTES ON A TOUR IN SOUTHERN ITALY.

II.

IAPYGIA.

It is commonly said that Brindisi possesses no apparent vestiges of antiquity. This is incorrect. It is undeniable that this city can show no monumental remains commensurate with its importance under the Roman domination. But still it is by no means wholly destitute in this respect. As he leaves the railway station, before entering the modern city, the traveller may observe on his right a fragment of the Apian Way, which, for some three hundred feet, shows the ancient pavement exposed, together with the foundations of the tombs which lined the road on either side. At the port itself, at the extremity of the point of land that divides it into two parts, which were compared by the ancients to the two horns of a stag (whence the name of *Βρετινιον*, said to be derived from the word *brentes*, which meant "a stag" in Mes-sapian)—just in front of the spot where the P. and O. and Austrian Lloyd's steamers anchor—is a pretty high terrace supporting two monumental columns which stood by themselves opposite the entrance to the port. These two columns, which are of great height and imposing aspect, are of white marble. Of one, only the base is still standing; the shaft is lying on the ground beside it, in several pieces; the capital has disappeared. The other is uninjured, with its unfluted shaft and its capital, original in sweep and singularly rich and imposing. Its effect is still very striking. This monumental column, which remains erect, dates from the Imperial epoch at latest, from the time of the Antonines. It presents one of the most remarkable examples, and certainly the most important in respect of size, of a sculptured capital that classical antiquity has bequeathed. Instead of being supported by volutes or *caulicoli*, the four angles of the plinth rest on half-length figures of Tritons issuing from a row of large acanthus leaves. Between these Tritons, on each face, is represented a marine

deity—on two sides that of Neptune, on the other two that of Amphitrite; the whole in a very good style of sculpture. According to local tradition these two columns marked the termination of the Appian Way at the point where it reached the port. It may be objected that they are not on the same line as the fragment of the road near the railway. But it must not be forgotten that two great roads, both branching off from the old Appian Way, ran in from different directions and ended at Brundisium after separating at Beneventum—that which passed through Canusium, Barium, and Gnatia, and the course of which is described by Horace in his Fifth Satire, and that which passed through Tarentum.

However this may be, the base of the column, which is still standing, bears a Latin inscription in large letters. This is unfortunately incomplete, but it mentions the restoration of the city by a Byzantine *protospatharius* named Lupus, after its destruction by the Saracens in the tenth century.

+ ILLVSTRIS · PIVS · ACTIB · ATQ · REFLVGENS
PTOSPATHA · LVPVS · VRBEM · HANC · STRVXIT · AD
QVAM · IMPERATORES · MAGNIFICIQ · BENIGNI

In this inscription certain guide-book writers have seen the mention of a personage called Spthalupus!

Brindisi likewise commends itself to the attention of students of the Middle Ages by the interesting ruins of its round church of St. John the Baptist, dating from the eleventh century, and by some very early Christian crypts existing in the neighbourhood, close to the San-Vito station on the line to Bari.

At Lecce a provincial museum, still in course of organisation, is being formed in the school buildings. As a larger sum is being spent upon it than on that at Bari, it seems likely that this museum will speedily attain considerable importance. Almost all the vases now discovered at Canosa are purchased for the provincial museum at Lecce. Even now it possesses a very valuable series of Messapian inscriptions; and this class of remains will naturally be almost wholly centred at Lecce, as being the special feature of the district.

What likewise constitutes the originality of this museum, as well as that of all the private collections of the country, is a special class of painted vases, which begins to appear at Gnatia, in combination with the Apulian potteries, and which thenceforward occurs almost exclusively in all the necropolises of the Messapian and Iapygian district as far as the promontory of Santa-Maria di Leuca; for instance, at Ostuni, Ceglie, Mesagne (Messapia), Rugge (Rudiae), Oria (Uria), Lecce (Lupiae), Otranto (Hydruntum), Vaste (Basta), Alessano (Veretum), Ugento (Uxentum), Nardo (Neretum), &c. These vases belong to a quite distinct style of manufacture, which survived from the archaic age to the very latest period of painted pottery. They are often very small, and scarcely ever exceed a moderate size. The prevailing form is that the development and perfecting of which by the Greek taste produced the *amphora* with *rotulae* decorated with masks which we find at Canosa and Ruvo. I propose to call it the "Iapygian amphora," as we use the term "Tyrrhenian amphora" for a type of vases with black figures which occurs in great numbers in Etruria. The ornamentation of this ware is black, brown, or red, on a whitish ground. It generally consists of geometrical designs, and, in more recent times, of regular compartments occupied by stars or flowers. It is only very rarely, and in very exceptional instances, that we meet with figures on vases of this class. The most curious specimen that I have seen came from Gnatia, and is now in the museum at Bari. In it is represented a deer hunt by a man on horse-

back, painted in brown in a very primitive style. The special class of potteries to which I am calling attention here is already represented in the various museums of Europe by a few scattered specimens. But these examples bear no indication of the precise place whence they came, and it was of consequence to determine accurately the district in which they originated.

The terra-cottas of the Messapian and Iapygian region—the province to which the name of Calabria, so strangely transferred to another district in the Middle Ages, was applied in ancient times—are also very different, both in point of style and of material, from those of Ruvo, Canosa, and, generally speaking, the whole of Apulia. The free work of the chisel has a larger share in their execution, and they do not aim at a servile reproduction of the models brought in the ordinary course of trade from Greece. For among the *figurines* of Apulia a considerable proportion are mere duplicates, rendered heavy and vulgarised in the process of copying, of the exquisite statuettes of Athens and Tanagra. There are some good specimens of these Messapian or Calabrian terra-cottas in the Jatta collection at Ruvo and in the museums of Bari and Lecce. I do not recollect seeing any in the museums of the rest of Italy, of France, England, or Germany.

TARENTUM.

The last vestiges of the ancient city which remained to our own day above ground at Taranto are finally disappearing at the present moment in consequence of the construction of a new quarter on *terra firma*, outside the island that in ancient times contained the citadel, which was artificially enlarged in the tenth century by the Emperor Nicephorus Phocas, and where, after that date, the city remained concentrated during the whole of the Middle Ages. The works now in progress are turning up the soil of the entire district where the Agora was situated, and likewise the main street, running from the shore of the outer gulf to the inner gulf of the Mare Piccolo—the street by which Hannibal dragged his ships over land into the port, with the object of taking the fortress, occupied by the Romans, in the rear. It is much to be regretted that the Italian Government did not have them watched from the beginning by an engineer. An outline of the ancient buildings which have been successively brought to light and demolished would have given an almost complete plan of one of the most interesting portions of ancient Tarentum.

Many antiquities, too, are found in the course of these works, but the discoveries are not strictly and continuously watched. The various objects are dispersed, destroyed, or packed off to Naples without any authentic certificate of the place where they were turned up. There is no museum or private collection at Taranto, except of medals. The only cabinet that once existed in the city—that of Canon Cecci—is now almost entirely dispersed in consequence of the owner's death. All of any value that it contained has been sold piecemeal. The remainder, which I was allowed to see, chiefly consists of grotesque forgeries, which some workman of the place manufactured for the excellent Canon. It included some vases with red figures, painted in oil, with elephants, a reminiscence of Pyrrhus, which are, it must be confessed, highly amusing.

I was, however, able to pick up at Tarentum a few fine fragments of terra-cottas, for which I have been fortunate enough to gain admission to the Louvre, and which introduce a special series in antiquities of this class. They consist of an antefix decorated with a mask of Pan, the modelling of which is remarkable for its firmness and precision; and fragments, of the heads more particularly, of statuettes of very considerable size, deeply scored with the chisel

on leaving the mould, and presenting every characteristic of Greek sculpture of the fourth and third centuries B.C. One in particular forcibly reminds the student of the fine head of the bearded Dionysos on the coins of Naxos in Sicily at the culminating epoch of art, and would compare with it by no means unfavourably. These terra-cottas of Tarentum also combine with the coins of the same city to reveal a truly original school of art, to which a place must be assigned when a few more examples are known. The Tarentine *coroplasts*, in the fragments here spoken of, have their own peculiar manner, and—a very rare circumstance in Italy—instead of following more or less skilfully in the track of the Attic or Boeotian *coroplasts*, they create compositions and types of which they are the inventors. One peculiarity common to all the heads collected by me is the singularly ample and somewhat theatrical development of the hair upon them; in this we recognise a token of that love of slightly exaggerated magnificence, of pompous and profuse display, which was among the characteristics of Tarentine taste. It is taste of the same order as is displayed in the Greek votive crown of gold now in the museum at Munich, and discovered at Armento in Basilicata.

As to authentic painted vases, nothing that I could see on either hand at Taranto represented the local manufacture of the best period. It is still wholly unknown, so far as my experience goes. What I have seen belongs exclusively to the familiar class of the Apulian pottery of the age of complicated compositions and overcharged decorations, and of the age of the decadence. This confirms what I had long suspected, that the vases of Apulia and Basilicata are really Tarentine vases. I do not mean to imply that there were no centres of local manufacture outside Tarentum. It is certain, at all events, that there was one such at Ruvo, where potters' ovens have been discovered, and near one of these ovens the tools of a vase painter, the stone pestle to pulverise his colours, and his two pots of black and red—all of which are preserved in the Jatta collection. But it was Tarentum which set the fashion to the Apulians and Lucanians, and from that city came the Greek potters who settled among the native populations, subject, until the Roman conquest, to the political influence of the powerful colony of Sparta, which loved luxury and pleasure and was unfaithful to the stern traditions of its mother country.

Other circumstances testify to the truth of this hypothesis. The palaeography of the Greek inscriptions on the Apulian vases is purely Tarentine. It has long been noticed that representations of comic subjects are peculiar to the vases of Apulia and Basilicata. But these representations have not the same character as the scenes borrowed from Athenian or Sicilian comedy by other classes of antiquities. They have a more trivial and grotesque accent, which precisely coincides with what we are told of the *phylakes* of Tarentum—farces of a purely burlesque character in which the Tarentine people delighted. And among these comic subjects may be noted some which are connected with the city's traditions. Such is the well-known painting representing a *phylax*, with a thick cap on his head, riding on a large fish. Here there is no room for doubt; the burlesque actor is playing the part of Phalanthos, the founder of Tarentum, saved from shipwreck by a dolphin, like his mythical predecessor, Taras, and characterised by the fur *κυνή* which he was to lift from his head as the signal for the resurrection of the Parthenians, but which he kept on, being restrained at the last moment by an honourable scruple of patriotism.

So, then, the event which brought about the fall of the painted-vase industry in the district of Apulia and Lucania must have been the

ruin of Tarentum in the Second Punic War. It is well known how severely the Romans punished that city for surrendering to Hannibal. Its buildings were levelled to the ground, part of its population massacred, the rest, to the number of 30,000 citizens, sold for slaves; from 209 to 123 B.C. its site remained a scene of almost perfect desolation. This centre of light from which Greek artists radiated over the neighbouring provinces was thus suddenly extinguished, and the natural result must have been the fall of the industries established at Tarentum, such as painting on pottery. If at a somewhat later date, in accordance with the suspicions of Gerhard and Baron de Witte, the "Senatusconsultum de Bacchanalibus" exercised any influence over the final extinction of this industry, it can only have been to complete what was already three parts accomplished.

As regards the topography of ancient Tarentum, the chief quarter of that city extended from one sea to the other along what is now the Leorce Road, on the point to the east of the citadel. It formed a triangle, the *perimeter* of which was about six miles, and which covered an area of almost one and a-half square miles. The base was formed by the wall which bounded it on the land side, and the line of which can still be traced by the fragments of Hellenic construction in large well-shaped blocks which may be seen at the spots called Collepasso on the Mare Piccolo, Montegranaro on the outer gulf, and Murivetera between the two. Outside this enclosure lay the necropolis, of the existence of which we have clear traces near Murivetera, but where no regular researches have ever been prosecuted. The Agora, as I have said above, was situated where the Borgo Nuovo is now in building. Between that place and the Villa Beaumont-Bonelli, on the Mare Piccolo, may be seen the remains of a Roman circus. Those of the theatre are near the church of San Francesco di Paola. Round this church are constantly found the terra-cottas of which I have just spoken, and which appear to consist of the *ex-votos* of a temple which was succeeded by the present church. A little outside the ancient walls, at the place called Fontanella on the Mare Piccolo, may be observed enormous heaps of shells of the *Murex brandaris* and the *Murex trunculus*, the relics of the manufactories in which the famous Tarentine purple, used for dyeing woollen stuffs, was prepared. Similar heaps, which may be noticed near Tyre in Phœnicia and Gythium in Laconia, indicate that the Phœnicians employed the second of these molluscs exclusively, and the Laconians the first. The Tarentines, however, seem to have combined the colours extracted from the two. Some remains of the buildings in which the dye-works were installed may still be seen near the shell heaps; the visitor will remark some patches of plaster which have preserved indelible traces of the colour employed.

But the ordinary view is quite erroneous which would reduce ancient Tarentum to this principal portion situated to the east of the citadel. This is possibly true of the Roman city, which never occupied, even on this side, more than a part of the site of the Greek city. The latter had, on the opposite point, to the west, where the Naples road runs, at least a suburb, a *proasteion*, almost as extensive as the city itself, and protected by a fortified wall. A fragment of this wall, belonging to the best period of Hellenic construction, is standing at a distance of about a mile and a-quarter north of the railway station. Without equalling Syracuse in size, Tarentum, thus divided into three parts by the natural channels which lead into the Mare Piccolo, was, in the time of her splendour, one of the greatest among Greek cities.

One must have observed on the spot the mar-

vellous richness and infinite variety of the aquatic fauna of the Mare Piccolo in fish, molluscs, and zoophytes to understand the place occupied by these divers creatures in the small accessory types of Tarentine numismatics.

In the cathedral, dedicated to San Cataldo, with the roof of its nave partially resting on ancient columns, I remarked several interesting marble capitals, strictly Byzantine in style, decorated with the Imperial eagle, which betoken the handiwork of artists from Constantinople, and must belong to the works executed by Nicephorus Phocas. The cathedral was perhaps originally built in the time of that Emperor, but it has been materially altered at different epochs since, and was completely modernised in the last century.

FRANÇOIS LENORMANT.

OLD MASTERS AT BURLINGTON HOUSE.

[First Article.]

A COLLECTION of about sixty examples of the art of Holbein and his contemporaries lends an exceptional interest to the present exhibition. It is always a keen enjoyment to be able to follow a great master through the various stages of his career, and to watch the gradual development of his powers. We can scarcely appreciate the full measure of an artist's strength by the study of isolated examples of his work; nor is it an easy task, even when we are familiar with all that he has produced, to combine the impressions derived from a number of pictures seen at different times and in different places. But in the case of Holbein there are reasons which render such a collection as the present specially attractive to the English student. While in the subjects of many of his pictures we are constantly reminded of the great events of English history, we cannot forget that, even from a purely artistic point of view, his influence exercised a powerful effect upon the destinies of the English school. He was the first and the greatest of a line of portrait painters who found employment at the English Court, and whose practice fixed a tradition of style to which our own painters at a later time gave a truly national character; and although the particular manner of his work was almost entirely effaced by the later example of Vandyck, it is impossible that his long sojourn in England can have been without enduring influence upon English taste. Nor was the scope of this influence limited to the art of painting or to the practice of portrait. A century later painters had, indeed, become specialists, restricting themselves to the interpretation of particular truths; but Holbein belonged to a race of men whose supremacy depended on their power of design, and who, in virtue of this power, were able to pass from one form of art to another with absolute assurance and mastery. Thus we know that Holbein could invent a page of ornament as readily as he could seize and record the facts of individual character. His designs for jewellery, preserved in the British Museum, and the beautiful cup bearing the motto of Jane Seymour, prove how readily he could adapt himself to the requirements of the goldsmith's craft; and the numerous woodcuts for book illustration show us, indeed, that he possessed an inexhaustible fancy in the production of all kinds of graceful decoration.

And yet it is undoubtedly true that his first and highest title to fame is that of a great painter of portraits. He had inherited the tradition established by the great masters of imaginative design in Italy and Germany—a tradition which continued to the last to govern the executive qualities of his art; but by intellectual choice he belonged rather to the modern school, for in all the essentials of his art he was

a born realist. Such realism, however, is to be clearly distinguished from that particular form of imitative skill which the painters of Venice were the first to cultivate, and which passed from Venice to the artists of Spain and the schools of the North. In none of his works do we find the kind of brush power which is to be met with in the later examples of Titian or in the portraits of Tintoret and Velasquez. His colouring is rich and full in quality, and his rendering of the facts before him is searching and complete, but the effect of his painting depends as little as possible upon the power to interpret the differences of texture and surface which afterwards became an object of special study to all painters of portrait. In this sense there is no one of the many admirable specimens of his handicraft here exhibited that will bear comparison with the portrait by Tintoret (110) lent by Sir Frederick Leighton. Judged by such a standard, his execution is seen to bear a closer affinity to the style of the Florentine school, or the earlier school of Flanders. His practice, like theirs, is based upon a system of elaborate and precise design—a system which, of necessity, excludes the kind of imitative colouring which the painting of a later time has sought to attain. Within the limits implied in this distinction Holbein stands forth as a colourist of the first order. His choice of the particular tints which are to make up the scheme of his picture shows always the finest sensibility to beauty and fitness of arrangement; and even where he restricts himself to the simplest harmonies the purity and strength of the few colours he employs avail to give to the result an impression of sober strength and richness. The full scope of his powers in this direction is amply illustrated in the full-length portrait of the young Duchess of Milan (177), a picture which unquestionably ranks as one of the grandest exhibitions of artistic genius that has survived to us. It may be doubted whether even Holbein himself has produced its fellow, for it has a certain distinction of style which even the marvellous portrait of Moret, at Dresden, cannot rival. The painter, it would seem, has here been completely fascinated by his subject, for he has not sought to add a single accessory to the graceful figure, nor has he attempted to introduce a vestige of ornament into the simple blue background against which the fair face and dark robes are relieved. The occasion of the picture and the character of the lady herself serve to lend yet a further charm to a work that would be all-sufficing if the sitter were nameless and unknown. After the death of Jane Seymour in 1537, the representatives of England at foreign Courts were instructed to report as to the fittest person to be her successor. Hutton, the English envoy in Flanders, in the discharge of this delicate duty, directed the attention of the Lord Privy Seal to the noble qualities of the lady whom Holbein has here immortalised. The daughter of Christian II. of Denmark, and niece of the Emperor Charles V., she would in many ways have proved an acceptable choice to the English statesmen of the time. Though little more than a child, she had been already married to the Duke of Milan, and when Holbein was sent to Brussels to take her portrait he found her, as he has painted her, in the sober garments of a widow. Most admirably does Hutton's description accord with the evidence of the picture. She is, reports the envoy, "a goodly personage, and of excellent beauty." "She is not," he adds, "so delicately fair as the deceased Queen, but she hath a good countenance, and when she smiles two little dimples appear in her cheeks and one in her chin which become her well." And again he says, "She is very friendly and graceful in her bearing, and soft in speech; she seems to be of few words, and she lisps somewhat in talking, which does not become her badly." Hutton continues

to relate how he procured a sitting for the artist, who, "having but three hours' space, hath showed himself to be a master of that science; the other is but slobberid in comparison to it." This last clause refers to a previous portrait by some unnamed painter, which had been taken before Holbein's arrival, and it is fortunate for the world that the envoy showed himself to be possessed of so much critical discrimination. From the three hours' sketch Holbein, as we may suppose, painted this superb portrait, and from his practice in other cases we may conclude that the sketch was one of those crayon drawings of which so many examples remain to us at Windsor. Some years ago Mr. Scharf, the Director of the National Portrait Gallery, drew attention in the *Archæologia* to a small painting at Windsor, and pointed out for the first time its identity with the Arundel portrait. But, it is not, we think, very probable that a finished work of this kind can have been executed in three hours' space, and it seems more reasonable to conclude, with Woltmann and the late Mr. Wornum, that the sketch mentioned by Hutton served as the foundation of both paintings. These particulars, preserved to us in Hutton's correspondence, are interesting as throwing general light upon Holbein's methods of procedure. There is little doubt but that it was his usual practice to make a careful drawing from the life from which he afterwards executed his painting, and the exact correspondence in many instances between the drawing and the picture suggests that, as in the case of the Duchess of Milan, he may sometimes have relied almost entirely upon the preliminary study for the completion of the portrait. Such a method would be obviously insufficient in the case of an artist who sought for imitative effects of colour, and who would necessarily require the constant presence of his model; but, as we have already pointed out, Holbein's colouring is governed by a different principle, and he does not seek in his execution to interpret such individualities of surface and tone in flesh as would be prized by the professors of another school. In regard to several of the portraits here exhibited, the preliminary drawings are still preserved. The heads of Sir Henry Guildford (174), Lady Butts (178), Archbishop Warham (179), and John Reskimer (185) are all to be found in the Royal Library at Windsor, and several of them were exhibited two years ago at the Grosvenor Gallery. There is one instance in which the existing drawing enables us to declare decisively against the assumed identity of the subject of the portrait. The interesting example from Lord Pembroke's collection (182) is described in the catalogue as representing Sir John More, father of the famous Sir Thomas More, but both the head at Windsor and the Basle drawing of the More family are entirely inconsistent with this assumption. Another drawing at Basle suggests a comment of a different kind upon the portrait of Sir Nicholas Carew (192), for it is impossible to compare the drawing with the picture without feeling that the latter is in all respects inferior; nor is it easy to escape the conviction that Holbein's drawing must have been transferred to canvas by some inferior hand.

It would take long to do justice even to those examples of the present series which are unquestionably by the master, and still longer to enter upon the reasons that in some individual instances would seem to justify a different attribution. We may, however, specially distinguish, among what seem to us to be indisputable Holbeins, the grand half-length of Lady Guildford (171), where the painting of the accessories displays the artist's power in the treatment of Renaissance ornament; the portrait of the Duke of Norfolk (180), from Windsor; and of Sir Brian Tuke, from the same source; nor must we omit to mention the

exquisite little portrait of one of the Fugger family contributed by Mr. Cook.

J. COMYNS CARR.

EXHIBITIONS.

SOCIETY OF PAINTERS IN WATER-COLOURS.

THE present exhibition of this society is unusually attractive, and this is in great part due to the numerous and excellent works of its lady members. This being so, it is not a little surprising to see a note in the catalogue to the effect that "There is no vacancy for a lady member;" since this, we suppose, is to apply, not only to the ensuing election in March, but to all subsequent ones. If the society believe that the works of their lady members are derogatory to their exhibitions, they have chosen an ill moment for the announcement of their conviction.

The Marchioness of Lorne, who is an honorary member of the society, exhibits no less than seven sketches taken in Canada. Of these, the *Set of Three Drawings—Views from Citadel, Quebec*, are very attractive, and the small drawing called *Fishing on the Ristagouch, Canada*, is full of quaint humour, the effect of which is heightened by the bold way in which the mosquitoes are put in.

By Mrs. Allingham are several charming little works, all highly finished and extremely pretty. Of these, *The Goat Carriage* is perfect. It shows two children drawn along the sands by a sleek black goat—a fine specimen of his kind—while a pretty little girl in the chaise complacently holds the reins. Behind this group is seen the pale blue sea, while the air seems laden with sunshine. The whole effect is charming, and the painting both solid and delicate. Mrs. Allingham has other drawings of children, and several small and very true studies of wild flowers, one drawing of bluebells seen in a glade by open daylight, so that their hue is pale. Many artists make the mistake of painting these flowers dark blue, whether they are in shadow or in light. Mrs. Angell exhibits several charming flower-studies, of which the one of *Chrysanthemums* is full of light, and is drawn in a very spirited way. Miss Clara Montalba has made surprising progress of late, and surpasses herself in the drawings here. With the exception of one work the whole number forms an interesting series of scenes of the Thames, not of its banks when they look young with verdure, but of its bridges with the aged wharves scowling at one another across the waters, while heavy clouds of smoke hang lowering overhead. Miss Montalba has learnt much by her residence in Venice, and returns to paint our London river less wildly and more staidly than before. *Blackfriars Bridge*, under her treatment, appears almost grand; and the barge, with its deep-red sail, as it comes sweeping through one of its arches, is an object of actual beauty. There is one drawing here by Mr. Ruskin, showing the decoration in the interior of one of the domes of St. Mark's, which is, of course, most conscientiously and minutely painted. Sir John Gilbert has *The Wise and Foolish Virgins*, rather formally portrayed; but the figure of the bridegroom on horseback seems surprising as well as new, and rather produces the effect of seeing a Quaker with his hat on in the presence of ladies. Mr. Alfred Hunt sends several of his lovely dreamy effects of afternoon light and colour. No. 208, *Norway—Midnight*, has the effect of being painted from memory. By Mr. Alma-Tadema is *An Old Bachelor*, which is chiefly noticeable for the evident difference of handling water-colours between this artist and the other artists of the society. Mr. B. W. Macbeth has several studies of the Devonshire fisheries, of which the study of boats (No. 24) is full of light. Mr. Brewtnal has two pretty drawings,

one called *Winter*, of a lady clad in red and russet, apparently holding friendly converse with a robin; the other, of a *Haunted House*, which, except for the wonderful amount of window space, looks very mysterious, and the woman and child hurrying by have a good appearance of being scared. By Mr. Carl Haag is the portrait of a good-looking Zulu, which is pleasant to see after the many hideous likenesses of this race that have lately been shown in the shop-windows. *Luca Signorelli*, by Mr. Henry Wallis, is a strange work; it shows a young man with a flat face standing on some soft-looking steps, gazing up at a wall over which girls are peering and blossoms are falling, while an elderly man in the same posture of standing in a walking position with the feet on two steps is seen behind. This picture is not attractive in any way—not even in colour, in which point Mr. Wallis is usually so pleasing. By the same hand is *A Dutch Hofje* (almshouse) and two others, of which *A Bridge in Delft—Market Day*, is delightful; the group of three plump peasant women, standing in a triangle and having a regular good gossip, is excellent. There are a great number of good landscapes, among which those of Mr. Albert Goodwin, Mr. John Lloyd, Mr. Arthur Hopkins, and Mr. Edwin Buckman are specially charming. Mr. Birket Foster's *On the Coquet, at Workworth*, is a good specimen of his very precise and minute style of painting. By Mr. Samuel Read are two solidly painted views of interesting streets in Edinburgh and Exeter. Mr. Robert Barnes should avoid such subjects as *More Free than Welcome*, of a black cat coming to pay an early call on a child in bed, if he is afraid to paint the bed-clothes in any lighter tone than pale green and red. Mr. Lamont shows much humour in the convivial expression on the face of his old man in *At the Dairy Door*, who holds out his mug for another draught. Mr. Walter Duncan is delightfully naive in his drawing called *Two Young Lovers Lately Wed*; all people—married people at least—must know that such young persons are rather dull company, but no painter has yet been so bold as to state this plainly, since it has always been the fashion to cast a veil of mystery and romance—and wisely—over such people. But Mr. Walter Duncan here depicts a young couple out for a walk, with a fierce red sunset in front, making the delicate complexion of the bride of rather a bronze-red hue, while on the hand of the groom sits a magpie, or some such talking bird, which these young people have been wise enough to bring with them, since—the touch of sarcasm in the painter—are not all lovers apt to be silent?

INSTITUTE OF PAINTERS IN WATER-COLOURS.

At the gallery of this society will be found, among a rather large number of drawings and sketches, many which are full of interest, while there are some which are amusingly bad.

The most important work here is Mr. J. D. Linton's *Flag of Truce*, which is a capital subject successfully treated. The expressions on the different faces are admirable; the looks of loathing of the recently besieged for the white flag, and the manner of the messenger of peace as he waves the hated emblem before the faces of the conquered, are most admirable. *Going to Market—Early Morning, North Holland*, by Mr. George Clausen, shows the towing-path by a Dutch canal, along which are walking peasant women carrying baskets, and a man dragging a barge. The foremost figure of the group is a smiling buxom young woman, who carries her wares in two pails suspended from her shoulders, and who chats most pleasantly to her neighbour, the bargee, as she trudges along. If "going to market" is usually conducted in this way in

Holland, it must be a favourite employment there. The misty appearance over the canal is well given, and suggests early morning. Mr. Wolf has several drawings here, of which *Night*, showing a huge beast of prey stealthily creeping through the darkness, is excellent; while *Storks Starting for the South* is very curious. The effect produced by the sharply divided black and white plumage of the birds, which is seen more clearly when they are in flight, together with the symmetrical pattern they form into at starting, produces a strange effect, and is quite Japanese in appearance. By Mr. Townley Green are two pretty little subjects called *Good Morning* and *The Swing*, which seem to tell parts of the same story, how a good-looking, but rather heavy-faced, young man, in King Charles dress, bids a sad good-bye as he leaves the presence of the lady he admires and courts; and how, presently, the same young lady, seated in a swing in the garden, sways herself to-and-fro, not too well pleased at her refusal having been so readily accepted by her too-desponding swain. A *Question of Date*, by Mr. Seymour Lucas, is extremely well painted; the whole aspect of the room is in harmony, nothing demanding an undue amount of attention; but the similarity in the colour of the old helmet and the coat of the connoisseur is surely too marked. There are some interesting studies by Mrs. Elizabeth Murray, one of which, *An Arab Officer*, a man seated in strong sunlight, with his hands held outwards above his eyes, and who has so fallen asleep, is very good, but the knuckley appearance along the outer side of the hands is disturbing. By Mr. John Fulleylove are some views of Hampton Court Palace and Gardens, of which that of the fine Dolphin Fountain raised against an old red brick wall is perhaps the best. *The Old Bachelor* and *Stragglers*, by Mr. Andrew Gow, are both excellent pictures. *The Epilogue to Romola*, by Miss Gow, is carefully painted. Mr. Walter Wilson's *Pupil of Vandyke* is cleverly and effectively rendered.

The designs in black-and-white, chiefly for illustration to recent novels, are most admirable, and show careful work as well as clever effects in chiaroscuro; the illustrations by Mr. Small for *Under One Roof* are specially noteworthy, and so also is an etching by Mr. Herkomer.

NOTES ON ART AND ARCHAEOLOGY.

MR. G. A. AUDSLEY has in preparation, uniform with the *Keramic Art of Japan*, the last part of which has just been issued, a work on the *Cloisonné Enamels of Japan*. The English edition will be strictly limited to 1,050 copies, and subscribers' names will be received by the author, 27 Greenheys Road, Liverpool.

M. ALPHONSE DE NEUVILLE has nearly finished a large picture of the surprise and massacre of Isandiana.

MESSRS. SAMPSON LOW AND CO. have issued, as a supplement to *Men of Mark*, a portrait of the German Imperial Crown Prince, with a Memoir revised by himself.

We learn from an Indian paper that Dr. De Fabek is preparing for publication a considerable volume on *Architecture and Decorative Art in Rajputana*, for which he has collected a great amount of materials, including about 200 drawings, in conjunction with Major Jacob.

We are only able this week to record the death of Mr. E. W. Cooke, R.A., F.R.S., at the age of sixty-eight.

A Moscow antiquary lately discovered a silver bowl of German workmanship, belonging to the seventeenth century. Its artistic execution, and the singular bearing of its decorations on the present time, induced a few German

patriots to purchase it, and send it as a present to the German Emperor. The exterior of this interesting relic presents a skilful joining together of German thaler pieces, of the period when the Fatherland boasted of no fewer than thirty sovereigns. Among these thaler pieces—and herein consists the special value of the gift—the bust of the Great Elector appears in semi-relief; and the artist, in a prophetic spirit, has placed the Imperial crown in his hand.

THE *Deutsche Rundschau* for January contains an article by Prof. Virchow on "Troy and the Castle-hill of Hissarlik." Prof. Virchow went there last year as the guest and fellow-labourer of Dr. Schliemann, and he has published the first of a series of articles on more minute questions connected with Dr. Schliemann's discoveries, in the *Verhandlungen der Berliner Gesellschaft für Anthropologie* (June 1879).

THE Freiburg committee for the erection of a monument to Nikolaus von Flüe has issued an invitation to the sculptors of Switzerland and foreign countries to send in competitive sketches for this work. The monument is to take the form of a statue of the popular hermit and patriot, while the pedestal is to be ornamented at the sides with two bas-reliefs, one of which must represent the famous Diet at Stans, and the other some episode from the Battle of Murten. The models are to be sent to the Kantonsbaumeister, in Freiburg, not later than April 1, 1880. The prize for the best model is 1,000 frs., while 500 frs. will be given for the second in merit.

THE Académie des Beaux-Arts has awarded the Rossini prize to M^{me}. de Grandval.

THE Austrian papers announce the death of the painter on glass, Karl Geyling. His chief works are in St. Stephen's, Vienna.

A NEW edition of M. George Duplessis' valuable *Histoire de la Gravure* has just been published. It is considerably enlarged from that which appeared in the series called "La Bibliothèque des Merveilles" some time ago, and has received the author's latest corrections. It is now richly illustrated with a large number of reproductions executed by the Amand-Durand process, which leave nothing to be desired in point of faithfulness.

A WINTER exhibition of fine arts at Bruges which is now open appears, contrary to prediction, to be a decided success. It is only in England that winter exhibitions have become a custom to any extent. In Bruges, at all events, such an innovation was deemed foolish, and met with much opposition. The members of the Cercle Artistique de Bruges persisted, however, in their determination, and have been rewarded for their efforts by having got together a very fair collection of pictures both by foreign and native artists. The modern French school especially is largely represented, and some German and Dutch artists contribute; but, strange to say, we do not see any English names, though Bruges has such a large number of English inhabitants.

It is with regret we see announced that the whole of the valuable artistic treasure stored in the Palace of San Donato, at Florence, will be sold by public auction on March 1 and the following days. All the important pictures, sculptures, works in bronze and other metals, tapestries, &c., of which an interesting account was given in the *Gazette des Beaux-Arts* some time ago, will now be dispersed, and, like so many similar collections in Italy, will go to enrich the galleries of foreign countries and the hoards of private collectors. An illustrated catalogue of this sale is being prepared, and will be sold partly for the benefit of the poor of Florence, and partly as a contribution to the fund raised for the purpose of finishing the great *façade* of the Duomo.

AMONG the *livres de luxe* put forth by the well-known house of Hachette this season is a magnificent edition of the Apocryphal Book of Tobias, illustrated by M. Bida in the same way as his celebrated New Testament and the Books of Ruth and Joseph. These works are remarkable, not only for their artistic merits proper, but also for the rare perfection to which the typographic art is carried in them. In these days of cheap paper and printing, it is a delight even to turn over the leaves of such books, in the preparation of which expense seems to have been the last thing considered. The history of Tobias is illustrated with no fewer than fourteen etchings *hors texte*, with numerous pen-sketches of places, initial letters, head and tail pieces, &c., reproduced from M. Bida's drawings by some photographic process.

MR. MARCUS STONE, A.R.A., is the "living artist" under notice in the *Magazine of Art* this month, and an engraving is given of his capital picture *Le Roi est Mort; Vive le Roi!* We also have in this number, which is enlarged according to promise, an article on the eccentric Belgian painter, Wiertz, giving a short sketch of his life. It is accompanied by a portrait, but, unfortunately, no illustration is given of any of his sensational works. These remarkable performances are almost entirely unknown, except to visitors to Brussels, who all feel bound to visit the Wiertz Gallery, if only for the sake of being tricked by its curious illusions.

THE STAGE.

PROF. MORLEY'S lecture at the London Institution was remarkable for its revival of a scheme for the proper stage education of our actors and actresses, or, to be more correct, for its casting the scheme into definite form. The thing has long been talked about, but the talk at first was broken and intermittent, while it has now become earnest, practical, and almost continuous. With all possible wishes both for the efficient establishment of a training school for players, and of a theatre free from the obligation of being from the first and always self-supporting, we doubt very much whether the day is not still distant when State aid may be given to the Drama. The question probably resolves itself into this—Can any sufficient number of persons seriously interested in the theatre (either amateurs or theatrical managers) be found to join together to establish a school? Good teaching can hardly be unavailable, for, apart from a few excellent professed masters of elocution and bearing now doing useful work in London on their own account, the accession to the ranks of the theatre within the last few years of several men of original culture provides the means of competent professorships. Admission to the school would naturally be decided by the judgment of a small committee of critical and professional experts, since, though "all the world's a stage," it cannot be permitted that all shall be players. This admission to the school should itself constitute some recommendation of the persons admitted, and they would then have the opportunity of learning what can only be taught efficiently to the suitable. This might not be Prof. Morley's precise plan, but the adhesion to any one plan is of less importance than the putting of the scheme, broadly, into practical, and not wholly unremunerative, shape.

UPON dramatic critics Prof. Morley in his lecture was unduly severe, or at least he failed to appreciate the conditions of their work. He had apparently forgotten that it now happens but rarely for a critic—even of a daily paper, where pressure is necessarily hardest—to be obliged to write his criticism immediately on the conclusion of the first representation. He can

go to bed like other people, and no doubt generally does. For a first night is almost always on a Saturday, and there is Sunday for him to prepare his article. The public should not be allowed to conclude that everything is sacrificed to the exigencies of immediate publication. "Criticisms" are sometimes telegraphed to provincial papers, it is true, not long after the curtain has fallen; and we are accustomed, on opening our broadsheet, to see the telegram from Paris giving a *compte rendu* of what happened at the Français scarcely more than half-a-dozen hours before. But the Monday morning criticisms of our own London performances are not written under extreme and disabling pressure.

The new series of *The Theatre*—the monthly magazine now edited by Mr. Clement Scott—begins very well, and (except for those purposes of business intercommunication which it does not pretend to fulfil) it is distinctly the best serial devoted to the drama which we have had in England. Mr. Knight, Mr. Thomas, Mr. Bendall, and Mr. Pollock are among the critics contributing to the first number, and Mr. Clement Scott, the editor, writes several notices with which no fault is to be found but that of a too universal geniality. The question discussed in the symposium is a quite interesting and important one—"The Dearth of Dramatists—Is it a Fact?" Mr. Palgrave Simpson thinks that it is "not a fact," but the reasons that prompt him to his decision are not so evident as his good nature and indulgence to such few playwrights as are cropping up; Mr. Henry Irving avers that the dearth exists as far as concerns dramatists whose work it is possible to produce, and cause is found in the indifference of the writers of plays to the necessary conditions of the theatre—an indifference and an ignorance existing, not only among the beginners in literature, but also among some of the most practised and accomplished novelists who essay stage-writing. *The Theatre* is well illustrated—this time by the counterfeit presentments of the two popular performers at the Lyceum.

DURING the recent visit of Lord Lytton to Rajputana, he witnessed a performance by a Parsee company at the Jaipur Theatre. This theatre is said to be more handsomely fitted up than those at Calcutta and Bombay, and to be well attended by the natives. Its chief peculiarity is a ladies' gallery, protected in front by a lattice-work, so that the occupants may see without being seen themselves.

MUSIC.

NEW MUSICAL PUBLICATIONS.

The Silver Cloud: Cantata for Female Voices. By Franz Abt. *The Music of the Bible*. By John Stainer. *The Literature of National Music*. By Carl Engel. *The Lancashire Sol-fa*. By James Greenwood. (Novello, Ewer and Co.) The subject of Herr Franz Abt's cantata is a very simple fairy legend set in agreeably flowing if somewhat weak verse by Mr. Edward Oxenford. The music is written for three solo voices and three-part chorus. Though possessing no great pretensions to originality, it is very graceful and melodious, and the harmony of the voice parts, as well as the piquantly arranged accompaniments, shows the hand of a practical musician. The work is of no inordinate difficulty, and may be highly recommended for class teaching.—Dr. Stainer's little work treats of a subject interesting alike to the musician and the historian. The author contributed a series of articles to *Cassell's Bible Educator*, and these form the ground-work of the present volume; but they have been subjected to revision, and new matter has been added. The work bears the impress of extensive reading and much

thought, though the results are compressed into less than two hundred small pages. An account is given of each instrument mentioned in the Scriptures, the whole being classified in the usual manner as strings, wind, and percussion. This section is succeeded by a chapter on the vocal music of the Hebrews, a subject involved in excessive difficulties, which Dr. Stainer wisely makes no attempt to solve. This is naturally the least satisfactory portion of an otherwise admirable little treatise. As regards the philological portion of the book, the author acknowledges his indebtedness to Mr. Ernest Budge, of Christ's College, Cambridge.—Mr. Carl Engel's essay may be considered in some degree as a companion to that of Dr. Stainer. It appeared in the monthly parts of the *Musical Times* from July 1878 to March last. By the term national music, the author rightly includes only traditional or folk music, and not the important works produced by the representative composers of each particular nation. The book is therefore a descriptive catalogue of various compilations bearing upon the subject. Published collections of the songs of each country are first noted, and afterwards works on national poetry, dance tunes, and sacred music. For purposes of reference, Mr. Engel's book will be found useful enough in its way.—The last on our list is one of the most recently issued of Messrs. Novello's admirable Music Primers. Perhaps many will be surprised to learn that any special system of sight-singing prevails in the North of England; but it appears that the old English system of sol-fa still exists in certain quarters, and that the best results are constantly obtained from this method. It consists in applying the syllables fa sol la to the 1 2 3 and to the 4 5 6 of the scale, the syllable mi being reserved for the seventh or leading note. The staff notation is employed in its integrity, and, therefore, the system cannot with justice be termed heterodox. Mr. Greenwood is himself a most successful teacher by the method, but he is no controversialist, and his book consists merely of a plain and practical exposition of the system without note or comment.

FROM a large quantity of sheet music recently published we select the following as worthy of mention.—*Gigue, Passepied, and Bourrée*, by Edwin M. Lott; *Gavotte*, by Cécile S. Hartog; *Polonaise*, by Mary Travers (Ashdown and Parry); and *Rondo Scherzando*, by Maude Valerie (Stanley Lucas, Weber and Co.), are easy and well-written pianoforte pieces suitable for teaching purposes. *Fantasia on Lohengrin, Cantilena, Chœur de Chasse, and Grande Polonaise*, by Sydney Smith (Ashdown and Parry), are more brilliant and difficult. Those in search of drawing-room songs will probably find some to suit them from among the following list:—*Honest Heart*, by Lady Lindsay; *Chanson d'Avril, Chanson de Mai, and The Girl to her Bird*, by Arthur G. Thomas; *Love Floweth on for Ever*, by Ridley Prentice; a set of six songs by Prof. G. A. Macfarren, set to words by the author of *The Epic of Hades* (Stanley Lucas); *For Ever and a Day*, by Boyton Smith (Ashdown and Parry); and *The Old Grenadier*, by A. C. Mackenzie (Novello, Ewer and Co.).

A MEDLEY OF NOTABLES: What

they said and What others said of them. By G. F. S. This little book contains on one side of each page a quotation from some well-known author, and on the other side a brief notice of this author by other authors. If we turn to Shakespeare, for instance, we find quoted Dame Quickly's description of Falstaff's death, while there are given notices of Shakespeare by Keats, Ben Jonson, Browning, Barnfield, and by some anonymous writer who likely enough is the editor. From him we learn that "Shakespeare went before all men, and stands in the array of human intellect like the sun in the system, single and unappropriated."—*Saturday Review*.

NOVELLO, EWER, & CO.'S CATA-

LOGUES (1880). No. 1.—Organ and Harmonium Music. No. 2.—Sacred Music with English Words. Post-free on application.

Now ready.

THE ONLY COMPLETE EDITION.

1 vol., 518 pp., folio, handsomely bound, cloth, gilt edges, price 21s. An entirely new and carefully revised edition of

MENDELSSOHN'S ORIGINAL COM-

POSITIONS for the PIANOFORTE, including the "Lieder ohne Worte." Also a New Two Edition (518 pp.). Price, in paper cover, 7s. 6d.; cloth, gilt edges, 10s. 6d.

"The volume before us is indeed a model of cheapness combined with elegance and convenient arrangement. It contains, in 518 neatly printed pages, everything Mendelssohn has written for the pianoforte, from the capriccio in F sharp minor, op. 5, composed in 1825, at the age of sixteen, to his latest works, including several published after his death. A student will find no end of interesting points in the works here collected; but to the more advanced amateur also they will be a source of pure enjoyment. We need not add that the stately volume before us is eminently adapted to serve as an elegant and valuable gift-book at this, or indeed at any, season of the year."—Times.

A New Edition of the

LIEDER OHNE WORTE, from the above

(Eight Books complete), is also published separately. Price, folio, paper cover, 3s.; cloth, gilt edges, 3s.; 8vo, paper cover, 2s. 6d.; cloth, gilt edges, 4s. 6d.

* The only complete edition.

LIPPINCOTT & CO.'S LIST.

ALLIBONE'S (S. A.) GREAT

AUTHORS of ALL AGES: being Selections from the
Prose works of Eminent Writers from the Time of
Pericles to the Present Day. Royal 8vo, gilt cloth (pp.
550), \$1 5s.

This Work is the fourth of Mr. Allibone's publications,
which together constitute a Course of English Literature.
It is in every way worthy of the Author's reputation, and
exhibits the same sound judgment and extensive reading
that have characterised his former Works.

FRANKLIN (BENJAMIN), the
LIFE of. Written by Himself. Now first Edited from
MSS., and from his Printed Correspondence and other
Original Writings, by JOHN BIGLOW. With Portrait.
New and Cheaper Edition. 3 vols., crown 8vo, cloth (pp.
1,670), \$1 1s.

"A remarkable book. . . . Not only of deep interest,
but a literary experiment of a novel kind. . . . Destined
to remain a Classic for all English-speaking people."—
Contemporary Review.

"Mr. Bigelow having supplemented Franklin's narrative
with biographical extracts from his letters, the work is both
complete and excellent."—*Athenaeum*.

A HANDBOOK of NURSING, for

Family and General Use. Published under the Direction
of the Connecticut Training School for Nurses. New
and Cheaper Edition. Crown 8vo, cloth (pp. 270), 4s.

"One of the most satisfactory works on the subject of
nursing that we have seen. . . . Its arrangement is so
good, and the amount of information it contains is so sound
and so forcibly stated, that it cannot fail to be popular."—
Lancet.

WURTZ'S (A.) ELEMENTS of

MODERN CHEMISTRY. Translated and Edited, with
the approbation of the Author, from the Fourth French
Edition, by W. H. GREENE, M.D. With 132 Illustrations,
crown 8vo, cloth (pp. 887), 10s. 6d.

"The translation is a faithful or even improved representa-
tion of the original work."—*Note by the Author*.

BROOKES'S (C. B.) POPULAR

GUIDE to the TERMS of ART and SCIENCE. In-
tended to enable a non-Scientific person to find the tech-
nical terms by merely knowing the popular words
relating thereto, and to translate into popular language
such technical terms as he may meet with. Crown 8vo,
cloth (pp. 226), 7s. 6d.

**BABCOCK'S (W. H.) LORD STIR-
LING'S STAND,** and other Poems, mostly Original,
but some reprinted from various Periodicals and News-
papers. Crown 8vo, cloth (pp. 212), 7s. 6d.

KEATING'S (J. M.) WITH GENE-

RAL GRANT in the EAST: a Record of his Recent
Tour. Illustrated. Crown 8vo, cloth (pp. 227), 7s. 6d.

"We have seen nowhere of late more graphic pictures of
India than those this unpretending volume gives. It enables
the reader to travel directly with the company, and to see
things as they saw them. This is the highest art of such a
narrative."—*Boston Literary World*.

DUHRING'S (Dr. L. A.) Atlas of

SKIN DISEASES. To be completed in 8 or 10 Parts,
each containing Four Coloured Plates, with Explanatory
Descriptions. Parts I. to VI. now ready, price 12s. each.

"The plates are of great artistic excellence, and are faithful
copies of diseased appearances. Teachers as well as practi-
tioners will find these plates useful. The work is one of high
merit."—*Practitioner*.

"Dr. Duhring is taking an immense amount of trouble
with the issue of these plates, and they all reach a very high
standard, whilst the letter-press is all that can be desired."—
Lancet.

AGNEW'S (Dr. D. H.) PRINCIPLES

and PRACTICE of SURGERY: being a Treatise on
Surgical Diseases and Injuries. Vol. I. Royal 8vo, pp.
1,100, and illustrated with nearly 1,000 Wood Engravings,
cloth, £1 16s.

*. Vol. II. is in the press, and will be issued as speedily
as possible.

"A work which will make Dr. Agnew's name familiar to
all engaged in the acquisition of surgical knowledge, whether
they be student or practitioner."—*British Medical Journal*.

"Prof. Agnew's work does great credit to the industry and
enterprise of the author. . . . Every part of this portly
volume shows signs of the labour and care bestowed upon it."—*Lancet*.

LITERATURE.

Memoirs of Prince Metternich, 1773-1815.

Edited by his son, Prince Richard Metternich. Translated by Mrs. Alexander Napier. Vols. I. and II. (R. Bentley & Son.)

[First Notice.]

THE first instalment of the Memoirs of the famous Austrian Chancellor of State has just appeared, edited by his son Prince Richard Metternich, the present head of the family. It is by far the most important contribution that has been hitherto made by any contemporary hand to the history of the most eventful period of the nineteenth century, and its appearance is in two senses opportune. On the one hand, the State system of Western Europe has undergone such a complete dislocation since the death of the Chancellor that, if the publication of his Memoirs had been much longer deferred, portions of them which are concerned with Western Europe might have come to be regarded only as historical curiosities. On the other hand, there are portions of them which regard Eastern Europe and reflect a strong light on the existing difficulties of the Eastern Question, and they well deserve perusal by statesmen of the present day, who may be called upon to undertake to solve those difficulties. The interval of twenty years, however, which has elapsed since the death of the Chancellor is perhaps, after all, not too long a period to have been allowed for the disappearance from the world's stage of several subordinate actors, whose susceptibility might have been hurt by the revelation of facts heretofore shrouded behind the veil of the Austrian State archives. Further, there appears to have been a tradition in the Metternich family that in the opinion of the late Prince himself such a delay was necessary, "in order that the papers which he left behind him should become ripe for the use of the literary world." It may seem strange, at first sight, that so prudent a statesman should have left no testamentary directions as to the publication of his papers. He was, however, singularly free from personal vanity, and he shrank from giving to the public, even after his death, any systematic account of the process by which the great results, in which he played so distinguished a part, were brought about. "The men who create history," such are his own words, "have not time to write it; I at least have had none;" and after his retirement into private life he recoiled from the task, as he was at a distance from the State archives, to which access was necessary for such a purpose. Fortunately, however, he had arranged in 1844 a series of documents which he deposited

in the archives of his family at Plass, in Bohemia, as a collection to be used according to time and circumstances for the history of his life, and for the defence, if they should be needed, of historical truth. The task, therefore, of his son has been "to collect the papers left by the Chancellor, to classify them, as he states, according to the nature of the subject, following the chronological order, and to supplement them occasionally by reference to the State archives." The Memoirs accordingly may seem to some literary critics to be wanting in artistic treatment of such an important period of the world's history; but the editor has preferred that "the reader should hear, not another person speaking of Metternich, but Metternich himself," and that "his own words should enable men to realise the power and charm of his character, as he once again passes before them."

Prince Richard, we think, has acted judiciously in dividing his father's Memoirs into three sections, and such, we believe, was the design of the late Prince himself, as he stated to a friend on a visit to him at Johannisberg in 1858 that he had at that time a settled plan of dividing his papers into three portions, to be published at separate intervals after his death. He seems, however, either to have delayed too long the giving of any certain directions in writing on the subject, or, amid the political complications of the moment at which he died (June 11, 1859), he thought it wiser to leave to the discretion of his son the selection of the proper time and manner of their publication. Prince Richard has accordingly been led to adopt an arrangement in conformity with the natural division of the life and labours of the Chancellor; and the first instalment of the Memoirs, which has just appeared in two volumes, embraces a period of forty-two years, commencing with the birth of the Chancellor in 1773, and ending with the Peace of 1815, towards the accomplishment of which he contributed in so eminent a degree.

The contents of the two volumes may be briefly stated. They commence with the autobiography of the Chancellor, which is followed by a gallery of celebrated contemporaries, among which the portraits of Napoleon and of Alexander, the Emperor of Russia, are the most remarkable. These, in their turn, are succeeded by a collection of documents from the first period of Metternich's life, mostly from Metternich's own hand, including his despatches from Paris to Count Stadion and to the Emperor Francis, which are most valuable as contemporary records of the circumstances to which they relate. The autobiography itself is, in fact, another name for the MS. bequeathed by the Prince to his family under the title of "Materials for the history of my life." The period of his childhood is passed over quickly by him, but it may be interesting to the reader to be furnished with a clue to certain antecedents of the family, of which the Prince has taken no notice, except indirectly, when he states that Napoleon, as a special sign of his favour to Austria in 1810, proposed to Prince Schwarzenberg, then Austrian ambassador at Paris, and to himself (then Count Clement Metternich on a special mission to Paris consequent on the marriage of

the Empress Marie-Louise), to abolish the mediatisation of their families, and to enrol them as sovereign members of the confederation of the Rhine; "which proposal on the part of Napoleon," the Prince observes, "we both, in consideration of our special position, declined in the most politic manner (vol. i., p. 129). We are not aware whether this fact has been previously made public, but it has been for a long time well known that Napoleon and Metternich were never personal enemies, although Metternich was Napoleon's determined adversary, and the main object of Metternich's special mission to Paris in 1810 was to discover the true motive of Napoleon in marrying the daughter of the Emperor of Austria, and to master, if possible, Napoleon's game. Wellington was at that time stubbornly contesting with the marshals of Napoleon their occupation of Spain. The illusions of Tilsit were fast passing away from the minds both of Napoleon and the Emperor Alexander, and Metternich soon discovered that the great object of Napoleon's policy was to secure the neutrality of Austria in contemplation of a coming struggle with Russia. Metternich's farewell audience with Napoleon, the notes of which are printed as they were drawn up at the time (vol. ii., p. 166), forms the conclusion of his special mission.

The Chancellor himself was born at Coblenz in 1773, where the "Stamm-Haus" of the Metternich family still exists, being one of the first buildings on the left hand after passing through the archway which leads into Coblenz from the old bridge over the Moselle. The family of Metternich-Winneburg has given many archbishops to Mayence and to Trèves. Its lay head was a baron of the empire in 1616, and a count of the empire in 1679; and it was in his character of representative of the Catholic counts of the imperial circle of Westphalia that the young Count Clement Metternich made his first appearance in public at Frankfurt in 1790, at the early age of seventeen, as master of the ceremonies at the coronation of the Emperor Leopold II. The family estates were for the most part on the left bank of the Rhine, and these were confiscated when the armies of the French Republic occupied the electorate of Trèves in 1794. Upon the conclusion of the Peace of Lunéville (1801) the left bank of the Rhine was definitively ceded by the empire to France, and the Peace of Presburg (1803) saw the family of the Metternichs mediatised at the same time with the princely family of Schwarzenberg. Thus it happened that Napoleon had an opportunity in 1810 of showing his goodwill towards Austria by offering to abolish the mediatisation of both families, and to enrol them among the sovereign members of the confederation of the Rhine.

One of the most interesting circumstances connected with the youthful training of the future statesman was his attendance on the lectures on public law in the University of Mayence. He had previously commenced his academic studies at Strassburg, where, by a curious coincidence, he had lessons in fencing from the same *maître d'armes* who had taught the youthful Napoleon Bonaparte. The latter, having concluded his studies in the

artillery regiment quartered at Strassburg, had just left that city when young Count Metternich arrived there. In passing through Strassburg in 1808, Metternich received a visit from his old fencing-master, "who expressed a hope that his two pupils would not take it into their heads to come to blows with each other." He had no occasion for any fear on that head, for the studies of young Metternich at Frankfurt had inspired him with a deep respect for public law (*Staats-Recht*), the knowledge of which fact is a key to explain the almost religious reverence of the Chancellor for "legality," and his adoption of the motto which he chose as the symbol of his conviction—"Strength lies in Right" (*Kraft im Recht*). "Save this," he says, "all is transitory."

We have not space on the present occasion to do more than touch upon the more important topics handled by the Prince in his autobiography. His father had been appointed minister plenipotentiary to the States General at Brussels by the Emperor Leopold II. This circumstance at once introduced young Metternich to a numerous and distinguished diplomatic corps then resident at Brussels. He was present afterwards at the coronation of the Emperor Francis at Frankfurt in 1792, and there performed the same duties as at the previous coronation of Leopold II., opening the ball at Prince Esterhazy's palace with the young Princess Louise of Mecklenburg, who afterwards as Queen of Prussia was distinguished for her beauty and noble qualities. He thus became personally known to the Emperor Francis, and shortly afterwards, when the Prussian army had encamped at the village of Metternich, near Coblenz, he came to know the Crown Prince of Prussia, who, after the death of Frederick William II., ascended the Prussian throne. Shortly afterwards came the French Reign of Terror, and Metternich paid a visit to London, where he made the acquaintance of the Prince of Wales, afterwards George IV., in 1794, whom he describes as "one of the handsomest men he ever saw, and to an agreeable exterior he added the most charming manners!" He then returned to Vienna, where he married, in 1796, the Princess Marie-Eléonore, the grand-daughter of the illustrious Chancellor of State, Prince Kaunitz, and occupied himself with scientific studies, passing his mornings in a learned circle of Viennese professors, and his evenings in the *salon* of the Princess Karl Lichtenstein, who gathered around her all that Vienna possessed of the remains of the society of the "five Princesses" of the Lichtenstein House, who for many years were the intimate friends of the Emperor Joseph II. From time to time he visited Baron Thugut, who, in his capacity of Minister of Foreign Affairs, conducted the business of the Imperial Chancellerie; and he occasionally waited upon the Emperor Francis, who one day said to him, "You live as I should be very happy to live if I were in your place. Hold yourself ready for my orders; that is all that I expect from you for the present." Such is the account which the Chancellor gives of his "apprenticeship;" and the *tableau* is of great

interest, as it serves to show how his youth was spent in a manner which was a suitable preparation for a great career.

The Prince's official life, or what he terms his political life, commenced with his embassy to Dresden in 1801, which he describes as being interesting to him as "a post of observation of the Northern Courts." He thence passed on to the embassy of Berlin, where he made the personal acquaintance of Count Haugwitz, then Prussian Minister of Foreign Affairs; of Baron, afterwards Prince, Hardenberg; and of Freiherr von Stein, Minister of Finance (1803-1805). This was a transition period in Prussia, and for Europe it was neither peace nor war. Napoleon was forming the camp at Boulogne, under the pretext of preparing an expedition against England. "Some better instructed observers," writes the Prince, "saw in this camp a French army held in readiness to cross the Rhine, and such was my opinion" (vol. i., p. 48). The Prince adds a note on this passage which details a conversation with Napoleon in 1810, when Napoleon acknowledged to him that his opinion was correct. "You were very right," replied the Emperor, smiling. "Never would I have been such a fool as to make a descent upon England, unless, indeed, a revolution had taken place in that country. The army assembled at Boulogne was always an army against Austria. I could not place it anywhere else without giving offence, and, being obliged to form it somewhere, I did so at Boulogne, where I could, while collecting it, disquiet England. The very day of an insurrection in England, I should have sent over a detachment of my army to support the insurrection. I should not the less have fallen on you, for my forces were écheloned for that purpose. Thus you saw in 1805 how near Boulogne was to Vienna."

As war approached in 1805, the Courts of Vienna and St. Petersburg drew closer to each other, and it was Metternich's difficult task on behalf of Austria to persuade the King of Prussia to abandon his neutral attitude, and to join the alliance. The Emperor of Russia, on the other hand, had decided to force the hand of the King of Prussia, when news arrived that Napoleon had violated the Prussian territory at Anspach, in order to outflank the Austrian army concentrated at Ulm. Without loss of time the Prussian army marched towards the Upper Danube; but the capitulation of General Mack at Ulm left the road to Vienna open to Napoleon, and Prussia hesitated to declare war. The impetuosity of the Emperor Alexander, in disregard of the arguments of the Emperor Francis, precipitated the catastrophe of Austerlitz, and its result was fatal for a time to the foundations of the independence of the three principal Powers of the Continent. A despatch from Metternich to Count Stadion of a later period (vol. ii., p. 115) discloses the fact that Count Haugwitz, the Prussian Minister of Foreign Affairs, betrayed on this occasion to M. de Laforest, the French ambassador at Berlin, the secret of the Convention between the three Powers signed at Dresden on November 3, 1805. The King of Prussia had imputed that act of treachery to Count Stadion, the Austrian Minister of Foreign Affairs; but

M. de Laforest's subsequent declaration to Metternich, when Austrian ambassador at Paris, makes it clear that it was part of the double game which Count Haugwitz played with such disastrous consequences to Prussia, and by which he threw himself into the arms of the only Power which Prussia had really good cause to fear.

The consequence of the battle of Austerlitz was the resignation of Count Colloredo and Count Cobenzl, the Ministers of the Emperor Francis, whereupon Count Stadion was appointed Minister of Foreign Affairs, Count Metternich being sent as Austrian ambassador to Paris at the special request of Napoleon; and here we must conclude the present article with the observation that what is to follow concerns what the Chancellor considered to be the most important period of his life, and the most formidable crisis in the world's history.

TRAVERS TWISS.

Our Visit to Hindostan, Kashmir, and Ladak.

By Mrs. J. C. Murray Aynsley. (W. H. Allen & Co.)

THERE have been plenty of books about India of late, and still the cry is, "They come, they come." It is to be hoped that some of those which we see advertised have more *raison d'être* in them than Mrs. Aynsley's. In her preface she gives the following account of the origin of her volume:—

"A friend in England seemed pleased with some letters I wrote to him giving descriptions of places which we had visited, and thus arose the idea of a continuous series of papers which I thought might possibly interest other friends at home at some future period. The idea of publication was an afterthought."

If this sort of thing is to go on the British Museum must add a new wing to its overcrowded building. Anyone may find a friend in England ready to "seem pleased" with private letters describing our journeys, but should publication follow? We do not remember having ever before heard of so large a volume having been produced on so small and dubious encouragement. It is, no doubt, interesting to have on record that one travelled so many miles on such a day over a bad road, and it may perhaps be interesting to the complaisant friend alluded to above; but such narratives are confined by the judicious to volumes printed only for private use.

Mrs. Aynsley has added to her narrative a good deal of historical information, gathered from Grant Duff's *History of the Mahrattas*, Ferishta's *History of Hindostan*, and other books; but she certainly does not enliven her pages thereby; and it may well be questioned whether anything is obtained by this reproduction of old information in a rather pointless and heavy way. Sivaji is not exactly a new character, who requires to be introduced for the first time to the reading public; and India in general is a well-hackneyed subject. This new influx of writers on India will soon make the subject a veritable nuisance—as it has been made before now. The mistake they make is that of supposing that its novelty to themselves justifies them in publishing books about it. No subject can be too hackneyed for writing upon; but it

should not be written upon in a hackneyed manner. A Dickens or a Thackeray, in a stroll from Temple Bar to Ludgate-hill, might find something to tell us which would both instruct and delight; but he would hardly do so by copying from his note-book an account of the steps he took, and the shop-fronts he saw.

Mrs. Aynsley has the merit of accuracy, and seems to have had certain special advantages for correcting her information. Of course another book by her is sure to follow. Indeed, in the last paragraph of her present volume we are promised it, in the shape of an account of her visit to Southern India. This is the inevitable successor which requires no encouragement, and which no discouragement will prevent from appearing. Might we ask her on this second occasion to be a little more sparing in her historical details and a little more lively in her narrative? She might have given us a really interesting account of the little-known and picturesque Kulu Valley, with its exceptionally good-looking women, and she had full opportunity of making acquaintance with it; but nothing of the kind is vouchsafed to us. The most interesting parts of the present volume are those relating to the proclamation at Delhi of her Majesty the Queen as Empress of India, and to the causes of the late famine in Kashmir. On that last subject she brings the most serious charges against the Maharaja of Kashmir and his officials, and her general accuracy gives a special importance to those charges; but it would have been well if something like proof had been adduced in support of them.

ANDREW WILSON.

A NEW LIFE OF CHRIST.

Jesus of Nazareth: embracing a Sketch of Jewish History to the Time of His Birth.
By Edward Clodd, author of "The Childhood of the World," &c. (C. Kegan Paul & Co.)

IN two previous works, *The Childhood of the World* and *The Childhood of Religions*, Mr. Clodd has given a popular exposition of the results obtained by modern reconsideration of primitive monuments and traditions. In the present book he treats in a similar manner the conclusions most generally accepted by critical students of Christian origins. Certainly the want has been very extensively felt, in England and elsewhere, of a Life of Christ which, while frankly accepting, without wearisome argument, the naturalistic point of view, should also show a hearty recognition of the spiritual charm and moral import of the subject. To what extent Mr. Clodd's work has succeeded in meeting this want it would be premature to venture an opinion. For this is a question on which the popular voice is supreme, and, of course, it has not yet had time to speak. But so much, at any rate, an individual critic may say—that the book is an honest and intelligent attempt to meet a recognised need; that it exhibits a scholarly appreciation of the present position of Biblical criticism, together with a devout sense of the value of Christian inspirations to the higher life of man; and that it sets forth the compressed results of much reading in an attractive

style, not, perhaps, a model of elegance or accuracy, but always simple, lucid, and strong.

The point of view assumed is that Jesus was no exception to the law "that every man is a son, not only of his own time, but of all time that has gone before him." Ecclesiastical reviewers will perhaps complain of this as a *petitio principii*. They will say that the question whether Christ was spiritually as well as physically of entirely human genealogy is precisely the point in dispute between the devotees of supernatural revelation on the one hand, and of natural religion on the other—at least, in the Western world. But the obvious rejoinder is that there is a large and increasing number of people who have decided that question in the affirmative, and that they have been too much neglected even by the religious teachers of their own side. They do not want volumes of argument to prove what it is impossible for them to doubt. Miracle, in the theological sense, having vanished from their universe, the problem that remains for them is where to put Christ and Christianity in the order of the world. Now, Mr. Clodd's work is written to help them in solving this problem. It is a little book to have so great an aim. But, after all, the main thing is to indicate the attitude of mind and heart in which the subject should be contemplated. There are pictures which, seen from any point but one, are mere chaotic blotches of paint. But, viewed from one particular spot, they reveal the vision seen by the artist's inner eye—a glory of sun, and cloud, and air. A beholder who has got the right position for seeing has only to say to his bewildered friend, "Come and stand by me," and he will achieve more than by an hour's argument. This is very much what our author does in contemplation of the life of Jesus.

Such a design necessarily involved a preliminary sketch of Jewish history, because the writer would have his readers see in Jesus the natural culmination of that history. At first sight it may appear that this introductory sketch has been drawn out to a disproportionate length, inasmuch as it takes up just half the book. But this impression is owing in a great measure to our opening the work with the expectation of a biography, whereas Mr. Clodd, regarding a biography in any proper sense of the term as impossible, gives us rather a study of spiritual history. He traces the religious ideas and aspirations of the Jews from their earliest germs in the myths of a Bedouin tribe to the sublime and inspiring contemplations of the later Isaiah. He generally does full justice to the foreign influences that moulded the beliefs and customs of the Israelites. But some exception may be taken to his treatment of the main difficulty of Hebrew spiritual history, the origin, significance, and prevalence of the sacred name "Jehovah." No fault can be found with the author's judgment in abstaining from laborious and, to the readers of such a book, unintelligible controversy on the subject. But to describe one of the sublimest names ever devised to express universal deity as "the name of a Semitic sun-god, in the worship of whom we cannot join in spirit and in truth," is, to say the least, somewhat out of harmony with the general tone of a

work everywhere characterised by spiritual susceptibility. Indeed, the words just quoted are practically corrected in Note B. at the end of the volume, where, while rightly denying that "a semi-barbarous people, like the Israelites, evolved . . . the philosophical ideas of 'being' ultimately connected with Jehovah," Mr. Clodd points to the true solution when he adds—

"the impulse in this direction seems to me to have come from Egypt through Moses, who, consciously or not, could scarcely remain unaffected by contact with a religion under whose symbols the conception of a Highest appears traceable."

But if Moses conferred on a tribal god a name that ensured an expansion into universal deity, it would seem that the spiritual conception of Moses, and not the "Semitic sun-god" lost in its greatness, should be for us associated with the word Jehovah.

The bearings of the naturalistic view of Hebrew history on the true value and right use of the Bible are well given in an important passage (pp. 111–116) too long for quotation entire. The spirit of it, however, will be gathered from the following excerpts:—

"People are apt to forget that for the understanding of the books of the Old Testament, and indeed of the New Testament as well, no slight knowledge of ancient history, of Eastern customs, and modes of speech is needful; and the difficulty is increased by the changes which they have undergone in translation out of languages whose nice shades of expression cannot well be reproduced." . . . "And what might have been made clear with small effort on the reader's part is too often so ill-arranged and maltreated as to quite hinder this; for, in their eagerness to support foregone conclusions, Christians, in receiving the books comprising the Old Testament from the Jews, have so dealt with them as to entirely misrepresent their meaning. For example, the writings of the prophets, with which we are now dealing, have been sorted regardless of the time when they were penned, placed according to length, and not according to date or importance; the words of men who lived many years apart have been mixed together, and in cutting up the books into chapters, which often wrongly 'divide the word of truth,' tables of contents have been added which are utterly false, and which, allowed to remain in Bibles issued to this day, betray wilful ignorance." . . . "Such harmful and unfair use of these ancient writings will go on until they are re-arranged, issued with truthful notes and comments as to their origin and meaning, and read in the light of knowledge of the times when they were composed, and of the events either happening, or which it needed only keen foresight to see must happen. Then will their real value and peerless beauty be seen, and the danger which all devout minds desire to avert, namely, that people, angry at having been misled, will cast them aside as fables and vague talk of bewildered dreamers, pass away. Because it will be seen that the greatness of the prophets could never have been in writing down word-puzzles, in which lurk dates and mystic hints about the birth of men centuries hence, the fall of kingdoms, and the end of the world, but in setting forth the certain doom of the people and nation that forget God, and the beauty of the steps of the preachers of righteousness as 'heralds of good tidings.'"

But the chief object of the author in this preliminary sketch of Jewish history is of course to show how Jesus was "a son, no

only of his own time, but of all time that had gone before him." Accordingly, in the second half of the work, which treats of the life and work of Christ, we are told how the spiritual traditions of the Jewish race, modified by its external relations at the time, made the advent of some such teacher as Jesus both possible and natural. But Mr. Clodd has too profound an appreciation of the greatness of his subject to suppose that the explanation thus offered is complete. "Such," he says, "were the conditions amidst which Jesus grew up, but when we have learned all that we can about these there will remain in him, as in the life of every great man, much that fails us to explain." The last words are somewhat awkward English, but the meaning is clear. The undeniable attractiveness of our author's style is apparently not due to care in composition.

Now, with regard to his estimate of the personal element in the problem of the origin of Christianity, Mr. Clodd will be exposed to criticism from opposite quarters. Already Mr. Voysey has publicly expressed his disappointment that so intelligent a man should continue to entertain so high an opinion of the character of Jesus. He thinks that our author has been one-sided in his acceptance of evidence on this subject. For the same records which attribute to Christ a sense of a mission "to seek and to save that which was lost" also represent him as declaring that he spoke in parables in order that the multitudes might have no chance of understanding the saving word, and so might be sure of damnation. Mr. Voysey complains that in such cases Mr. Clodd fails to balance one piece of testimony against the other, and that, as in the vision of a more solemn judgment, "one is taken and the other left." The particular illustration selected is unfortunate, because the words of the great teacher concerning his use of parables are so variously reported in the gospels that it is clear the writers were not agreed as to what he really did say, and probably all of them misunderstood it. But the other saying that he had "come to seek and to save that which was lost" is supported, not only by the whole tenor of the traditions concerning him and by the whole scope of his life and death, but by the innermost and most vital inspiration of the Church—his living monument. The very same reasons which make it difficult for Mr. Clodd to accept Jesus as a miracle make it also impossible for him to conceive the founder of Christianity as an incongruous monster. If, therefore, he finds a uniformly consistent line of tradition maintaining that Jesus had for his one thought the salvation of men, and another internally inconsistent tradition hinting that Jesus carefully darkened his speech so as to ensure the damnation of most of his hearers, it is no superstitious weakness for prevalent idolatry, but rationalism of the severest type which suggests the conclusion to be adopted.

But from another side our author is exposed to criticism which, in the opinion of the present writer, is better grounded. After reading the book, one's sense of the enormous disproportion between the phenomenon and

the explanation is so deep, so overwhelming, that for a moment a revulsion of feeling against the author's method will commonly be experienced. Yet the method is inevitable. It only requires to be carried farther than the size and scope of the present book would allow. That Christ and Christianity lie within the realm of order, and not of miracle, is a belief now extending far beyond the borders of avowed rationalism. No sense of insufficiency in proposed explanations will henceforward drive the scientific spirit of the age into speculations that transcend proved human experience. But there is a good deal of human experience, not traditional but existent, which fails to find sufficient place in Mr. Clodd's story of Jesus. The sense of God does not vanish with the dispersion of any creed, tri-theistic, theistic, or otherwise. It was surely this element of a divine consciousness that made Jesus—if we judge by continuance of impulse rather than extent of nominal following—so much mightier an influence than Gautama Buddha. It was *the want of this* in Mohammad—for his idea of God appears to have been just as external as that of theists at the present day—which made his kingdom carnal instead of spiritual. The author of the work before us seems scarcely to assign sufficient importance to the extraordinary development in Jesus of that inner sense of God which sees all things as phenomena of an eternal life, and so finds the subordination of self to God's world in its nearest, its human form an ecstasy of sacrifice. As might naturally be expected from this remark, he almost entirely ignores the Fourth Gospel. He not only rejects it as history, but apparently declines to recognise in it a traditional echo of elements in the teaching of Jesus not sufficiently represented in the synoptics. Another feature of the book suggesting an insufficient estimate of the personal element in the great problem is its entire silence as to the Resurrection. Mr. Clodd probably follows M. Renan in the opinion that this subject belongs to the history of the apostles. But even the latter refers to it in his *Vie de Jésus*, as an illustration of the profound personal impression made by the crucified Master on his disciples. There are some minor points on which it is difficult to follow our author, notably in his preference for translations not always more accurate, while their English is uniformly feebler, than that of the Authorised Version. But after all deductions are made it will be generally acknowledged that Mr. Clodd has rendered very valuable aid to an increasing number of people who are seeking how to reconcile instincts of devotion with loyalty to historical truth.

J. ALLANSON PICTON.

A Contemporary History of Affairs in Ireland from 1641 to 1652. Edited by J. T. Gilbert. (Dublin: Printed for the Irish Archaeological and Celtic Society.)

THE Irish War or Rebellion of 1641 has been the cause of bitter polemics in our own time. Mr. Froude and Mr. Lecky have done their best on either side of the controversy. Mr. Froude's savage attack upon the Irish people has indeed as little chance of attaining a permanent place in history as his panegyric on

Henry VIII.; yet there is no doubt room for a dispassionate enquiry into the circumstances of the war which may fairly draw out the causes of the weakness of the Irish as well as those of their vigour. Hitherto anyone willing to undertake this work has been confronted by the difficulty that all the accounts of the war proceed from one side. We knew what the English had to say about the Irish, but we did not know what the Irish had to say about themselves. Mr. Gilbert has to a great extent removed this obstacle by the publication of an Irish chronicle bearing the curious name of an *Aphorismical Discovery of Treasonable Faction*. It is written by an Irishman attached to Owen O'Neill, the leader whose capacity and courage might have led to success, if success had been possible. The causes of failure, indeed, are as clearly written in this narrative of the Irishman as in the tale told by the English conqueror. They were precisely the same as those which led to failure in the English resistance to William the Conqueror in the eleventh century. The Irish people had not reached the stage of national cohesion. The men of the South were as little inclined to give hearty support to the O'Neills of Ulster as Edwin and Morcar were inclined to give hearty support to the West Saxon Harold.

Mr. Gilbert has added to the obligations under which he has placed us by giving us in the Appendix a large and well-selected store of documents bearing on the Irish War. Such volumes as his lighten the work of the historian, and may be read with pleasure and advantage by many who have no ambition of writing history.

SAMUEL R. GARDINER.

ENGLISH MEN OF LETTERS.

Hawthorne. By Henry James, jun. (Macmillan.)

A CAVILLER might ask, on beholding the title of this book, what business Hawthorne has in this particular galley. It certainly would seem that the lamented author of *Mlle. D'Arvers* might as justly figure in a collection of French authors as Hawthorne, an American citizen born thirty years after the Declaration of Independence, among English men of letters. This, however, is rather an objection for Americans to make than Englishmen. It may be somewhat cruel of Mr. Morley to take their ewe lambs and range them with his stately flock. But no Englishman will be sorry to have a convenient life and criticism of Hawthorne, and certainly no one will be sorry to have it from the hand of Mr. Henry James. Mr. James's already published criticisms and analyses of French novels and novelists contain some very admirable work of the kind here required; and the fact sometimes noticeable in those criticisms, that he busies himself more with the life and character than the literary achievements of his subjects, is hardly against him. Something of the last-named peculiarity may indeed be noticed as recurring here. We should have liked a somewhat clearer and more definite attempt to sum up the characteristics of Hawthorne's novels than that which Mr. James has given us. Such attempts no doubt often lead those who make them

into the fault of exaggerating special features in order to make the picture definite and distinct. But if literary criticism is worth anything at all it ought not to decline an attempt simply because the attempt is often made badly. Such handbooks as these are, we suppose, intended either as a substitute or as a preparation for the study of the original. As a substitute—which very likely Mr. James would say he had no thought of attempting—this book seems to us inadequate. A person unacquainted with the writings of the author of *The Scarlet Letter* would, we think, lay it down without any clear notion of the sum and nature of the work which he actually accomplished. Nor would a person who, having studied it, proceeded to attack the texts find himself provided with any very clear notion of where to lay his critical hold. Interspersed in Mr. James's pages are many scattered remarks about Hawthorne's different works which are excellent as criticism; but whether they are sufficient, in the words of the prospectus to the series, "to satisfy intelligent curiosity as to the performances" of the man of letters they deal with is a question which we feel inclined to answer in the negative. Moreover, to get over what we have to say that is unfavourable at once, we do not always like Mr. James's style. Such a sentence as "out of the soil of New England he sprang—in a crevice of that immitigable granite he sprouted and bloomed," appears to us, we must confess, to be a mixture of the inappropriately sublime and the indisputably ludicrous.

These shortcomings, however, though they can hardly be passed over by a critic who has to give an account of a book professing to do certain things, and, as it seems to him, failing to do them, do not prevent this book of Mr. James's from being an exceedingly interesting one. As a critical biography of an artist by one of the same craft it has unusual excellence. Mr. James's account of Hawthorne's novels may seem to us to lack fullness and precision; his account of Hawthorne himself, as a man and a novelist, is quite proof against any such criticism. He has treated his subject as carefully and as lovingly as if he were the hero of one of his own stories. Hawthorne's idiosyncrasy has, it is well known, been very variously judged. There are readers whose judgment is not contemptible, and who regard him as simply a morbid horror-monger possessed of some literary skill. There are others—of whom, by-the-way, Mr. James quotes M. Emile Montégut as the most prominent instance—who look upon him as a type of the Puritan novelist ever harassed and goaded by a consciousness and conviction of sin. Edgar Poe looked on him as the great representative of quiet or repose in literature—but this was, it is true, when his work was but half accomplished. In short, *quot homines tot sententiae* is truer of Hawthorne than, perhaps, of any other novelist. Mr. James has picked his way among these perplexed paths with great skill, or rather, to speak more truly and to do him more justice, he has disregarded them all, and has been his own road-maker. Without going into the extravagances of the Taine school, it is, of course, clear that, speaking roughly, the idiosyncrasy of any man or writer is determined by his temperament *plus* his

circumstances. Mr. James has endeavoured to indicate Hawthorne's temperament with great analytical skill, and has illustrated his circumstances with full knowledge. The earlier portion of the book is hardly more a biography of Hawthorne than it is a picture of New England society from sixty to forty years ago. The theoretical equality, combined with a very decided pride in race and pedigree; the shy, unsocial ways; the universal diffusion of elementary education and decent affluence without any great scholarship or luxury; the eager aspiration after higher culture with very few opportunities for its attainment; and, above all, the traditional religionism with its gloomy teachings and constant incentives to introspection and soul dissection, are admirably indicated without being at all "charged." Many of the incidents of Hawthorne's life of "cool solitude" become highly dramatic and pictorial in Mr. James's hands, particularly his short sojourn at Bowdoin College, with its curious result in the half-lost romance of *Fanshawe* and the later episode of his residence at Brook Farm. Mr. James's treatment of this latter quaint establishment and of Margaret Fuller is delightful, but there are things in it which make one reflect, copybook fashion, on the mutability of things. "There flourished at this time," says Mr. James, "in Boston a very remarkable and interesting woman, Miss Margaret Fuller by name." Evidently Mr. James thinks that the poor marchioness's name will be new to most of his readers. If this be so—and he is probably a better judge of the fact than we are—how quickly are the mighty fallen! Only five-and-thirty years ago, to anybody in England who took the slightest interest in matters literary or in matters American, Margaret Fuller's name was familiar enough, and familiarity with it has been handed down to at least some persons who at that period had not the advantage or disadvantage of existing. But now it seems Margaret Fuller, Marchesa d'Ossoli; contributor to the *Dial*, transcendentalist and all the rest of it, has to be reintroduced to most readers as "a very remarkable and interesting woman, Miss Margaret Fuller by name." We have not recently come across a more striking example of *sic transit*.

"Margaret" has led us, as indeed she has led Mr. James, a little out of the way. To return, we may say that in all Hawthorne's modest vicissitudes, his temporary and not specially congenial official employments at Salem, his happy marriage, his Liverpool consulship, and his subsequent wanderings, Mr. James follows him with the same intelligent touch, showing how each situation affected him and was represented in his work. In the rather thorny matter of *Our Old Home* the biographer has conducted himself with very considerable tact. He makes the best case he can for his hero, and he does not make any concessions to English feeling which a good American ought not to make; but he admits freely that Hawthorne had "a constant suspicion and mistrust of the society that surrounded him," and that "his national consciousness was exaggerated, painful, and morbid." This is all that any Englishman can reasonably claim, though,

putting *Our Old Home* quite aside, and, looking at Hawthorne in his American rather than in his English relations, we think that we should give a more unfavourable account of him than Mr. James has done. He seems to us to have had a distinct vein of "ill-conditionedness" in him which may or may not be worth noticing in connexion with his purely literary work, but which certainly shows itself in his relations with the actual world. It is at least significant that Brook Farm complained of *The Blithedale Romance* quite as much as did English society of *Our Old Home*.

Mr. James, as we have said, does not give us much "lead" to a discussion of Hawthorne's literary characteristics, and such a discussion would therefore be out of place here. His inclination to defend his author from the charge of special gloom leads him to argue that the selection of such subjects as that of *The Scarlet Letter* was rather due to the paucity of really striking subjects open to an American novelist of his day than to any natural predilection. The gloomier side of Puritan faith and practice offered from a purely artistic point of view a good subject, and Hawthorne as an artist jumped at it. This at least is Mr. James's argument as we understand it. It might be interesting to enquire whether the choice of the subjects of *Transformation* and *Septimius Felton*, where no such excuse can be offered, does not militate strongly against this hypothesis; and, indeed, Mr. James in some places of his book seems himself to hold opinions rather inconsistent with that which, as against M. Montégut, he champions. But, as we have said, he has not summed up or arranged his literary judgments of Hawthorne with sufficient definiteness to allow them to be in their turn seriously criticised. We think that this is a pity, but for what he has given us we return him very hearty thanks. Much of his information and many of his points of view are from the nature of the case inaccessible to an unassisted Englishman, and for the supply of them, as well as for the way in which they are given, he deserves our best gratitude.

GEORGE SAINTSBURY.

NEW NOVELS.

Daireen. By Frank Frankfort Moore. In 2 vols. (Smith, Elder & Co.)

Through the Storm. By Charles Quentin. In 3 vols. (Hurst & Blackett.)

From the Foam of the Sea. By Salvatore Farina. Translated by Marcellina. In 2 vols. (Charing Cross Publishing Co.)

Called to the Rescue. By Anna H. Drury. In 3 vols. (R. Bentley & Son.)

FOR the author's, as for the reader's, sake *Daireen* should have been all first volume. The key-note of coarse yet vigorous caricature struck in the very first chapter hardly prepares us for the passionate stage thunder and lightning whose last dismal rumblings too slowly die away in the later chapters. If the lovemaking afloat seems obviously suggested by Mr. Howell's *Lady of the Aroostook*, the main plot is at least only too original. Possibly Mr. Moore has written at various times

a rollicking-Irish novel, a satirical-aesthetic novel, and an amorous-colonial novel, and has now either combined them or allowed them to tumble together of themselves. Hence his book is in part very good and in part very bad. Of a piece with his dishevelled plot and unkempt sentiment is the fell device of heading each of his forty-one chapters with two, three, or four selections from *Hamlet*. True, if Mr. Moore should happen to survive Shakspeare, *Hamlet* might be well-nigh reconstructed from *Daireen*; but let Mr. Moore know that, while *Hamlet's* votaries may safely be left to their Chandos or Globe, there are those who can sit down to a fairly spread chapter without such sorry nips and provocatives. It is a serious matter if, with Horace and Pope gently sinking into silence, the stupendous nuisance of "apt" quotation is reviving under a worse form. If once Shakspeare is to be wrested in a novel like Scripture in a pulpit, we shall see before long rival congresses meeting to marvel why men no longer care to read novels. A glance at some of Mr. Moore's selections would explain a good deal. Daireen is a well-connected and well-conducted Irish maiden, who has a well-behaved Irish lover, who has an ill-behaved Irish sire—the MacDermot O'Dermot, a richly exaggerated specimen of the ancient bogtrotting dynasties. Of the lover and hero we know no harm, nor yet much good, since, though disguised as a sailor, he watches secretly over Daireen during her voyage to the Cape. Mr. Moore consigns him to the oblivion of the forecastle till he is wanted to patch up the *dénouement*, and allows Daireen to fish up a castaway from the ocean, who, in a picnic on Table Mountain, wins her by an atmospheric *coup de main* made up of eloquent silence, an extensive landscape, and a remarkably fine sunset. This colonial Lara turns out not only to have been, but to be, a very considerable rowdy, and, after trifling with his old enemy the *delirium tremens*, planning a murder, and agonising Daireen by his ambiguous conduct, very properly volunteers for the Zulu War and dies in the odour of bigamy. Daireen's fellow-voyagers—the stupid matchmaking Mrs. Major Campbell, her husband, and his hardened confederate the Doctor—are sufficiently bright and amusing; but by far the best is Mr. Glaston—the young Archimandrite of aesthetics. This vein of satire has indeed been rather overworked of late, but Mr. Glaston's cackling is really clever, and he remains always amid his delightful selfishness and arrogance a perfect gentleman—and, moreover, if not exactly a possible character, at least its legitimate caricature. Here and there by a word or epithet Mr. Moore succeeds most happily in casting a grotesque charm over this fancy sketch. Nothing could be finer than Mr. Glaston's filial patronage of his father, the Metropolitan of the Salamander Archipelago, upon whose modest stipend he keeps up his Kensington establishment, and with whom he condescends to appoint an annual *rendezvous* at the Cape. Still better is his paternal treatment of Daireen, of which, indeed, we may venture to add a few instances. At the first breakfast on board he has been painfully shocked by a young lady in bright blue, but somewhat relieved by Daireen's harmonious toilette.

"My dear Mrs. Campbell, your young *protégée* sat before me—a poem of tones—a delicate symphony of Schumann's, played at twilight on the brink of a mere of long reeds and water flags, with a single star shining through the well-defined twigs of a solitary alder. That was her idea, don't you think?"

"I have no doubt of it," the lady replied after a little pause. "But if you will allow me to present you to her—"

"Not this evening, Mrs. Crawford; I do not feel equal to it," he answered. "She has given me too much to think about—too many ideas to work out. That was the most thoughtful and pure-souled toilette I ever recollect; but there are a few points about it I do not fully grasp, though I have an instinct of their meaning. No, I want a quiet hour alone. But you will do me the favour to thank the child for me."

Again, when Daireen is invited to join the party going ashore at Funchal:—

"Oh, Mrs. Crawford, if you have the least regard for me, do not say that word 'party'; it means everything that is popular; it suggests unutterable horrors to me. No subsequent pleasure could balance the shame I should endure going ashore. Will you not try and induce that child to give up the idea? Tell her what dreadful taste it would be to join a party—that it would most certainly destroy her perceptions of beauty for months to come."

In vain the artful *chaperon* suggests that they will be *taking in coals*—

"Then she can shut herself up in her cabin," he retorts, "and neither see nor hear anything offensive. Who but a newspaper man would have thought of suggesting to cultured people the possibility of enjoyment in a party?"

Of course, he strongly disapproved of Daireen's share in the rescue of the castaway:—

"Poor child," he murmured. "Poor child! It was very melodramatic—terribly melodramatic; but she is still young, her taste is—ah!—plastic. At least, I hope so."

The humour may even atone for the exaggeration in the scene where he is showing off his pictures. He comes to the *chef d'œuvre*—"a half-naked, dark-skinned female, with large limbs and wild black hair," standing in a kiosk, "gazing with fierce eyes" upon a frescoed wall:—

"It is too terrible," said Daireen; "there is nothing of a woman about it."

"My dear child, that is the chief wonder of the picture," said Mr. Glaston. "You recognise the subject, of course?"

"It might be Cleopatra," she replied dubiously.

"Oh, hush, hush! never say such a thing again," said Mr. Glaston, with an expression that would have meant horror if it had not been tempered with pity. "Cleopatra is vulgar—vulgar—popular. That is Aholibah."

If only second-rate novelists would but take this golden advice!—if you cannot keep adultery and concubinage out of your books altogether, at least never try to moralise or philosophise about them. But it is not so easy to convince anybody that he is second-rate—not Mr. Quentin surely, who in *Through the Storm* rears a moral colossus of straw just to knock down, and so adroitly confuses our ideas that we end by being piously relieved when, at last, the heroine is triumphantly proved to have been really not a lawful wife all the time, and by feeling that she demeans herself somewhat by the cold formalities of her subsequent

union with the other man. The third volume, which is peculiarly dry, is occupied with the well-worn history of the Siege of Paris. Having ourselves conscientiously passed *Through the Storm*, from its first sprinklings to its welcome drying-up in the last chapter, we can assure the reader, who is opening his umbrella, that it is merely one of those dull November drizzles serious only for their dreariness and duration. To write about it or to read it were equally time and temper lost.

Marcellina must surely be either a Bourbonist or Garibaldian exile who, in disgust at the mockery of an Italia Irredenta, has determined to show it up in its novels. If so, he has dealt a telling blow, for we can hardly fancy the infancy of a United Canibalia giving birth to a work so babyish and so silly. Any sharp little girl might have written it who, by running through half-a-dozen story books, had picked up just enough of the anatomy of fiction to know how to use a lost uncle and a disputed will. The weazened, weedy little plot is propped up by a sort of nursery commentary, which somehow reminds us that if donkeys do not ruminate, calves do. But, after all, if his conceit is more vigorous than his sense, and his morality distinctly Cisalpine, the writer is, at all events, perfectly amiable.

The more one studies lady-novelists the more hopeless it seems to make them out. Here is Miss Drury who, by every established rule, ought to have written a typically bad novel. She never looks an inch below the surface; her characters—or rather her puppets—are all outside; she has no particular power of insight or description; and she actually glories in improbability. And yet, to our annoyance, she has the assurance to write a very good novel indeed. Calmly relying upon and emphasising her defects, she remains triumphantly and most provokingly readable. A veritable Amazon of Incident, she recalls the stir and bustle of Le Sage and Smollett; and her readers, who have quite enough to do to follow the quick counter-marches of her puppets, are quite content to learn by a hurried but emphatic whisper from behind the curtain which are the villains and which the saints. It is not too much to say that writers of thrice Miss Drury's ability and experience would have failed to concoct or carry through a plot so ingenious, so cool in its improbability, so masterly in its persistent vigour. As the end triumphantly proves, the wisdom of her serpents is no match for the gentleness of her doves in this war of *intrigue à outrance*. Let us add that Miss Drury is always to be found on the right side, while her tone is not less satisfactory than her sympathies. Though she makes the most of the weird doings and black arts of her table-turning professor (a stepfather—and of course the Satan of the tragedy) she does not fail to expose his machinery to the light of day. That these scenes have some real power has been made clear to at least one reader who has no acquired taste for poison, plot, or murder, by a curious psychological experience. Turning to drink off another cup of tea in the interval between an abduction and a railway accident, and thinking of just nothing at all, he was suddenly taken aback by the

unmistakeable taste of the Turkey rhubarb of his childhood. After careful reflection, he was compelled to refer this phenomenon to the unconscious impression produced upon the brain by the lethal soups and coffees of which the old beldame, Justine, had been so horribly liberal a few chapters further back. And as he would boldly defy Mr. Wilkie Collins to make him dream, much less remember, he is naturally inclined to rate Miss Drury's sensational powers somewhat highly.

EDWARD PURCELL.

CURRENT LITERATURE.

The Philosophy of Handwriting. By Don Felix de Salamanca. (Chatto and Windus.) All readers of Edgar Poe know the curious book entitled *Autography*, in which he collects and discusses the signatures of American men of letters. Don Felix de Salamanca, whom we suspect to be but a Salamanca Spaniard in the sense in which the local adjective was used of Titus Oates' doctorate, has done very well to follow out the idea in this very handsome and interesting book. The autographs in facsimile of more than 150 persons of distinction, chiefly English, but with many Frenchmen and Americans included, are given here, each with a short discussion of its characteristics. Although to autograph-hunters the "fists" of such persons as Messrs. Tennyson and Browning, Ruskin and Carlyle, Victor Hugo and Thiers, are doubtless familiar enough, the general public who are not autograph-hunters will still be very glad to have the opportunity of making their acquaintance. It must be acknowledged that beautiful handwriting is rare among them, the only exception of a striking character being that of Mr. Robert Browning. More villainous scrawls than Mr. Tennyson's, Mr. Swinburne's, Mr. Carlyle's, and Mr. Ruskin's autographs could hardly be devised. Don Felix's remarks are frequently interesting, but they show most strongly how different the impressions made by handwriting upon different persons may be. Thus Don Felix has nothing but condemnation for the signature of Father Ignatius, which seems to us a very fair sample of calligraphy; while his laudation of the extraordinary scrawl which Gautier was pleased to write is unbounded. Again, Don Felix thinks Mr. Lowell's autograph "severely simple and graceful," while it appears to us slovenly and graceless in the extreme. We should suggest that this book might be used as the text for a new and not uninteresting variety of the game of crambo, each person writing down his impression of a given autograph. The result would, we think, go to show that the philosophers of handwriting are no more in accord than other philosophers.

Eight Months in an Ox-Wagon. By E. F. Sandeman. (Griffith and Farran.) To one who came entirely fresh to the subject, this would be a pleasant and acceptable book; but is there anyone, who reads at all, who is not already acquainted with all the incidents of wagon travelling in Africa, and who has not had more than his fill of sport? Mr. Sandeman is more considerate than most travellers, for he spares his readers any details of his voyage to Cape Town. At Pietermaritzburg he embarked in his wagon and travelled through the Orange Free State and the Transvaal as far as the Portuguese frontier. His object was health. He arrived at the Cape a miserable invalid, suffering from disease of the lungs, and hardly able to walk a mile. Within six months, after a stay of little over four months in the climate of the Transvaal, he was able to walk from sunrise to sunset, carrying his rifle, under a blazing sun

without feeling unduly fatigued. The roughness of wagon life, the violent storms, frequent wettings, and sudden transitions from heat to cold did not hinder his recovery. In time we may look to the Transvaal becoming a resort for consumptive patients, but before that time arrives communications must be improved and tariffs lowered, for at present the discomfort and expense of life there are such as practically to deter invalids from making the experiment. Mr. Sandeman gives an interesting account of the settlement made in Secocooni's territory by Herr Marensky of the Berlin Missionary Society. The success of this bold and worthy man is mainly owing to the exercise of tact and judgment, which our own missionaries would do well to imitate. The author was fortunate in meeting with the honey bird, of which he gives a graphic account. This bird, about the size of a sparrow, flew round the wagon with a shrill hissing cry, endeavouring to attract the attention of the men whom it accompanied till the oxen were outspanned, then it conducted a party who followed it for about a mile, pointed out to them the tree in which the wild bees had made their combs, and waited till its own share of the honey had been placed for it on a neighbouring bush. Surely in this there is more of reason than instinct. Mr. Sandeman, like most other writers on this subject, bears testimony to the wrongs of the Transvaal Boers at our hands. No unprejudiced person, he says, can consider their history for the last fifty years and come to any other conclusion than that they have been treated unfairly and unjustly by the English, and that the only law observed towards them has been that might is right. The annexation, he considers, was made on the flimsiest pretext, and it will cost us hundreds of lives and millions of pounds. He never could hear of any tangible benefit which could possibly result to the British nation from this unjust act. His experience of the result of the usurpation to the Transvaal itself was that there was hardly any protection for life and property; and the value of land, except in the vicinity of towns, had rather declined than increased.

Ellen the Teacher. By Mrs. Hofland. (Griffith and Farran.) This little story makes us thankful that the late Mrs. Hofland was not one of the literary and moral lights of our infancy. We suppose there are still mothers who like to put books into their children's hands in which stilted precepts are inculcated in sonorous Johnsonese; but we hope that they are few and far between, for the book is not only dull, but the morality is strained and unwholesome.

Seppel. By Gustav Nieritz. Translated from the German. (Hodder and Stoughton.) A book which begins with the charge of a bull and the rescue of a child by a Jew who hangs on to the bull's horns; proceeds with the suffocation of a child, and the hiding of the corpse among the purchases in the bundle of a Jewess; and winds up with the burning of the synagogue by the infuriated Christians and the destruction of all the Israelites therein, is thrilling but scarcely profitable reading for children. The fact that this horrible catastrophe kills the two Jewish characters whose continued existence is inconsistent with the comfort and happiness of those of their brethren in whom the reader is interested so dulls our horror at the tragedy and our indignation with its perpetrators that its moral effect is very doubtful.

Politicians of To-day: a Series of Personal Sketches. By T. Wemyss Reid. 2 vols. (Griffith and Farran.) This is a fresh example of the close approach which journalism has made at the present day to regular literature. By the side of two or three names that might be mentioned, Mr. Wemyss Reid occupies the front rank among provincial editors, and in one of these "Personal Sketches" he not obscurely

alludes to the honourable sense of responsibility with which he fulfils his duties. In other works he has shown that he can hold his own among the professors of *belles lettres*. The present book, on the whole, maintains his assertion that the editor of a party newspaper can be independent, if not impartial, and that he ought to appreciate opinions with which he does not sympathise. Despite the ephemeral nature of their subjects, these sketches are so handsomely set out in paper and type that we cannot refrain from a few serious criticisms. Sophia (vol. ii., p. 174) seems to be used as a rhetorical synonym for Constantinople. Hume (vol. i., p. 255) was never in Parliament. The phrase "the accident of an accident" (vol. ii., p. 274) is not an original combination, but was before used by the first Lord Thurlow. The scandalous story told of Prince Gortschakoff (vol. ii., p. 160), if true, would certainly not have offended the "sensitive" Roumanians.

A Year in Peshawur, and A Lady's Ride into the Khyber Pass. By L. B. Trevelyan. (Chapman and Hall.) The title of this book is not badly chosen to indicate that it belongs rather to the class of descriptive stories than to that of novels with only an excuse of local colour. Regarded as a work of fiction, the thread of romance must be called exceedingly slight, and of the literary style it is most charitable to say nothing. But if the reader is content to concentrate his attention upon the general picture here presented of social life in India at an important frontier station, his disposition to criticise will be disarmed. The writer has a woman's eye for details and a woman's faculty of description. Her merits and her faults are alike those of the amateur photographer, in some of whose productions the dress of the sitter, in others the background or the ornaments of the room, force themselves into predominant notice. Her characters do not live, but the surrounding circumstances amid which they move are real. More than one of her subordinate incidents we are able to parallel from our own personal experience. One point more should not be passed unnoticed. Mrs. Trevelyan has boldly dared to touch upon the shady side of Anglo-Indian morality. Indeed, from some allusions in her early chapters we feared an unpleasant conclusion. But her tact and, above all, her old-fashioned faith in English manliness and English purity bring her safe through, and almost inspire us with an interest in the several pairs of lovers and married people that throng her pages.

The History of the Honourable Artillery Company. By Capt. G. A. Raikes. With Maps and Illustrations. Vol. II. (Bentley.) Having noticed the first volume of this work at the time of its appearance (ACADEMY, November 30, 1878), we must now content ourselves with stating that the second volume fully confirms the favourable opinion then expressed. The history of a regiment of the line (of which we remember to have seen a few specimens) is at best a mere record of battles and campaigns, interesting only in so far as it serves to stimulate *esprit de corps*. But the Honourable Artillery Company, with its remote past, its unbroken traditions, and its democratic organisation, has a real history, which illustrates both the municipal life of London and the condition of the country at large. Such a history would readily lend itself to the picturesque style affected by the magazine writer of the present day. But Capt. Raikes has chosen the part of a chronicler, who collects materials for others to work up into narrative. Year by year, and reign by reign, he faithfully puts down all the events, whether great or small, which constitute the annals of his subject. Without any parade of research he has spared no trouble in consulting the original documents wherever

possible. The old maps and the quaint pictures supply an appropriate setting to a work which, in its thoroughness and freedom from literary ambition, recalls the labours of an earlier and simpler generation.

NOTES AND NEWS.

THE *Glasgow Weekly Herald* will publish Mr. William Black's new work, "Sunrise: a Story of These Times."

MR. CHARLES SWEET, LL.B., a son of the late eminent conveyancer, Mr. George Sweet, has nearly finished the new Law Dictionary on which he has been engaged for the last eight years and more. Every article has been written anew from independent research.

MR. W. A. CLOUSTON, of 137 Cambridge Street, Glasgow, proposes issuing a private reprint of the literal English translation by Sir William Jones of the *Moallakat*, or seven Arabian poems, usually considered the finest pieces of poetry in that language, which are preserved among the Oriental MSS. at Oxford. The volume will also contain a selection from the Shata poems edited by Dr. Carlyle in his *Specimens of Arabian Poetry*, and an Introduction by Mr. Clouston giving all the facts which can be recovered concerning the authors of the seven poetical pieces and the substance of some valuable criticisms which have recently appeared in Germany on ancient Arabic poetry. The editor has received assistance from several well-known Arabic scholars, and has already obtained permission to enter the names of several eminent Orientalists among his subscribers. The impression will consist of 230 copies—200 on crown octavo and thirty on demy octavo.

EVER since the world began to be peopled by men, they have been addicted to public meetings in the open air. And these open-air assemblies have exercised a great influence on the world's history. A work which is likely to prove both valuable to the archaeologist and interesting to the general reader will shortly be published by Mr. G. L. Gomme, F.S.A., upon this subject, tracing from the earliest times the fortunes of the Folk-moot in Britain, and especially showing how it has survived among ourselves in various forms to the present day. Its title will be *Primitive Folk-Moots; or, Open-Air Assemblies in Britain*, and the publishers will be Messrs. Sampson Low and Co.

THE Icelandic translator of *Lear*, M. Steingrímur Thorsteinson, of Reykjavik, who has also translations of several other of Shakespeare's plays ready for publication, is to be proposed as one of the vice-presidents of the New Shakespeare Society.

A MONOGRAPH on astrolabes, by Mr. Knobel, will shortly appear.

MR. FURNIVALL has given to the British Museum Library his unique (though imperfect) copy of the first edition of Phillip Stubbes's *Perfect Pathway to Felicitie* (1592). Mr. Alfred Huth's copy of the 1610 edition is also believed to be unique.

MESSRS. MOXON, SAUNDERS AND Co., of Henrietta Street, Covent Garden, will publish on the 26th inst. *My Sweetheart when a Boy*, by E. Owens Blackburne, author of *Molly Carew*, *A Woman Scorned*, &c., forming No. 1 of "Moxon's Select Novelettes," to be issued monthly, price sixpence, illustrated by J. Moir Smith and other artists. No. 2, to be issued at the end of February, will be *Stella*, by Mrs. S. B. Townsend and Mayer, author of *Sir Hubert's Marriage*, *The Fatal Inheritance*, &c. Several popular authors have been engaged to contribute to this series.

PROF. BUGGE's investigations on the origin of Scandinavian mythology, which were noticed in the ACADEMY some weeks ago, will shortly be published by him in full, and will appear simultaneously in a German translation. Prof. Bugge seeks to prove that the great majority of the Greek-Roman myths which found a home in the North arrived there only through a Celtic medium. The new views have already received the more or less qualified adhesion of some of the most competent German scholars, among whom may be mentioned Prof. Maurer, of Munich, who has lately brought before the Munich Academy an abstract of Prof. Bugge's investigations, in which he lays stress on their partial anticipation by Dr. Vigfússon, who, in the prolegomena to the *Sturlungasaga*, referred a portion of the Eddaic poems to a Celtic home.

MR. GEORGE SAINTSBURY will give a course of four lectures at the Royal Institution on "Dryden and his Period" on February 28 and March 6, 13, and 20.

THE Keepers of the British Museum are in danger of being overwhelmed by the crowd of readers whom the recent improvements have attracted to that great institution. Every day the Reading-Room seems to be frequented by a larger number of students than on its predecessor, and often, especially on Saturdays, it is impossible to secure a seat without great delay. At four o'clock on the 10th of this month there were over 450 readers in the room, and in the course of the day considerably over a thousand applications must have been sent in for books from the presses in the interior of the building. The energies of the staff are now taxed to the uttermost to secure the delivery of the volumes which are demanded by the frequenters of the Reading-Room, and some plan should be devised to lighten the labours of the attendants after midday. Possibly some relief might be obtained for that deserving class of men, and some convenience afforded to the general public, by allowing well-known literary students to leave their tickets or to send them through the post on the previous day to that on which the books are desired.

MESSRS. CASSELL, PETER, GALPIN AND Co. will shortly publish *The Field Naturalist's Handbook*, by the Rev. J. G. Wood and Theodore Wood, embracing Entomology, Field Botany, and Egg Collecting, and giving for each successive month particulars of the plants, insects, eggs, birds, &c., which can be observed by the field naturalist.

MR. ARTHUR PALMER, Fellow of Trinity College, Dublin, editor of Ovid's *Heroides*, will shortly publish a new text of Propertius. In this the readings of the rediscovered Cujacian MS. will be given for the first time since Scaliger used the MS. for his editions; these and the Naples MS. will form the basis of the text. Mr. Palmer's articles on Propertius in *Hermathena*, and his acknowledged ingenuity as a conjectural emender, give reasons to expect that this will be a very valuable contribution to the criticism of Roman poetry.

MESSRS. SONNENSCHIEIN AND ALLEN will issue in a few days a work entitled *The Influence of Joy upon the Workman and his Work*, by H. Bendelack Hewetson. It will contain several autotype facsimiles of drawings by William Blake and others. The size of the book is quarto.

THE same firm have just issued the first volume of their promised *Industrial Geography Primers*, edited by G. Phillips Bevan, F.G.S., treating of Great Britain and Ireland. The second volume is to deal with France.

To the list of new Swiss journals appearing with the new year we may add the *Bauernzeitung*, edited by Fellenberg-Ziegler and Fritz Rödiger, and the *Volksart*, both published at

Herzogenbuchsee. A new scientific and literary review, under the name of *Le Polyglotte*, has appeared in Geneva, with articles in French, German, English, Italian, and Spanish. The notes and commentaries are given only in French, German, and Italian.

THE *Deutsches Montagsblatt* states that an interesting collection of autographs was to be sold in Berlin on January 16, including those of many of the heroes of the Thirty Years' War, the Prussian rulers and generals, German poets, artists, and dramatists, and a particularly original letter from Anselm Rothschild, the founder of the great banking house. Many of the specimens were collected by Fouché.

MR. EDISON's mathematician, Mr. Upton, has written a paper for the February number of *Scribner's Monthly* which will give the first correct and authoritative account of Mr. Edison's invention of the electric light. The same number will contain the first instalment of an original history of "The Reign of Peter the Great," by Eugene Schuyler, author of *Turkistan* to run serially in the magazine during two years. The publishers state that bureaus of illustration for this work have been established in Paris and St. Petersburg, where all the important pictures will be prepared and sent to America for engraving; also that they have been granted access to Russian museums of Peter, and have been permitted to copy paintings by famous Russian artists, while original drawings by Dmitrieff, Charlemagne (present Court painter of Russia), and others will be given from time to time.

MR. W. R. MORFILL is to read a paper this session before the Philological Society, "On some Polish Vocabularies." Polish is the old national language of the Slavs on the Elbe, and the few glossaries of it which have been preserved are almost unknown to English scholars, though they abound with interesting verbal forms.

A VOLUME of *Specimens of English Dialects*, containing the "Exmoor Scolding and Courtship," edited by Mr. F. T. Elworthy, and "William de Worlat's Bran New Wark," edited by Prof. W. W. Skeat, and forming the third of the English Dialect Society's publications for 1879, is now being issued to the members. The fourth publication of the past year will be the second part of the *Dictionary of English Plant Names* (G to O), by Mr. James Britten and Mr. Robert Holland, and it is expected to be ready in February.

THE *Fourth Annual Report of the Johns Hopkins University* (Baltimore: Murphy) prints the roll of fifty-four fellows, past and present, among which we notice a large number of names of German, Dutch, and Scandinavian origin, besides one Russian and one Japanese. There is also given a list of all the scientific papers published by members of the university during the past three years. If Oxford or Cambridge were to attempt such a record, it is humiliating to reflect how large a proportion would prove primers or school-books. We observe that investigations in marine zoology were conducted by an organised party of twelve biologists on the shores of the Chesapeake Bay during twelve weeks of 1879. The only parallel we can show to this is the work done last summer by Aberdeen University on the north-east coast of Scotland.

IN consequence of the dissolution of the Nordiske Literatur-samfund, founded in 1847, and which has done such good work in publishing Old Icelandic, Norse, and Danish texts, a new Scandinavian Text Society has been started under the title of Samfund til udgivelse af gammel nordisk litteratur. In their prospectus the founders of the new society urge that, in spite of the labours of past generations, the

whole body of Northern literature has not yet been brought to light, and that some of it has not been published in such a way as to satisfy the requirements of modern scholarship. Many of the oldest and most remarkable MSS. have either not been printed at all or else in an untrustworthy form. Whole branches of literature, again, have been almost completely ignored, such as the highly interesting *rimur*. Many of the oldest historical poems, remains of the oldest Christian poetry, and a number of prose romances and tales still remain unprinted. Much remains also to be done in the Danish literature of the fourteenth to the sixteenth century. The society has already begun its work, and will, in the course of the year, publish an Old-Icelandic MS. and a unique Old-Danish text. The annual subscription is five crowns (less than six shillings). The president of the society is Dr. Svend Grundtvig; the secretary, Dr. P. E. K. Kaalund; the other members of the council, Drs. Lorenzen, Vilh. Thomsen, and Ludv. Wimmer. This society deserves the support of all English scholars. Those who wish for further information should apply to the secretary in Copenhagen.

THE Statistical Department of the Chinese Maritime Customs has just published at Shanghai a volume entitled *Le Saint Edit: Revue de Littérature Chinoise*, by M. A. T. Piry, of the Customs service. M. Piry has reproduced the whole of the text and amplification of Kanghsi's Sacred Edict, with a carefully collated translation and explanatory notes.

THE "Free Popular Lectures" at the Working Men's College, Great Ormond Street, during the coming term will be delivered by Messrs. W. Spottiswoode, T. Hughes, F. Darwin, Prof. Huxley, Tyndall, Hales, and others. The opening lecture to-day (Saturday) will be by Prof. Hales, on *The Merchant of Venice*.

THE Manchester Literary Club commenced its session on the 12th inst., when papers were read on "Robin Hood's Country," by Mr. J. Mortimer, and "English Gipsy Annals under the Tudors," by Mr. H. T. Crofton. The programme for the remainder of the session is as follows:—Jan. 19, "Fads and Fancies in Art," by Mr. C. Bowley, jun.; Jan. 26, "Lancashire Dramatic Authors," by Mr. E. R. Callender; Feb. 2, "A Few Free and Extended Renderings of Familiar Nursery Rhymes," by Mr. H. H. Hadfield, and "The Relation of Wit to Humour," by the Rev. W. A. O'Connor; Feb. 9, "Glimpses of Manchester Life Two Centuries since, as seen in Newcome's Diary," by Mr. C. Hadfield, and "The Philosophy of Hume and Berkeley," by Mr. H. H. Howorth; Feb. 16, "The Lancashire and Yorkshire 'Flitting' Boggart: its Scandinavian Origin," by Mr. C. Hadfield, and "Charles Dickens and Rochester," by Mr. Robert Langton; Feb. 23, Exhibition of rare books and literary curiosities; March 1, "The Manchester Academy of Fine Art," by Mr. Ward Heys, and "The Origin and Progress of the Manchester School of Art," by Mr. W. H. J. Traice; March 8, "Sydney Smith as a Social Reformer," by the Rev. Stuart J. Reid, and "Manchester Theatrical Reminiscences" (part iv.), by Mr. John Evans; March 15, "The *Prometheus Vincius*," by the Rev. W. A. O'Connor, and "Children and Women in the Poems of Wordsworth," by Mr. George Milner; March 22, "The Bibliography of Rochdale, as illustrated by the Collection in the Local Free Public Library," by Lieut.-Col. Fishwick; April 5, Annual Meeting; April 12, *Conversazione*.

DR. BURGERSDIJK is about to publish a metrical translation of Shakspeare's sonnets into Dutch.

DAUDET's latest novel, *Les Rois en Exil*, is being translated into Polish.

THE well-known German newspaper, the *Hamburger Correspondent*, will shortly complete its hundredth year of life. In celebration of the occasion the proprietors will issue some curiosities connected with it; among other things, a facsimile of the paper as it was printed during Davoust's occupation of the city, when he caused it to be printed in green characters because his eyes were too weak to bear black.

WE have received from Messrs. W. Satchell and Co. No. 1 of the *Angler's Note-Book and Naturalist's Record*, which contains much that will interest an even wider circle of readers than that immediately aimed at.

PROSPERO VIANI has discovered an unpublished poem of Leopardi's, entitled *L'Appressamento della Morte*, which will be printed next month in the second part of the Appendix to *Leopardi's Correspondence* now being issued. This Appendix will also contain an unpublished epigram of the poet's directed against Tommaseo.

WE are glad to see that Dr. Albert Réville has been appointed to the newly founded professorship of the history of religions at the Collège de France.

IT is stated that the late Senator Centofanti, who has just died at the age of eighty-five, has left a volume of Memoirs, which will derive great interest from the author's connexion with the Liberal movement in Italy.

M. HENRY COCHIN has published (Charavay) a new French translation of Luigi da Porto's novel *Giuletta e Romeo*, with a preface on the author and the Italian Renaissance.

WE learn from Trübner's *Record* that Don Manuel Larrainzar has just completed his *Estudios sobre la Historia de América, sus Ruinas y Antigüedades, comparadas con lo mas notable del otro Continente en los Tiempos mas Remotos, y sobre el origen de sus Habitantes*. It consists of five octavo volumes, of some 600 pages each, and is illustrated with thirty-eight lithographic plates. It is published at Mexico.

SIGNOR H. CAPPARONI has just published (Auximi: Quercetti) a Latin translation of the first book of Thucydides.

THE *Revue Critique* is to be enlarged, and will for the future review classical school books. Its valuable *chronique* will appear weekly instead of monthly.

THE Municipality of Paris has just issued a new edition of its atlas of plans of the capital.

DR. JOHN KOCH's translation into German verse of Chaucer's *Minor Poems*—his "Pity," "Parliament of Fowles," "Adam Sciveyne," "Truth," "Gentillesse," "Steadfastness," "Skogan," "Marriage" (or "Bukton"), "Fortune," and "Purse"—is now in the press, with an Introduction on the dates, &c., of these and Chaucer's other works.

A new edition of the Russian poet Lermontof's works will shortly be published, the last edition, published in 1873, having been exhausted. The editor, M. Efrekof, has newly revised the text, and supplemented it from the author's MS. The edition will be in two volumes, the first of which will contain a portrait of the poet, two facsimiles of his handwriting, and a biographical sketch.

THE *Comedy of Errors* was the play critically examined at the last meeting of the Clifton Shakspeare Society, on December 27. Reports were brought from the following departments:—Historical References, by Miss Florence W. Herapath; Instrumental Music, by Mr. C. H. Sanders; Rare Words and Phrases, by Mr. L. M. Griffiths; Plants and Animals, by Dr. J. E. Shaw; Shakspeare's Play-craft, by Mr. J. A. Sanders; Various Readings, by Mr. A. H. Thurnam; Metre and Authorship, by Miss

Constance O'Brien; Demonology and Witchcraft, by Miss Florence O'Brien; Anachronisms, by the Rev. Barton S. Tucker; Grammar, by Mr. E. Thelwall. Mr. P. A. Daniel's *Time-Analysis* of the play was also brought before the Society.

G. ROSKOFF, the author of the *History of the Devil*, has just published a new work, entitled *Das Religionswesen der röhesten Völkerstämme*, in which he endeavours to refute Sir John Lubbock's thesis that there exist certain rude tribes among which no trace of religious ideas is to be found. The evidence collected in the present work concerns systems of faith and superstitions from all parts of the globe, and shows in particular that the belief in sorcery and evil spirits is nearly universal. What is specially valuable, the author has not confined himself to bringing together many curious details regarding the folk-lore and the popular superstitions of barbarous nations, but he has carefully analysed every belief to which he refers, and tried to find out its psychological basis. He has, to our mind, fully proved his point, and his work forms an important contribution towards the solution of one of the most interesting problems of comparative theology.

MAGAZINES AND REVIEWS.

THE *Modern Review*, a new quarterly magazine, edited by R. A. Armstrong, B.A. (James Clarke and Co.), is intended to supply an organ for "religious Liberals," such as older magazines afford to "champions of Ancient Creeds and exponents of the Positive Philosophy." The first number has too many articles. Prof. Upton's, on "Fervent Atheism," and perhaps Mr. Hargrove's, on "St. Thomas Aquinas," are able; M. Charruand's, on "The Present Situation in the Reformed Church of France," is worth reading; and Dr. Carpenter's, on "The Force behind Nature," is only not admirable because it is either inadequate in scale or assumes reference to larger works of Dr. Carpenter himself and others. Some of the shorter articles are by people who never write foolishly; but it does not follow that they are wise in publishing the mere overflowings of their minds.

THE January number of the *Monatsschrift für Geschichte und Wissenschaft des Judenthums* contains a suggestive article by Dr. Grätz on Old Testament passages rendered obscure by the wrong insertion or omission of the interrogative (Gen. iv. 13 appears in a new light when we introduce a question), and the commencement of what promises to be a valuable series of articles on Jewish and comparative folk-lore by Dr. Gaster. Dr. Theodor concludes his articles on the composition of the Agadic homilies, and Dr. Back continues his notes on the fables in the Talmud and Midrash, which will also supply some fresh data to students of Eastern folk-lore.

THE *Deutsche Rundschau* has the last instalment of a new historical novel, *Der Heilige*, by Herr Meyer, in which the chief personages are Henry II. and Thomas Becket. The novel is carefully constructed, but it follows for its history M. Thierry rather than Mr. Freeman, and tries to gain interest by making Becket have various Saracen relations, and a daughter whom Henry II. seduces. It has the merits and defects of the modern German historical novel—great truthfulness in local colouring, but a want of human interest owing to the remoteness of the situation. Herr Friedländer writes on the "Luxury of the Table," and brings forward facts to show that the *gourmandise* of the Romans, in what we are accustomed to consider the most corrupt state of society that has ever existed, may be paralleled in almost any age, and certainly in Berlin at the present day. Dr. Birch-Hirschfeld criticises in

rather an adverse spirit Mr. Darwin's theory of the expression of the emotions.

THE *Rivista Europea* for December 16 has an article by Signor Ferrari on "Fra Dolcino," in which he examines the theological opinions of Fra Dolcino and refutes the opinions of Rossetti, Aroux, and others that Dante in the *Divina Commedia* aimed at setting forth heretical opinions similar to those of the Dolcists under a mythological and allegorical form. Signor Stracali begins a paper on "The Goliardi," or wandering scholars of the mediaeval universities, a class whose existence till late times has been overlooked, but who were the literary Bohemians of the Middle Ages, and whose writings on religious and social subjects are rather startling reading to those who still like to believe in an ideal "Age of Faith."

IN the *Preussische Jahrbücher* for December is the beginning of a life of General von Rüchel, who was born in 1754 and was trained as a soldier under Frederick the Great. The notices given of him are extracted from his letters, and contain numerous characteristic anecdotes of Frederick. Herr Förster writes on "Greek Sculpture in the Service of the Attalidae at Pergamos," and gives an account of what can be discovered of the celebrated votive offering of Attalus I., of which the chief remains are in the Museum of Naples. The practical issue of Herr Förster's remarks is to insist on the importance of Asia Minor as a home of Greek art which has never yet been fully searched to discover its hidden treasures.

OBITUARY.

JOSEF SCHNELLER.

ONE of the most characteristic of Swiss antiquaries, an old and kind friend of the present writer, Josef Schneller, the City Archivist of Luzern, died on December 19, his seventy-ninth birthday. He was the son of a poor builder in Luzern, and originally studied theology with a view to the priesthood; but soon after his ordination as deacon he laid aside the clerical office, though he remained a faithful but liberal Catholic to the end of his long life. He was appointed Stadtarchivar of Luzern early in life, and soon after his entry on public office published his first work, in co-operation with the then Spitalpfarrer Marzohl—*Liturgia Sacra*, an elucidation of the liturgy of the Catholic Church in the West, with rich archaeological illustration. In 1843, in union with the late Prof. E. Kopp, he founded the widely known and valued "Historische Verein der V. Orte" (the cantons of Luzern, Schwyz, Uri, Unterwalden, and Zug), and from 1845 until lately was the editor of the society's organ, the *Geschichtsfreund*, which contains his principal historical and archaeological writings. He had the most exhaustive acquaintance with the history of every commune, fort, ruin, convent, and church within his native canton, and of the political relations between Luzern and the other Swiss republics, and various foreign States from the earliest to the latest period. With Father Gall Morel, the Benedictine poet and antiquary of Einsiedeln, he maintained an unbroken friendship until the death of the latter. Every summer for many years he spent his holiday at Seelisberg, where the charming old scholar was always ready to place his wide range and depth of local knowledge at the service of enquiring foreigners. When his writing-desk was opened after his death, the first paper which came to view was a characteristic illustration of his methodical habits; it was the official announcement of his death, written out by himself, and directed to the Civilstandsamt of Luzern. T. HANCOCK.

THE death of Dr. A. Mordtmann, at Constantinople, on December 30, 1879, is a heavy loss to Oriental studies. Dr. Mordtmann, a native of Hamburg, had been living at Constantinople ever since 1845. He was at first Secretary to the Embassy of the Hanseatic towns of Germany, and afterwards became Consul-General of those towns, which post he exchanged in 1859 for the office of a member of the Turkish Conseil de Commerce and Court of Appeal. After having been forced, by Mahmud Nedim Pasha, to give up his official position, he was for a short time editor of the *Phare du Bosphore*. In the last years of his life he devoted himself entirely to his scientific studies, which had always formed the centre of his activity. In the course of his long residence at Constantinople he acquired a thorough familiarity with Turkish, Persian, and Arabic; but the field of his scientific labours was the dead languages of the East and Oriental numismatics. He was foremost among the decipherers of the Pahlavi inscriptions on the coins and gems of the Sassanid kings, and his discoveries in that field have paved the way for the progress which the study of Pahlavi literature has lately made. Of Arabian coins he was a profound connoisseur, and an Arabian work on geography was translated by him as early as 1845. He tried to decipher the Lycian and Phrygian inscriptions soon after they were discovered; and the study of the cuneiform inscriptions is indebted to him for several important discoveries. But his attempt at making out the language of a certain number of cuneiform inscriptions to be an ancient form of Armenian was a failure, and has been completely refuted by Profs. Hübschmann and Sayce.

WILLIAM BUDD, M.D., F.R.S., who died at Clevedon on January 9, was one of a band of brothers whose medical reputation is a household word throughout the West of England. He was himself settled at Bristol, where he held for years the first place as a consulting physician. But his fame mainly rests upon his researches into the mode of propagation of contagious diseases, both in men and in animals. The enthusiasm with which he inculcated the "germ theory" will not easily be forgotten by any who have heard him hold forth on this subject, to which his life was devoted. By the generous support of Prof. Tyndall, who in this matter was proud to call himself a disciple of Dr. Budd, he was elected a member of the Royal Society—a rare honour for a provincial medical man. Besides many papers reprinted from medical journals, which he freely distributed among those who cared to read them, he was the author of a standard work on Typhoid Fever, published only a few weeks before the beginning of the disease which finally carried him off.

THE death of Mr. Serjeant Parry at Holland Park, Kensington, on the 10th inst., has removed from our midst one of the most popular followers of the law. Mr. John Humffreys Parry was the son of an antiquary of the same Christian names who spent his years in studying and illustrating the history and antiquities of his native Principality of Wales. After having completed his education at the Philological School at Marylebone, and passed some of his early years as a clerk in the City, he obtained a post as a temporary assistant in the Printed Book Department at the British Museum. He held this appointment from January 1839 to July 1843, when he abandoned bibliography for the more lucrative profession of the law. During this time Mr. Parry assisted in drawing up the celebrated rules for cataloguing, and he was one of the experts who gave evidence, before the Royal Commission which sat on the Library of the British Museum in 1847-49, on its internal working, and on the capabilities of Mr. Panizzi.

During the last twenty years Mr. Serjeant Parry has been engaged in many of the *causes célèbres* which have been tried in the English courts. His only appearance before the world as an author was as editing *Lord Campbell's Libel Act*; with an *Introduction on the Law of Oral Slander* (1844).

THE death is announced of Mr. Henry White, the compiler of the Royal Society's *Catalogue of Scientific Papers*; of Luigi Vincenzi, formerly Professor of Hebrew in the Roman University, and since 1871 Under-Archivist of the Holy See; of Ernst Kossak, one of the first *feuilleton* writers of Germany; of Prof. J. E. Wappäus, editor of the Göttingen *Gelehrte Anzeigen*; of Bronislas Zaleski, who had just completed the first volume of his *Life of Prince Adam Czartoryski*; and of Silvestro Centofanti, formerly professor in the University of Pisa, author of lectures on the *Divina Commedia*, and of books on the *Life and Works of Alfieri*, on Greek literature, and on Pythagoras.

PARIS LETTER.

Paris: January 9, 1880.

THE two most noteworthy publications of the last month have been the *Memoirs of Prince Metternich* (Plon), and the second volume of those of *Mme. de Rémusat* (Calmann-Lévy). The former of these works is probably already familiar to you through the English translation, which was to appear simultaneously with the French edition. I will, therefore, only touch upon it in order to point out to the curious in such matters the portrait of Napoleon I., as drawn by the Austrian Chancellor in the second book of these *Memoirs*. It is in the highest degree interesting to note how far the estimate of *Mme. de Rémusat*, who had lived as a lady-in-waiting in the Imperial household, differs from that of the diplomatist who had only seen the Emperor under an official light, and surrounded by all the pomp of his court. The acuteness of Metternich, as will be seen on a perusal of the chapter in question, was not blinded by the marvellous skill with which Napoleon played his part of grandiose tragedy; and the Prince's *Memoirs* agree with those of *Mme. de Rémusat* in showing us in Bonaparte a man proud to the verge of insanity, cruelly selfish, and, in private life, violent even to brutality. But the palm must be awarded to *M. de Metternich*; for *Mme. de Rémusat*, while clearly seeing the Emperor's defects, does not perceive, or, at any rate, does not sufficiently indicate the element of grandeur in his character, while the Austrian Chancellor is not backward in recognising this element and in doing justice to the genius which entered into the strange composition of this crowned soldier.

This defect in *Mme. de Rémusat* is still more perceptible in the second volume of her *Memoirs* than it was in the first. Her task was to follow the events which occupy the years 1804-5-6; that is to say, from the coronation to the campaign of Austerlitz. This campaign, it need scarcely be said, marks the apogee of the Emperor's military glory. For this glory, *Mme. de Rémusat* has not one word of sincere admiration. It is this defect which lowers these most interesting revelations to the rank of a party pamphlet. As a compensation, this second volume, like the first, abounds in most curious details, particularly concerning the Emperor's religious marriage, celebrated on the eve of his coronation. *Mme. de Rémusat* does not share the opinion of Prince Metternich, and believes that the religious ceremony was duly and formally solemnised, although in secret. The volume ends with two chapters of very precise details concerning the Emperor's household, the great dignitaries who approached his person, and the French men of letters of the day. Here

again the Metternich *Memoirs* bear out all the assertions of M^{me}. de Rémusat. After sketching the portrait of Napoleon of which we have spoken above, the Chancellor indulges us with some discursive remarks under the headings of "The Napoleonic Aristocracy," "Napoleon's Estimate of Chateaubriand," "The Family of Napoleon," &c., sometimes giving almost word for word the Emperor's opinions as also reported by M^{me}. de Rémusat.

The interest attaching to almost contemporary events does not prevent scholars from eagerly seeking after any documents throwing light on the history of more distant times. For them M. A. Quantin has undertaken and commenced to give to the world a work bearing on the history of the eighteenth century, which will be indispensable to all who take an interest in the period that gave birth to the Revolution. The work is entitled *Le Chansonnier historique du Dix-Huitième Siècle*. The political *chanson*, now dead in France, was long all the fashion. Not possessing, as weapons against the excesses of absolute power, liberty of public meeting, or liberty of the press, or liberty of parliamentary speech, the French were accustomed to fall back upon the only kind of liberty which could not be taken from them—liberty of ridicule. Hence an incredible number of satires, *triolet*s, *rondeaux*, epigrams, and malicious refrains, which flew about from mouth to mouth, as difficult to catch as a wasp, and possessed of as sharp a sting. Copies of these were circulated, in the language of the day, "sous le manteau." In short, a song then filled the place of a cutting article now. But if an article, struck off by the thousand, disappears and is lost so soon, how much more likely is the same fate to befall these couplets, which remained in most cases in manuscript! Fortunately, even then collectors existed, and some of them occupied themselves with filling their portfolios with these relics of the satirical literature of the day. The most persevering of these collectors was Pierre Clairambault, royal genealogist, who during the course of his long life (from 1651 to 1740) collected no fewer than thirty-six volumes of satirical songs. A copy of this precious collection, executed by order of Comte de Maurepas, has for a long time been the only one known; and it is this copy which has rendered the name of the facetious Minister inseparable from that of Clairambault. This Clairambault-Maurepas collection M. A. Quantin proposes to publish in *extenso*, so far as it has any bearing on the history of the eighteenth century. The occasional licentiousness, however, of some of the songs will not allow him to give them all. It must be admitted that the Clairambault-Maurepas collection is far from being complete, inasmuch as it stops at about the middle of the century. M. Quantin's collection will thus be at once more and less complete than its model. The work is to be divided into epochs, and will occupy twenty volumes. Four will comprehend the period from 1715 to 1723—i.e., the period of the Regency. The reign of Louis XV., divided again into the three epochs represented by the names of Fleury, Pompadour, and Du Barry, will furnish material for thirteen volumes. Finally the reign of Louis XVI. to the year 1789 will occupy three more. The volume which opens this series is therefore occupied with the Regency. It is prefaced with an excellent essay by M. Emile Rayné on the history of political verse in France. The couplets it contains nearly all relate to the death of Louis XIV., and bear witness to the joy, indecent at times in its expression, with which the news was generally received. These pieces form a striking commentary on the words of Duclos:—

"The day his body was taken to Saint-Denis, the crowd in the plain was immense. All kinds of

food and drink were being sold. On every side people were to be seen dancing, singing, and drinking; while many so far forgot themselves as to give utterance to ribald jests as the car containing the coffin was passing by."

As a contrast to the melancholy picture presented by this close of a famous reign we may mention the one drawn of its beginning by M. Chéruel in his *History of the Minority of Louis XIV.*, the third volume of which has just appeared at Hachette's. The three books comprised in this volume embrace the years 1648-49-50, i.e., the birth, development, and final collapse of the civil war known as the "Fronde Parlementaire." M. Chéruel has made use of the MSS. of Mazarin and of numerous unpublished documents, which have enabled him to give freshness to a subject that seemed exhausted; and this is especially the case with the part concerning foreign relations and the negotiations ending in the Peace of Westphalia. The same publishers give us in one volume the *Studies on the History of Prussia*, by M. Ernest Lavisse, which originally appeared in the *Revue des Deux Mondes*. M. Ernest Lavisse has tried to explain the unique character of the Prussian monarchy as contrasted with other German States. The conclusion to which his studies have led him may thus be stated in his own words:—"Prussia is a German State lying outside the frontiers of Germany." It is to the exigencies of this struggle for existence amid hostile surroundings that we must refer the development of that stern and well-organised militarism which little by little has won for the Hohenzollerns the hegemony of Germany. M. Lavisse, going back to the most ancient times, shows us the links in the chain which connect the habits of the Prussian Monarchy with the primitive institutions of the Mark of Brandenburg and with those of the knights of the Teutonic order—habits which have been transmitted as an impersonal heritage from king to king; so impersonal, that in the words of King Frederick William I., each of these Hohenzollerns has apparently considered himself as the War and Finance Minister of an ideal and perpetually existent King of Prussia.

Beside this work, which is purely scientific, and therefore occupies a position raised above mere contemporary controversy, many other books are constantly appearing in which the historian is at the same time a political partisan, seeking in the past for arguments to support his ideas on the present. Thus M. Paul Thureau-Dangin, who in various historical essays has shown himself a staunch partisan of a kind of clerical torism similar to that of the Duc de Broglie, has just published a special pleading against the Ferry Bill in the shape of a very complete essay, entitled *Church and State under the Monarchy of July*. Almost simultaneously, M. Charpentier published a work by M. Emile Clairin, written in an entirely opposite sense, and entitled *Clericalism from 1789 to 1870*. While M. Thureau-Dangin, who, by-the-way, is in very bad odour with that organ of clerical Ultramontanism, *L'Univers*, tries to renew the alliance between Liberalism and Catholicism, M. Emile Clairin sets forth the series of conspiracies formed by the clerical element against lay society since the beginning of the century. Both these works have precisely the value of a special plea, and they serve to show at what a critical point the delicate relations between Church and State in this country have arrived.

If historical works were abundant at the close of last year, on the other hand there has been an almost complete dearth of philosophical or literary production. A little book by M. Espinas, which was published by Germer-Baillière under the title of *Experimental Philosophy in Italy*, is, however, deserving of notice, not so much in itself as from its very remarkable Introduction. M. Espinas is one of that

band of young French thinkers who, following in the steps of M. Ribot, have espoused with a well-considered and sustained enthusiasm, if not all the doctrines, at any rate all the methods, of contemporary English psychology. Mr. Herbert Spencer is the recognised leader of this group of eminent psychologists, to which we are already indebted for many vigorous monographs. M. Espinas in the Introduction to the work in question has traced with an earnestness that carries conviction the history of this invasion of English philosophical ideas among the Latin races, and discusses the question as to whether philosophic science will continue to exist as a separate entity or will split up into a number of different parts. The book itself is more a collection of documents than anything else, and, as the author says, rather "an instrument of research into the movement of ideas in Italy" than a work containing any system of dogmatic philosophy.

It remains for us, in order to complete this review, to notice the appearance of two novels, as well as of two books for children, the work of two of the most refined writers of the young school. The first of these novels is by M^{me}. Henry Greville, and is called *Lucie Roday* (Plon). One finds in it the refinement which is so distinguishing a characteristic of this authoress's previous works, but also in a still greater degree the effects due to a somewhat vague conception, and to a too often colourless style. I greatly prefer a piquant story from the pen of M. Henri Llesse (Lemerre), to which the author has not very wisely given a title having no reference to the plot—*L'On n'aime qu'une Fois*. This novel, which is a first work, is written in a gay and sparkling style, and is characterised by a power of observation at once subtle and exact. M. Llesse has certain affinities with the naturalistic school, loving minute details, or what M. Zola calls "le document humain." On the other hand, he is distinguished from this group by the wit of his dialogue. Now, naturalism has a tendency to fill its vocabulary with the most common and every-day speech, while M. Llesse recalls, by the smartness of repartee which he puts into his hero's mouth, the famous legends of Gavarni's cartoons. The great fault of this work is a lack of coherence in the plot.

The two books for children are by M. Paul Arène and M. Coppée. The former has treated a subject which is familiar to children on the stage in all the provinces of France, *The Temptation of Saint Antony*, and has already been mentioned in your columns. The latter has written a charmingly conceived little story—*Bluette*. But these two little tales defy analysis, for their entire charm consists in the detail, and in what is technically termed "le faire." Almost simultaneously M. Coppée brought out at the Odéon a drama in verse, entitled *Le Trésor*, which was received with as much favour as *Le Passant*, the pretty Shaksperian comedy in one act by which, ten years ago, he commenced his successful career as a poet.

CORRESPONDENCE.

THE DERIVATION OF "JUTE."

London: Jan. 2, 1880.

Prof. Skeat's derivation of the word "jute" from the Sanskrit *jāta*, noticed in the ACADEMY of December 27, affords an interesting example of the degree of historical proof which philology admits of. That the popular name of an Indian product finds its original in Sanskrit would to most persons seem enough. But the curious fact remains to be explained that jute is not known by that name, or any similar name, in Bengal itself. The jute of commerce is strictly confined to a limited area in Eastern Bengal, where it is always called either *pat* or *koshta*. With the derivation of these names we are not concerned; but it may be mentioned that *pat* is found as *patṭa* in the Mahabharata. The word "jute" occurs for the first time in English official documents towards the close of the last century. Dr. Roxburgh, the eminent Indian *savant*, was then superintendent of the Botanical Gardens at Calcutta, and in a letter dated 1795 he drew the attention of the Court of Directors to the commercial value of the fibre "called jute by the natives." The question is—From whom did Dr. Roxburgh get the name? A simple and decisive answer can be given. In those days, as now, the gardeners at Calcutta were immigrants from Orissa, and in Orissa jute is known to the present day as *jhat* or *jhant*.

A full discussion of the subject will be found in the *Report of the Jute Commission* by Babu Hem Chunder Kerr (Calcutta, 1874), where it fills three folio pages. But, as that volume is not readily accessible (I have been unable to obtain it in the library of the India Office, though I was permitted access to a copy in the Record department), I trust that this summary of the Babu's argument will be accepted, though coming from one who knows neither the vernacular Bengali nor the classical Sanskrit.

JAS. S. COTTON.

IRISH MISSALS.

3 Porten Road, Hammer Smith, W.: Jan. 4, 1880.

The Irish entries in the Stowe Missal given by Mr. Warren should receive, and no doubt will receive, attention from the few scholars who have made Celtic philology their special study. For their full elucidation one would require, besides a knowledge of mediæval Irish, to have the Latin context before him, and to have some liturgical knowledge. Mr. Warren will, I am sure, forgive me for adding that the transcripts—probably made in haste—need the strictest verification throughout.

Nevertheless, a large part of these entries seems clear; and I may be allowed to offer the following suggestions, subject, no doubt, to correction in several points of detail. The italics in the Irish mark proposed substitutions for doubtful portions of the transcripts.

In the *Ordo Missæ* :—

- | | |
|---|--|
| (1) Lethdirech sund. | (1) Half uncovering here. |
| (2) Landirech sund. | (2) Full uncovering here. |
| (3) Isund totet Dignum tormaingind maid Per Quem bes inna duiddi thall. | (3) It is here that the <i>Dignum</i> undergoes increase if the <i>Per Quem</i> is after it beyond. |
| (4) Isund totet Dignum in (?) tormaingind maid Sanctus bess inna diuidi thall. | (4) It is here that the <i>Dignum</i> undergoes the increase if the <i>Sanctus</i> is after it beyond. (See Dr. Todd's translations of the above entries.) |
| (5) Isund con ogabar (?) ind ablistuair (?) forr cailech fobdi (?) dichir oeth (?) na baigrine is (?) in cailech. | (5) See below. |
| (6) Isund conbongar in Baigen. | (6) It is here that the Host is broken. |

In the *Ordo Baptismi* :—

- | | |
|---|---|
| (7) Isund doberar (?) in salann im belu ind lelucti. | (7) It is here the salt is put in the mouth of the child. |
| (8) Isund dognither in toguht. | (8) It is here is made the consent. |
| (3) (4) The <i>Dignum</i> , as Todd has pointed out, is the Preface, from the words with which it begins [Sursum corda. "Habemus ad Dominum." Gratias agamus Domino Deo nostro. " <i>Dignum et iustum est.</i> " Then, Vere <i>dignum et iustum est, aequum et salutare</i> , &c.]. | |

The *Per Quem* is the form with which now, as a thousand years ago, when this Missal was in use, the Preface ends; "Per Quem Maiestatem tuam laudent angeli &c. cum quibus et nostras voces ut admitti iubeas deprecamur, supplici confessione dicentes, *Sanctus, Sanctus, Sanctus*," &c. The "increase" refers to the variation of the Preface according to the season.

(5) It would be hazardous to attempt a version of the whole of this till the transcript is carefully revised; but portions are clear enough, and the general sense. "It is here that . . . over (the) chalice . . . of the Host into the chalice." The rubric can, I presume, only refer to what is done at the Pax Domini, when the priest breaks the Host over the chalice, and subsequently drops a particle into it.

(6) The word *baigrine* is literally a "cake."

(7) "*Lelucti*" seems related to Cormac's *lelab*, a child at the breast.

In offering these suggestions I cannot but repeat that to be of any value they should be based upon accurate transcripts. It is some twenty-four years since Todd made a very unsatisfactory examination of the Missal, not being permitted, as he tells us, to copy any—

* The corresponding Latin term seems to be *Augmentum*. See *Notes and Queries*, January 3, p. 18, where the rubrics are quoted from "an old missal," "*Hic augmentum*," "*Hic secunda pars augmenti*."

thing. If its possessor will now allow of its publication, and Mr. Warren can see his way to editing it, the public would have before them, and not too soon, a valuable relic of the ancient Irish Church.

DAVID FITZGERALD.

MR. SWINBURNE'S "STUDY OF SHAKESPEARE."

Dublin: Jan. 10, 1880.

I shall not trouble readers of the ACADEMY with personal controversy. The few who care to ascertain the facts can easily do so. But two or three points of wider interest may be noticed.

If words not occurring in Shakspeare are found in a play of doubtful authorship, does this furnish an argument against Shakspeare's alleged authorship of the play? No. If we may trust a table—approximately setting forth the facts—drawn up by Mr. Richard Simpson (New Shakspeare Society's *Transactions*, 1874, p. 115) there are no fewer than 9,464 words of Shakspeare's vocabulary peculiar to single plays. Shakspeare, in his amazing wealth of words, has nowhere written a hundred lines without summoning into use a word which has never appeared outside the one play in which it does service. In *Henry V.* the number of words *ἑαυτὸς λεγόμενα* is 549. To found an argument on such data, the words must, as Mr. Simpson said, be weighed, not counted; they must be carefully selected, crucial words. To call a word actually occurring in Shakspeare "non-Shakespearian" or "pre-Shakespearian" does not prove it a crucial or test word.

Certain words occurring in *King Edward III.* can be spoken of as *ἑαυτὸς λεγόμενα* only by excluding from consideration the poems of Shakspeare. Mr. Swinburne—it seems to me—silently assumes that Shakspeare has two vocabularies: one for his poems, another for his plays. This is an important assumption, and someone with leisure would do well to ascertain the facts. I have looked a little into the matter, and incline to the opinion that the *ἑαυτὸς λεγόμενα* of the poems do not largely differ in number or in kind from those of an equal number of lines in Shakspeare's earlier dramas. A small excess and a certain peculiarity might be induced, one would suppose beforehand, by the demands of rhyme.

Perhaps I may add that, as to the authorship of *King Edward III.*, I am inclined to agree with Mr. Swinburne; but my opinion is founded only on a general impression in which I have myself no great confidence.

As to the "perpetual predominance" of the triple ending in Fletcher, the statement took me by surprise, but I did not venture hastily to question it. Now that a challenge has been given by Mr. Furnivall, I may say that I examined the first scene of *The Knight of Malta*, 225 lines, and the first hundred lines of *The Little French Lawyer*. These plays, I see it stated, are ascribed by Mr. Swinburne to Fletcher, at least as regards style and execution. In the 225 lines of *The Knight of Malta*, I find four which might possibly be represented as exhibiting triple endings, but I do not believe Mr. Swinburne would represent them as such; the terminal words *memory*, *business*, and *Zanthia* (a dissyllable in line 199) he would—rightly, I think—treat as dissyllabic. The remaining line,

"For a sign somewhere. May then my life forsake me,"

no intelligent reader of verse, I suppose, would treat as giving an example of the triple ending. In the first hundred lines of *The Little French Lawyer* nine, exhibiting departures from the normal form, deserve attention; of these only one,

"The curate of the parish; but for Cleremont," has, it seems to me, the triple ending. The general result is that, in 325 lines examined by me, one triple ending occurs. I have little

doubt that in some of Fletcher's plays they are less rare.

The general question which chiefly interests me in this whole discussion is the following: Does not accurate scholarship subserve the best criticism of literature and art? Or are we to wander in dilettantism, from one unfounded assumption to another, lit by will-o'-the-wisp fancies, until we suddenly find ourselves in the slough?

EDWARD DOWDEN.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 19, 4 p.m. Asiatic.
5 p.m. London Institution: "The Leyden Jar," by J. E. H. Gordon.
8 p.m. Royal Academy: "Truth in Art," by Briton Rivière.
8 p.m. Victoria Institute: "On the Organ of Mind," by the Rev. Dr. J. Fisher.
TUESDAY, Jan. 20, 3 p.m. Royal Institution: "The Physiology of Muscle," by Prof. Schiffer.
7.45 p.m. Statistical: "The Strikes of the Past Ten Years," by G. Phillips Bevan.
8 p.m. Civil Engineers: "Fixed and Moveable Weirs," by L. F. Vernon Harcourt; "Moveable Dams in Indian Weirs," by R. B. Buckley.
8 p.m. Colonial Institute: "The National Development of Canada," by J. G. Bourinot.
8.30 p.m. Zoological.
WEDNESDAY, Jan. 21, 7 p.m. Meteorological: Anniversary.
7 p.m. Entomological: Anniversary.
8 p.m. Society of Arts: "Domestic Poisons," by H. Carr.
8 p.m. Geological: "On the Genus *Plauracanthus*, Agass," by J. W. Davis; "On the Schistose Volcanic Rocks occurring on the West of Dartmoor," by F. Rutley; "On Mammalian Remains and Tree-trunks in Quaternary Sands at Reading," by E. B. Poulton.
8 p.m. Archaeological Association: "Ancient Jade Instruments," by H. W. Ope; "Ancient and Unpublished Documents," by W. de Grey Birch.
THURSDAY, Jan. 22, 3 p.m. Royal Institution: "Modern Architecture since the Renaissance," by H. H. Statham.
7 p.m. London Institution: "The 100,000th of a Second," by W. E. Ayrton.
8 p.m. Royal Academy: "Architecture governed by Technical Principles," by E. M. Barry.
8 p.m. Society of Arts: "The Teaching of Physics," by Prof. Perry.
8.30 p.m. Royal. Antiquaries.
FRIDAY, Jan. 23, 8 p.m. Quakers.
8 p.m. New Shakspeare Society: "On the Inconsistency of the Time of Shakspeare's Plays," by E. Rose; "Is there a Fifth Day in *Romeo and Juliet*?" by W. J. Rolfe; "There is not a Month between Scenes II. and III. of *Julius Caesar*, Act I," by Hermann Linde.
9 p.m. Royal Institution: "Sea and Land in Relation to Geological Time," by Dr. W. B. Carpenter.
SATURDAY, Jan. 24, 3 p.m. Royal Institution: "Coal," by Prof. T. Rupert Jones.
8 p.m. Physical: "On the Theory of Prof. Hughes' Induction Balance," by Dr. O. J. Lodge; "On a Liquid Voltaic Arc," by C. V. Boys; "On a Talking Machine," by J. Faber.
8.45 p.m. Botanic.

SCIENCE.

T. Macci Plauti Captivi. With an Introduction, Critical Apparatus, and Explanatory Notes by Edward A. Sonnenschein, M.A., late Scholar of University College, Oxford. (W. Swan Sonnenschein & Allen.)

THIS work is a translation of the edition of the *Captivi* by the well-known scholar, Brix, with additional notes by the English editor. Mr. Sonnenschein's knowledge of German is that of a native, and is a sufficient voucher for the accuracy of the translation. The high reputation of Brix, proved by his various editions and articles on Plautus, cannot fail to recommend this work to English, and, I hope I may add, American, students.

But it would be little to say thus much only of Mr. Sonnenschein's work. He has given for the first time a complete collation of the British Museum MS., well known in England since Wagner's edition of the *Aulularia* as J. This is a MS. ascribed by Mr. E. M. Thompson to the end of the eleventh century, and is therefore nearly equal in antiquity to the famous Codex Vetus (B) of the Vatican. The readings of both MSS. are now presented side by side; the few lines of which A (the Ambrosian) still preserves fragmentary

traces are given when they occur; and occasional readings are quoted from the Ursinianus, as well as other MSS. of less note. As no edition of the *Captivi* hitherto published exhibits an adequate critical apparatus, this may be regarded as the most important contribution which Mr. Sonnenschein has himself made to the study of the play. But he has also given to the world a series of emendations which can hardly fail to excite attention, for they are asserted to be, and it seems that they are, from the hand of Bentley. Mr. Sonnenschein found them in a copy of Pareus in the British Museum (682, b. 10). Many of these have since been made by other scholars, but some of them are quite new, and, whether right or wrong, call for examination. I would mention as interesting specimens the following:—

I. i., 18.—*Canes sumus; quando { res redeunt } { redierunt } venatici* for *quando res redierunt* of MSS.

II. ii., 71.—*Ne patri tam etsi unicus sum esse e re videatur magis for sum decere* of MSS.

II. iii., 71.—*Cave tu mi iratus fuas for cauto michi* of MSS.

IV. ii., 12.—*Coniciam in collum pallium, primo ex me hanc rem ipse audiat for rem ut audiat* of MSS.

IV. ii., 17.—*Vmerus aries, tum genu ad quemque icero, ad terram dabo for adquemque icero* of MSS. In this case Bentley, taking *icero* from Camerarius, rejects the *ut* which he had substituted for *ad*, no doubt forgetting or not noticing that *quemque=quemcumque*; Bentley's emendation has been made since his time independently by Lindemann, and is, I think, right.

IV. ii., 6.—*Laridum atque epulas foveri ferculis ferventibus* for *foculis* of MSS.

IV. ii., 82.—*Atque agnum adferri proprium pinguem. Cur? Vi sacrifices for proprium* of MSS. This is a conjecture on which we should be glad to have Mr. Munro's opinion; it seems very tempting, but the word is rare, and Mr. Sonnenschein quotes no instance of a use exactly parallel.

The commentary is, as might be expected, excellent, and rarely leaves anything unexplained. Sometimes, however, we have found it necessary to supplement, occasionally to alter, our views by a reference to Using's recent or Lambinus' never superseded, though old, commentary. In a comedy there is generally a good deal of the exact force of which strikes different readers differently; and this is, of course, more true where the readings are so often conjectural as in Plautus. But it would be difficult to mention any English edition of the plays from which so much may be learnt as to the language and syntax of Plautus as this, not excepting Dr. Wagner's valuable, but less minute, editions of the *Aulularia*, *Trinummus*, and *Menæchmi*. The *Captivi* has besides a peculiar advantage for school purposes in its moral propriety. The author himself dwells on this in the address which he makes to his audience at the end of the play, *Spectatores, ad pudicos mores facta haec fabula est*. On the other hand, it is thoroughly dramatic, and keeps up the reader's interest to the last, even if we hesitate to accept the verdict of Lessing that it is "das schönste Stück das jemals auf die Bühne gekommen ist."

The present edition is called "preliminary." The editor intends to publish, later, another,

in which Bentley's conjectures on the other plays are added in an Appendix. R. ELLIS.

CURRENT SCIENTIFIC LITERATURE.

Annual Record of Science and Industry for 1878. Edited by Spencer F. Baird. (New York: Harper.) These volumes—an attempt to reproduce on a smaller scale the *Jahresberichte* of the Germans—have now appeared for eight consecutive years, while their predecessor, *The Annual of Scientific Discovery*, was commenced in 1850. The book is very comprehensive, and it furnishes within a space of 700 pages a very useful résumé of the main results of scientific investigation during the year. The astronomy, for which Prof. E. S. Holden is responsible, includes a record of all important discoveries, and passes on to a report of American, and afterwards of European, observatories. The American list comprises no less than forty observatories, many of them, of course, belonging to private individuals. Astronomy is followed by the physics of the earth, or physiography as we now call it. The part relating to vulcanology would be considerably improved next year by a detailed account of some one seismological observatory such as that of Palmieri or of Stefano di Rossi. Physics and chemistry record no very notable discoveries during 1878. Mineralogy, geology, and geography follow in succession; a section is given to microscopy; and the biological sciences occupy about a sixth of the book. Agriculture and rural economy are discussed with considerable minuteness by Prof. W. O. Atwater, and some useful industrial statistics conclude the volume. Although many omissions must occur in a work of such considerable scope, the principle of entrusting each particular section to an expert is carried out so fully that the book affords a very fair insight into the state and progress of science. The continued references to scientific journals are also a notable and useful feature.

Mittheilungen aus dem k. Zoologischen Museum zu Dresden. 3tes Hft. (Dresden: Baensch.) This finely illustrated work is edited by the indefatigable Dr. A. B. Meyer, the explorer of New Guinea, and now the Curator of the Dresden Zoological Museum. The present part contains an account of a new form of glass-fronted case for museums, with the bodies and all the fittings made of iron, designed by Dr. Meyer. Plates are given showing the details of structure, and we recommend the study of them to curators of our museums at home. There is further a paper on the dragon-flies of New Guinea by M. E. de Selys Longchamps, and a paper containing a series of descriptions and measurements of the ethnological skeletons and skulls in the Dresden Museum by Drs. Meyer and E. Tüngel. The next paper is by Mr. R. Bowdler Sharpe, of the British Museum, on the collections of birds made by Dr. Meyer during his expedition to New Guinea and some neighbouring islands, and is illustrated by three coloured plates. A paper by Dr. Th. Kirsch on new wasps in the Dresden collection follows, and the part closes with a long paper by Dr. Meyer on 153 Papuan skulls from New Guinea and the Island of Mysore (Geelvink Bay), forming a continuation of two papers on the same subject which appeared in the two earlier parts of the same publication. The present part of the paper is illustrated with five photographic plates, each of which contains five different views of each of five different skulls, so that twenty-five skulls in all are portrayed. The photographic method leaves nothing to be desired. This exhaustive treatise of Dr. Meyer's is to be further continued in the next part of the series.

NOTES OF TRAVEL.

THE results of the Dutch scientific exploration of Sumatra are to be published in four volumes, the first of which will contain an Introduction by Col. Versteeg, the originator of the expedition, and a succinct account of the journey, accompanied by illustrations. The second will be devoted to a geographical description of the country, its meteorology, geology, and natural history; there will be sixteen maps to illustrate this volume. The ethnographical and linguistic information gathered by the expedition will be comprised in the third volume; while the fourth will be wholly taken up with natural history, and more particularly zoology. This great work is being prepared by the members of the expedition, with the assistance of Messrs. Hasfelt, Snelleman, and Veth.

MR. HENRY VON SIEBOLD has lately issued in Japan a volume of notes on Japanese archaeology, illustrated by twelve large photographs.

THE publication of a bi-monthly magazine is to be commenced at once at Malta, under the title of *Rivista Geografica Internazionale*.

NEWS has lately been received of Dr. Otto Finsch's expedition to the little-known islands of the North Pacific, previously referred to in the ACADEMY, vol. xv., p. 302. The expedition has been undertaken with the view mainly of studying the natural history and ethnography of certain groups, and Dr. Finsch accordingly commenced his labours in the Sandwich Islands, whence at the end of last August he arrived at Bonham Island, one of the Marshall Islands, the most easterly archipelago of Micronesia. This island Dr. Finsch finds well fitted for the pursuit of his ethnographical studies, as it is visited by people from various islands in the neighbouring groups.

THE French Geographical Society are about to consider the question of adopting some uniform system of orthography for geographical publications.

THE search for gold is being somewhat actively carried on in Queensland just now. An expedition has recently started across the interior to Cape York peninsula to prospect for gold in that region, and it is also stated that gold has been found at the Eastern River near Copperfield.

THE Church Missionary Society have received news that the *Henry Venn* has returned from the expedition up the Binue branch of the Niger to which we referred on November 8. Fifty-one days after starting, the little steamer appears to have reached Yola, a place which, though marked on some maps, has never before been visited by Europeans; it is said to be nearly 500 miles east of Lokoja, at the confluence with the Niger. As the water in the Binue was falling, the *Henry Venn* was only taken about forty miles higher up to some rocks, which were named the Henry Venn Rocks. These lie opposite to a town, named Garawa, in about 9° 30' lat., 13° 30' long., and were reached on September 4. From this point a small launch was taken a few miles farther on, presumably only for surveying and sounding purposes. The banks of the river are stated to be thickly populated, a good-sized town being seen about every mile for a long distance. The farthest point reached by this expedition is said to be some 800 miles from the sea.

THE question of the Trans-Sahara Railway is being actively taken up by the French Government, and we learn that it is in contemplation to organise no less than four expeditions for the exploration of the unknown regions which will have to be traversed by it. Of these, three will start from Algiers, one of which will be under the orders of Col. Flatters, while the fourth will make for Timbuktu from

the west coast under M. Paul Soleillet, who has already done good service by his explorations in that quarter.

COUNT BÉTA SZCZEBENYI, in a report to the Hungarian Academy of Science, dated Si-ning, August 10, 1879, describes several excursions in the neighbourhood of that town. Among other places, he visited the south-eastern portion of the Kuku-nor, where a broad shallow river, the Pas-then-ho, enters that lake. The mountains in its neighbourhood rise to a height of 14,500 feet. He also visited the Lama monastery of Kumbum, with its wondrous tree, a syringa, bearing white blossoms, and the Hoang Lake to the north-west of Si-ning. He now proposes to proceed to Tibet by way of [Sze-chuen, a route recommended to him by the Chinese authorities.

DR. JUNKER has returned to Africa, his object being to reach the Monbuttu country, to the south of the Welle. Herr Slatin, an Austrian traveller, arrived in September last at Dara in Dar Fur, and was then making preparations for a journey to the copper mines of Hofrat el Nahas. Dr. Lenz, who travels on behalf of the German African Association, has, by this time, probably left Fez for Taflet.

AFTER a lapse of two months the Royal Geographical Society have again received news of their East African Expedition, which, under Mr. Thomson, Mr. Keith Johnston's successor, reached the north end of Lake Nyassa, six miles east of Mbungu, on September 22. Though Mr. Thomson's letter, read on Monday evening, is brief, it contains some interesting geographical information. From S. lat. 8° 50', it appears, the country N.N.E. of the lake suddenly rises from about 3,500 feet above the sea-level to 7,000 feet, and a few miles farther south to between 8,000 and 9,000 feet. This, Mr. Thomson considers, represents the general level of an old plateau, which is now cut up by numerous streams into deep narrow valleys. The highest point reached by the expedition was 8,116 feet, and no conspicuous mountain was seen. Mr. Thomson's observations dispose of the Konde mountains as a range from 12,000 to 14,000 feet high, as previously reported. What other travellers have seen from the lake has, no doubt, been the side of the plateau mentioned above. Mr. Thomson reports that the expedition had arrived at Lake Nyassa in excellent condition, and that he intended to leave for Lake Tanganyika on September 28. There is every probability, therefore, that he would reach his destination in advance of the party from Livingstonia under Mr. James Stewart, C.E.

SCIENCE NOTES.

The Fossil Birds of India.—Mr. William Davies, of the British Museum, has examined some avian remains from the Tertiary deposits of the Siwalik Hills, which were presented to the museum many years ago by Colonel Sir Proby Cautley. Mr. Lydekker, of the Geological Survey of India, has also lately published some observations on the remains of birds from the same deposits. It is clear that during the Upper Miocene or Lower Pliocene period there must have existed side by side, in the plains of India, two distinct forms of struthioid birds, representatives of which are now found in widely separated areas—namely, the ostrich in Africa and the emeu in Australia. From Mr. Davies's studies it would appear that a third species of the struthioid type, but of undetermined genus, may have been contemporaneous with these Indian ostriches and emeus. A new fossil species of pelican is described by Mr. Davies as *Pelicanus Cautleyi*, and another bird, probably also a pelican, is named *P. Siwalensis*. Mr. Davies's paper appears in the current number of the *Geological Magazine*.

The Meteorology of Western Thibet.—During the late Mr. Shaw's expedition to Yarkand very careful observations were taken by Dr. Scully, especially on the return journey. These have now been discussed by Mr. Blanford, and the results afford some very valuable data as to the daily march of meteorological elements, particularly of pressure, at great heights. The paper appears among the Indian Meteorological Memoirs.

Rainfall in the Alps.—In the Austrian *Zeitschrift* for July Prof. Baulin gives an elaborate paper on the distribution of rain in the Alps from Vienna to Marseilles. This discussion of the facts is of the highest value, as it is based on the observations at about 250 stations, which are given in full monthly means.

Climate of Brazil.—In the Austrian *Zeitschrift* for June Dr. Hann gives a notice of a paper on the climate of Pernambuco by Dr. Béringer, who has recently observed there for rather over a year. He gives a summary of the results of all the older series of observations which he has been able to discover. In our present condition of ignorance as to the climate of South America this paper is very useful; but Dr. Béringer's own results as to temperature are not of much value, for his thermometers were suspended in a large airy hall with its windows open! This, however, does not affect his statements as to the physical geography of the country.

Climate of Norway.—In Schübeler's *Væstlivet i Norge* Prof. Mohr has published an essay on the climate of the country, which is, unfortunately for most English readers, in Norsk. It is copiously illustrated by several charts for temperature and rainfall, and for the depth, and temperature in depth, of the sea between Norway and Iceland, as determined by the Norwegian Deep Sea Expeditions.

Meteorology of Germany.—The second number of the general returns for Germany has appeared at Leipzig; it is for the year 1877, and, like its predecessor, only contains reports for seventeen stations. Bavaria only began regular observations in connexion with the system in 1879, and Prussia has not really got its organisation in working order yet.

It is stated that the Japanese Government propose to undertake a geological survey of the whole of Japan.

THE frequent shocks of earthquake which have been experienced of late in Switzerland and along the Rhine have led the Swiss Naturforschende Gesellschaft to appoint a special "Earthquake Committee." It was at the wish of this committee that Prof. A. Heim, of Hottingen, Zürich, compiled his essay on the "Observation of Earthquakes," which the Alpine Club has promised to distribute to all its members. Every person in Switzerland, the Black Forest, or Savoy who is made aware of a shock of earthquake is requested to communicate with the local secretaries of the committee. The following are the names of the secretaries:—Prof. Heim for Graubünden, St. Gallen, Appenzell, Glarus, Uri, and Zürich; Prof. Amster-Lasson for the Black Forest, the Hohgau, Schaffhausen, and Thurgau; Herr R. Billwiler, Chief of the Meteorological Bureau in Zürich, for Luzern, Zug, Schwyz, Unterwalden, and Ticino; Prof. Forster, of the Observatorium in Bern, for Bern and Freiburg; Prof. Soret, of Geneva, for Geneva, Savoy, and the neighbourhood; Prof. Hagenbach-Bischoff for Basel, Solothurn, and Aargau; Prof. Forcl, of Morges, for Vaud, Valais, and Neuchâtel. The shock of earthquake on December 30 last was felt throughout Central and Western Switzerland.

PHILOLOGY NOTES.

PROF. FRIEDRICH MÜLLER'S *Allgemeine Ethnographie*, which has just appeared in a second edition, is one of the standard works on ethnology; and, though it is not such attractive reading as Peschel's *Völkerkunde*, its author has succeeded in bringing together, in a comparatively narrow compass, a great number of interesting and instructive facts. What gives to his work a peculiar advantage over all its predecessors and contemporaries is its treatment of the linguistic part of ethnology, and we are glad to get from the learned linguist a *résumé* of his views regarding the classification of languages, as we possess as yet only instalments of his large work on the elements of the science of language.

THE third volume of Prof. Weber's *Indische Streifen* (Trübner) contains the reviews on Indian subjects which that distinguished professor has contributed from 1869 to 1878 to the *Literarisches Central-Blatt* and the *Jenauer Literatur-Zeitung*. We find here, in short articles written *currente calamo*, the first impressions produced by the works discussed on a mind singularly eager to welcome all new contributions, and generous to all real work, while entirely outspoken concerning any deviations from the sound scholarly standpoint. With a few exceptions, the 128 books reviewed include all the works of any importance which have appeared either in Europe or in India and have dealt with Indian philology, history, or religion: and the whole volume will be full of instruction to the increasing number of those interested in such subjects. It is also peculiarly attractive from the freshness of almost youthful enthusiasm evident on every page, and in such striking contrast to the deep and varied learning which shows how many years of earnest labour Prof. Weber has devoted to his favourite study. It is to be regretted that the same vigour tinged sometimes with bitterness his differences with other scholars; but it is part, after all, of the quickness both of thought and of productive activity which has made the veteran professor's influence so full of fruit. The volume closes with most full and valuable Indexes to the contents of all the three volumes of *Indische Streifen* now published.

THE *Nirayāvalīyā Suttam*, by Dr. S. Warren (Amsterdam: Johannes Müller), is the text, in Jain Prakrit, with notes and glossary, of five Jain *Upangas*, forming the above Sutta, and containing a legend of Bimbisāra and Ajātasattu, a Jātaka story told by Mahāvīra, and several short *avadānas* or legends of Jain Saints. Dr. Warren has not ventured on a translation, and confesses that he has not been able to understand all the text, which he edits, curiously enough, in Devanāgarī characters, while the glossary is in the Roman type adopted by other European editors of Jain works. The paucity of Jain texts compels us to welcome any new one, carefully edited, as this is, from four MSS. The work would, however, have been better delayed till it could have been published in a more complete state; and Dr. Warren's previous work, *De Jainas*, leads to the hope that the next contribution from him may be of a more useful and enduring kind than the present one.

Analyse de la Langue albanaise. By L. Benlcœw. (Paris: Maisonneuve.) The study of Albanian is at length attracting the attention it deserves. We lately noticed the learned and exhaustive volume of M. Dozon on the Albanian grammar and vocabulary, and we now have a new volume on the same subject by Prof. Benlcœw. Everything that Prof. Benlcœw writes is worthy of attention, but we fail to be any more convinced by the present book of the

truth of his main thesis than we were by his previous work, *La Grèce avant les Grecs*. His own analysis of the language goes against his assertion that "Albanian is not an Indo-European language in the strict sense of the word;" and it seems to us a violation of the scientific method to compare modern Albanian, whose records do not reach back much beyond three centuries, with the wholly unknown language or languages of the ubiquitous and semi-mythical Pelasgians. But even his Pelasgian theory is plausible by the side of another theory now added to it, which brings the Albanians of Europe from the Albania of the Caucasus. The resemblances between a few local names which M. Benlcœw urges in support of this new theory might be made to prove anything, and the precarious character of them may be judged of from the fact that *Elymais*, which he compares with the Elymeia of Macedonia, is shown by the cuneiform inscriptions to be the Semitic *elamu* ("high"), a term never used by the inhabitants of the country itself. The first Appendix, on the influence which Albanian has exerted upon the dialects of modern Greece, will be read with much interest. We think, however, that some of the references to the Tzakonian dialect will be modified by Dr. Deffner's forthcoming grammar of the dialect, though Dr. Deffner also would do well to make himself acquainted with M. Benlcœw's researches in this obscure subject.

PROF. ALBRECHT WEBER contributes to Trübner's *Record* an obituary of the late Prof. F. Anton von Schiefner, who died at St. Petersburg on November 16. He was, writes Prof. Weber,

"a distinguished scholar of most various attainments. His speciality, however, was Tibetan, and more particularly the investigation of Buddhist legends of Indian and Occidental origin, a collection of which in English will soon be published by Messrs. Trübner and Co. He had, moreover, devoted himself with rare perseverance and disinterestedness to the utilisation and publication of the labours of two scholars whose own restless activity would, without him, have been almost entirely lost to the scientific world—namely, those of the Finnic linguist, Alexander Castrén, and of the Caucasian linguist, Baron von Uslar. One might—*sit venia verbo*—almost say that both men had found in Schiefner their Homer. He edited the labours of Castrén almost wholly from the posthumous papers of that brave and modest man, who, from 1838 to 1849, explored, under the greatest privations, the inhospitable regions of Norway, Lapland, and Siberia, where the tribes of the Finnic race are seated. Castrén's *Reiseerinnerungen und Reiseberichte*, edited by Schiefner, present a vivid picture of the hardships Castrén had to go through, and which finally caused his premature death, in 1852, at the age of thirty-nine. We have lying before us the twelve volumes of his Samoyedan and Tungusian Grammars and Vocabularies, as well as those of the languages of the Buryats, Koibals, Karagassas, Otyaks, &c.; his ethnological lectures on the Altaic races, and those on Finnic mythology—all worked out by Schiefner's deft hand, and edited by him from 1835 to 1861. In connexion therewith Schiefner also made a German translation of the Finnic national epos *Kalevala*, and also one of the Hero-Sagas of the Minussin Tatars. Schiefner was more advantageously situated in working up the collections of the estimable Caucasian linguist, Major-General von Uslar (1816 to 1873), written in the Russian language, with whom, until the General's death, he was always able to confer directly. While Schiefner's own and entirely independent work on the Thush language (1856), by the accuracy with which a hitherto quite uncultivated and altogether strange department was opened to linguistic investigation, had obtained for the author general appreciation, the united efforts of both scholars have furnished surprising results as regards these highly peculiar languages of the Caucasian mountaineers—the Avars, Abchases, Tchetchenzes, Kasikumiks, Kurines—which by their extraordinary sounds as

well as by their most singular grammatical structure produce so very strange an impression. The personal intercourse with soldiers of Caucasian origin, garrisoned at St. Petersburg, was herein of high importance to Schiefner. His amiable and open manner in personal intercourse, characteristic of the whole man, bore him excellent fruit in this case. Science, and especially the St. Petersburg Academy of Sciences, has by Schiefner's death sustained a heavy, indeed a quite irreparable, loss."

FINE ART.

THE NEW FRONT OF THE CATHEDRAL OF FLORENCE.*

ONE of the most interesting architectural enterprises of the present century undoubtedly is the attempt now in progress to complete the front of the Cathedral of Florence. This noble edifice, first designed by Arnolfo da Cambio, was some years after his death entrusted to Giotto da Bondone, an artist of still greater genius. He was followed by Andrea Pisano, Francesco Talenti, Alberto di Arnolfo, Lorenzo Ghiberti, and Filippo Brunelleschi, who achieved the wonderful cupola, the story of which is one of the most exciting and romantic episodes related in the annals of architecture. Next followed the demolition, in 1587, of its unfinished *façade* in an age of debased art, and thereafter the futile attempts of a number of architects, each of eminence in his time, to design a front worthy of the Cathedral. Their models, remaining to this day in the Office of Works, commemorate the decay of taste and the decline of constructive skill. In 1867 the Florentines again invited a competition of architects, which invitation was responded to by several of capacity and refinement, and, as usual on such occasions, by others of more ambition than ability. The judges selected the worst of these designs, so that it only remained for men of judgment to hope that no funds would be found to carry out a scheme which would have disfigured the famous Santa Maria del Fiore. Among the designs exhibited, the best, no doubt, was that of William Peterman, a Dane. Beautiful as a drawing, it showed careful study and mature comprehension of the spirit of Italian mediæval architecture. Among those by Italian architects were several much better than that selected. The fortunate architect since that time has certainly approached the views illustrated by his rivals, their drawings remaining to this day hung near his own. He has evidently chosen able assistants, by whose aid he prepared and exhibited a much better design than his first one; while no doubt he has studied and made himself familiar with the style of the ancient edifice, for he has now erected about three parts of the new front with a success which will ensure him the confidence and congratulations of his friends, and, it may reasonably be assumed, the approbation of many who, judging by his first drawing, entertained doubts of his taste and ability to carry out so great an enterprise.

Contemporaneously with the building, a new edition of Vasari's *Lives* has been in course of publication, with a rich store of extracts from unpublished documents, arranged by the learned and well-known editor, the Cavaliere Gaetano Milanesi. These documents overthrow not a few of the views usually taken of the history of the Cathedral; and this may be considered a fitting time briefly to notice the most interesting, as well as to make some deductions from these invaluable notes and commentaries. According to Vasari, the foundation-stone was laid on the festival of the birth of the Virgin in 1298; and in the new edition of his *Lives* it is established that Arnolfo died in 1310, twelve years after the commencement of his great

* The Commendatore de Fabris, Architect.

work. Consequently, the usual traditions regarding the extent to which he carried it on fall to the ground, for he had not time to do all that has been assigned to him. Instead of building a portion of the front, his operations ceased before the two western arches of the nave were erected. From the death of Arnolfo to the appointment of Giotto as sole architect and master of works, on April 12, 1334, twenty-four years elapsed; and a glance at the troubles of the Republic during these years will amply account for the delay in proceeding with the Cathedral. Giotto made the design and model of his famous Campanile, which he founded, and, as the last two arches of the nave were not yet erected, he must have been guided in placing his bell-tower where it stands by the drawings and models of Arnolfo then existing in the Office of Works. It is evident that he did not erect any part of the *façade* traditionally attributed to him. Giotto died in 1336-7, and erected only the first stage of the Campanile, including the two ranges of bas-reliefs, and, I venture to suggest, the string course, or rather cornice, above them, for all this is obviously the work of one mind. He was succeeded by Andrea Pisano, who after a time was dismissed, his work being unsatisfactory. I have not been able to find the date of this event through a misprint in the notes; but it was probably within a brief period, as an attentive study of the second stage of the tower shows a less happy disposition of the coloured marbles, and less taste and firmness in the mouldings. Andrea was superseded by Francesco Talenti, who, in 1351, had carried the tower up to the great upper windows. The beauty of the workmanship shows him to have been a great master; and it is reasonable to suppose, in spite of the usages of the time among architects, that he adhered with fidelity to the model of Giotto, although it is not improbable that he is entitled to be considered the author of parts of the details, for it is not likely that Giotto left many working drawings, considering the very short period during which he was architect. The idea that the Campanile was proceeded with by Taddeo Gaddi is effectually disposed of by Signor Milanese, and it is evident that this artist never was an architect at all. Francesco Talenti appears to have added the two western arches of the nave and the two awkwardly placed doors, as well as the four false flank windows on each side, represented by two false ones inside; and, as may be observed, he altered the design of the flanks. In 1359 Alberto di Arnolfo was architect, and in 1360 he resumed the works, and the edifice was vaulted in 1364. A singularly interesting document establishes that in 1366 what may be called a committee, consisting of six painters and certain master builders and goldsmiths, prepared models, showing the arrangement of the coloured marbles, the additions made structurally, and the sculptured ornaments of the external decoration. What would be said now if goldsmiths were called in to design the sculptured ornaments of any building? That in the fourteenth century these artists were eminently capable of making such designs is sufficiently evident if we study the ornament of the Cathedral, while a rare delicacy and refinement is accounted for. Space will not allow me to proceed further with this analysis of the new lights thrown on the history of the noble Cathedral of Florence; the notes appended to the story of the rivalry between Lorenzo Ghiberti and Filippo Brunelleschi are interesting, but do not add much to our knowledge.

The success which has so far attended the great Florentine enterprise might suggest that the history of its beginning were best passed over in silence; but, on the other hand, an act of injustice was done to more than one man of genius, and it is impossible not to sympathise with their

disappointment in being deprived of honours fairly won. I have therefore referred to this part of the history in token of respect for the unsuccessful competitors, victims of an obviously partial judgment. In 1860 King Victor Emanuel laid the foundation-stone. In 1875 the admirable scaffolding was erected preparatory to the building of the new rubble front on a foundation carried to a depth of twenty-three English feet. In two years the rubble front was completed, with a solidity and excellence of execution which excited universal admiration. The marble basement of the front was laid the entire length, the two principal buttresses to the south were carried up to the apex of the tabernacles, and the whole of the end of the northern nave has been erected with marvellous celerity. It consists of Seravezza white marble, of red marble of Montiere, and green marble of Prato. It is not easy to convey an idea of a design by description. There are two solid square buttresses on each side the front of the aisle carefully copied from those of the older portions of the flanks of the church; they are panelled in stories in the same manner as the old work, with the addition of rich tabernacles in their fronts, inspired by those of Or San Michele, the interiors being coloured with mosaics, and each containing a sitting figure of an Evangelist. These buttresses are crowned with the magnificent corbelled cornice and quatrefoiled balustrade of the rest of the Church. Between the buttresses is the new decorated doorway, which is as rich in ornament as the well-known old northern doorway by Nanni d' Antonio di Banco, who died in 1421. Above it and within the arch is an admirable picture by Prof. Cassioli, which, however, is not designed with that attention to architectural conditions so much to be desired. Over the well-proportioned gable of the door, is a rose window, and above it are three niches of the richest design, containing erect statues, by Profs. Passaglia, Bortone, and Paganucci. Whether above these the architect will carry out his first idea of a false gable or not remains to be seen. The coloured marbles are introduced with artist-like skill, the admirably executed ornamental carving is imitated from that of the older part of the Cathedral or of the Campanile, and the general effect of the whole is highly satisfactory. Should there be any inclination to criticise the proportions, it must be remembered that these were fixed by the architect's predecessors; many of the details, such as the string courses, smaller cornices, sinkings and mouldings of the panels, have the characteristic defects of Italian Gothic, being flat, meagre, and devoid of the invention and power observable in northern mediaeval architecture, and some of the ornaments have no apparent constructive *raison d'être*; but the same faults characterise the old work of Giotto and his successors, due, no doubt, to their instincts as painters. The cost of this magnificent work does not exceed 320,000 lire, or about £12,500 sterling, including every outlay. This wonderfully moderate sum reflects the highest honour on the architect and on all concerned. The natural intelligence of the workmen, their zeal and steady conduct, their self-imposed study, have made them all artists. The whole work has been executed by the usual marble cutters of the Office of Works, under the headship of Signor Marinelli, master carver; under him the whole of the beautiful carving has been cut by the men with no demand for increased wages as they gained in skill. The story is one which resembles in its spirit and character, and in its results, the religious devotion which prevailed in the Middle Ages. The sculptors of the statues have given their labour, the materials only having been paid for.

Somewhat more than two-thirds of the *façade* remains to be finished in marble. I observe two English names among the donors, both

Protestants. It is possible that funds may now fall short, especially during a period of almost unexampled distress. I venture to suggest that wealthy English Catholics, who are very numerous, might assist in this great work. In what has been done they have evidence of the skill of the architect, of his unparalleled economy, of the devoted spirit of the admirable workmen; and if they advance money they may feel certain that it will be well employed.

There remain a few words which I think ought to be said. I have in England and in Italy publicly objected to the building of rose windows in front of the painted glass of Lorenzo Ghiberti and Niccolò de Piero Dellamagna, designed on a very different principle. The architect replied that the radiating mullions would not darken the painted glass. I had observed the effect with the sun in the west, and had seen their shadows on the glass, and, besides, rose windows as mere screens appeared to me objectionable, while I felt that no work, especially of Ghiberti, should thus be obscured. The first rose window is finished, and I am bound to say that it does not in the least affect the glass—which has been carefully cleaned—during most hours of the day. When the sun is in the west it must obscure the window, but we all know that during part of every day painted windows are variously affected by the position of the sun. In the face of the architect's great merits, I will not repeat my other objections, for it is a pleasanter task to dwell upon his success.

CHARLES HEATH WILSON.

OLD MASTERS AT BURLINGTON HOUSE.

[Second Article.]

A FEW examples of the early schools of Italy have been arranged in the fifth gallery, where are also to be found some quaint specimens of religious art, ascribed by their owner, Mr. J. C. Robinson, to the Early-Castilian school. Of the works included in this latter class, it may be said generally that they exhibit in the crudest form many of the familiar characteristics of the primitive style of Flanders. The *Virgin and Child with Two Angels* (244) is the only one of this series which can be said to possess any serious claim to rank as a work of art. Thoroughly Flemish, alike in the type of the faces and in the manner of the painting, it is marked by a tenderness of religious sentiment and a fineness of execution which are conspicuously absent in the other examples attributed to the Castilian school. The large picture of *The Last Judgment* (245) is indeed in every respect a barbarous production, devoid of imagination, and unsupported by any kind of technical power; while in the panel representing the *Resurrection* (248) the traditional treatment of the subject has been travestied by some unlearned and incompetent workman. Mr. Robinson has doubtless good reason for associating these unpromising essays with the early history of Spanish art; but even if he is right in his conclusion, it can only serve to show that the artists of Spain were at this time working in a purely imitative spirit, and with the most imperfect means of expression. A triptych with the *Passion* (247), ascribed to the Early-Aragonese school, has a higher interest, as showing a more distinct mode of invention.

It is, however, a relief to turn from these unlovely examples of a barbarous style, and to take refuge even in the least noticeable of the few works that bear testimony to the early progress of Italian painting. The four panels in illustration of Boccaccio were formerly in Mr. Barker's collection, and are now lent by Mr. Leyland. They have been carefully cleaned since they were last exposed to public view; but it may be doubted whether they can be said to have improved in the process. Or perhaps it would be more just to say that, with the better

opportunity which is now afforded of examining them closely, the works themselves fail to sustain the original impression. In spite of the occasional beauty of the design and the poetical charm of the landscape backgrounds, it is impossible to feel that the work, as a whole, is quite worthy of the master to whom it is assigned. The colouring in particular is often curiously at variance with Botticelli's usual manner. Nor do the numerous figures display the kind of power in expressing the imaginative truth of the subject which we have a right to expect as the unfailing accompaniment of his art. No painter knew better how to weave a legend into the forms appropriate to pictorial design so as to make even the smallest detail of his work necessary and helpful to his purpose, and the paintings before us, therefore, suggest the possibility that the master's scheme may here have been carried out by other and inferior hands. No doubt of this sort disturbs the enjoyment of the very beautiful example of Piero della Francesca (223) lent by Christ Church, Oxford. This, indeed, is one of the gems of the collection, and the Academy has done good service in making its existence and its merits more widely known. As is the case with nearly all the extant examples of the master, the colouring in several places has flown and changed. The flesh tints have lost freshness and gradation and have sunk to an equal pallor of tone, and the greens have everywhere darkened almost to blackness. But these injuries are not so grave as to obscure the beauty of the general scheme of colouring, nor do they at all affect the influence of the design, wherein the individual qualities of the painter's art are most decisively expressed. An extraordinary simplicity in the choice of attitude, combined with almost classic reserve in the play of gesture, is the distinctive mark of Piero della Francesca's invention. His pictures at the first glance have the impression of a scene taken without selection from actual life, and yet with this quality of directness and reality there is associated the highest power of poetical suggestiveness. In regard to several other examples of Early-Italian work here exhibited, it is possible to do full justice to the beauty of the painting without feeling the same absolute confidence in the correctness of the authorship assumed in the catalogue. The admirable head lent by Mr. Cook (214) may or may not be by Antonello da Messina, but it is an unquestionable and beautiful specimen of the style to which it belongs. As much may be said of the portrait of *A Youth* (233) lent by Mr. Austen, and associated with the name of Raphael. In this case, indeed, as in that of the two designs ascribed to Signorelli, the owner has himself invited discussion by placing a mark of interrogation after the artist's name. It may, perhaps, have occurred to him, as it must occur to others, that the manner of execution in the portrait partly suggests the influence and teaching of the Milanese school, and that the mingled effects of light and colour are not such as are familiar to us in Raphael's practice. However this may be, the picture itself is equally impressive, and those who have not accustomed themselves to trust merely to names will value at their true worth the delicate perception of character and the extraordinary refinement of workmanship which it undoubtedly displays. No hesitation is shown in claiming Mantegna as the author of the small *Virgin and Child* (220) contributed by Mr. Butler; and yet in this case there is but little ground of assurance, for intrinsically the picture falls far below the standard of the great Paduan. Like the *Virgin and Child* (225) ascribed to Lionardo da Vinci, the picture bears stronger evidence of the manner of a school than of the individual power of a great master; and this is also true of *St. Sebastian* (241), where it is possible to detect

much of the style without the strength of Signorelli.

Later Italian art is even more sparingly represented. On the west wall of the large gallery we find a bad specimen of Guido's feeble invention occupying a place of honour; and here, too, are hung a *Magdalen* (99), ascribed to Veronese, and a full-length portrait, said to be of Michelangelo, and assumed to be the work of Sebastian del Piombo. A much nobler example of Italian portraiture is presented in the head of Paolo Paruta (110) by Titoret, and again in the bust of a philosopher (121) assigned to Moroni; while the claims of Italian landscape are fairly sustained by the *View in Rome* (111) from the hand of Canaletto and the large canvas by Salvator Rosa.

J. COMYNS CARR.

OBITUARY.

WE very briefly announced in our last issue the death of Edward William Cooke, who was long an accepted painter of land and sea. Though not a very old man, since he was born only sixty-eight years ago, Mr. Cooke's art had for some time appeared to belong to another generation than ours, and there is probably not very much of it that will make a permanent mark. Though varied in subject, it was constantly similar in character. Often faithful, but wholly prosaic and unimaginative, he had little to charm. It was besides very much without individuality, for, though Mr. Cooke was not consciously a copyist of anyone who had preceded him, he did little that had not been done before. He was more occupied with rendering positive form than the subtleties of atmospheric effect. His colour was apt to be cold, and, though not offensive, was but rarely refined or delicate. But he worked through a fairly long life with exemplary diligence and much accuracy, and by the thoroughness of his labour in the art of landscape taught, by example, an excellent lesson to the practitioners of the slapdash fashion of the day. Of his career there is not very much to be said in detail beyond what is already known to the art public. He came of a family of artists, and was the son of George Cooke and nephew of W. B. Cooke the engravers, both of whom were engaged during the greater part of the first forty years of the present century in reproducing in black and white the drawings of Turner. E. W. Cooke himself received the training of an engraver as well as that of a painter. He displayed his ability while he was yet young, and is stated to have made and etched the drawings of "Old" and "New" London Bridge, published by his father now nearly fifty years since. E. W. Cooke was an exhibitor at the Royal Academy in 1835 and onwards. He was elected an Associate in 1851, and thirteen years afterwards became full academician. His chief themes were coast views and views in open sea, generally in northern latitudes. But he likewise painted scenes of the rock of Gibraltar, and essayed to convey some characteristics of Venice. The modern landscape painter or marine painter travels constantly, and E. W. Cooke had been much abroad. Of late, however, he relaxed in his devotion to the profession of his life, and his work, though always respectable and respected, ceased to attract much attention. We have not very long ago reviewed no less than two volumes of reproductions from his sketches. These appear to have been received by the public of to-day with but scanty favour. But E. W. Cooke was a substantial artist, and an honourable and agreeable man—a chatty companion, and by many rightly accounted a profitable one. Of late he had lived much at his country house in the home counties, and at Groombridge he was buried last Saturday.

WE recorded briefly last month the death of

the Düsseldorf painter, Carl Hübner; but a few more words may be said about this popular German master, whose loss is greatly felt in Düsseldorf art circles. Hübner was born in 1814, and studied painting under Schadow in the Düsseldorf Academy. But he soon emancipated himself from academic teaching, and, setting up a studio of his own, quickly became known as a clever *genre*-painter, whose works always attracted notice and admiration at German exhibitions. Many of them were engraved and lithographed, and the popular character of their subjects contributed to render the artist a great favourite. They mostly deal with the sorrows, joys, and "simple annals of the poor," and are characterised by a certain forcible rendering of the theme, by powerful colouring, and broad execution, which make them effective, though the drawing is often faulty and the style lacking in delicacy and refinement. It is said that one of his works, *The Poacher's Death*, made such an impression on the German mind that it led to the game laws of the country being changed in accordance with the views it set forth. Hübner's art was greatly admired in America; and when the artist paid a visit to the States in 1874 he was most cordially received, artists and amateurs of art combining to show him honour. He was one of the founders of the Düsseldorf Art Union, known as the "Mal-kasten," and indeed was an active and popular member of almost all the art societies and clubs in Düsseldorf. He died December 5, 1879. A good many of his pictures are in American collections.

THE death is likewise announced of Mr. F. S. Cary, son of the translator of Dante, and successor of Sass at the Bloomsbury School of Art; of M. Marcellin de Groissilliez, a pupil of Corot; and of Leo Schöninger, of Munich.

NOTES ON ART AND ARCHAEOLOGY.

THERE has been forwarded to our office the January number of the *Etcher*, which is perhaps up to the mark of its forerunners. The text in itself does not claim any merit. It is merely explanatory. The magazine this month consists of three prints by E. W. Macbeth, Dr. Evershed, and the late Edwin Edwards. Edwin Edwards' contribution is a landscape, with lofty trees to the right. It is probably faithful as to form, but is very hard, and somewhat too obstinately realistic. Dr. Evershed's is a graceful wind of country road. And Mr. Macbeth's—which has the most of subject in it—represents a young woman, of fair comeliness, sitting, weary with watching. The sentiment is tasteful and the illumination good. As usual in Mr. Macbeth's etching, there is not very much of figure-drawing or of figure-modelling, but what there is is by no means unmeritorious, and the type affected by Mr. Macbeth is, we rejoice to add, a healthy one. His women, even if "weary," are never wasted.

WE are informed that Messrs. Dowdeswell and Dowdeswell, the print-sellers, propose to open shortly, at their rooms in Chancery Lane, an exhibition of the works of certain modern etchers, among whom are Dr. Propert and some French etchers either living or deceased.

A FINE chimney-piece of black oak, reproducing the Italian woodwork of the seventeenth century, is to be erected in the Parliament House, Edinburgh, as a memorial of Lord President Hope and Lord Benholme.

WE have received from the "Librairie de L'Art" a portfolio of etchings by Dr. Arthur Evershed. These are entitled, *An Etcher's Rambles—First Series: The Thames*, and they consist of twelve etchings from nature, most of them small, all of them delicate. There are but fifty impressions, and the pleasure of the collector is to be consulted by the destruction

of the plates, so that rarity may be achieved. It is possible, moreover, that the delicate work of Dr. Evershed would not withstand the wear of an extended *tirage*. Dr. Evershed has for some years been known as an etcher. He received, we believe, the education of an artist before he received that of a physician. His etched work has been received with special favour by the *Gazette des Beaux-Arts*, and indeed its elegance—we might almost say its elegant slightness—naturally commends it to French taste. Englishmen may add, as regards this series of prints, that it sketches for us with refined attention to the graces of form many reaches of the river which Londoners know best. Boldness, robustness, and variety of treatment as well as of subject are qualities or advantages which Dr. Evershed—should he continue the practice of the art—may presumably acquire. Indeed, certain of these qualities he has displayed in isolated prints not included in the present collection. He is an artist clearly sensitive to prettiness of form and suavity of composition, his work is naturally tasteful, and an appreciation for refined landscape and for its refined treatment in the art of black and white may, we can well conceive, be cultivated by a knowledge of his etchings. They are dainty sketches on the copper, in which the form of details is a little wanting, and sometimes the sense of construction in houses, big boats, and the like. But, as a last word, the result is agreeable, for the scene has been considered as a whole.

ON November 15 we mentioned the discovery of a colossal marble statue at Gaza. M. Joseph Reinach writes to the *Revue Politique et Littéraire* that it is a *Jupiter*, evidently by an Alexandrian artist of the best period, and suggests that it may be an Alexandrian reproduction of the *Zeus* of Pheidias. This discovery appears to fix the site of the ancient Gaza, which must have been at some distance from the present city, and much nearer the sea. M. Reinach urges the French Government to secure this *chef d'œuvre* for the Louvre.

A SOMEWHAT curious sale is announced to take place in Paris this month. It consists of about 4,000 paintings, drawings, &c., of various descriptions that have been executed by pupils under Government instruction. Among these are, doubtless, many works by well-known painters of the day; but, as none of them are signed, it is difficult to identify them. The Government sells the whole in different lots, so that here is a fine opportunity for those who like to speculate in the probability of being able to acquire some early work by a distinguished master at a small cost.

WE stated last week that an interesting account of San Donato had appeared some time ago in the *Gazette des Beaux-Arts*. It was, however, in *L'Art* that the articles on this magnificent palace and its collections appeared last year. They were written by M. Paul Leroi, who is now continuing them, giving a description in the number for January 4 of some of the beautiful sculpture and ancient wood-carving that is so soon to be dispersed.

IN the *Portfolio* this month Mr. J. W. Clark begins his study of Cambridge with a description of the mediaeval town, and the now rich fen-land on the borders of which it was situated. Mr. Clark's "Cambridge" is evidently intended to form a companion volume to Mr. Lang's "Oxford," and is illustrated in like manner by M. Brunet Debaines. The chief artistic worth of this number lies, not in its original etchings, which are somewhat poor, but in the Amand-Durand reproduction of Rembrandt's magnificent portrait of Johannes Wtenbogaert (or Uytenbogaert), the Dutch theologian and remonstrant. It is truly said, in the account given of this

famed work, that "you may look at this face till you forget the etching altogether and believe it lives." Many persons will be likely to possess themselves of the *Portfolio* this month for the sake of this fine reproduction.

THE *Repertorium für Kunstwissenschaft* advances steadily under its new editors—Dr. Janitschek and Dr. Woltmann. The second volume was completed last year, and we now have the first part of a third volume, which opens with a learned and almost exhaustive study of the early Swiss painter Niklaus Manuel von Bern, whom Dr. J. R. Rahn, the writer of the monograph, considers to be, "as an artist, a poet, a statesman, and a reformer, one of the most prominent figures among the representatives of the Renaissance in his time." A review of the latest biographies of Rubens, an account of a Court poet who wrote on artists and art in the time of Leo X., a long *Literaturbericht*, and a full and useful bibliography of works on art published during the last half-year make up the rest of the number.

DR. ALFRED WOLTMANN'S exhaustive *History of Painting* (Leipzig: Seemann) is proceeding steadily, though slowly. We have just received the fifth and sixth parts of this important work, which has now reached its second volume. The history of "Painting under the Renaissance" is the subject of this volume; but, strange to say, it does not begin, as is usually the case in art histories, with the development of the Renaissance in Italy, but enters first on the study of the Renaissance in Flanders and Germany, under which heading is given a history of the van Eycks and their followers, and the German schools of the fifteenth century. It will be seen, therefore, that Dr. Woltmann does not limit the term "Renaissance" simply to the revival of the knowledge of antiquity which had such a wonderful influence over the arts in Italy, but extends it to the whole culture of the fifteenth and sixteenth centuries as seen in Northern countries as well as Southern. A large number of excellent wood engravings illustrate the text, many of them being of works that we do not remember ever before to have seen engraved.

TRÜBNER'S *Record* calls attention to a most important national work on the coinage of Japan, entitled *Dai Nihon Kaneshi*, "a History of the Coinage of Japan," from the time of the Emperor Jingō Kōga (201-269 A.D.) to the eighth year of the reign of the Emperor Meiji (1876), by Yoshida. This work consists of thirty-two volumes octavo, and appeared in 1877. It contains a history, not only of the coins issued by Imperial authority, but also of those introduced into the empire from Corea and elsewhere. The illustrations, which are numerous and finely executed in colours, represent specimens of the various coins which have from time to time been officially issued, as well as the different processes employed in the native mint. The last six volumes are devoted to the history of the paper currency from 1868 to 1876.

VERDI has composed a *Pater Noster* and an *Ave Maria* to words of Dante's. The composer has announced his willingness to allow these works to be performed first in Milan, and has added that if the proceeds of this first performance be devoted to a charity he is willing to conduct on the occasion. It has, therefore, been decided to perform the works in the Scala at the close of the Carnival on behalf of needy musicians.

THE competition that was held lately in Paris for an allegorical bust of the Republic produced such unsatisfactory results that no prize was awarded. The Municipal Council will probably open a fresh competition.

THE STAGE.

THEATRICAL PUBLICATIONS.

LADY POLLOCK and Mr. Walter Pollock have made a useful and welcome addition to the little series called "The Art at Home Series," published by Messrs. Macmillan. Their subject is *Amateur Theatricals*, and in treating this theme they are as chatty as Mr. Loffie and as business-like as the Miss Garretts. The book is exceedingly brief—there are only about seventy pages, and these are not written with great terseness of style; but the value of a book of counsel does not depend on the amount of "matter" it contains, nor on the amount of advice, but on the quality of the advice and the taste with which it is offered. In this case the quality is excellent and the taste unexceptionable. Slight as the book is it will be really useful to the beginner in amateur acting. To the practised person it does not profess to be addressed, yet the most practised person may find here hints that will remind him of his business. With regard to utterance, beginners may learn with profit the general rule, "never to drop the voice at the end of the sentence, but rather slightly to raise it;" while more accustomed actors, too much wont to bring upon the drawing-room platform or drawing-room carpet the devices of the professional stage, may bear to be reminded that "what will produce a good effect on the stage will look shabby in a drawing-room." We are much at one with the writers of this little book in regard to the simplicity with which things should be done.

"If a regular stage and scenery are put up the house becomes uninhabitable for days before the performance and days afterwards. Carpenters hammer from morning to night; rehearsals proceed with difficulty, and everything is turned out of its usual place, to say nothing of the damage done to the house; and after all this agitation the imitation of a real stage may probably be at best but a poor one. The more amateurish the scenery is the less will the audience expect, and the more easily it will be satisfied."

Only here and there is the slightness of the book a disappointment, as where it is written—

"The greatest mistake an amateur can make is to imitate the characteristics of any public performer, not only because direct imitation is a sterile thing, but because amateur dramatic art is different in its essence from professional art. The same sharp effects cannot be made and should not be attempted."

The first proposition here put forward is obviously true: the advice commends itself to everyone of taste; but we should have liked some further development and explanation of the remark that "the same sharp effects cannot be made." We do not understand why, and we even doubt whether, whatever might be the explanation, the statement could be accepted without great qualification. But in the statement so briefly put forth there is involved a very interesting and highly important question. It should surely have been treated with some fullness; as it is, we are left to draw our own deductions from it. The book, nevertheless—as has been sufficiently indicated—is a very acceptable one, written with sympathetic intelligence, and having no sins to answer for but the sins of omission. Except for the frontispiece, which suggests but a doleful order of Comedy, Miss Kate Greenaway's several designs which accompany the text rather than illustrate it would all be good. "Going On" is prettily suggestive of the slow and measured entrance which anticipates a "reception." And we commend, as a wholesome corrective to managers and artists preoccupied with preparations for scenic splendours, the cut that represents the stage of Shakspeare. This, of course, is not Miss Greenaway's; it is from an old print.

M. FRANCISQUE SARCEY is a critic whom success has not improved. He permits himself from time to time airs of infallibility, and can be as frankly uncourteous as a spoilt child. Indeed, he is the spoilt child of a certain section of the Parisian public. But, at the same time, his judgment is much oftener sound than unsound; he has not only the knowledge, but the necessary instinct—the *flair*—in matters theatrical, and he continues to do what very little of the stage criticism of the day ever attempts to do—to lead instead of to represent public opinion. Yet in reality he is fairly representative. A political exile, living temporarily at Brussels, was asked what things sent to him from Paris brought him, as it were, nearest to the Boulevard. He answered, two things, and we forget what the first was, but the second was the *feuilleton* of Sarcey. M. Sarcey represents the best opinion of the day when he writes as he does in the current number of *Comédiens et Comédiennes* (Paris: Jouaust) in praise of Mlle. Blanche Pierson. Blanche Pierson's first success was not the success of an artist. It was a *succès de jolie femme*. And this has caused too many people to ignore or underrate her recent and present merits as an artist. M. Sarcey—very wisely, as we think—ranks her high among sympathetic artists to whom only genius is wanting. Mlle. Pierson has grace and intelligence in a high degree, and her gentleness and warmth have at times enabled her to approach the effects of genius. Lalauze's etching of her in this present number of M. Sarcey's series is a pretty little work, though not a very good likeness. It manages, however, to suggest that beauty of "decent and gracious motion" which, unlike some other beauties, is able to survive a good many years of varied life and effort.

We have received the new edition of the *Dramatic List*, by C. E. Pascoe (David Bogue). It is cheap and portable, and, moreover, it is fuller and in many ways better than the earlier and dearer publication. It is now a sort of Clergy List or Medical Directory for the profession of the theatre. No honour is implied by mention in it, but a useful service is rendered by it to the actor and the manager, and in some cases to the public, where the accounts of popular favourites are particularly full. But the book itself makes no pretension to be critical, and we cannot honestly say that the wisest discretion has been exercised in the choice of criticisms quoted. Many of them, of course, are from leading journals, and all from journals of wide circulation. But sometimes they are mere puffs. There is little of interesting or careful analysis of the parts played by the players, and some of the most independent and plain-spoken and pungent criticism—such criticism, for instance, as now appears in the *World*—is habitually ignored. But the extracts given no doubt fairly represent the popular estimate of the performer, and this is possibly all that the book is intended to convey.

THIS DAY IS PUBLISHED. A HISTORY OF THE REIGN OF QUEEN ANNE.

By JOHN RILL BURTON, D.C.L.,
Historiographer-Royal for Scotland; Author of a "History of Scotland,"
"The Book-Hunter," &c.
Three Volumes 8vo, price 75s.
WILLIAM BLACKWOOD & SONS, Edinburgh and London.

THIS DAY IS PUBLISHED. A MONOGRAPH OF THE SILURIAN FOSSILS OF THE GRYVAN DISTRICT IN Ayrshire, with special reference to those contained in the "Gray Collection." By H. ALLYN NICHOLSON, M.D., F.R.S., &c. Professor of Natural History in the University of St. Andrews, and ROBERT ETHERIDGE, Junr., F.R.S., Edin. FASCICULUS II. (Trilobites, Phyllopora, Cirripedia, and Ostracoda) Royal 8vo, illustrated with Six Lithographed Plates, 5s.

FASCICULUS I., containing Rhizopoda, Actinozoa, Trilobites, illustrated
with Nine Lithographed Plates and other Engravings, 7s. 6d.
"This fasciculus is a piece of paleontographical work of the very highest
character, and we trust that the authors may be encouraged by the reception
it meets with from their conferees and the public, to complete it in the
same style."—*Popular Science Review*.

in Music to the University of London.

LONDON: TRÜBNER & CO., LUDGATE HILL.

Highly Important Books

PUBLISHED BY

J. W. BOUTON,
706, Broadway, New York.

ORIGIN, PROGRESS, and DESTINY of the ENGLISH LANGUAGE and LITERATURE.

By JOHN A. WEISSE, M.D. 1 vol., 8vo, 700 pages, cloth, 16s.

The object of this work, to which the author has devoted his leisure hours for thirty years, is: 1. To lay before the English-speaking populations, in both hemispheres, the real origin and progress of their language. 2. To make the coming generation realise the superiority of their idiom over others as to the refinement and vigour of its vocabulary, clearness of diction, simplicity in grammar, and directness in construction. 3. To show the inconsistency of so-called English orthography. 4. To suggest a method to write and print English as it is pronounced, and remove the few remaining irregularities from its grammar. 5. Last, to stimulate the English-speaking millions all over the globe so to simplify the uttering, writing, and printing of their language as to make it a desideratum for universal adoption.

New Edition, with Portrait of the Author.

ISIS UNVEILED:

A Master Key to the Mysteries of Ancient and Modern Science and Theology. By H. V. BLAVATSKY, Corresponding Secretary of the Theosophical Society. 2 vols., royal 8vo, about 1,500 pages, cloth, 36s. Fourth Edition.

The recent revival of interest in Philology and Archaeology, resulting from the labours of Bunsen, Layard, Higgins, Müller, Dr. Schliemann, and others, has created a great demand for works upon Eastern topics.

To the scholar and the specialist, to the philologist and the archaeologist, this work will be a most valuable acquisition, aiding them in their labours and giving to them the only clue to the labyrinth of confusion in which they are involved. To the general reader it will be especially attractive because of its fascinating style and pleasing arrangement, presenting a constant variety of racy anecdote, pithy thought, sound scholarship, and vivid description. Madame Blavatsky possesses the happy gift of versatility in an eminent degree, and her style is varied to suit her theme with a graceful ease refreshing to the reader, who is led without weariness from page to page. The author has accomplished her task with ability, and has conferred upon all a precious boon, whose benefit the scientist as well as the religiousist, the specialist as well as the general reader, will not be slow to recognise.

The MEDALLIC HISTORY of the UNITED STATES of AMERICA, 1776-1876.

By J. F. LOUBAT, LL.D. With 170 Etchings by JULES JACQUEMART. 2 vols. folio. I. Text, pp. lxxx-478; II. pp. xvi, Plates, 86. Printed on heavy hand-made paper, manufactured expressly for the work by Blanchet Frères & Kleber, Rives, France. Letterpress printed by Francis Hart & Co., New York. Etchings printed by A. Salmon, Paris. Bound in extra cloth, gilt top, and uncut edges. Price, £6 16s. 6d.

OBLIVIAD (The);

With Notes, together with additional Notes, Preface, and Supplement by the American Editor, and the Perpetual Commentary of the *Athenæum*. 1 vol., 8vo, cloth, 10s.

[New York, 1879.]

"Sed nos oblitterata quoque scrutamur: nec deterrebit quarundam rerum humilitas."—*Plin. Hist., lib. xiv., Proem.*

"The Obliviad is a laborious imitation at great length of the Dunciad of Pope, somewhat more universally insolent in its treatment of contemporary authors than any other satire in prose or verse that we remember. It is unfortunately so indiscriminate in its censures that, when it deals with offenders to whom its method is properly applicable, it rather honours than hurts them by a chastisement which they share with men whose names would be an ample protection from the blows of a much more skilful and powerful critic."—*Saturday Review*, June 28, 1879.

PEPPER'S QUININE and IRON TONIC
Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

PAINLESS DENTISTRY.

MR. G. H. JONES,
Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name.

"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,
IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HARRALL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S
EXTRACT
OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

FURNISH your HOUSES or APARTMENTS

THROUGHOUT on
MODERN HIRE SYSTEM.
The original, best, and most liberal.

Cash prices.

No extra charge for time given.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

LOCKYER'S SULPHUR HAIR RESTORER.

Large Bottle, 1s. 6d. Restores the Colour to Gray Hair in a few days. The best, safest, and cheapest. Quite equal to expensive ones. Sold by Chemists and Hairdressers.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,

and without which none is genuine.

Sold Wholesale by the Proprietors, Worcester;
Gosse & Blackwell, London; and Export Oilmen generally.
Retail, by Dealers in Sauces throughout the World.

"Coca Leaf."**Wordsworth's Chemical Food of Health.**

Prepared from the choicest Peruvian Leaf. The New
REMEDY for GENERAL DEBILITY, NERVOUS PROSTRATION,
NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.

Sold in Bottles, 1s. 1d. and 2s. 9d., post-free.

H. WORDSWORTH & CO., Homoeopathic Chemists, 6, Sloane-
street; and 4, King-street, Kensington, London.

DANTE: Six Sermons. By P. H. WICKSTEED. Crown 8vo, cloth, price 5s.
"Short and to the point."—*Academy*.
"Gives a readable and complete account both of Dante and his poetry."—*Contemporary Review*.
"Will be very helpful, not only to beginners, but even to advanced students of the poet."—*British Quarterly Review*.

SONNETS and SONGS. By Emily Pfeiffer. A New Edition. Handsomely bound in cloth, gilt edges, price 4s.
"Mrs. Pfeiffer's Sonnets are, to our mind, among the first in the language."—*Spectator*.

THE LEGEND of ALLANDALE, and other POEMS. By Felix MONTERRA. Small crown 8vo, cloth. [Immediately.]

LYRICS and IDYLLS with other POEMS. By Edmund Clarence STEDMAN. Crown 8vo, cloth, price 7s. 6d.
"Deserve praise generally for simplicity and freshness, for force and vivacity, for a command of rhythm, and for the variety of subjects upon which the writer has exercised his skill."—*Pall Mall Gazette*.

A LIFE'S IDYLLS. By Hugh Conway. Small crown 8vo, cloth, price 3s. 6d.
"Mr. Conway sings with feeling and simplicity; he has a command of a variety of metres, and he is seldom if ever false either in his imagery or diction."—*Pall Mall Gazette*.

THE WEED: a Poem. By Charles Walter Palmer. Small crown 8vo, cloth, price 3s.

WITHIN SOUND of the SEA. By the Author of "Blue Roses," "Vera," &c. New and Cheaper Edition. In 1 vol., with Frontispiece, crown 8vo, cloth, price 6s.
"There are few writers who can imagine and present the character of a pure and noble-minded woman with the fineness of touch and delicate good taste of the author of 'Vera.'"—*Athenaeum*.

AN INTRODUCTION to the SCIENCE of LANGUAGE. By the Rev. ARCHIBALD HENRY SAYCE, Deputy Professor of Comparative Philology in the University of Oxford. 2 vols., large post 8vo, cloth. [Next Week.]

NEW WORK BY PROFESSOR HUXLEY.

THE CRAYFISH: an Introduction to the Study of Zoology. By T. H. HUXLEY, F.R.S. With Eighty-two Illustrations. Crown 8vo, cloth, price 5s. Vol. XXVIII. International Scientific Series.

"An Edition of 250 copies, all of which are numbered and signed, has been prepared on large paper. These contain the first impressions of the wood engravings carefully printed at hand-press, price 15s.

MIND in the LOWER ANIMALS in HEALTH and DISEASE. By W. LAUDEN LINDSAY, M.D., F.R.S.E. 2 vols., demy 8vo, cloth, price 32s. Vol. I, MIND IN HEALTH. VOL. II, MIND IN DISEASE.

THE HISTORY of the EVOLUTION of MAN. By Professor ERNST HAECKEL. With Numerous Illustrations. 2 vols., large post 8vo, cloth, price 32s.
"The appearance of the present fascinating work in an English dress will aid the cause of science in this country. . . . Persons who wish to understand the real significance of their own structure should read this book; and, as such a desire should be felt by all educated men, it is to be hoped that the book may soon reach a second edition."—*Athenaeum*.

FREEDOM in SCIENCE and TEACHING. From the German of ERNST HAECKEL, with a Prefatory Note by T. H. HUXLEY, F.R.S. Crown 8vo, cloth, price 5s.

THE ABOLITION of ZYMOTIC DISEASES and of OTHER SIMILAR ENEMIES of MANKIND. By Sir THOMAS WATSON, Bart., M.D., F.R.S. Small crown 8vo, cloth, price 3s. 6d.

THE TELEPHONE, the MICROPHONE, and the PHONOGRAPH. By Count DU MONCEL. With Seventy-four Illustrations. Small crown 8vo, cloth, price 5s.
"We can strongly recommend this book as containing a faithful history and exact descriptions of the more important instruments, amply illustrated by well-executed diagrams and woodcuts."—*Engineer*.

A GUIDE to MODERN ENGLISH HISTORY. By William CORY. Part I.—1815-1830. Demy 8vo, cloth, price 9s.

ENGLAND under LORD BEACONSFIELD: a Political History of Six Years from the End of 1873 to January, 1880. By P. W. CLAYDEN. Demy 8vo, cloth. [Immediately.]

GERMANY—PRESENT and PAST. By the Rev. S. Baring-GOULD, Author of "The Vicar of Morwenstow," &c. 2 vols., large post 8vo, cloth, 21s.
"We have seldom met with more pleasant reading than Mr. Baring-Gould's volumes on 'Germany.' . . . The book is as remarkable for the brightness of its style, and the variety of its subjects, as for the comprehensive precision of its historical research. Mr. Baring-Gould knows the country well, and is deeply read in all branches of its literature."—*Times*.
"Nowadays, when Germany is attracting so much attention, a book like Mr. Baring-Gould's is of great value. . . . We advise all readers who sincerely desire to inform themselves concerning Germany to read Mr. Baring-Gould's volumes."—*Athenaeum*.

JOHN DE WITT.—HISTORY of the ADMINISTRATION of JOHN DE WITT, Grand Pensionary of Holland. By JAMES GEDDES. Vol. I., 1623-1654. With Portrait. Demy 8vo, cloth, price 15s.
"This very instructive and interesting book."—*Examiner*.

HISTORICAL ABSTRACTS: being Outlines of the History of some of the less-known States of Europe. By C. F. JOHNSTONE, M.A. Oxon. Crown 8vo, cloth, price 7s. 6d.

THE MASTERS of GENRE-PAINTING. By Frederick Wedmore. With Sixteen Illustrations. Large crown 8vo, cloth, price 7s. 6d.
"There is much in this book that deserves cordial praise. . . . The reading can give nothing but pleasure to the rapidly widening circle of those who are interested in art and artists."—*Academy*.

FREE LAND. By Arthur Arnold, Author of "Social Politics." Crown 8vo, cloth. [Next Week.]

FREE TRADE in LAND. By Joseph Kay, M.A., Q.C., of Trinity College, Cambridge. Author of "The Law Relating to Shipmasters and Seamen." Edited by his WIDOW. With Preface by the Right Hon. JOHN BRIGHT, M.P. Fourth Edition. Crown 8vo, cloth, 5s.

In a recent letter, Mr. Bright says:—"I recommend you to buy and read carefully 'Free Trade in Land,' by the late Joseph Kay, Q.C."—*Daily News*.

"No one who observes what is now happening can doubt that the land-question will soon become one of the most prominent subjects that must engage the attention of Parliament."—Professor Fawcett's Speech at Shoreham.

"The production of a thoughtful, diligent student, and of an earnest, liberal-minded politician. . . . We are bound to admit, after a careful perusal of Mr. Kay's work, that we have nothing to subtract from it. Mr. Kay is always just; he is well informed; and, although he is enthusiastic, he is accurate."—*Academy*.

UTOPIAS; or, Schemes of Social Improvements, from Sir Thomas MORE to KARL MARX. By the Rev. M. KAUFMANN. Crown 8vo, cloth, price 5s.

LONDON: C. KEGAN PAUL & CO., 1, PATERNOSTER SQUARE.

MESSRS. MACMILLAN & CO.'S EDUCATIONAL PUBLICATIONS.

SCIENCE PRIMERS.

Under the Joint Editorship of Professors HUXLEY, ROSCOE, and BALFOUR STEWART.
18mo, illustrated, 1s. each.

- Introductory.** By Prof. Huxley, F.R.S. *[Nearly ready.]*
Chemistry. By Prof. Roscoe, F.R.S. With Questions.
Physics. By Prof. B. Stewart, F.R.S. With Questions.
Physical Geography. By Prof. Geikie, F.R.S. With Questions.
Geology. By Prof. Geikie, F.R.S.
Physiology. By M. Foster, M.D., F.R.S.
Astronomy. By J. N. Lockyer, F.R.S.
Botany. By Sir J. D. Hooker, K.C.S.I., F.R.S.
Logic. By Prof. Jevons, F.R.S.
Political Economy. By Prof. Jevons.
 * * Others to follow.

ELEMENTARY SCIENCE.

- Astronomy.** By J. N. Lockyer, F.R.S. With Illustrations. 5s. 6d.—QUESTIONS, 1s. 6d.
Botany. By Prof. Oliver, F.R.S., F.L.S. With Illustrations. 4s. 6d.
Chemistry. By Prof. Roscoe, F.R.S. With Illustrations. 4s. 6d.
CHEMICAL PROBLEMS ADAPTED to the SAME. By Prof. THORPE. With KEY, 2s.
Chemistry.—Owens College Junior Course of Practical Chemistry. By F. JONES. Preface by Prof. ROSCOE. 2s. 6d.
Questions on Chemistry. Problems and Exercises in Inorganic and Organic Chemistry. By F. JONES. 3s.
Logic, Deductive and Inductive. By Prof. JEVONS, F.R.S. 3s. 6d.
Physiology. By Prof. Huxley, F.R.S. With Illustrations. 4s. 6d.—QUESTIONS, 1s. 6d.
Political Economy for Beginners. By M. G. FAWCETT. With QUESTIONS, 2s. 6d.
Physics. By Prof. B. Stewart, F.R.S. With Illustrations. 4s. 6d.
Natural Philosophy for Beginners. By I. TODHUNTER, M.A., F.R.S. Part I., PROPERTIES OF SOLID AND FLUID BODIES, 3s. 6d. Part II., SOUND, LIGHT, and HEAT, 3s. 6d.
Physical Geography. By Prof. A. Geikie, F.R.S. With Illustrations. 4s. 6d.—QUESTIONS, 1s. 6d.
Sound, An Elementary Treatise on. By Dr. W. H. STONE. Illustrated. 3s. 6d.

MANUALS FOR STUDENTS.

- Inorganic Chemistry.** By Professors ROSCOE and SCHORLEMMER. Vol. I., NON-METALLIC ELEMENTS, 21s. Vol. II., METALS, 2 Parts, 18s. each.
Gegenbaur's Comparative Anatomy. A Translation by F. J. BELL. Revised, with Preface, by Prof. RAY LANKESTER. Illustrated. 8vo, 21s.
Text-Book of Physiology. By Michael FOSTER, M.D., F.R.S. Illustrated. 8vo, 21s.
The Osteology of the Mammalia. By Prof. W. H. FLOWER, F.R.S. With Illustrations. Crown 8vo, 10s. 6d.
The Morphology of the Skull. By Prof. PARKER and G. T. BETTANY. Illustrated. Crown 8vo, 10s. 6d.
Elementary Practical Physiology. By MICHAEL FOSTER, M.D., F.R.S., and J. N. LANGLEY, B.A. Crown 8vo, 6s.
The Student's Flora of the British Islands. By Sir J. D. HOOKER, K.C.S.I., F.R.S. Globe 8vo, 10s. 6d.
Physiography: an Introduction to the Study of Nature. By Prof. HUXLEY, F.R.S. With Illustrations. Crown 8vo, 7s. 6d.
Elementary Biology. By Prof. Huxley, F.R.S., assisted by H. N. MARTIN, M.B., D.Sc. Crown 8vo, 6s.
The Principles of Science: a Treatise on Logic and Scientific Method. By Prof. W. STANLEY JEVONS, LL.D., F.R.S. Crown 8vo, 12s. 6d.
Manual of Political Economy. By Prof. FAWCETT, M.P. Crown 8vo, 12s. 6d.

HISTORY AND LITERATURE PRIMERS.

18mo, 1s. each.
 Edited by JOHN RICHARD GREEN.

- Homer.** By the Right Hon. W. E. Gladstone.
English Grammar. By R. Morris, LL.D.
Rome. By M. Creighton, M.A. Maps.
Greece. By C. A. Fyffe, M.A. Maps.
English Literature. By Rev. Stopford BROOKE, M.A.
Europe. By E. A. Freeman, D.C.L. Maps.
Greek Antiquities. By J. P. Mahaffy, M.A. Illustrated.
Roman Antiquities. By Prof. A. S. Wilkins. Illustrated.
Classical Geography. By H. F. Tozer.
Geography. By George Grove, F.R.G.S. Maps.
Children's Treasury of Lyrical Poetry. By F. T. PALGRAVE. In 2 Parts, each 1s.
Shakspeare. By Prof. Dowden.
Philology. By J. Peile, M.A.
Greek Literature. By Prof. Jebb.
English Grammar Exercises. By R. Morris, LL.D., and H. C. BOWEN, M.A.
France. By C. M. Yonge. Maps.
English Composition. By Prof. Nichol.
 * * Others to follow.

- Primer of Pianoforte-Playing.** By Franklin TAYLOR. Edited by GEORGE GROVE, D.C.L. 18mo, 1s.

HISTORICAL COURSE.

Edited by E. A. FREEMAN, D.C.L.

RICHARD BENTLEY & SON.

AT ALL BOOKSELLERS'. DUNCKER'S HISTORY of ANTIQUITY.

From the German of Professor MAX DUNCKER, by EVELYN ABBOTT, M.A., of Balliol College, Oxford. In demy 8vo. Each Volume can be obtained separately, price 21s.

The First Volume contains
BOOK I. EGYPT. BOOK II. THE SEMITIC NATIONS.

The Second Volume contains
BOOK III. ASSYRIA. PHOENICIA. ISRAEL.

The Third Volume contains
BOOK IV. THE FALL OF ASSYRIA. THE LATER PHARAOHS. THE BABYLONIAN AND LYDIAN EMPIRES.

AT ALL BOOKSELLERS'. MOMMSEN'S HISTORY of ROME.

From the Earliest Times to the Period of its Decline. By Professor THEODOR MOMMSEN. Translated (with the Author's sanction, and Additions) by the Rev. P. W. DICKSON. With an Introduction by Dr. SCHMITZ.

The POPULAR EDITION, in 4 vols., crown 8vo, £2 6s. 6d.; or sold separately—Vols. I. and II., 21s.; Vol. III., 10s. 6d.; Vol. IV., with Index, 15s. The Index (crown 8vo size) separately, price 3s. 6d.

Also, a LIBRARY EDITION, in 4 vols., demy 8vo, 75s. The Index (8vo size) separately, price 3s. 6d. These Volumes not sold separately.

"A work of the very highest merit; its learning is exact and profound; its narrative full of genius and skill; its descriptions of men are admirably vivid. We wish to place on record our opinion that Dr. Mommsen's is by far the best history of the decline and fall of the Roman Commonwealth."—*Times*.

AT ALL BOOKSELLERS'. CURTIUS' HISTORY of GREECE.

From the Earliest Time down to 337 B.C. From the German of Professor ERNST CURTIUS. By A. W. WARD, M.A. In 5 vols., demy 8vo, 84s.; or separately, Vols. I. and II., each 15s.; Vols. III., IV., and V., with Index, each 18s.

"A history known to scholars as one of the profoundest, most original, and most instructive of modern times."—*Globe*.

"We cannot express our opinion of Dr. Curtius' book better than by saying that it may be fitly ranked with Theodor Mommsen's great work."—*Spectator*.

SAMPSON LOW, MARSTON, & CO.'S NEW BOOKS.

BIOGRAPHIES OF THE GREAT ARTISTS.

From the *Times*, Jan. 22, 1880.

"Few things in the way of small books upon great subjects, avowedly cheap and necessarily brief, have been hitherto so well done as these biographies of the Great Masters in painting. They afford just what a very large proportion of readers in these hurrying times wish to be provided with—a sort of concentrated food for the mind. The Liebigs of literature, however, especially in that of the fine arts, need no small amount of critical acumen, much experience in the art of system, and something of the bee-like instinct that guesses rightly where the honey lies. The mere 'boiling down' of great books will not result in giving us a good little book unless the essence is properly diluted and set before us in a form that can be readily assimilated, so to speak, and not in an indigestible lump of details. The writers of these biographies have, on the whole, succeeded in giving an excellent *aperçu* of the painters and their works, and better where they have adhered to the lives written by acknowledged specialists—such as M. Vosmaer for Rembrandt, Passavant for Raphael, and Dr. Woltmann for Holbein. The life of Holbein is by Mr. Cundall, the editor, with whom the idea of such a series originated, and to whose great experience in illustrated books is to be attributed the very valuable copies of all the important pictures contained in the different biographies. These have been selected with great taste and judgment, and being taken generally from less well-known works by the masters, they enhance the interest and add much to the practical utility of the books. The chronological lists of the works of the masters are also very useful additions."

ILLUSTRATED BIOGRAPHIES of the

GREAT ARTISTS. Each volume is illustrated with from Twelve to Twenty Full-page Engravings, printed in the best manner, and bound in ornamental cloth cover, 3s. 6d.

The NEW VOLUMES now ready in this Popular Series are:—

LEONARDO DA VINCI. From Recent Researches.
By Dr. J. PAUL RICHTER, Author of "Die Mosaiken von Ravenna." With Sixteen Illustrations.

FIGURE PAINTERS of HOLLAND. By Lord Ronald
GOVER, F.R.A., Trustee of the National Portrait Gallery, Author of a
"Handbook to the Art Galleries of Holland," &c. With Eighteen
Engravings.

The other Volumes already published are on:—

TURNER.	HOGARTH.	RUBENS.
HOLBEIN.	TINTORETTO.	RAFAEL.
VAN DYCK and HALS.	TITIAN.	REMBRANDT.

THE LITTLE MASTERS.

In the press,
MICHAEL ANGELO. DELAROCHE and VERNET. REYNOLDS.
LANDSEER. GAINSBOROUGH.
Other Volumes preparing.

NOTICE.

THE FERN PARADISE is being published

in Shilling Monthly Parts, of which the first is ready this day. Con-
taining forty-eight pages, the Pictorial Title-page and Photographic
Frontispiece of the work (a Devonshire "green lane"), a Full-page
Engraving from a Drawing by Birket Foster, and an Engraved Plate
of Grouped Ferns. The volume will be completed in Twelve Parts at
One Shilling each.

THROUGH the DARK CONTINENT. By

H. M. STANLEY. New and Cheaper Edition, complete in 1 vol., with
the Text and Full-page Illustrations and Maps. Crown 8vo, cloth
extra, 12s. 6d.

HANDBOOK of EMBROIDERY. By L.

HOGG. Edited by LADY MARION ALFORD, and published by authority
of the Royal School of Art Needlework, and dedicated to their President,
H.R.H. Princess Christian of Schleswig-Holstein, Princess of Great
Britain and Ireland. With Sixteen Page Illustrations, many of them
in Colour, by Burne-Jones, Walter Crane, William Morris, George
Aitchison, Fairfax Wade, the Rev. Selwyn Image, and Miss Jekyll;
and Designs for Borders, &c., by Miss Webster, Miss Burnside, and
Miss Mary Herbert, of the Royal School of Art Needlework. Crown
8vo, 2s.

LITERATURE.

A History of the Reign of Queen Anne.
3 vols. By John Hill Burton, D.C.L.
(Blackwood.)

[First Notice.]

THE literary world has for many years looked forward to the appearance of Dr. Burton's volumes on the history of Queen Anne's reign in the expectation that they would fill a gap in the national literature of Great Britain. It has justified this confident feeling by the remembrance of his pre-eminent advantages for such an undertaking. The union of the two kingdoms of England and Scotland was, as everyone knows, brought to a successful issue in 1707, in spite of the opposition of the governing classes and the citizens of Edinburgh, supported by the anxiety of the Presbyterians lest their religion should be displaced for that established over the border. A few years earlier the energies of the Scotch, ever engaged in the search after fresh fields for the employment of the national characteristics of industry and thrift, had developed their schemes of civilisation in the Indies with such vigour as to excite the apprehension of the Southrons, culminating in cries for the interposition of Parliament. Devotion to the ancient House of the Stuarts still burnt in the hearts of the Highlanders, and the flames were fanned by the intrigues of Jacobite emissaries, who penetrated into the fastnesses of the mountains to spread the cause of the Pretender. The volumes in which Dr. Burton has traced the history of his native land and followed the fortunes of the Scot abroad have marked him out as the leading authority on Scotland and the Scotch, and must have smoothed away many a difficulty which would have impeded the progress of a less experienced writer. Add to this the absorbing passion which has seized on the minds of the fashionable world for imitating the characteristics of Queen Anne's time in architecture and in art, and it would seem that now was the appropriate time for a narrative of her reign to take the world by storm, and that Dr. Burton was its fitting historian.

Have these anticipations been realised? With regret we answer, No, not in their entirety. The reader will open these three handsome volumes with expectations of pleasure, and will continue his perusal with constant feelings of enjoyment; but before he has read many pages he will awake to the knowledge that they are disfigured by many errors of detail, and, when he has closed the volumes and pondered over their contents, the conviction will have arisen in his mind that the discussion of some important points of English life has been altogether overlooked.

These shortcomings we shall indicate in a further notice; we prefer for the present the more pleasing duty of dwelling on the conspicuous merits which have attended Dr. Burton's labours. For twelve years he has been engaged in the task of examining and sifting the superabundant materials which exist for the history of this epoch. Most of the important State papers have already been published to the world, and he could not have been expected to discover any fresh sources of information of imperial interest; but within the last twenty years bundles of private correspondence of the foremost politicians of the day have been revealed to the public. One such collection of papers has been used by him with great advantage. The letters and despatches of the Methuens—the ambassadors at Lisbon whose skill in completing the “Methuen Treaty” has given to their names a chance of preservation which has been denied by the compilers of our biographical dictionaries—acquired a few years ago as an addition to the MS. treasures of the British Museum, have enabled Dr. Burton to throw fresh light on the characters of the commanders of the English forces in Spain during those wearisome operations which neither genius nor daring could render successful. Not contented with reproducing from the descriptions of his predecessors the scenes of the campaigns in Holland and Germany, he has himself travelled over the countries through which the armies of the Allies swept in their irresistible course of victory; and, by personal observation of the local peculiarities of these countries, has brought vividly before the eye of the reader the battle-grounds, hitherto only names, on which Marlborough broke to pieces the armies of the invincible monarch of France. These pictures possess a charm which cannot fail to gratify, and, as a specimen of the style of Dr. Burton, we extract from his third volume the description of the scenery around the village of Malplaquet.

“Malplaquet is now a considerable village of good houses consistent with the aspect of agricultural wealth around it. Cultivation has rendered it difficult to trace the ground so as to identify upon it the motions of the two armies. The paved road to Mons is still there, and so is a portion of the old stretch of forest. The trees are beech, birch, ash, and sycamore—no pines. It is a forest decaying and reproducing itself, and looks as fresh and young as it could have looked on the battle day. An open heath was among the features then; but that is gone. The fields, with their plentiful crops, are protected from intrusion; and along the border, between the field and the forest, there is a line of tall, thick-set, impervious hedge, as if the farmers found it desirable to protect themselves from intruders entering through the forest. The patch of forest is still serviceable, along with the village of Malplaquet and La Chapelle Malbrook, in identifying the field of battle and helping to solve the policy of its selection.”

Dr. Burton, in his laudable desire to arrive at a true perception of the characters of Queen Anne's Ministers, has not shrunk from spending years of his life in poring over the contents of our great libraries, and has crossed the “narrow streak” which separates us from the Continent to ensure the fidelity of his scene-painting of foreign lands; yet he has allowed two serious defects, which could have

been remedied by a tithe of the labour and money expended in his researches at home and his journeys abroad, to detract from the value of his volumes. Nearly a third of this History relates to wars waged from the shores of Portugal to the banks of the Rhine and the Danube. The manoeuvres of Marlborough and the French generals were executed with such perplexing changes of scene as to render it impossible to follow their actions by the aid of letterpress alone. Each chapter on the struggles of the opposing forces should have contained at least one map, even if it were of the unpretending character of those published in Mrs. Creighton's *Memoir of the Duke of Marlborough*, to guide the student through these mazes of movement. But such helps must be sought for elsewhere than in Dr. Burton's volumes. A defect still more inexcusable is the absence of any dates at the head of the pages. Their author is not prodigal of these dry facts at any time, and in consequence of their absence the reader is frequently compelled to turn over many leaves before he can discover the year in which the events under discussion occurred. In this respect Dr. Burton is less worthy of imitation than one of his predecessors; for when Mr. Wyon found that, through inadvertence, he had omitted to supply the date of the year at the top of each page of his painstaking History, he prefixed to the first volume a slip of paper supplying the information by which the purchaser could rectify the error.

The investigations of Dr. Burton have resulted in his entertaining favourable opinions of nearly all the political and military personages of the epoch. Even the Dutch statesmen, universally condemned for that proverbial sluggishness of thought and action which often served to clog the adventurous designs of the English commander, find some apology in the argument that, if failure had followed on any of his bold conceptions, the consequences of the disaster would have fallen on the Netherlands. In Dr. Burton's estimation Marlborough and Godolphin, the two Ministers who ruled over this country for many years with a singleness of purpose rarely found in political life, are the heroes of the age. On at least two occasions he even ventures to style Godolphin the greatest financial Minister that ever governed Britain—a verdict which will scarcely be accepted without protest by the admirers of two Prime Ministers of the past and present centuries; and he never loses an opportunity of lauding his talents in raising the amounts required for supporting the English troops in their campaigns, and for paying the subsidies of our rapacious allies. On the reputation of Marlborough there is no room for diversity of opinion; and Dr. Burton has recalled to our recollection that Napoleon himself stamped the tactics of that military genius with his approval, not, of course, without the *arrière pensée* of showing his French subjects the superiority of their Emperor over the commanders of the Bourbons. The career of Marlborough's great rival, and we are afraid that we must add his enemy, the brilliant and indefatigable Peterborough, is criticised with greater, and in some respects with undue, asperity. “Fond of fighting for its own sake,” “rash audacity,” “Quixotic,”

"insolent and mendacious aggression," "inspired lunatic," are some of the expressions applied to Peterborough that may be culled from the chapters on the war in Spain. If Marlborough's march into Germany conveyed by its rapid changes of direction a false impression to his opponents, and is justly praised for its success in "drawing attention to the courses which in the end it did not take," the varying movements of his fiery rival leading ill-clad and ill-paid troops, with an incapable Austrian puppet as their nominal head, through a hostile country should also receive their measure of approbation. Dr. Burton himself seems at last to have arrived at this conclusion: for, after having insinuated that Peterborough was fond of summoning councils of war for the purpose of disregarding their decisions, and after having spoken of his qualities in the harsh terms already quoted, he confesses that the crushing defeat at Almanza resulted from a policy which "Mordanto" opposed; and, in describing the great debate in the House of Lords on the conduct of the Spanish War, he acknowledges that its failure confirmed "what many sharp eyes saw under the wild eccentricities and over-audacious projects of the man—an inner fund of deep sagacity."

The effect on the mind of the French King of the victory at Malplaquet has been, we venture to think, over-estimated by Dr. Burton. If the French commander had advanced to meet the allied forces on the open field, who can doubt, from a comparison of the qualities of the opposing leaders, Villars and Marlborough, that victory would have inclined to the tactics of the English champion? By ensconcing his army behind entrenchments and awaiting the attack of the Allies, Villars was enabled to retreat after the contest with his troops in good order; and the knowledge that the losses of his enemy exceeded those of his own army justified him in boasting to his King that, if it was his fate to lose another such battle, the enemy would be annihilated by its victory. Dr. Burton holds that it was part of the design of Marlborough to leave the French undisturbed at their work with the spade for two days. This is so far from being the case that there would seem to be ample reasons for a contrary opinion. The leaders of the Allies are reported to have been disconcerted by the rapidity with which the French had strengthened their position during the night, and their attack was delayed by the opinion of Prince Eugène that they must await the coming of the troops which were being hurried up from Tournay. There were other and more potent reasons than the victory at Malplaquet for terminating the strife, but the consideration of this question must be deferred for another week.

W. P. COURTNEY.

Ceremonial Institutions: being Part IV. of the "Principles of Sociology." By Herbert Spencer. (Williams & Norgate.)

MR. HERBERT SPENCER has decided to issue the remaining divisions of the *Principles of Sociology* in separate parts. Among his reasons for this decision he mentions the fact that many persons are deterred from attacking large books by fear of their size. It is cer-

tainly a curious and not an encouraging symptom of our existing mental *status* that, while readers will eagerly devour two thick volumes on the biography of almost any comparatively obscure individual who happens to have lately died, they are afraid of undertaking a few hundred pages on a subject of deep and wide-reaching interest, such as the origin of our whole religious and governmental systems. Nevertheless, it is well to recognise even unpleasant facts, and there can be little doubt that Mr. Spencer will obtain more readers for separate fascicules such as this than he is likely to find for his thicker volumes. A prophet is not without honour, save in his own country; but we can hardly feel otherwise than ashamed of English slowness to duly recognise a great philosopher when we learn that most of the separate essays composing this division were published simultaneously in America, France, Germany, Italy, Hungary, and Russia. Bacon's pathetic recommendation of his fame to "foreign countries" has apparently become a legacy for all English thinkers.

Ceremonial Institutions consists of six essays already published in the *Fortnightly Review*, together with six other new chapters. References to authorities are appended for all the chief statements by an ingenious system which avoids overloading the pages and distracting the attention with foot-notes, at the same time that it admits of easy verification in the case of any doubtful passage. The germ of the work may be found in Mr. Spencer's early essay on *Manners and Fashion*. The fuller treatment now accorded to the subject brings it into close relation with the other fundamental ideas expounded in the first volume of the *Principles of Sociology*. But the subject has grown under Mr. Spencer's hands. In the original sketch of the *Synthetic Philosophy* prefixed to the *First Principles*, the part dealing with Ceremonial Government came after the parts dealing with Political and Ecclesiastical Government. Now, however, in the matured work, it precedes these two divisions. The reason for this change is to be found in Mr. Spencer's present conviction that "the earliest kind of government, the most general kind of government, and the government which is ever spontaneously recommencing, is the government of ceremonial observance." As being the undifferentiated root from which the other forms of government are slowly evolved, it naturally precedes them in the systematic treatment of sociological development. Political and religious regulations are at first a mere body of ceremonial observances directed towards certain persons, living or dead. Ceremony toward the living ruler eventuates in political government. Ceremony toward the dead ruler, the ghost finally apotheosised into the god, eventuates in ecclesiastical government. Accordingly, the consideration of ceremonial necessarily comes before the consideration of the two more evolved forms of regulative organisation.

Trophies taken in the chase or in battle give the stronger or more successful man a certain influence, more or less vague, among his fellows. Such are Dyak skulls or American scalps. The chief is the greatest trophy-taker; and, as kingship evolves, the king

becomes an object of awe from his possession of the trophies of conquered chiefs. And when the ghost is elevated into the god, similar honours are paid to his temple. But as the slaughter of captured enemies gives way to the practice of slave-making, there grows up a modified habit of cutting off portions from the living body, as signs of subordination, instead of portions of the dead body. Hence arise mutilations, originally marks of subjection to a master or conqueror, but becoming at last mere national practices of forgotten purport. Nowhere is the value of Mr. Spencer's inductive method, based upon the wide collection of facts in the *Descriptive Sociology*, more clearly seen than in the explanation of these personal disfigurements. Mr. Darwin treated them in a well-known chapter of the *Descent of Man* as purely aesthetic in intention, and they consequently became to many readers a decided stumbling-block (in spite of much ingenious reasoning) in the way of his main argument as to sexual selection. But Mr. Spencer now shows that their origin is wholly different, and that they really began with the practice of trophy-taking.

"Let us ask what happens if the scalped enemy survives. The captor preserves the scalp as an addition to his other trophies; the vanquished enemy becomes his slave; and he is shown to be a slave by the loss of his scalp. Here, then, are the beginnings of a custom that may become established when social conditions make it advantageous to keep conquered foes as servants instead of eating them. The conservative savage changes as little as possible. While the new practice of enslaving the captured arises, the old practice of cutting from their bodies such parts as serve for trophies continues, and the marks left become marks of subjugation."

Thus we get the clue to the cutting off of hands, feet, or fingers, of noses or ears; the knocking out of front teeth; the clipping of hair or beards; the practice of circumcision; the infliction of scars, and the habit of tattooing. All these forms of mutilation may mark slavery, or political subordination; or they may acquire a religious significance through their connexion with allegiance to a dead king; or they may become, by constant practice, mere national customs, in which case they are at last erroneously explained as due to aesthetic or sanitary intentions.

In like manner the giving of presents as a propitiation is shown to originate political taxation and ecclesiastical revenues. Visits, regarded as marks of homage, become eventually merged in levées and church services. Obeisances are traced backward to the prostration which the conquered makes before the conqueror, and then upward through the various stages of kneeling and bowing. So from the stripping of captives by their captors we get the naked condition of some servile castes; the ceremonial uncovering of the body, or a part of the body, before rulers; and, finally, our own habit of "capping" superiors. All these obeisances also differentiate into political and ecclesiastical observances. Forms of address are shown to be all in origin expressions implying that the inferior is the slave of the superior, and melting down at last into our conventional "obedient servant." Titles similarly imply the relation of master to slave, while badges

and costumes are closely connected with the same origin. A chapter on fashion shows it to arise, on the other hand, from the desire of the socially inferior to imitate the dress or privileges of the socially superior. So that, while ceremony accompanies the state of political subordination, fashion is an incident of growing freedom.

If Mr. Spencer's present little volume had done no more than explain on evolutionist principles the origin of these ceremonial observances—of barbaric mutilations, of Oriental presents, of conventional visits, of the kneeling, bowing, and hatting] of modern Europe, of the forms of address and titles even now current in our midst—it would still have ranked as a work of great and curious interest. Judged merely from this lower standpoint, it may be read with pleasure for its amusing instances, for its unexpected explanation of familiar customs and phrases, even by the most unphilosophical reader. Both the subject and the treatment are far more popular than any other part of the *Synthetic Philosophy*, except, perhaps, the extremely interesting chapters on the origin of religious ideas in the preceding volume of the *Sociology*. It may thus to some extent be enjoyed as a separate treatise by thousands of readers who are never likely to tackle the second volume of the *Psychology*. But, apart from such mere surface interest, the present instalment of Mr. Spencer's great work has a deeper value as an integral portion of the fundamental sociological theory already sketched out in the preceding parts. There are two aspects of the question especially important in this higher connexion. In the first place Mr. Spencer points out on every page, side by side with the history of ceremonial evolution, the relation which ceremony in general, and each ceremony in particular, bears to those two antithetical social types, the militant and the industrial, whose antagonism and organic consequences were already pointed out in the preceding volume. He shows conclusively that ceremony is most fully developed among the most militant societies, that it is most closely related to militancy and to the military form of organisation, and that in all societies it is most largely developed among the military class, or the governmental class produced by militant habits. On the other hand, it dies away among industrial societies, and among those classes which industrialism has produced. In the second place, Mr. Spencer expounds the fundamental importance of ceremony in generating that habit of obedience to authority which underlies the greater part of primitive sociological evolution. He shows it to be the origin from which spring the political and ecclesiastical controls, and gives it its due place as the first step in the production of certain highly important social structures. So the slavish submission of the savage subject and the despotic requirements of the savage king slowly prepare humanity for "observances expressing a proper regard for the individualities of other persons, and a true sympathy in their welfare." While in itself a comparatively minor part of Mr. Spencer's whole scheme, the present work thus falls into its proper place as a component link of the

evolutionary chain, without which the full explanation of the more important political and religious regulating systems would be impossible; and, though from the nature of its subject-matter it cannot be considered as one of Mr. Spencer's most valuable works, there are perhaps few of them more startling in the unexpected order so admirably introduced into a mass of chaotic material. The whole theory, as a whole, bursts upon the reader like a revelation, while every separate page is replete with ingenious illustrations, apt affiliations of fact on fact, and curiously obvious, yet unsuspected, connexions between the most apparently remote observances—social, political, and religious. GRANT ALLEN.

Synopticon: an Exposition of the Common Matter in the Synoptic Gospels. By W. G. Rushbrooke, M.L., Fellow of St. John's College, Cambridge. Part I. (Macmillan.)

THE present reviewer can hardly be expected to be quite free from prepossession in regard to this work, inasmuch as he himself proposed one almost identical in plan to the Delegates of the Clarendon Press some five or six years ago. The proposal was declined, and he was therefore obliged to abandon studies which he hoped to undertake in the Synoptic Gospels, as he was convinced at that time, and remains equally convinced now, that a work of this kind must be a necessary preliminary to any fruitful investigation into the mutual relations of the three first Gospels.

It is true that the *Marcusevangelium* of Dr. Weiss, published in 1872, affords a partial parallel. There, too, the passages common to the three Gospels were printed side by side, with the relations between them indicated by different types; but these relations were determined in accordance with a preconceived theory, and the text was not allowed to speak simply for itself. Hence, for those who were not prepared to accept the theory (and, with all due recognition of the value of Dr. Weiss' labours, there must have been many with whom this was the case), the arrangement was much less serviceable than it might have been. Mr. Rushbrooke has avoided this mistake. The differences of type and colour represent relations suggested purely by the texts themselves. Matter common to all three Gospels is printed in red; matter peculiar to each evangelist in ordinary type; and matter found in two of the three Gospels in uncial or spaced type, a fixed scheme showing clearly in which two Gospels it is found. Notice is taken (and very rightly taken), not only of words, but of parts of words that are in agreement.

The only points of detail on which the present writer would have proceeded differently are (1) that he would have kept the usual order of the Gospels, not only because it is the usual order, but because St. Mark contains much more matter that is common to each of the other two Gospels in turn than they contain that is common to themselves and not found in it, and it is easier for the eye to glance to right and left than from one side column to the other; and (2) that he would have made a somewhat different use of the spaced and uncial type,

though he is not at all sure that the arrangement adopted is not quite as good or better.

The execution of the work is really perfect, and reflects the highest credit both on the editor and also on the Cambridge Press, from which it issues. Mr. Rushbrooke explains in his Preface that the idea originated with Dr. E. A. Abbott, to whose admirable article on the Gospels in the last volume of the *Encyclopædia Britannica* it forms an excellent accompaniment. There is every reason to hope that it will prove, not only this, but also a stepping-stone to further results. To all who are concerned with Synoptic criticism it should be indispensable. W. SANDAY.

Memoirs of Prince Metternich, 1773-1815. Edited by his son, Prince Richard Metternich. Translated by Mrs. Alexander Napier. Vols. I. and II. (R. Bentley & Son.)

[Second Notice.]

WE take up the thread of our previous article where it dropped at the battle of Austerlitz—"the Battle of the Emperors," as the French soldiers loved to call it. The commencement of Prince Metternich's political life dates, according to his own view, from his mission to Paris in 1806. His courteous intercourse with M. de Laforest, the French ambassador at Berlin, at a moment of great tension between France and Prussia, led the latter to speak well of him to Prince Talleyrand, whose policy was not averse to the establishment of good relations between France and Austria; and this circumstance led to Napoleon's request that Metternich might be sent to represent Austria in Paris in the place of Count Philip Cobenzl. His presence in Paris gave face to face with Napoleon enabled him, as he states, to appreciate his excellences, and also to discover the faults of his character. The autobiography recounts the substance of many most interesting conversations with Napoleon, and will initiate the reader into the extravagance of the gigantic schemes which led to Napoleon's fall.

"After the Peace of Tilsit," he says, "the Emperor of the French turned his eyes upon Spain. In order to secure the carrying out of his plans he thought it necessary to cripple Russia after conquering Austria and Prussia in two successive wars, and covering the eastern frontier of his empire by the Confederation of the Rhine. The undertaking had but too great a success at Erfurt. The conference which there took place between Napoleon and Alexander was a snare for the Russian monarch. In reality, Napoleon's thoughts were directed neither against Turkey nor against Asia, and if the hatred which he entertained for England led him to think for a moment of attacking her Indian possessions, this project existed only as an eventuality, dependent on the concurrence of circumstances as yet remote. Napoleon occupied himself rather with perfecting his Continental system and with the expulsion of the Bourbons from the throne of Spain; the extravagance of those gigantic schemes brought about the fate of Napoleon a few years later, and the expedition against Spain, which, beyond any doubt, was a thoroughly mistaken idea on his part, only accelerated the catastrophe."

Metternich's official position at Paris brought him into immediate contact with the most distinguished of Napoleon's marshals

and ministers, most of whom he discovered, before his office of ambassador to France came to an end, to be exceedingly weary of the war; and he quitted Paris satisfied that the national feeling of the great country which Napoleon governed with such admirable skill, both as a legislator and as an administrator, was repugnant to the continuance of his warlike policy abroad. This portion of the *Autobiography* contains some interesting sketches of the leading characters among Napoleon's ministers. Talleyrand, Fouché, and the Arch-Chancellor Cambacérès form the central group, and Napoleon more than once analysed to the ambassador the qualities of each of these well-known personages. "When I want anything done," the Emperor said of Talleyrand, "I do not employ the Prince of Benevento; I turn to him when I want a thing not to be done which I wish to appear to want." "In private life, however," Metternich observes, "Talleyrand was as trustworthy as he was amiable." The despatches which the ambassador wrote to Count Stadion, then Austrian Minister of Foreign Affairs at Vienna, are full of instructive details respecting this period, which concluded with a second endeavour of Napoleon to crush Austria, in which he partially succeeded at Wagram. The firmness of the Emperor Francis' character under this great disaster was of good augury to Metternich, who was at once summoned by the Emperor to take charge of the department of Foreign Affairs on the resignation of Count Stadion.

"Napoleon at this time," says the Chancellor, "passed in the eyes of Europe for an irresistible power, under the yoke of which all had to bow. The feeling of the masses was no longer to escape this fate, but to lighten the burden as much as possible. My thoughts, however, soared higher." "That Napoleon," he goes on to say, "in his lust of power on the European Continent had already overstepped the limits of the possible—of this I had not the slightest doubt. I foresaw that neither he nor his undertaking would escape the consequences of rashness and extravagance. The *when* and the *how* I could not pretend to determine."

The momentous event of this period was the marriage of the Archduchess Marie-Louise to Napoleon, of which full particulars are found in the *Correspondence* (No. 150). There had been negotiations with the Russian Court for a marriage with one of the Russian Grand Duchesses, and, when rumours reached Vienna that Napoleon had an Austrian Archduchess in view, it was thought to be a fantastic dream on his part. Napoleon, however, took advantage of a masked ball at the Arch-Chancellor Cambacérès' to open the subject to Mdme. de Metternich, who had remained in Paris, and to ask her, under cover of his mask, whether she thought that the Archduchess would accept his hand, and whether the Emperor, her father, would consent to the alliance. The letter of Mdme. de Metternich to her husband of January 3, 1810, discloses the fact that Louis, the vice-King of Holland, had advised his brother to ask the hand of the Archduchess, and the Empress Josephine herself had pressed upon the Emperor a marriage with the Archduchess as a plan the success of which would make her hope that the sacrifice she was about to make in resigning herself to a divorce from the Emperor would

not be a pure loss. The result is well known, and its probable political influence upon the then existing state of Europe, more particularly upon the relations between Austria and Russia, is very fully discussed in the Chancellor's instructions to Prince (Adolphe) Schwarzenberg, then Austrian ambassador in France. Metternich considers that Napoleon reached the real summit of his power upon the victory of Jena, and that, if, instead of seeking for the destruction of Prussia, he had then annexed Prussia to the Confederation of the Rhine, he might have gained for his empire a foundation of strength and solidity which the Peace of Tilsit did not gain for it.

The sixth chapter of the *Autobiography* contains the narrative of Metternich's special mission to Paris in 1810, during which he had repeated conversations with Napoleon on the Turkish question, in the course of which Napoleon lifted the veil behind which his intentions against Russia were concealed. The choice by the Swedes of Bernadotte as Crown Prince and virtual successor to the crown of Sweden was treated by Napoleon as a distant motive for war with Russia; but Napoleon, for other reasons, held a war with Russia to be inevitable, and he was anxious to tempt Austria to side with France by offering her the Illyrian Provinces and Dalmatia in exchange for a portion of Galicia, which was necessary to enable him to reconstruct a kingdom of Poland. Instead of remaining four weeks, as originally intended, Metternich was induced to prolong his stay in Paris for six months. He accompanied the Emperor and his bride to Cambrai on their way to Brussels; and we should have been glad to have found in the *Autobiography*, or among the documents annexed to it, an account of a most interesting conversation which Metternich had with Napoleon at St.-Quentin, in which Napoleon narrated to him the history of his whole life. We have ourselves heard the details of this conversation from the Prince's own lips. It was upon the return of the new Empress to Paris that the fatal ball was given by Prince Schwarzenberg in honour of the Imperial marriage at the palace of the Austrian Embassy, which terminated in the conflagration of the palace, when the Princess Schwarzenberg (Pauline, daughter of the Duke of Arenberg) perished in the flames. A full report of this calamitous event was sent by the Chancellor to the Emperor Francis, and it is printed in the *Gallery of Celebrated Contemporaries* (p. 298).

The Russian campaign forms the principal *tableau* of the seventh chapter, in which is given the substance of the confidential conversation of the Chancellor with Napoleon at Dresden before the expedition to Moscow. This conversation tends to relieve in some respect Napoleon's memory from the reproach which attaches to that expedition as a gigantic military blunder. Napoleon explained to the Chancellor his plan for the war with Russia, about which he entertained the most dangerous delusions; but the plan which Napoleon unfolded to Metternich was not unworthy of his military genius. How he came to abandon it is not explained by the Chancellor, and it may suffice to say that Napoleon was misled by the counsels of those about him to subordinate the military to the political question.

He was firmly convinced that the Russian monarch would not expose the most beautiful city of his empire to the occupation of the enemy, and he did not calculate on the *torch of Rostopchin*. The *History of the Alliances of 1813-14* and of the *Dawn of Peace* completes the portion of the *Autobiography* at present published. We have in these later chapters an account of Metternich's second and more famous interview with Napoleon at Dresden, after the Battle of Bautzen, in which Napoleon's star once more coruscated. The Russians hesitated to continue the war unless Austria would abandon her neutrality. Metternich commenced by obtaining from the Emperor Alexander his consent to his offering to Napoleon the mediation of Austria. Hence the famous interviews between Napoleon and Metternich in the Marcolini Palace at Dresden, of which M. Thiers has given an imperfect account in his *History of Napoleon*, and of which a more complete narrative has been already published in Baron Helfert's *History of the Empress Marie-Louise*. Prince Richard Metternich observes in a note on this conversation that there are some discrepancies to be found between the two MSS. with respect to certain dates; but he relies on the report sent by the Chancellor on the very same evening to the Emperor Francis, which will be found among the documents (No. 185) appended to the *Autobiography*.

It is well known that the neutral policy of Austria in 1812 was unsatisfactory to the Prussian party, at the head of which were Baron von Stein and his generals, who were anxious to redeem the disasters of Jena.

"Whether the course we pursued," says the Chancellor, "was better than the one which Freiherr von Stein and his political friends were never tired of urging upon King Frederick William III. I must leave to be decided by the actual events of the years 1813-14. The results would have been quite different if Austria had not assumed so prudent an attitude in the last adventurous undertaking of the conqueror of the world. If we had listened to the urgent entreaties of the Prussian party, we should, without any means of defence, have seen Napoleon on the battle-fields of our own exhausted territories, instead of on the icy steppes of Russia. At any rate, Austria's course has not run counter to the ways of fate."

The negotiations which ensued between Austria and Napoleon after his return from Moscow, consequent on the Austrian proposal of an armed mediation, came to no result, and war was ultimately declared by Austria. The victory of the Allies at Leipzig turned the tide of battle against Napoleon, and compelled him to retreat. The chapter on the Alliances of 1813-14 discloses the sagacity and tact with which the division of the War of Liberation into three campaigns was brought about by Metternich. The first campaign was to end at the Rhine, the second on the summit of the Vosges mountains, the third at Paris. The account of the negotiations between the Allied Powers at Langres, the crowning point of the Vosges, is perhaps the most curious revelation in the *Memoirs*. The Chancellor himself observes:—

"These negotiations would remain unknown to the world for ever if I did not record them here." "As the monarchs," he says, "and their Cabinets were here together, no protocols were drawn up, so that no written trace exists of proceed-

ings which had the most momentous consequences. The correspondence of Lord Castlereagh with his Cabinet may contain some fragments, but it cannot give the complete course, for the principal questions were only discussed between the Emperor of Russia and myself."

The startling matter which for a moment disturbed the equanimity of the Allies at Langres was a proposal on the part of the Emperor Alexander that, on their victorious entry into Paris, they should summon a National Convention of the French people, and place La Harpe, the tutor of the Emperor Alexander in his youth, at the head of the Convention, to direct it in choosing a form of government and in selecting a ruler. Metternich's opinion was that such a step was simply to unchain the Revolution, which Napoleon had chained up, but he seems also to have thought that it was on the cards that the Emperor Alexander's scheme of placing La Harpe on the direction of the Convention might have led to the choice of Bernadotte as the successor of Napoleon. The scheme, however, was at once disposed of by a declaration on the part of the Emperor of Austria that he would never favour any dynasty but that of the Bourbons; and it appears that Austria was on that fundamental point in perfect harmony with the British Government. The march of the Allied Armies upon Paris is briefly told, and the masterly movement of Prince Charles Schwarzenberg, which took Napoleon by surprise, and elicited from him the exclamation, "A fine move! I should not have expected it from a general of the Coalition!"

Prince Metternich seems to have had some misgivings, from conversations which he had with Louis XVIII., as to the probable future of France under the Bourbons, although he had no doubt that the Bourbons were acceptable to the enormous majority of the French people. He recounts a remarkable conversation which he had with Napoleon at Paris in 1810, when Napoleon said to him at the Tuileries, "Do you know why Louis XVIII. is not sitting opposite to you? It is only because it is I who am sitting here. No other person could maintain his position, and if ever I disappear in consequence of a catastrophe no one but a Bourbon could sit here."

The last chapter of the Autobiography, on "The Dawn of Peace," contains a brief account of the visit of the Allied Sovereigns to England, the Congress of Vienna, the return of Napoleon from Elba, the Battle of Waterloo, the second Peace of Paris, and the History of the Holy Alliance, an overflow of the pietistic sentiment of the Emperor Alexander. We think it well that Prince Metternich has publicly stated how this "loud-sounding nothing" originated. It damaged the Cabinets, although it received no ministerial counter-signature, and even Lord Liverpool's Government suffered by being brought into contact with it. The papers, however, of Lord Liverpool, whenever they may see the light, will, we have good reason to believe, confirm Prince Metternich's account of this Imperial *niaiserie*, of which he foresaw the almost certain mischief.

The publication of the Metternich Memoirs may, we hope, serve as an encouragement to

the British Government to permit the publication of the contemporary documents preserved in the archives of the Foreign Office. We know, upon the authority of the late Prince himself, that the English State archives ought to be far richer than the Austrian State archives in materials for the history of the period which witnessed the overthrow of Napoleon's gigantic scheme of reviving a Carolingian empire in Europe under a Bonapartist dynasty. The publication of Lord Castlereagh's correspondence with his Cabinet from the time he joined the Allied Sovereigns at Basle down to the conclusion of the Vienna Congress is now the more called for, inasmuch as Frederick von Gentz, in his "Memoir on the Congress of Vienna," which concludes the second volume of the Metternich Memoirs, says that the weak and partial support which Lord Castlereagh gave to Austria in resisting the ambitious schemes of Russia was the principal cause of the unsatisfactory issue of the Vienna Congress. These are not the words of Metternich himself, who, in mentioning the arrival of Lord Castlereagh at Basle, speaks of his ideas and feelings in the most cordial terms of approval; but the voice of Gentz in connexion with the Congress of Vienna has a ring of authority about it hardly second to that of the Chancellor himself. Metternich, however, has placed on record his own opinion of Gentz in the following words, written by his own hand on a memoir of Gentz of that period:—"Gentz," he says, "was always inclined to describe matters in the most decided colours, and to pass from the extreme of hope to that of despair." The publication of Lord Castlereagh's despatches would be the best vindication of his action at the Congress of Vienna; and, if they should not altogether refute the charge of vacillation brought against him by Gentz, they would at all events render intelligible the policy of the British Cabinet, by which Lord Castlereagh's conduct was directed, and which has exposed England to the reproach of the able and energetic Aulic Counsellor, that her object at the Congress was apparently to obtain "peace at any price, and almost on any conditions."

TRAVERS TWISS.

England: its People, Polity, and Pursuits.
(Cassell, Petter, Galpin & Co.)

MR. ESCOTT'S *England* adds one more to the list of books with a special character of their own which issue at intervals from the great popular publishing and printing establishment in La Belle Sauvage Yard. The way was felt by *New Greece, Egypt as it is, Turkey in Europe*, each of which was a photograph, more or less finished, of a country and nation with which our reading public were getting anxious for a better acquaintance. Then followed Mr. Mackenzie Wallace's *Russia*, which took us by storm, and lifted the series on to a higher plane. Dealing with a larger and more complex subject than its predecessors, it achieved, and well deserved, a far higher success, by the thoroughness of its workmanship and the breadth of its handling. The deep interest and hearty appreciation with which Mr. Wallace's book was welcomed may probably have suggested the idea of doing the same work for England; at any

rate, the present volumes remind us of their predecessors. Their aim is to gather up and produce, in an attractive as well as accurate survey, the social, political, and industrial life of our English nation of to-day, and to analyse and explain the constituents of the artificial civilisation, and of the minutely elaborated institutions of the time (vol. i., p. 10).

Whatever the result, the serious attempt involves a high degree of courage in its conception and of industry in its execution—how much, indeed, of the latter quality can scarcely be appreciated by anyone who has not himself been occupied with some portion of the great subject. But what is the result? How has the attempt succeeded? Well, on the whole the answer must be, admirably. It goes without saying that the publishers' part of the work is faultless; that paper, type, binding, decoration, and finish are all that the most fastidious reader can ask for: and the contents are not unworthy of their case. The first condition of success in such an undertaking must be that your guide shall be himself a spectator, not a partisan; the second that he shall have broad enough views and sympathies to appreciate what is really genuine in all the various movements and powers which are at work, and often jostling one another, in the complex and shifting drama: and both these conditions Mr. Escott fulfils. You rise from the perusal of those parts of the book which treat of the subjects with which you are most familiar without being able to say whether the writer is Whig, Tory, or Radical, but with the feeling that he is a staunch Englishman, and that the treatment has been fair and accurate; while you will probably have met with information as to details which, if not altogether new, has been put under new light. So far as the internal evidence goes, Mr. Escott is a liberally minded man, sympathising with and admiring the aristocratic side of English life, but a thorough believer in the wisdom and necessity of the fusion of classes as "the guarantee of our political stability and our security against revolutionary changes" (vol. i., p. 93), and in the essentially serious foundation on which our society rests—"the result of the traditional and pre-eminently English habit of taking grave and earnest views of life" (vol. i., p. 38). To our minds such a temper and standpoint are well suited to the work which he has set himself in these volumes.

From such a survey it is difficult to select any one section which can be satisfactorily treated in the space at our command; but, as some choice must be made, we will take the base of the great national pyramid, and see how Mr. Escott deals with this, the most difficult, as it is the most important, part of his subject. Besides the chapters on the urban and rural working class (x. and xi., vol. i.), the book opens with the picture of "an English village;" and there are chapters on "Pauperism and Thrift," and "Co-operation," which are wholly—and chapters on "Criminal England," "Educational England," "The Social Revolution," and "Popular Amusements," which are mainly—occupied with the position and prospects of that larger half of our English race in these islands—the seven-

teen millions who live by the labour of their hands, and depend on weekly wages. Mr. Escott shows in the sentences in which he approaches the subject that he comes to it in the right spirit. He has "faith in the good sense, the good feeling, and the political docility of the English working man" (vol. i., p. 240), and enough sympathy with the main objects of his desire and pursuit to enable him to judge and represent him fairly. Indeed, if anything, his view is somewhat too optimistic, as he seems to be not altogether unaware himself, when he excuses the "Arcadian glimpses" of the labourer's cottage (new style) which he has given by pleading that the tendency of the times is in the direction of social and sanitary reform, and that the rapid and widespread improvement, since the Report of the Agricultural Commission of 1867, justifies such a presentment (vol. i., p. 311). For our part we are glad to admit the plea, and only too thankful to find so industrious and careful an observer coming to such favourable conclusions as to the condition, temper, and aims of our mechanics, miners, and agricultural labourers. Of those engaged in textile industries his observation is somewhat less favourable. But while, in the main, acknowledging the care and accuracy of his work, there are some points upon which we must challenge his conclusions. Thus, in referring to the question of peasant proprietors (vol. i., p. 330), he says that in England "no overwhelming desire for land exists;" which may be true, no doubt, if by "overwhelming" he means a desire which will satisfy itself by any and every means. English working folk will not take land by brute force; but, short of that, we believe there is no stronger desire among them than to possess it as their own, nor, we may add, any one which it is more for the true interests of England that they should be able to realise. Again, speaking of the allotment system, Mr. Escott declares it to be "quite certain" (vol. i., p. 319) "that, if *extended beyond a limited size*, allotments are a source of danger and loss to the peasant." But what is a *limited size*? He seems to doubt whether two or three acres are not enough to ruin the occupant. Our own experience is certainly quite the other way. Again, his estimate of the average wage of the English agricultural labourer as little less than 18s. a week (p. 331) is too high, and indeed is confuted by the evidence given by himself of the result of his enquiry as to the rates paid in sixty cases in different parts of the country in the week ending February 1, 1879. Wages in the most depressed districts—in Dorset, Hants, the Eastern counties—have risen, as he admits, some thirty per cent. since the establishment of the Union in 1870–71, but even before the late fall have never touched such an average.

Another position which he maintains (controversing the Bishop of Manchester's well-known Report) is that field-work, practised as it is in the North of England, has a healthy physical and moral effect on women. In the face of the evidence cited (pp. 324–25) it is difficult to question his facts, but no one bred in the Southern counties can wish to see the revival of the practice as it obtained in many of them some years since.

Lastly, in his treatment of co-operation among the poor there occurs an unaccountable omission, which mars the value and completeness of the picture, otherwise an entirely fair one, and showing a somewhat rare appreciation of the meaning and scope of the movement. For while he does full justice to the work which individual stores and associations have done in teaching habits of thrift and in educating their members in many directions, no allusion is made to the Union by which upwards of 700 of them are bound together, and which enables them to maintain and spread the principles laid down in 1852 for their guidance, and ever since recognised. These will be found at vol. i., p. 387, and cannot be too often repeated. They are:

"That human society is a body consisting of many members, not a collection of warring atoms. That true workmen must be fellow-members, not rivals. That a principle of justice, and not of selfishness, must govern exchanges."

It is not clear whether Mr. Escott himself (in common, it must be allowed, with the majority of his countrymen of the upper classes) considers these to be "pardonable delusions;" but the fact should at least be noted that they are the deliberately accepted rules upon which the daily business of some million and a-half of the working people of England is carried on in this winter of 1879–80, and that they have enabled hundreds of trading societies, composed of the poorest of our people, to pass unscathed through the severe commercial crises of the last three years.

We regret that we have no space for further comment, and so in conclusion must say generally of Mr. Escott's book that, though it may not be of any great service to the specialist, there are few persons of average acquirements and culture who will not find it full of useful information, and that of a kind not easy to be got, and in a handier form than (so far as we know) can be found elsewhere; while to young politicians and journalists, to diplomatists anxious, on their arrival in this country, to make the most of their time, and start in their studies on the best lines, and to persons in general who are short of time, but desirous of getting some adequate notion of the complex civilisation which surrounds them, it is likely to prove a really valuable possession.

T. HUGHES.

NEW NOVELS.

Magnum Bonum; or, Mother Carey's Brood.

By Charlotte M. Yonge. (Macmillan.)

Jemima. By Adelaide. (Whittingham.)

From Generation to Generation. By Lady Augusta Noel. (Macmillan.)

Orlando. By Clementina Black. (Smith, Elder & Co.)

The Love of his Life. By Cosmo Cumming. Moxon, Saunders & Co.)

MISS YONGE's new book has many of the characteristics to which her readers are accustomed. A preference for family life—in a large family for choice—a strongly but not obtrusively religious tone, a good level of general cultivation and manners steadily maintained, and a considerable knowledge of the ways and habits of girls and boys allied

to a singular ignorance of the general thoughts and conduct of grown-up folk, give the sum of these characteristics pretty completely. *Mother Carey's Brood* differs only topically from the *Daisy Chain* and many others of its fellows. The heroine is left a widow with a large family, brought up on principles rather of fellowship than of subjection. She inherits great wealth and goes through many other vicissitudes. One or two other families, also more or less large, are brought in to share the fortunes of the chief personages, so that altogether we have fourteen or fifteen young persons who have got, according to the author's usual fashion, to be carried from extreme youth to early manhood or womanhood, through various struggles of faith and fortune, and ultimately to be paired off more or less happily, except one or two who die, and one or two more who are left to illustrate the more excellent way. That the book is of good literary quality, that there is much pathos and some fun in it, that it is on the whole sound and wholesome reading for *virgines* and not altogether unsuitable for *pueri*, goes without saying. It seems to us, however, decidedly inferior to its author's earlier work, though it is perhaps better than some which has recently proceeded from her pen. In the first place there is a distinct want of central interest, either of incident or character. Thackeray, but perhaps Thackeray only, could manage the fortune of a most respectable family through an unusually long novel, with little or no plot. Certainly Miss Yonge has not managed it. The "magnum bonum," a mysterious medical secret which is left as a kind of charge to the widow, is too vague and occupies too little space in the story to serve the purpose. The multitude of characters, on the other hand, prevents the author from allotting sufficient attention to any particular character to supply the deficiency. *Mother Carey* herself is well imagined originally, but hardly filled out, and she becomes less, not more, individual as the story goes on. Miss Yonge has such excellent faculties as a novelist, and she has done such good work in founding a school of novels neither mawkish nor impure, that this looseness of texture and colourlessness of figure about her later work is particularly to be regretted. Never was there a time when it was of more importance that the rules of novel writing as an art should be observed than at present, and never, we must add, was there a mistress who paid less attention to them than Miss Yonge. Her followers, of course, exaggerate her method, or rather her contempt of it. We cannot recommend young ladies to take a course of *Tom Jones* or *Madame Bovary*, and they will not read Miss Austen, however much we recommend her. The unfortunate critic is therefore pretty much at his wits' end.

Jemima is a very natural and charming story of a very natural and charming little girl. It is exactly what it pretends to be—"a story of English family life"—but it has a distinctness of quality which is by no means common in stories of English family life. Some of the pranks of *Jemima* and her brothers and sisters are irresistibly comic, and the only thing we find to object to is the presence of an occasional American flavour in the

elder personages which is not altogether appropriate or pleasing. There is an episode of a crucifix which is harmless enough and might very probably happen, but which would, we think, on the whole have been better omitted; and the poetical young gentleman, Mr. Romer Piercy, is, we hope, not common in English households. But the originality of the book more than redeems these slight defects.

Lady Augusta Noel wrote a good novel in *Owen Gwynne's Great Work*, and she has written a better in *From Generation to Generation*. The key of passion, at least in the later part, is pitched rather high, but it is very fairly maintained. The hero from his boyhood bears the horrible imputation of having, accidentally of course, killed his own father; and his consequent estrangement from his mother, his lapse into reckless ways, his return, and so forth furnish the main strength of the story. Lady Augusta Noel has not, however, quite made him what he should be to enlist the reader's sympathies fully; and the opposite character, his cousin Kenneth, is also faulty as a finished study. She has also, we think, fallen into an ethical as well as an artistic error in making the display of military bravery atone for an almost unexampled act of baseness, continued through long years with hardly a thought of remorse. The arrangement is the more unsatisfactory in that the criminal has also earned laurels before his discovery. If such exploits have such purging power, why is it necessary to repeat them? However, questions of this kind are, perhaps, a little unprofitable. The minor characters of the book are particularly good, and the pictures of Highland life at Dalbraith and of the contrasted English country home at Sandysmere are excellent. The character of Margaret Douglas, who is so absorbed in the thought of her loss that she hates the guiltless cause of it almost without knowing that she hates him or appreciating the probable consequences of her conduct, is very good, and but little short of the best. These "one-idea'd" characters are apparently favourites with Lady Augusta, *Owen Gwynne* having to a considerable extent turned upon them.

We can also speak well of *Orlando*, and, but for certain *longueurs* in it, we could speak very well. We should indeed like to ask Miss Black for the exact date when "Lucretius was still questioning the earth, and early Christians as they went to their death were comforted," &c. They must have been *very* early Christians. But this is a solitary slip, and in more important matters *Orlando* takes a decidedly high place. There is some freshness about most of the characters, though in most of them also there is room for more decided and fuller handling. The heroine, or at least the *prima donna*, Elizabeth Glendinning, is certainly novel, being a girl who is a renowned beauty, has seen much of the world, and is full of good sense and good feeling, but consents to marry almost the first man that asks her, rather from an exaggerated idea of his feelings than from any corresponding affection of her own. This lover himself, Captain Grove, is also a good example of a man selfish and unprincipled rather than positively bad, who inflicts a good deal more suffering on his

unfortunate betrothed than a much more definite villain might have done. Besides these, the hero Orlando and the family of strong-minded but soft-hearted ladies with whom he consoles himself for his mishap with Elizabeth are also good. The book is rather one of those which one reads with a pleasant and equable feeling of satisfaction than one of those which deserve the terms "enthraling," "entrancing," "engrossing," or any other of the usual laudatory participles. But of its kind it is very far from unsuccessful.

We cannot imagine the most tolerant critic regarding *The Love of his Life* as satisfactory in any kind or in any degree. It is exceedingly rare for us to come across a book which absolutely resists the attempt, skilfully, conscientiously, and persistently made, to read it. This, however, or something like it, has been the case with *The Love of his Life*. By varying the methods and places of attack, by beginning sometimes at the end, sometimes in the middle, and sometimes at the beginning, and by refreshing the exhausted mind with literature of a different kind at intervals, we have attained to such a knowledge of it as to be able to pronounce, without unfairness or precipitancy, that it seems to us very bad; but more we cannot say or do.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

The Hebrew Migration from Egypt. (Trübner.) The date on the title-page states that this work was printed in 1879; from the tone we should have referred it to a previous century. It is addressed, not to disciples of any of the leading schools of the day—whether of Hengstenberg, Ewald, or Renan—but to those who, with the seventeenth-century theologians, regard the Scriptures as a single book, composed (to use a phrase caught up somewhere by our author) by a "divine historian," and therefore beyond the pale of human criticism. We have never seen a professedly critical work carrying a theological bias so unblushingly on its front. When we look a little closer, however, we find that the author's equipment for his self-assumed task is but slender. He tells us (p. 61, note) that only extremely orthodox persons any longer deny that the Book of Isaiah is the work of two persons, one of whom wrote chapters i.-xxxix. (!), the other chapters xl.-lxvi. He explains a supposed corruption in the Hebrew text by the resemblance between Beth and Gimel in Rabbinical Hebrew (p. 297, note). He conjectures that Aram-Naharaïm is a corruption of Aram-Nahorim, "Aram of the Nahorites," forgetting that Naharaina of the Egyptian inscriptions, and ignoring Dr. Beke's and M. Halévy's bold but plausible and not unphilological hypothesis. He follows the Authorised Version in rendering in Deut. iii. 8, "on this side Jordan," contrary to usage, and against his own interest as an opponent of the Mosaic authorship of Deuteronomy. But a truce to these *minutiae*. The author is an honest and even acute student, though he perhaps under-estimates the amount of training necessary for his work. The suspicion with which he regards the list of stations in Numb. xxxiii. is not unshared by critics, and his attempt to identify the route of the Israelites in its first stage with that annually traversed by the Egyptian pilgrims on their way to Mecca, however bold, is well worthy of consideration. It is true it involves identifying Elim with Elath and Mount Sinai with Mount Hor. But

startling as these theories are, they are not impossible; and we are not bound to follow the author in deriving Sinai from *seneh* (the "bush" in which Elohim appeared to Moses), and converting Hor-ha-Har into Har-ha-Har, i.e., the mountain κατ' ἔξοχην. Sinai is undoubtedly the mountain dedicated to the moon-god Sin, whose *cultus* can be traced so widely in geographical names. Nor will the author's explanation of *yam suph* (for *yam suphah*?) as "sea of tempests" (supposed to be a title of the Gulf of Akaba) prevail without a struggle, involving, as it does, the rejection of the tradition of the wonderful passage. Altogether, the author is very wild in his treatment of names. Thus Alush becomes a corruption of Elath; Jaakan of Isaac; Abarim of Arabim. On p. 311 it seems to us that the author sets aside Brugsch's explanation of Shur rather too lightly. Dr. Ebers' *Aegypten* might have told him that it was no mere "small fortification" which the Egyptians erected on their frontier. He might also have known that his own view that Shur means a particular long line of cliffs (on p. 313) is due to Prof. E. H. Palmer. His suggestion, too, that the "City of Palms" is, not Jericho, but Zoar, has been anticipated by Dr. Grätz (see Grätz's *Monatsschrift*, 1872, pp. 337-346, or the notice of his paper in the *ACADEMY*, volume iii., p. 250). Lastly, his daring conjecture that the land of the Hebrews, the land of Abraham, was the land of Edom or of Midian in the broadest sense (p. 420) has been partly anticipated by Tiele and others, who hold that the worship of Yahveh, and perhaps the Hebrew custom of circumcision, originated in Edom (see *Encyclopaedia Britannica*, new edition, article "Circumcision"). The author deserves respectful attention. He has, at any rate, strengthened the evidence for the views of Dr. Kuenen (expressed in *The Religion of Israel*) on the Hebrew migration—views which are not necessarily connected with that uncompromising anti-supernaturalism which distinguishes the Leyden professor and his English disciple.

Fourteen Months in Canton. By Mrs. Gray. (Macmillan.) Mrs. Gray had exceptionally good opportunities for turning her short residence at Canton to profitable account as far as sights and curiosities went, for her husband had been consular chaplain there for many years, and had a high reputation as a *cicerone* among all visitors to the City of Rams. Although, under these circumstances, Mrs. Gray's notes and information are in the main correct, it must be remembered that some of the peculiarities of the Cantonese are local, and do not by any means of necessity extend to all parts of the empire. As many people are very curious on the subject of Chinese meals, we may call attention to the account of a dinner *à la Chinoise*, of which Mrs. Gray partook at a native restaurant (pp. 83-90); but at the same time we would add a caution that the consumption of rats, cats, and dogs is not by any means so common in China as Mrs. Gray would have us believe. The one great drawback to the book, in our opinion, is the fact that it consists of a series of letters from the writer to her mother, the only advantage of which, perhaps, is that it obviates the necessity for any methodical arrangement of the writer's observations.

Sister Dora: a Biography. By Margaret Lonsdale. (C. Kegan Paul and Co.) The life of one who was to the Black Country for fourteen years what Florence Nightingale was to our Crimean army could hardly fail to prove attractive. The one thing needed was a biographer gifted with a congenial spirit, and this has been found in a pupil and friend—the granddaughter of the broad-minded Bishop Lonsdale. The result is a book so justly appreciated already that the first edition went off in a fortnight. Nor will the work be ephemeral;

for not only does it depict scenes which belong, it appears, to the every-day life of Walsall, but which are, let us hope, abnormal elsewhere; not only does it show that the classes supposed to be most degraded have loving and grateful hearts, it also introduces the reader incidentally to topics which possess interest of a different nature. For instance, there is the question whether a woman ought to break off an engagement, solely because her lover has doubts with reference to revealed religion. This point presented itself to Sister Dora, and it was decided against her feelings. Possibly the conclusion may have been sound in this instance, so far as the lady's happiness was concerned; for Miss Dorothy Pattison, the sister of an Essayist of that name, having much in common with the authoress of *Romola*, had taken up the active life of a hospital nurse and an amateur surgeon as a means of escaping from those perplexing enquiries which wrecked the faith of him whom she loved. No doubt the clergyman under whose advice she acted had this in his mind; but if he had been only a Rector instead of a Director he would have recollected that an Apostle, having regard to the welfare of the man as well as of the woman, gave an opposite and a more humane decision. This was not the first time Sister Dora had to suffer in her affections, for the Coatham Sisterhood refused her permission to see the father of whose life she had been the sunshine when he was on his deathbed. Since the publication of this book another question has arisen in connexion with it. At p. 235 is a letter from the Vicar of West Bromwich narrating an attempt made by Monsignor Capel to baptise Sister Dora a few days before her death, and her successful resistance. This has elicited a statement from a priest at Walsall to the effect that the interview with the Monsignor, his guest, was invited by Sister Dora herself, but that neither of them expected her to become a member of their Church openly, since she had long before informed him (Father MacCarten) that she was prevented from doing so by considerations having no reference to religion. He adds that Monsignor Capel informed her that he would celebrate mass for her on the following day in London at eight o'clock, and that two Catholic nurses were accordingly engaged with Sister Dora at the time specified "in devotions for mass." This looks like flat contradiction. The truth, however, is as follows:—Miss Dorothy Pattison did not entirely agree with any community of Christians, but she honoured all good men, whether they were Nonconformist Protestants, or Nonconformist Catholics, or conforming Vicars. Her tender care of the poor and the suffering, her untiring activity in well doing, her genial smiles, her merry anecdotes, and ringing laughter, all showed to whom she belonged—namely, to that Church which, although unrecognised, is universal, the joyous company of the Rosy Cross. A letter from Monsignor Capel himself will appear as an Appendix to the second edition.

Two Lectures on South Africa. By James A. Froude. (Longmans.) Most of our readers will have already seen these lectures in the daily prints, but they will be grateful to Mr. Froude for putting them into a more complete and permanent form. His name and the charm of his style will ensure them a wide circulation; and, painful as the story is, we trust it will be carefully read and pondered over. There is probably no other Englishman so perfectly acquainted with South African intrigue and politics as Mr. Froude, and in forming his judgments he is guided by a straightforwardness and sense of right and justice which we look for in vain in the actors themselves in the deplorable series of blunders which has plunged us into the quagmire from which escape to solid

land seems well-nigh hopeless. Mr. Froude urges that the first origin of all our troubles at the Cape was the incapacity of the Colonial Office to distinguish between a colony and a conquered country; but, while exposing the mismanagement and injustice of which we have been guilty, he is studiously temperate in speaking of individuals. We do not think that the name of Sir Theophilus Shepstone occurs once in these lectures, and Mr. Froude is equally careful in avoiding any appearance of party spirit; neither Liberals nor Conservatives, he writes, are specially to blame. We should rather be inclined to say that they were both equally to blame; for this tacit agreement of each party to support the other prevented discussion, and stifled many powerful voices which, if raised in time, might possibly have changed for the better the course of events, and would certainly have roused the attention of the nation, to whose ignorance of the state of affairs at the Cape Mr. Froude alludes when he ironically tells his audience that if he makes mistakes there is no danger of their detecting him. This ignorance would perhaps not be astonishing if there were nothing in question but the lives of men; but after the slaughter of hundreds of our soldiers and of many thousands of Kafirs, there still remains what Mr. Froude calls "the little bill" for our "amusement." When the next Budget opens the eyes of the public, will it then be too late to find any remedy? The dead cannot be restored to life, nor can the millions expended be gathered up, but a recurrence of the events of the last few years may be prevented by a return to the wise policy of 1851 and 1852. Mr. Froude considers what course he himself would pursue, and what is practicable and likely to be adopted. Can it ever be too late to make reparation for injustice? Mr. Froude thinks not, and his concluding words are, "The Transvaal, in spite of prejudices about the British flag, I still hope that we shall restore to its owners."

NOTES AND NEWS.

WE understand that the *pièce de résistance* in the forthcoming number of *Macmillan's Magazine* will be King Cetewayo's own account of the History of Zululand and of the late War. This is contributed by the officer who conveyed his Majesty to Capetown, and is now in charge of him. It was taken from the King's own lips in a series of conversations on the subject. The history of the country is preserved by tradition among the Kings and Indunas only, and does not yet appear to have been committed to writing from any trustworthy source. The account of the war is naturally rather one-sided, but as to its genuineness there is no doubt.

CAPT. WHITE is at work on the Registers of Durham Cathedral for the Harleian Society.

MR. JAMES GAIRDNER has in the press for the Camden Society a volume mainly relating to the reign of Henry VI. In addition to the two brief chronicles from the Lambeth Library, the issue of which was authorised by the society some years ago, there will be a similar chronicle from the College of Arms, containing very interesting matter, and also a number of notes by Stowe, the antiquary, extending from the reign of Henry VI. to that of Elizabeth, written in his hand upon the blank leaves and spaces of one of the Lambeth MSS. The information contained in these notes is in many cases more full than that printed by Stowe in his Chronicle.

WITH the commencement of the year has appeared a new Russian Review, entitled the *Historical Messenger* ("Istoricheski Viestnik"). One of the articles contains a translation, with notes, by Prof. Bestuzhev-Rioumin, of an interesting letter found by Mr. Morfill among the

MSS. in the Bodleian. This contemporary document describes the revolt in Moscow in 1648 occasioned by the severity of the taxation. The account has been pronounced by the professor to be of primary importance for Russian history.

MR. TALBOYS WHEELER's promised *Short History of India* will be published almost immediately by Messrs. Macmillan and Co. It will be of special interest and value just now, as containing a history also of the frontier States of Afghanistan, Nipal, and Burma.

The Bicycle Road Book, a complete guide to the roads of England, Scotland, and Wales, which has been so long in compilation by Mr. Charles Spencer, the author of *The Modern Gymnast*, &c., is now nearing its completion, and will be published by Messrs. Griffith and Farran early in March next. Mr. Spencer has been at great pains and expense to furnish a list of the best hotels and the notable places on each journey, giving in a very small compass a great deal of information that will be found most valuable to the bicyclist.

WE learn from the *Revue Critique* that a Molière Society has lately been established in Germany. The president is Dr. H. Schweitzer, a physician, who is supported by Messrs. Humbert, Laun, and Fritsche. The first part of the society's publications has just appeared, under the title of *Molière-Museum, Sammelwerk zur Förderung des Studiums des Dichters* (Leipzig: Thomas). The society proposes to issue three fascicles yearly.

MESSRS. HURST AND BLACKETT will publish early in February *A Sylvan Queen*, by the author of *Rachel's Secret*, &c., in three volumes.

Our Australian Cousins is the title of a new work by "Maori," author of *Sport and Work on the Nepal Frontier*, which will shortly be published by Messrs. Macmillan and Co. As its name implies, it is an account of Australian men and manners founded on a recent tour in the country.

MR. ARTHUR J. JEWERS, F.S.A., proposes publishing in monthly parts, from February to December in this year, the Registers of St. Columb Major in Cornwall, which were originally transcribed for publication by the Harleian Society. Many entries relating to members of Cornish families are included in these Registers, which begin at the early date of 1539, and will be printed from the date of their commencement down to 1780. Subscribers' names will be received by Messrs. Mitchell and Hughes, of Wardour Street, W.; or Messrs. Brendon and Son, of Plymouth.

MR. FREDERICK N. NEWCOME, the author of some papers on "Loans of the Future" which appeared in the *St. James's Magazine* about three years ago, is now preparing for publication a work on the finances of the United Kingdom, our colonies, and all the leading foreign countries, to be entitled *The Compulsory Liquidation of the National Debt*.

"LOCAL NOTES AND QUERIES," under the editorship of a local antiquary, now appear in the Saturday's impression of the *Nottingham Daily Guardian*.

THE author of *Ginx's Baby* has a sequel to his *Blot on the Queen's Head* in the press. The new brochure, which is entitled *Ben Changes the Motto*, is characteristically illustrated by Linley Sambourne.

UNDER the title of "The Rogues and Vagabonds of Shakspeare's Youth," Mr. Furnivall will give the New Shakspeare Society this year a reprint of the volume edited by Mr. Viles and himself for the Early-English Text Society in 1869, containing John Awdley's *Fraternite of Vacabondes*, 1565-75; Thomas Harman's *Caveat*;

or, *Warrening for Common Cursetors, vulgarely called Vagabones*, 1567-73 (with its quaint woodcuts); *The Groundworke of Conny-Catching*, 1592; and an earlier humorous sermon in praise of thieves and thievery, from two MSS. in the British Museum. The society wants another gift-book this year.

THE Report of the Museum, Libraries, and Parks Committee for 1878-79 to the Council of the borough of Salford shows a considerable falling-off in the number of visitors to the museum and picture galleries, which is attributed to the depression in trade, as the working classes "take less interest in museums and galleries when work and wages are both reduced." On the other hand, the issues from the libraries have been more numerous than in any year since their opening in 1850.

LAST year's additions to the Advocates' Library amounted to a total of 13,873 articles, a decrease of 460 as compared with 1878. The cost of the catalogue of printed books, which was begun in 1851, and an account of which appeared in the ACADEMY of August 16, 1879, was £5,285 3s. 11d.

MESSRS. GRIFFITH AND FARRAN will shortly publish a new book by the author of *Mrs. Jerningham's Journal*, entitled *Very Genteel*. It is a tale for girls, and will be issued in the popular series of "Stories for Daughters at Home."

Two important works on economic history have lately been published at Jena—*Das Eigentum in seiner Sozialen Bedeutung*, von Adolph Samter; and *Englands wirtschaftliche Entwicklung im Ausgange des Mittelalters*, von Dr. W. von Ochenkowski (Verlag von Gustav Fischer). Whatever opinion English readers may form with respect to Herr Samter's conclusions from the history of property, the historical investigation contained in his treatise will be found instructive and interesting. Dr. von Ochenkowski's work is especially valuable for the light which it throws on the economic development of England during the fifteenth century.

THE Rev. Chauncy Maples, who has just returned from the East Coast of Africa, where he has lived for three years, will read a paper before the Philological Society in June on the Yao and Makó Languages, of the latter of which he has published a grammar.

A NEW quarterly is to appear immediately at Rome, entitled *Studi e Documenti di Storia e Diritto*. It will be illustrated with reproductions of MSS., drawings, inscriptions, &c., among which may be mentioned facsimiles of the *Regestum* of the see of Tibur; of the *Statuti dei Mercanti*, with a whole page in the autograph of Cola di Rienzo; and of an important funeral eulogy in marble of the time of Augustus. Among the contributors are Canons de Angelis and Fabiani, Mgrs. Capecelatro and Schiaffino, and Profs. Balan, de Rossi, Re, Ruggieri, and Visconti. The foreign subscription is twenty-two francs, and the office of the new journal is in the Palazzo Spada, Piazza Capodiferro, Rome.

THE February number of *Kensington* will contain a paper entitled "On the Cars," descriptive of railway travelling in America, its authoress, Miss Iza Duffus Hardy, being at present in that country.

MRS. J. F. B. FIRTH, author of *Sylvia's New Home*, has written a story entitled *More than Coronets*, which Messrs. Griffith and Farran will publish during the coming spring season.

AT the last meeting of the Schemes Committee of the Spelling Reform Association, the preliminary classification was considered. February 14 was fixed as the last day up to which the committee could undertake to receive schemes.

The first general meeting of the association will be held on Tuesday, the 27th inst., at the offices, when a paper will be read by the Rev. F. G. Fleay. A public meeting will also be held at the Society of Arts' rooms on Thursday, the 29th inst. Mr. E. B. Tylor has promised to take the chair.

THE Comte de Montalivet, who died on the 3rd inst., was known in literature as the author of a work on King Louis-Philippe and his Civil List. He has left some important MS. Memoirs on the Monarchy of July.

M. CONSTANS, professor at the Nîmes lycée, will shortly visit this country to study the MSS. of the romance of *Thebes* preserved in England.

PROF. MOEBIUS will publish shortly a supplement to his *Catalogus Librorum islandicorum et norvegicorum*, originally published in 1852, bringing down the bibliography of the subject to the present time.

TRIEFTRUNK'S History of Bohemian Literature is to be translated into German.

A NEW Socialist Review—*La Revue Socialiste*—is appearing monthly in Paris. The first number was issued on the 20th inst.

As Mr. Henry Nicol's *French Sounds in English* will form a volume of over five hundred pages, the excursions on Native Middle and Modern English Phonology, consisting of seven papers read before the Philological Society, will be printed separately in the society's *Transactions* for 1880-81.

PROF. FRIEDRICH succeeds the late Prof. Messmer, who died on the night of the 22nd ult., as editor of the *Deutsche Merkur*, the Old-Catholic organ, published at Munich.

THE *Revue Critique* announces the speedy publication by Messrs. Didier of an important study on Valentin Conrart. MM. Kervier and E. de Barthélemy have undertaken the task of dragging the first permanent secretary of the Academy from his "prudent silence." They have not only ransacked the rich portfolios of the Arsenal Library, but have discovered in the State archives of the Hague two MS. volumes containing Conrart's correspondence with the Protestant pastor Rivet, then a refugee in Holland, which will be published in *extenso*, and contains some details of a startling character. Conrart was, it should be added, the Paris agent of the Elzevirs.

M. STANISLAS GUYARD is about to publish (Maisonnette) a Persian manual.

M. CHANTELAUZE has discovered a MS. of the Chronicle of Philippe de Comynes which is evidently earlier than the three MSS. in the National Library. It seems to have belonged to Diane de Poitiers.

THE first volume of Pelayo's *Historia de los Heterodoxos españoles* is to appear next month; and the fourth volume of the Letters of Ignatius Loyola, containing those of the year 1554, will be published immediately.

MR. EDMUND FOULKES has been, if not whitewashing that ugly word *dogmatism*, at all events drawing its teeth. In a sermon* at St. Mary's, Oxford, which has attracted a good deal of attention, he recalls the distinction, which has been very generally forgotten, not merely by people in general, but by professed theologians, between *doctrine*, as derived from the Latin *doceo*, which "presupposes a teacher," and *dogma*, from the Greek *δόξα*, which "registers no more than a pronounced opinion, without any suggestion of its intrinsic worth." His view of the effect, from the earliest times,

* *Dogma distinguished from Doctrine*. By the Rev. E. S. Foulkes, B.D., Vicar of St. Mary's, Oxford. (Parker.)

both on theology and on Church history, of the misinterpretation of the latter word, is remarkably interesting.

AT the meeting of the Cantonal Historical Society of Freiburg, on December 18, F. Niklaus Raedlé read a paper on the history of the local coinage. For a long period no other money was used in and around the city of Freiburg but that which was minted by the Dukes of Savoy and the Bishops of Lausanne. The value both of the ducal and episcopal money was very precarious; it had sometimes a better, sometimes a worse character; but it gradually settled down into adulterated metal, which grew worse with each new coinage, until the injury which it worked in the trade and commerce of the Freiburgers compelled the citizens to issue a coinage of their own. The earliest Freiburg coins were struck in the years 1435-46. An early agreement between the "Münzmeister," Jean de Laule (de l'Aile), and the city was produced by F. Raedlé. The house which served for four centuries as the Freiburg Mint was handed over in 1850 to the Cantonal Bank. Herr Rudolf de Ste.-Columbe expounded a *menu* which showed what the Freiburgers understood by a dinner party in the last century. The truly pantagruelish meal, which was given by a resident near the Burg in 1773, consisted of twenty-four courses of flesh and fish, while one measure and a-half ("Mass," three-quarters of a gallon) of wine was served as a minimum to each guest. Herr Max Techtormann gave the history of 110 cannon of different calibre which were cast in Strassburg for the State of Freiburg in 1774. The Commandant d'Artein, who supervised the casting, received as his payment two enormous Greyerzer (Gruyère) cheeses. 83,753 pounds of metal were used, valued at 66,804 livres and eight deniers. Nearly all these guns were seized by the French in 1798, and served in the campaigns in Egypt and Russia, where many of them became a booty of the foe. Only three were left in Freiburg, where they are preserved in the Zeughaus, being brought out occasionally on Corpus Christi Day in order to fire the salvo of honour. They bear the legend, *Amicos parat, inimicos tollit*.

THE *Educational Year Book* for 1880, which will be published next week by Messrs. Cassell, Petter, Galpin and Co., will, we understand, be enlarged by the addition of upwards of one hundred and fifty extra pages in order to make room for the introduction of several departments on education not included in the last edition—female education, professional and technical education, &c. The book has, moreover, been revised and corrected to date, and additional matter introduced into those sections which deal with middle-class schools, the universities, local examinations, &c.

THE Baroness Burdett-Coutts has given a further donation of £20, and the Countess of Airlie a sum of £10, to the London Institute for the Advancement of Plain Needlework, 194 Westminster Bridge Road. Some of the specimens executed by students for the last certificate examination will be on view at the lecture-room during the week commencing February 9.

WE have received *The Second Coming of the Lord: its Causes, Signs, and Effects*, by the Rev. Chauncey Giles (Lippincott); *Society the Redeemed Form of Man, and the Earnest of God's Omnipotence in Human Nature*: affirmed in Letters to a Friend, by Henry James (Boston: Houghton, Osgood and Co.); *The History of Jesus of Nazara*, by Dr. Theodor Keim (Theological Translation Fund Series), vol. iv. (Williams and Norgate); *The Inner Life, as Revealed in the Correspondence of Celebrated Christians*, ed. the Rev. T. Erskine (S. P. C. K.); *The Credentials of the Catholic Church*, by the

Rev. J. B. Bagshawe (Washbourne); *The Children's Treasury of Bible Stories*, part i., by Mrs. Herman Gaskoin (Macmillan); *Scripture Lessons in Teuton English*, with Appendix containing a List of Teuton English Words in Common Use, compiled by O. L. (Longmans); *The Testimony of the Stars to Truths Revealed in the Bible*, abridged from the late Miss Frances Rolleston's *Mazzaroth*, by Caroline Dent (Rivingtons); *Chapters on Christian Catholicity*, by A. Clergyman (Triibner); *Catholicity in its Relation to Protestantism and Romanism*: being Six Conferences delivered at Newark, N.J., at the Request of Leading Laymen of that City, by the Rev. F. C. Ewer, S.T.D. (New York: G. P. Putnam's Sons); *Listening and Learning on Calvary*: Seven Addresses on the Words from the Cross, by the Rev. T. Grey Collier, M.A. (Griffith and Farran); *The Two Bibles: a Contrast*, by A. M. (Dublin: M. H. Gill and Son); *God and I: a Manual of Devotion* compiled from the Book of Psalms (Wilson and Son); *The Child's Life of our Lord*, by S. Geraldina Stock (Marcus Ward and Co.); &c.

TWO SONNETS.

ALGIERS.

LIKE Dido on the Carthaginian strand,
Facing the pale, fathse sea in blank dismay,
Aeneas-lorn; or, 'neath the garish day,
Like some great pearl cast up from ocean-land,
Whose light, reverberating swift, hath spann'd
Heaven and shore and sea, art thou—a ray
From out the sun-swept sea, thou dost betray
The sun, thy lover, ere he gain command.
Well, guilty City, may the soul be led
To think of Europe paling at thy frown,
To muse on thine old splendour, conquest-bred,
Imperial mistress of the Great Sea crown,
Seeing thee France-bestridden, spirit-dead,
And thy barbaric grandeur quite cast down.

THE OLD YEAR.

PASS not, O happy year; ah, linger yet!
For lo! the winter ways with balmy airs
Are sweet, and in the sun thy forehead wears
No touch of Time, nor are thine eyelids wet;
Thou shalt not die; upon thee there is set
Deep—during immortality that dares
The envious future, and the veil down-tears
Where new with old, and old with new are met.
Ah, linger yet, most happy, happy year,
With flower-fed eyes, with wine upon thy lips,
The new Spring playing at thy rosy feet;
Ah, me! upon thy bosom faint with fear
I fall, I whirl in deadly cold eclipse,
And 'tis thy corpse thus fondly I entreat.

J. ARTHUR BLAIRKIE.

THE RUSSIAN UNIVERSITIES.

WE have received from Moscow a vigorous and pathetic protest against the repressive measures recently adopted by certain Russian officials against freedom of thought, or at least of speech, among Russian scientific men. As it is signed merely "Un Individu de l'Intelligence russe," we have no means of proving its author's trustworthiness. Of course he had good reasons for not signing his name. Letters have an unpleasant knack in Russia of opening themselves in the post-office, and the writer of such a letter as is now before us would fare badly if brought before a military tribunal. Generals in Russia object to correspondents. What a wide gulf divides Russia from England—or say India! But although we cannot print the individual's letter in its entirety, we can give a summary of its contents.

The writer begins by complaining of the restrictions lately placed upon the liberty of the students in the universities. They are obliged to carry tickets about with them, like released convicts, and every civil or military official has the right to demand their produc-

tion at any moment. The idea was started of dispersing them among the provincial towns. Afterwards it was settled to leave them in the university towns (St. Petersburg, Moscow, Kief, Kharkof, and Odessa), but to place them under inspection. The Government inspector is not likely to be a model of civility. Sometimes he proves himself quite the reverse. Thus in one university, it is said, the inspector ordered a student whom he found with his cap on in a chemical laboratory to take it off. The professor of chemistry explained that the cap was a necessity, the weather being bitterly cold and the laboratory not being heated, cold being required for the work the student was engaged upon. The inspector refused to be convinced. So the professor resigned, and six of his colleagues followed his example. Whereupon the inspector was dismissed. But all professors cannot afford to get rid of inspectors by resigning. At Odessa a protest against the new rules was read by one of the professorial body to his colleagues. Denounced by a spy, he was taken before the acting governor, threatened with Eastern Siberia, and forced to humiliate himself. The letter ends with an appeal to the English press and Parliament, which is quite beside the mark.

The explanation of the measures justly complained of by the writer is that the officials who are now engaged in crushing, or attempting to crush, the "Nihilist" movement object to the Liberal party in Russia, the party in favour of progress and culture, more than to the "Nihilists" themselves. They are well aware that those revolutionists are few in number, strong only in their utterly unscrupulous fanaticism. They are not afraid of them. But they do fear the men of intellect and culture, the men who object on principle to bribery and extortion, to harsh exilings and cruel imprisonments. Until the recent crimes were committed by the extreme section of the Russian revolutionists, the reactionary generals who now rule Russia had no excuse for meddling with professors and students. Those crimes have placed the power to do so in their hands. And they use it. Narrow-minded men in office love to punish the public in revenge for crimes committed by individuals. Because individuals steal books from a library, for instance, therefore all the visitors to that library are to be annoyed and insulted. Because some students at the universities are of a Socialistic turn, therefore all the members of the universities are to be "taught their place," vexed, and humiliated. It is a great calamity for a country when its scientific institutions are regulated by uncultured soldiers. But the reason why such persons regulate universities in Russia is that crimes have been committed by certain fanatics who may justly be considered "enemies of the human race."

OBITUARY.

On January 15, at the age of forty-nine, died Philip Edward Pusey, M.A., only son of Dr. Pusey. The blow was unexpected, though the strain upon the nervous system of one so full of infirmities and yet so laborious a student must have been considerable, and makes the apoplectic seizure somewhat more intelligible. Not cast down by his grievous disadvantages, Mr. Pusey early resolved to do what he could for the Church as a student. His monument is his beautiful edition of the works of St. Cyril, printed at the Clarendon Press. "In journeyings often," may be said of him with perfect truth. In the libraries of Moscow and Madrid, in the monasteries of Mount Sinai and Mount Athos, he was a familiar visitor, primarily for his own necessary work of collating MSS. of St. Cyril. "How is Philippos?" was one of the first questions with which a later traveller was

greeted by the secluded monks of Mount Athos. Mr. Pusey also rendered such service as he was able to his father on the patristic side of his studies. Nor was he a mere student. A sweet and unaffectedly religious character endeared him to many who had never heard of the great St. Cyril.

THE Duc de Gramont, who died in Paris on Saturday last at the age of sixty-one, was the author of *La France et la Prusse avant la Guerre* (1873) and of a series of articles which appeared in the *Revue de France* under the signature of "Memor." In 1874 he printed for private circulation a few copies of a History of the House of Gramont. M. Jules Favre, who died two days later, was the author of a valuable History of his Government, and the successor of Cousin in the French Academy.

THE death is also announced of Mr. G. Wharton Simpson, of Catford Bridge, author of *The Photographic Teacher*, &c.; of the Countess Ida von Hahn-Hahn; of Paolo Frisiani, head of the Brera Observatory; and of Prof. von Waechter, Professor of Law at Leipzig.

CORRESPONDENCE.

THE ORIGIN OF NORSE MYTHOLOGY.

Würzburg: Jan. 11, 1880.

May an outsider be permitted to come forward in the interesting discussion regarding the origin and antiquity of Norse mythology which has been occasioned by the summary of Prof. Bugge's views printed in your issue of November 30? I will not try to oppose arguments of my own to Mr. Alfred Nutt's learned remarks; all I wish to do is to call attention to a paper which has just been published on the above subject by Prof. Konrad Maurer, of Munich, who, though a German, is one of the leading authorities in the field of ancient Icelandic and Scandinavian literature and history. It is only a few years since Prof. Maurer, at the call of the Norwegian Government, delivered to the students at Christiania a course of lectures on the ancient laws of their country. His present paper contains an abstract of Prof. Bugge's opinions, to which are appended some remarks of his own; and, as the latter bear directly on the points noticed by Mr. Alfred Nutt in your issue of January 3, and are not likely to come under the notice of many English readers, I beg leave to summarise them in your columns.

Prof. Maurer begins by stating that till quite recently all scholars used to subscribe to the two sayings of J. Grimm, that "the genuineness of Norse mythology can no more be doubted than the genuineness and originality of the Norse tongue," and that "the close kinship existing between Norse mythology and the religious beliefs of the Teutonic tribes is equally palpable." This is precisely the view which Mr. Alfred Nutt advocates; but Prof. Maurer goes on to show that it has been relinquished of late, not by Prof. Bugge alone, but by a great number of other scholars, especially in the North. As early as 1868, a Danish scholar, E. Jessen, pointed out that the Edda has largely drawn from the German *Heldenage*; that the scenes depicted in it do not belong to Norway alone, but to Iceland as well; that words of Latin origin occur in it; that its style is, to a great extent, artificial and learned instead of popular; and that it presupposes in several cases an acquaintance with Christianity. About the same time, or soon afterwards, similar doubts regarding the supposed high antiquity and original heathen character of the Edda were expressed by Prof. Maurer himself and by Prof. Möbius, of Kiel; while Vigfússon pointed out in his dictionary that numerous songs of the Edda presuppose an intimate acquaintance with England and Scotland, and went to the length of affirming, in a later work, that the majority of them must have been composed in the British Isles. An eminent Norwegian historian, E. Sars, started the theory, in 1873, that the contents of the Edda reflect the narratives current among the warriors and courtiers of the age of the Vikings much rather than the ancient traditions of the mass of the people. Henry Petersen, in his work *Om Nordboernes Gudekyrkelse* (Copenhagen, 1876), while attacking the latter theory, collected many facts tending to show that the popular system of faith prevalent in the North must have differed vastly from the religious ideas promulgated in the two Eddas, and tried to explain the latter as due to foreign influence. It was the lively discussion called forth by Petersen's work which caused Prof. Bugge to reconsider the whole problem of the rise of Norse mythology, and thus to arrive at his well-known conclusions. Part of his new theory, however, had already been propounded by himself several years earlier, inasmuch as he had endeavoured to prove in 1873 (and L. Wimmer in 1874) that the twenty-four runes of the ancient Teutonic alphabet must be adapted from the Latin

characters, the Teutonic tribes having received the latter from the Celts, and that the ancient Scandinavian system of sixteen rune characters merely represents a shorter form of the Teutonic alphabet; and in 1876 had expressed his conviction that the metre of the lays of the Edda, as they are, prevents us from assigning to any one among them an earlier date than the ninth century A.D. The antiquity of Norse metrics was doubted also by A. Edzardi, who tried to prove in 1878 that it must have been formed upon the model of the metres used in Irish poetry.

It thus appears that the assumption by which Prof. Bugge tries to account for those elements in Norse mythology which have not been traced in the Teutonic myths as well, instead of being entirely novel, goes only a step farther in that direction towards which most recent researches into the origin of Norse mythology and poetry seem to tend. Nevertheless, considering the wide bearing of this theory, its revolutionary character cannot be denied, and is fully recognised by Prof. Maurer, and indeed by Prof. Bugge himself. The former, though agreeing with Prof. Bugge in principle, adds that, to his mind, he has far better succeeded in proving the influence of Christian or Jewish ideas upon the growth of Norse mythology than in identifying Norse myths with Greek or Roman ones. It is to the latter point that Mr. Nutt's criticisms were chiefly directed. Meanwhile, the judgment regarding the details of Prof. Bugge's theory will have to be suspended until the appearance of his new paper, which is to be published both in Norwegian and German.

JULIUS JOLLY.

London: Jan. 17, 1880.

Hahn, in his *Sagwissenschaftliche Studien*, gives twenty-two cases of parallelism between the mythology of the Greeks and that of the Norsemen as preserved for us in the Edda. If the bulk of this last is indeed "based on foreign tales and poems heard by the Vikings from Englishmen and Irishmen," ought there not to exist an Anglo-Celtic literature yet more closely allied than the Eddaic to the Greek mythology, and reproducing its main features with yet greater distinctness? Where is such a literature to be found?—in the body of mythical and traditional lore which has gathered among the Gael around Fionn and Oisín, among the Cymry around Arthur and his companions? I do not think anyone would be prepared to affirm this. That the Ossianic mythology shows a general likeness to Greek myth on the one hand, and to Norse saga on the other, is undeniable (the resemblance between the stories of Diarmaid and Grainé and Venus and Adonis, Thor's journey to Utgard-Loki and "How Fionn came to the House of Cuana," was long since pointed out); but that it has borrowed from the one and lent to the other is demonstrably false. In the second case of parallelism, for instance, the Norse story, which, though very late, has yet preserved many mythical features, could not possibly have come directly from the Irish version, which is in the last stage of ethical degeneration.

If the origin of the Eddaic stories is not in the Ossianic cycle, where else is it to be sought for in Irish literature? The vast mass of mythological and epical lore which ought to be there according to Prof. Bugge's theory would seem to have utterly vanished, leaving no mark either on the written literature or on the folk-tale, both of which feel to this very day the influence of the Ossianic tradition. Indeed, the absence of any traces of classical influence upon Irish mediæval literature has been frequently noticed (*e.g.*, *Oss. Soc. Publications*, vol. iii., pp. 37, *et seqq.*).

It is possible that Prof. Bugge may have evidence more than enough to justify the some-

what dogmatic tone in which we are asked to accept his results. Until that evidence is produced it may be allowed to doubt whether those results are "so certain in their general outline," and to hold with Grimm that "die Echtheit der nordischen Mythologie anzufechten wäre eben so viel als die Echtheit oder Selbstständigkeit der nordischen Sprache in Zweifel ziehen."

ALF. NUTT.

THE PROPOSED FRENCH SOCIETY FOR THE PRESERVATION OF ANCIENT BUILDINGS.

London: Jan. 12, 1880.

While rendering full justice to the motives which inspired the formation of the French Commission des Monuments historiques, I still earnestly hope that those gentlemen who propose establishing a society for the protection of ancient buildings in France will succeed in carrying out their project.

When the commission was instituted it undoubtedly represented the opinions of those who had a strong interest in the historic monuments of their country, and a genuine desire to preserve them. Unfortunately, these praiseworthy intentions were accompanied by the strange wish to reproduce those buildings in their primitive state. This arose from the passion for archaeology, which received an unwonted impetus at that time—the period of the Romantic reaction—and which nowhere found more devoted students than among the French. Naturally, the science had peculiar attractions for architects, or rather those among them who had artistic inclinations without the creative power which impelled them to original work. Still, being conscious of their scientific knowledge, they were not content that it should only find literary expression, but were ambitious to embody it in more material form. Such a man was Viollet-le-Duc. His knowledge of all pertaining to fourteenth- and fifteenth-century architecture was prodigious—so vast that it overwhelmed his artistic instinct; in short, he was an archaeologist, not an artist. Hence his restorations have resulted in the absolute and final obliteration of the edifices he operated upon.

To some, the above may seem a very sweeping assertion. I can only venture to trespass on your space for the briefest illustration. The simplest case that can be taken is that of a piece of stone-carving. It would have been worn and stained by weather, and possibly damaged by man. Here and there a bit would be knocked away, yet perhaps on the under surface retaining the marks of the chisel; so that some of the actual work was still visible, the design was all there, and the colour was harmonious and appropriate, sometimes positively beautiful; moreover, it served as a chronicle of the centuries it had outlived. Many such stones we must all have seen. If we look for them now we find them either recut, with the damaged portions replaced, or else carted clean away. Of the inability of the modern carver to reproduce the work of past ages so much has been said of late that it is unnecessary for me further to allude to it. Thus genuine and beautiful work—work full of poetry and invention—has disappeared for the artist, the historical student, and the archaeologist; and, by the irony of fate, it is the touch of the archaeologist that has caused it to vanish.

If it had happened that a scholar had come into possession of a considerable portion of one of the lost tragedies of Sophocles, and, emending what was genuine, had attempted to complete the work, then, turning it into modern Greek, had finally destroyed the original document, what verdict would scholars and the literary public pass upon him? I am inclined to think it would have been better for him if he had never been born; for after such an act his life would have been unendurable, and his name would for ever have remained a byword. And

yet this is what is being done to our carved tragedies and epics, hitherto with almost universal applause, the reason being that the literary taste of the age is so far in advance of the artistic. Some of us, however, are sanguine enough to believe that in the next or future generations the latter will be developed to a certainly equal extent; and this consideration, as much as regard for our own artistic gratification, induces us to make some effort to preserve what remains of the architecture of the past.

Besides the influences mentioned above, which have acted so fatally, there have been others merely vulgar, such as the *éclat* accruing to the Governments which were supposed to be revivifying the national monuments, and also the delight of the uneducated in what is new and smart. The reply to this is that they have no right to secure their gratification at such a cost. If they wish to see the effect of mediæval or Renaissance architecture as it appeared when new, let them order copies to be erected. By so doing they will accomplish no greater harm than the mere waste of time and material, and possibly at that expense acquire wisdom. For before ten years have passed they will assuredly have become tired of their toy. Such fantasies are killed with ridicule—witness the reproductions of ancient buildings at Munich. But other feelings arise when we know that such mechanical trumpery stands in the place of what was once genuine artistic work.

For these reasons it is to be hoped our friends will persevere in their endeavours. Belonging to a nation so eminently logical as the French, they will probably induce the Government Commission to accept their views. At any rate, it is hardly likely that they will be sedulously and systematically misrepresented. What they may achieve is the saving yet a little longer some few memorials of the aspirations and handwork of their forefathers. Works of art, like their makers, must finally disappear; the utmost we can do is to retard their decay. That result does not follow, in the case of the latter, from making them suffer the punishment of Marsyas; a like fatality attends the same operation when performed on the former—even when conducted on the most scientific principles.

HENRY WALLIS.

HAWTHORNE'S "FANSHAWE."

London: Jan. 17, 1880.

It surprised me much to find Mr. Henry James, jun., speaking in his book on *Nathaniel Hawthorne* of the early novel, *Fanshawe*, as if the only opinion that could now be formed of it must be based on the account of it given in Mr. Lathrop's *Study of Hawthorne*. It surprises me still more to find Mr. George Saintsbury writing of it in your last issue as the "half-lost romance of *Fanshawe*." This was true when Mr. Lathrop wrote his *Study*—it was "half lost" then—but it is now fully found; and anyone curious about Hawthorne and the development of his genius can buy it from Mr. Triibner, or find it in the British Museum Library, for it has been republished, with some other early stories, in two volumes, uniform with the author's (American) edition of the works.

ALEX. H. JAPP.

London: Jan. 19, 1880.

Dr. Japp's letter does not, to my mind, show any difference between us, except as to the meaning of the term "half lost." This term seems to me well enough applied to a work to which the author has practically denied circulation. I was perfectly aware of the reprint to which Dr. Japp calls attention.

G. SAINTSBURY.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 26, 5 p.m. London Institution: "The History of Inventions," by E. B. Tylor.
7 p.m. Actuaries: "On the Practical Application of Mr. Makeham's Formula to the Graduation of Mortality Tables," by G. King and G. F. Hardy.
8 p.m. Royal Academy: "Truth in Art," II., by Briton Riviere.
8 p.m. British Architects.
8 30 p.m. Geographical: "Journey through Central South Africa, from the Diamond Fields to the Upper Zambesi," by Dr. E. Holub.
TUESDAY, Jan. 27, 3 p.m. Royal Institution: "Physiology of Muscle," by Prof. Schäfer.
8 p.m. Civil Engineers: Discussion on "Fixed and Movable Weirs."
8 p.m. Anthropological Institute: Anniversary.
8 p.m. Spelling Reform Association.
WEDNESDAY, Jan. 28, 8 p.m. Society of Arts: "The Future of Epping Forest," by W. Paul.
8 p.m. Literature: "The Spelling-Reform Dead-lock," by Dr. C. M. Ingleby.
8 p.m. Telegraph Engineers: Inaugural Address, by the President-Elect.
THURSDAY, Jan. 29, 3 p.m. Royal Institution: "Chemical Progress," by Prof. Dewar.
7 p.m. London Institution: "Two Centuries of Shaksperian Acting," by H. B. Wheatley.
8 p.m. Royal Academy: "Architectural Ornament," by E. M. Barry.
8 30 p.m. Royal. Antiquaries.
FRIDAY, Jan. 30, 8 p.m. Society of Arts: "Herat," by Col. G. B. Malletson.
9 p.m. Royal Institution: "Proportions of the Human Figure," by J. Marshall.
SATURDAY, Jan. 31, 3 p.m. Royal Institution: "Coal," by Prof. T. Rupert Jones.

SCIENCE.

A Treatise on Metalliferous Minerals and Mining. By D. C. Davies, F.G.S. (Crosby Lockwood & Co.)

THERE is unquestionably room in the scientific literature of this country for a good treatise on mining for metalliferous minerals. Such a treatise, however, if it is to be of any real worth, must be written by a man of no ordinary attainments. Mere familiarity with the pick and gad, though counting for a good deal, is by no means a sufficient qualification for the task; neither does a knowledge of mineralogical and geological science, however profound, justify a man in writing on the subject of mining. What is really needed is a combination of the two sets of qualifications—an acquaintance with the several sciences which bear upon the principles of mining, coupled with an acquaintance with the actual operations of the miner—science, in short, combined with practice.

When we first cut the pages of Mr. Davies's neat little volume, we unfeignedly hoped that it would prove to be a treatise worthy of the mining interests of our country. Nothing, indeed, could be better than the aim which the author sets before him in his Preface; nothing more satisfactory than his promise to throw light upon the origin of ore-deposits, and to define the conditions under which they occur, so as to lessen the uncertainty which too often attaches to the search for minerals of economic value. Old-fashioned folk may snap their fingers at the notion that inductive philosophy can ever be pressed into the miner's service, and may be content to fall back upon the empirical aphorism—"Where it is, there it is." But Mr. Davies is not one of these practical men who despise science in their heart. He is evidently a sincere believer in the value of scientific principles, and we therefore trusted ourselves with confidence to the light which he offered to shed upon the miner's path.

It was not necessary, however, to read many pages of the work before our confidence began to quiver, and at every page we

became more and more painfully conscious of the feebleness of the proffered light. However excellent the intention of our guide, it was clear that he was but ill equipped for the enterprise on which he had ventured. It is true that he has been at some pains to collect, from one source and another, a good deal of information; but unfortunately there is manifest throughout the work a lack of precision in the use of scientific language which leaves a most unsatisfactory impression upon a critical reader. It seems to have escaped the writer that before undertaking so ambitious a work as a "Treatise on Metalliferous Minerals" it is necessary to undergo a severe discipline in half-a-dozen sciences. A mere smattering is nowadays of little use; yet such a superficial knowledge is all that the writer displays in this volume. When Mr. Davies's work on *Slate and Slate Quarrying* was reviewed in these columns a few months ago, we ventured to point out in a delicate manner that the author was evidently treading upon dangerous ground when he overstepped the limits of his practical knowledge and touched the scientific branch of his subject. The defect to which we then drew attention is unfortunately much more glaring in the present volume.

Inaccuracies of a trivial character—much as they mar a book—may be charitably set down to slips of the pen. Of such inaccuracies there is no lack in the present volume; witness the curious statement that silver is "one-sixth lighter" than gold (p. 81); or the description of clay ironstone as a variety of hematite (p. 248); or the geographical pleonasm which describes a mineral as occurring "at Facebay, in Siebenburg [*sic*], in Transylvania" (p. 286); or the definition of glycerine as "a fatty acid" (p. 327). There are, however, errors of a more serious kind, but to expose these would require copious quotations, occupying much greater space than we can here command. We shall therefore content ourselves with citing a few definitions from the Glossary appended to the work.

Here, for instance, is a definition for the criticism of chemists:—

"POTASH. Potassium mixed with varying proportions of other substances."

Again, what can a mineralogist say to such a definition as the following, occurring, be it remembered, in a work largely devoted to the description of minerals?—

"CRYSTALLINE. Greek (*Krystallos*, ice). Rocks and other substances changed into a hard shiny form and particular shapes."

One other quotation must suffice, and this shall be petrological:

"PORPHYRY. The name by which the red felspar of Egypt was known, and now applied to most rocks where red felspar is present."

If we might liken Mr. Davies's book to some of the veinstones which are described in its early pages, we should be tempted to compare it to a brecciated lode—a lode which contains here and there a valuable bit of glistening ore, but which is made up for the most part of angular fragments comparatively worthless in themselves, bound together by a cement of only trivial value. At any rate, in exploring the pages of this treatise it has

rarely been our luck to light upon a good bunch of ore.
F. W. RUDLER.

CURRENT SCIENTIFIC LITERATURE.

An Atlas of Anatomy, with Descriptive Letterpress. By Mrs. Fenwick Miller. (Stanford.) This is one of a series of "instructive picture-books," primarily intended for children, but designed also to be useful to science teachers and students of all kinds. As a help to demonstrative teaching from preparations and dissections such a book may be of use, but if it is employed as a substitute for actual contact with the objects depicted it will do more harm than good. Anatomical knowledge, even of the most elementary kind, must be got at first-hand. A few bones and the carcass of a rabbit will enable a competent teacher to convey more real information to his pupils in the course of a few lessons than they can derive from all the books and pictures in the world. Having premised thus much, we have nothing but praise to bestow on the present Atlas. The figures are, of course, diagrammatic and boldly, not to say roughly, executed, but they appear to be substantially accurate and carefully selected. The illustrations of minute structure, indeed, might well have been omitted, since no one who is not familiar with the use of the microscope can go through the mental process needed to realise the connexion between the actual size of an object and its apparent dimensions under a high power. Without such a mental process, the effect of looking at histological diagrams is utterly misleading to the ordinary student. Mrs. Miller's descriptive letterpress is pleasantly written, though she has perhaps yielded too much to the temptation of trying to clothe the bare bones in attractive raiment, and adorn them with purple patches of poetical quotations.

Annals of Chemical Medicine. Vol. I. By J. L. W. Thudichum, M.D. (Longmans.) The title of this work is somewhat misleading. The application of chemistry to physiological and pathological enquiries may, for the sake of brevity, be termed "medical chemistry," but it affords no warrant for speaking of a "chemical" medicine. Again, these "Annals" consist merely of a collection of original memoirs and reviews already published by the author in various periodicals, and cannot be taken as in any sense a complete account of the progress of physiological and pathological chemistry during the period which they cover. This is not the place for any expression of opinion concerning the value of Dr. Thudichum's researches. His zeal and industry cannot be denied; and if many of his results are still questioned, or, if not questioned, ignored, by other chemists, he is fairly entitled to plead that they have not taken the trouble to follow him step by step over the ground which he has trodden. The volume is handsomely got up and illustrated with a considerable number of woodcuts.

THE GRAMMAR OF KANDRA.

I.

Kandry: Dec. 18, 1879.

At a time when the enquiry into the history and development of Sanskrit grammatical literature is engaging a large share of the attention of Oriental scholars it gives me great pleasure to announce to them the discovery of an important work in Ceylon which will throw much light on this interesting subject.

That a grammar by Kandra existed till about eight or nine centuries ago, and that it now exists in a Tibetan version only, are facts within the knowledge of every well-read

Orientalist. Not only is there the absence of its name from every catalogue of existing Sanskrit works, whether published or still in MS., but we have the distinct assertion of Rājendralāla Mitra, LL.D., on p. 162 of his descriptive catalogue of Sanskrit MSS. in the library of the Asiatic Society of Bengal, published in 1877, that the work is lost.

We find the author mentioned in the twelfth century by Vopadeva in the second verse of the Introduction to his admirable Dhātupāṭha called the Kavikalpadrūpa. There a list is given of the eight principal grammarians, the founders, no doubt, of eight different schools, to some one or other of which all the existing grammatical treatises are referable. These are Indra, Kandra, Kāsakritsna, Āpisali, Śakāṭyana, Pāṇini, Amara, and Gaiṇendra. The works of Indra, Kāsakritsna, Āpisali, and Amara are also lost, and MSS. have only been discovered of those of Śakāṭyana, Pāṇini, and Gaiṇendra. That Āpisali and Śakāṭyana were predecessors of Pāṇini appears from their being mentioned by him; and, although there is no mention of Indra in his work by name, yet there are reasons making it highly probable that the Prāṇka frequently referred to by him belonged to his school. It is also clear that several works now extant, such as the Kātantra and others, have been composed on the principles of the Aindra school of Sanskrit grammar. With the exception, therefore, of Indra, more perhaps is known of Kandra from quotations in existing works than of any one of the other three whose works have shared the same fate—viz., Kāsakritsna, Āpisali, and Amara. What is known of him, however, is so scanty that it would not enable us to form any definite idea of the character and extent of his work. To say that it consisted of sūtras, and that it was quoted by Bhāṭṭi in the Praudhamanoramā, by Uggvaladatta in his commentary on the Unādi-sūtras, and by one or two other authors, would embrace perhaps all that could have hitherto been said of the Kandra grammar. But the MS. just discovered enables us to ascertain with certainty several important facts regarding this work and its relation to the existing systems of Sanskrit grammar.

From this MS., of which I shall give a short account before concluding this paper, we gather that Kandra's work was based on the model of, and was intended as an improvement on, Pāṇini's Aṣṭādhyāyī. Both works have adopted the same arrangement, which may be termed artificial as distinguished from the natural arrangement according to subjects observable in the Kātantra and Mugdhabodha, and, in fact, in all European treatises on grammar. The division into adhyāyas and pādas is also common to both works, with only this difference, that the number of adhyāyas in Pāṇini is eight, while that in Kandra is six. This has resulted probably from the latter embodying in one adhyāya the substance of Pāṇini's third, fourth, and fifth chapters, all of which treat of affixes.

Both works open with a peculiar arrangement of the letters, materially differing from the alphabetical arrangement, and styled by the Pāṇinīya school of grammarians the Sivasūtras. There is, however, a slight difference between the two schemes—viz., that the *it* or *anubandha* at the end of the fifth sūtra in Pāṇini's is omitted in Kandra's scheme, which thus contains thirteen sūtras, while the number in Pāṇini's is fourteen. This omission causes the absence from Kandra's work of only one pratyāhāra, *at*, the necessity for which is obviated by Kandra in an ingenious manner, as will be seen from an instance which I cannot help adverting to.

Pāṇini, after laying down in viii. 4, 1, that the dental *n* should be changed to the cerebral *ṇ* when it follows *r* or *sh* in the same pada, states in the sūtra immediately following

that the rule obtains even when the letters included in the pratyāhāra *at*, and those belonging to the guttural and labial classes of consonants, as well as the preposition *an* and the augment *num*, intervene between the *r* or *sh* and the dental *n*. Kandra, on the other hand, after giving a rule corresponding to Pāṇini viii. 4, 1, in nearly the same words, mentions in a subsequent sūtra a number of letters the intervention of which between the *r* or *sh* and the dental *n* prevents the operation of the first-mentioned rule. These letters are those belonging to the palatal, cerebral, and dental classes of consonants, those included in *sar* and the consonant *l*. The obvious meaning of this is that the intervention of any other letters—and the only others are those given by Pāṇini—does not prevent the cerebral change.

At also occurs in Pāṇini viii. 4, 63, but in the corresponding sūtra of Kandra we find, instead of it, the more comprehensive pratyāhāra *am*, which includes, besides the letters contained in *at*, the nasals and the consonant *l*. That Kandra's rule is the better of the two will be readily admitted when it is remembered that Pāṇini's sūtra was amended by a vārttika of Kāṭyāyana substituting this very pratyāhāra *am* for the less comprehensive *at*.

Another pratyāhāra employed by Pāṇini but dispensed with by Kandra is the *an* formed with the second *n* in the scheme. This occurs only in one solitary sūtra of Pāṇini, viz., I. i. 69, according to which the letters contained in it would also represent or imply their homogeneous modifications; for instance, the short vowel *a*, which alone is given in the scheme, would imply, among others, the long and prolated *ā*. Kandra finds no necessity for this rule, and omits it altogether, as the short vowel *a*, being a *gāti* term, would necessarily imply its long and prolated forms and its other homogeneous variations.

The only other pratyāhāra employed by Pāṇini and omitted by Kandra is *ghas*; but he employs in his grammar the four pratyāhāras, *rik*, *ṇam*, *mam*, and *kay*, which do not occur in Pāṇini. With reference to the last of these, *kay*, it must be stated that, though not employed by Pāṇini, it is used by Kāṭyāyana in a vārttika to viii. 4, 48.

With the aid of these new pratyāhāras Kandra has effected a decided improvement on many of the sūtras of Pāṇini, an instance of which may here be mentioned. The sūtra Pāṇini i. 1, 51—*Uraṇ raparaḥ*—means, if we assign to the terms occurring in it their true and legitimate significations, that *an*, that is to say the vowels *a*, *i*, and *u*, substituted for the vowel *ri*, should be followed by *r*. It was found by grammarians that this rule stated too little, as it did not teach that *an*, substituted for the vowel *li*,* should be followed by *l*. To remedy this defect Pāṇini's commentators were obliged to have recourse to several ingenious devices, attributing to Pāṇini doctrines he never inculcated and contrivances he never intended. They held that the vowels *ri* and *li* are homogeneous, and that the former, according to I. i. 69, implies the latter. This can scarcely be said to be a perfectly correct view, as *li* is actually given in the *siva-sūtras*. At all events the commentators are not consistent, as, while asserting that *li*, which is given in the scheme, is homogeneous with *ri*—which in point of fact it is not, the former being a dental while the latter is a lingual—they, in almost the same breath, assert, for certain objects which it is foreign to my purpose to mention

* Almost all Oriental scholars transliterate this vowel by "li." I have my reasons for omitting the *r* and retaining only *li*, but they are too long to be stated in a foot-note. See Max Müller's *Sanskrit Grammar*, p. 13.

here, that ai and au, which in point of fact are homogeneous with e and o respectively, are not homogeneous with them, because the former are given in the scheme at the beginning of a sūtra. Having, however, by this grammatical fiction brought in the vowel *i* by implication into the rule, they had a still greater difficulty to contend with, viz., to show that the consonant *l* is also mentioned in it. To meet this fresh difficulty they resorted to a step to which there is no parallel in point of subtlety in the whole range of grammatical invention. They contended that the *a* in the sixth siva-sūtra, *lan*, is an *it*, and that the consonant *r* in the fifth siva-sūtra forms with it the pratyāhāra *ra*, which includes the letters *r* and *l*. In this extraordinary way the commentators of Pāṇini have explained the sūtra in question to mean that *an* substituted for *ri* and *li* should be followed by *r* and *l*. If now we turn to the corresponding rule of Kāṇḍa—*riko 'no rala*—we are forced to admit that the doctrine is taught there in the plainest terms, and that this has been effected by the adoption of the pratyāhāra *rik* not occurring in the sūtras of Pāṇini.

In both works the employment of pratyāhāras is not confined to letters, but their application is extended to affixes also, which appear to be enumerated in the same order, beginning with *san* and ending with *kap*. The affix pratyāhāras are also identical in the sūtras of both grammarians, with this difference: that in Kāṇḍa there are two sups, one formed with *su* and *sup*, as in Pāṇini, and the other with *su* and *kap*.

A remarkable feature in the system of Kāṇḍa is the absence from it of several technical terms invented by Pāṇini, or adopted by him from prior grammarians, such as *guna*, *vriḍḍhi*, *pragrihya*, *sarvanāsthāna*, *gli*, *nadī*, *shat*, and several others. This circumstance led me at first to suppose that Kāṇḍa's work was prior to Pāṇini's; but a closer examination has convinced me that the omission was intentional. The reason for this stop appears to be that, while by the omission of these terms no obscurity or lengthening of the sūtras would result, there was the decided advantage of many sūtras, such as those defining them, or rather explaining the meanings assigned to them, being omitted and, indeed, of others being actually shortened—a primary object according to the Mahābhāṣya in all grammatical sūtras. I shall illustrate this by an example or two.

Pāṇini's explanation of *vriḍḍhi* is "*vriḍḍhir āḍaḥ*," of *guna* "*adeḥ gunah*." It must be remembered that these sūtras are not, properly speaking, definitions of the terms *vriḍḍhi* and *guna*, but that they merely give these names to the letters mentioned in the sūtras. Now these terms are by no means shorter than the convertible terms *āḍaḥ* and *adeḥ*, and hence no advantage is gained by the use of the former in a sūtra in preference to the latter, which may be used to equal advantage, as they actually have been by Kāṇḍa.

In the case of *sarvanāsthāna*, consisting of six syllables, there is a considerable economising of space by its omission and by the retention of the dissyllabic *saut* used by Kāṇḍa, and occurring in two sūtras of Pāṇini, explaining the technical term *sarvanāsthāna*—viz., *sī* in i. 1. 42 and *sut* in i. 1. 43.

The Vipratishedha-sūtra, Pāṇini i. 4. 2, and the Asiddha-sūtra, Pāṇini viii. 2. 1, also occur in Kāṇḍa, the latter being placed in about the middle of the third pāda of the sixth adhyāya. The sūtras, therefore, in the latter half of the third pāda and in the whole of the fourth are, as it were, non-existent in reference to those in the preceding five adhyāyas and two pādas, and about one-half of the third pāda of the sixth.

W. GOONETILLEKE.

NOTES OF TRAVEL.

THE last mail from West Africa brings intelligence that Capt. Easton, H.M. consul, had been a long distance up the River Niger, above the confluence of the Benue. His destination was the capital of the Sultan of Nupe's dominions, where he was ordered to take presents from H.M.'s Government. He was well received at Bida, and remained there for a week.

News has been received, through the Chinese Legation at St. Petersburg—a somewhat noteworthy channel—that Col. Prejevalsky had reached the southern part of the province of Tsaidam, on the northern frontier of Tibet. Previous intelligence, received in October from Peking, reported his arrival at Sha-chow on June 20, and his intention to remain there till the end of July.

M. POTANIN, a well-known Russian traveller in the eastern portions of Central Asia, who is passing the winter at Irkutsk, sends word to St. Petersburg that during his explorations in the past season he has solved several important questions connected with the geography of North-Western Mongolia. He was also successful in making valuable collections in natural history, and obtained a hundred photographs of ethnographical types.

MR. HENRY FOWLER, Colonial Secretary of British Honduras, has lately published an account of a journey which he made a year ago through the unknown interior of that colony. The party went up the Belize River to the Cay settlement, and thence into Guatemalan territory. Having there examined a portion of the country in search of gold, they returned to British Honduras and journeyed across the colony to the coast. In the interior, which had not been previously explored, Mr. Fowler crossed a succession of valleys and hills, the latter varying in height from 1,200 to 3,300 feet. Considerable tracts of country were found suitable for agricultural and pastoral pursuits. Minerals were also discovered in a district which runs into Guatemala, gold-bearing quartz being met with at the summit of a lofty ridge. The region traversed is entirely without inhabitants, but at one time probably had a dense population, as ancient remains were discovered in many places. The country is very fertile and vegetation most luxuriant.

MR. E. F. IM THURN, who has just returned to this country, has been engaged for three years in exploring and making botanical and other collections in the little-known interior of British Guiana. He paid two visits to the Kaieteur Falls, on the Potaro River, a tributary of the Essequibo. These falls, which were discovered by Mr. C. B. Brown in 1870, are among the greatest wonders of the world, being some 830 feet in height and 370 feet broad. Mr. Im Thurn also visited the timber region and the southern districts of the colony, and penetrated into Brazilian territory. During his journeys in the interior he paid particular attention to the undeveloped resources of the country, its natural history, the language and habits of the native tribes, the shell mounds, rock inscriptions, and other Indian antiquities. A short time before leaving Georgetown, Mr. Im Thurn issued a pamphlet on the somewhat important question of the proper boundary-line between British Guiana and Venezuela.

THE Société Khédiviale de Géographie, which was reconstituted last year, has issued a number of its *Bulletin*, which is particularly useful as a record of the labours and explorations of the Egyptian General Staff. The present part contains two papers, one of which is an account, by Mr. L. H. Mitchell, of his examination of the gold mines of Hammamat, while the other is a report by Lieut.-Col. Graves on the country

of the Mijjertain tribe of the Somali country in North-Eastern Africa. This, the wildest of the four branches of the family, inhabits the country northwards for two hundred miles, from Cape Guardafui to Zindeh and southwards to the limits of the Somali country. The territory occupied by the Mijjertain tribe is a lofty and rocky plateau, intersected by deep and narrow valleys, and divided into terraces varying in height from 1,000 to 5,000 feet.

It is announced that the Dutch are intent upon a third Arctic expedition with their tiny sailing schooner *Willem Barents*, on the strength of a curious Dutch proverb which says that "thrice is ship right." A citizen of Amsterdam has already offered to defray one-fifth of the expenses.

SCIENCE NOTES.

The Silurian Fossils of Girvan.—Dr. Nicholson, of St. Andrews, and Mr. Etheridge, of the British Museum, have just issued the second fasciculus of their monograph on the fossils from the Silurian rocks of the Girvan district in Ayrshire. The first part of this work was noticed in these columns a few months ago. The second part, which is now in our hands, is occupied exclusively with the fossil crustacea, and contains descriptions of all the phyllopoda, cirripedia, and ostracoda, together with such of the trilobites as were not disposed of in the preceding part. Six admirably executed plates add to the value of the work, the cost of which has been partly defrayed by an allowance from the Government grant at the disposal of the Royal Society. The work issues from the publishing house of Messrs. W. Blackwood and Sons.

Das Microgonidium.—Under this title Dr. Arthur Minks has published his views and a record of his observations on the nature of Lichens. His book, which consists of about two hundred and fifty octavo pages, and is illustrated by six coloured plates, is an expansion of a series of papers which the author contributed to *Flora* (Nos. 14-20, 1878), and in which he made his views well enough known to all interested. About the present publication nothing further need be said but that it is certainly not calculated to convince anyone of the accuracy of the author's opinions who has any knowledge of the subject from other sources. Any lichenological publication without an attack on Schwendener would be an exceptional one, and Dr. Minks, from his point of view, is not behind his brother lichenologists in this respect. He writes what he is evidently very much pleased to style "the epitaph" of the Schwendenerian doctrine.

THE last number of Cohn's *Beiträge zur Biologie der Pflanzen* (Band III., Heft 1) contains, among other valuable papers, a continuation of Dr. Schroeter's "Entwicklungsgeschichte einiger Rostpilze." Dr. Oskar Kirchner contributes a paper on *Volvox minor* (Stein), in which he records observations confirming Prof. Cohn's ("Die Entwicklungsgeschichte der Gattung *Volvox*," in the *Beiträge*, Band I., Heft 3), but especially details the life-history of the oospores hitherto unknown. The researches on *Bacteria* in this number consist of an account of some experiments on infection with *Micrococcus prodigiosus*, by Dr. A. Wernich; an examination of *Bacteria* suspended in the atmosphere, by Dr. Miflet; and some observations on the influence of the electric current on the multiplication of *Bacteria*, by Prof. Cohn and Dr. Benno Mendelsohn.

M. NENCKI has published (Leipzig: Barth), under the title of *Beiträge zur Biologie der Spaltpilze*, a series of experiments with *Bacteria*, consisting of researches on the capability of life

in *Bacteria* during the exclusion of oxygen; on the presence or absence of *Bacteria* in the organs of healthy living animals (with the co-operation of P. Giacomini); on the chemical composition of putrefactive *Bacteria* (with F. Schaffer); and on the empirical formula of Skatol.

PROF. HANSTEIN has published three lectures on Protoplasm, which form a good popular account of the work done on this subject.

THE second and third volumes (which have appeared together) of the *Archivio del Laboratorio di Botanica Crittogamica di Pavia* contain many papers of interest—notably those on fungal diseases of plants.

It is intended to republish in one volume the works of the late Dr. Hermann Bauke, with a short biographical sketch. Dr. Bauke, whose name has been familiar to all readers of botanical literature during the last four years, died suddenly in his twenty-eighth year on December 15.

MR. MARSHALL WARD'S "Contributions to our Knowledge of the Embryo-sac of Phanerogams" will shortly appear in the *Journal of the Linnean Society*. Mr. Ward has set out for Ceylon to enquire into the nature of *Hemileia vastatrix*, the coffee-leaf disease.

PROF. DEWAR will begin a course of eight lectures on Recent Chemical Progress next Thursday afternoon, January 29, at the Royal Institution.

MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 15.)

EDWIN FRESHFIELD, Esq., in the Chair.—Mr. W. de Gray Birch exhibited a *facsimile* of an unpublished charter of King Eadgar in the possession of the Dean and Chapter of Wells. The style of the King is given as "totius regni Merciorum monarchiam obtinens," and the date is A.D. 953, the year before he succeeded his brother Eadwig as King of England. A place called Staunton is mentioned as being within the *Pagus Magesætas*, the locality of which has not been precisely determined, though it is known to be in Herefordshire. There is nothing, however, to show whether this place is Staunton-on-the-Arrow or Staunton-on-the-Wye.—The Rev. J. Barron, D.D., read a paper upon the peculiarities of the architecture of Stockton church, Wilts. This church is nearly square, with a rectangular chancel, divided from the nave by a solid wall pierced only by a doorway with a depressed arch, and a squint on each side of it. Dr. Barron referred to churches at Bradford, Wilts; Hurley, in Berks; and others, where a similar arrangement either exists now or was known to have done so before restoration. He was inclined to attribute this peculiarity to the Greek influence imported into England by Theodore of Tarsus, Archbishop of Canterbury in 669, and compared it to the iconostasis in Greek churches. Over the east window, a triple lancet, is an opening resembling a *vesica piscis*, but horizontal. In the south aisle is a tomb, with a recumbent figure of a lady lying on the left side and looking towards an altar which formerly stood in the aisle. The views expressed in the paper gave rise to considerable discussion, and the chairman and others who spoke were not prepared to adopt Dr. Barron's views as to Greek influences, more especially as a screen and not a wall is the almost invariable means used in the Greek church for dividing the chancel from the nave.—Mr. Ouvry exhibited a portion of a jug of the thirteenth or fourteenth century, ornamented with a bearded head, found at Lowestoft.

ROYAL ASIATIC SOCIETY.—(Monday, Jan. 19.)

SIR H. C. RAWLINSON, President, in the Chair.—A paper was read by Prof. Dowson "On a Curious Litigation between the Smartava Brahmins and the Lingayats, in which Two Copper Plates were produced." The writer stated that the Smartava Brahmins have, in the South of India, twelve *Maths*, or monastic establishments, of remote antiquity. The chief of these *Maths* is held in

high honour, and among his marks of dignity is the privilege of being carried in a *palki* crosswise, so as to sweep the road. These Brahmins are much troubled by the Lingayats—a dissentient sect some five or six hundred years old—who are very numerous in their neighbourhood. The chief of these Lingayats, to assert his own dignity, caused his *palki* to be thus carried, which led to riots and disturbances, till, at length, the head of a Brahman *Math* brought an action against the Lingayat for damages to compensate for the loss of the honours he considered due to him. In the course of the trial the Brahman produced two copper plates, dated in the twelfth century A.D., which were supposed to convey the cherished privilege, by a grant from a monarch of the time. The Brahman, having lost his case, appealed to her Majesty in Council, and the evidence sent home contained a translation of the two copper plates, which was, however, unintelligible, the impressions of the plates being very indistinct. Many years have now elapsed, and nothing more has been heard of the case; but Prof. Dowson suggested that some effort should be made to obtain more accurate copies of the plates, as they are certainly of some antiquity, and contain many curious references. It seems, however, probable that, though old, the plates are forgeries, as they mention the name of Madhava, a teacher who lived two centuries after the date assigned to them. Moreover, the words rendered "crossway-palki" do not bear this meaning.

FINE ART.

Rubens. By Charles W. Kett. (Sampson Low & Co.)

THIS is a prettily got-up volume, regard, however, being paid rather to the current taste of the day than to the style of the period in which Rubens, and many of the other "great artists" dealt with in the same series, lived. As to the matter it contains, though written in a flowing, easy style, we cannot speak with much praise. Surely the time has passed for writing lives of artists of either the mediæval or Renaissance period from a strong Protestant point of view; at all events we trust that few people now consider an author's sturdy Protestantism as sufficiently compensating for ignorance of the subject-matter of a volume. The note of admiration after SS. Nereus and Achilles (p. 59) would have been more appropriately placed after the *Ascension* of the Virgin, the *Ascension* of Elijah, or SS. *Maur* and *Papica*, by which strange names Mr. Kett designates SS. Maurus and Papias. The painting referred to which he has been unable to trace (was it because he did not take the trouble to try to do so?) is in the museum of Grenoble. We have never heard of an Order of S. Ildefonso, nor are we aware that any Order ever had a peculiar chasuble of its own. These errors only prove ignorance of Church history; and "the Caudenberg church at Brussels" is an instance of carelessness of little consequence; but how Englishmen would laugh were a French author to call St. Paul's "la Ludgate Hill église à Londres"!

Of course, for a popular book on Rubens, all that can be expected of its author is that he should give a summary of the facts discovered by others; but, if we are to have really good and useful popular books on art, the preparation of them should be entrusted to persons who have made a study of the life and works of the master of whom they write, and not, as is unfortunately too often the case, to someone who works up

the subject for the series without any previous special knowledge, and who does not know better how to select his authorities than to cite such compilers as van Hasselt and Alfred Michiels as useful and trustworthy guides.

The date and place of Rubens' birth are wrongly stated. The documents discovered more than four years ago by the learned archivist of Antwerp, M. P. Genard, have proved the surmises of M. B. du Mortier to be correct—namely, that Rubens was born during his mother's visit to Antwerp in May–June 1577. Mr. Kett is again quite mistaken in stating that the Siegen episode was kept completely secret. The facts are related by Philip de Kempenaere in 1617, and were more or less known to Constantine Huygens the younger, who in his journal says that Prince Maurice and Rubens were both sons of Anne of Saxony.

We take this opportunity of protesting against the hateful practice of giving Christian names in foreign tongues instead of in English. All Catholics, at least, receive their Christian names at baptism in Latin, and until within quite recent times translated them into whatever language they were using at the time, just as in earlier ages they translated their surnames in the same way. If Christian names are not translated, they should be given either in Latin or in the language of their bearer, or on some uniform principle. It is at all events quite absurd to give Frenchmen Flemish, Walloons Italian, and Flemings English names; and still more absurd, when a man had two Christian names, to write one in one language, the other in another. Mr. Kett's book is full of such evidences of carelessness or ignorance. An amusing instance occurs in a note at p. 75. An error often committed by English writers on art, and into which Mr. Kett has naturally fallen, is that of translating Jacobus Jacob, instead of James; the use of the former name is exclusively confined to Jews and Protestants. The well-known Renaissance artist of Liège, Lambert Lombard, called by Mr. Kett "Lamberto di Lombardo," is an altogether different person from Lambert Susterman, not "Sustermann," with whom he confounds him. "De Requesens," "Cardinal Grenvella," "Isaak Claesz called Nicolai," "the Company of Arquebussiers," "poltronerie," &c., also show carelessness or ignorance.

W. H. JAMES WEALE.

Die Votiv Kirche in Wien. Denkschrift des Bau-Comités veröffentlicht zur Feier der Einweihung, am 24. April, 1879. (Wien: Waldheim.)

THE Votive Church, erected at Vienna, on the Maximilians Platz, in commemoration of the escape of the Emperor Franz Josef from the knife of his would-be assassin Libeny on February 18, 1853, is now complete, and the building committee have published the history of their work in a handsome folio, profusely illustrated with engravings. Views of the church itself, its exterior and interior, its ground-plan, and various working drawings are given on a large scale; while its minor details and ornaments are cleverly adjusted to

form decorations of the pages and enframe the excellent descriptive text which is furnished by Dr. Moritz Thausing.

The author of the project was the brother of the Emperor, the Archduke Ferdinand Maximilian, whose portrait figures magnificently as frontispiece. About a week after the event of the 18th of February, which deeply stirred all classes of society, he issued an appeal to all those who might wish to join him in making an adequate thank-offering for the merciful preservation of his brother's life. He proposed, in this appeal, that the said thank-offering should take the form of "eine dem Zwecke entsprechende Kirche," and that the building should be in Gothic style; the which, he added, is, without doubt, best fitted to give expression to the wealth and elevation of Christian thought. A great deal of money would, of course, be required, but the empire was wealthy, and the Archduke concluded his appeal with the expression of the certain hope that means corresponding to the importance of the event to be commemorated would most surely be forthcoming.

The Archduke has not been disappointed. The volume before us contains an Appendix in which we find the minutest particulars of the building accounts and arrangements, together with the names of all those who have contributed directly to the expenses, or have presented articles of furniture, vestments, altar-fittings, and other things of value, great or small. This list of donors alone is a curious study. The proud names of members of the Imperial family, of great princes and princesses, of the great towns of the empire, are jostled by those of the humblest institutions and of yet humbler people. Eleven Archduchesses present an altar of cedar of Lebanon in honour of the silver wedding of the Emperor and Empress; the ex-Khedive sends 1,715 cubic feet of Egyptian marble; the Sheik of Eden offers through the Patriarch of the Maronites twenty-two posts of cedar wood, and then appears Theresia Seupper with a bit of needlework, and Franz Privorsky, spurmaker, with an iron cross.

The entire cost of the work, now complete, is covered by 4,035,516 fl.; of this sum, about half has been raised by voluntary subscriptions, the greater part of the remainder having been provided by the State. The architect, Heinrich von Ferstel, whose portrait finds a place among the small reliefs of the chancel, has utilised in his design his studies of French Gothic—the Gothic of Central and North-Western France as developed in work of the thirteenth and fourteenth centuries—but he seems to have adapted, with unusual tact, observations made on buildings of great size to the comparatively small dimensions on which he has had to work; that is to say, as far as can be judged from the illustrations, which seem to convey a very happy impression of grace and elevation. The church is built in the form of a cross, the nave having side aisles and the transept being accompanied by side chapels, which give to it also the appearance of triple division; the choir terminates *en chevet*. The west front shows a rose window, above the triple entrance which is surmounted by two pierced spires, and the principal feature of each of the side *façades* is the porch which protects the doors giving

access to the transept. The main features of the ground-plan are, in short, pretty much those which are usual in a Gothic cathedral, except that the nave, which consists of only four bays, appears to have been unduly curtailed for the benefit of the transept and choir, so that the whole impression is that of greater breadth as compared with length than we see, if I am not mistaken, in the chief models on which Herr von Ferstel has avowedly based his work. As to the exterior, one of the first points that attract notice is the modest treatment of the buttress and flying buttress, which seem so appropriately proportioned to the scale of the work that they enhance the general lightness of effect.

The interior decorations have been elaborated with the greatest care, and the glass paintings seem to have been a special object of attention. One of these has unfortunately been printed in colour, and shows some hues of red and blue and violet which augur ill for the rest in this respect. It is, however, one (given by the women in the Imperial tobacco manufactory) which contains devotional subjects only; and it is evident from the reproductions in black and white of other windows which are incorporated in the text that the devotional subjects have been treated with less sincerity and less success than the various portrait-groups of members of the Imperial family among which they are introduced. These portrait-groups often show a good deal of character; the group from the Children's Window, which figures on the same page as that of the Archduke Carl Ludwig, with his three wives kneeling behind him, is a pretty example.

Dr. Thausing's text, be it said in conclusion, is so simple and clear that, although this volume—with its complete collection of working drawings and its minute exact and special details—is of course addressed to a special public, it may be read with pleasure by the uninitiated. E. F. S. PATTISON.

ARCHÆOLOGICAL NOTES ON A TOUR IN SOUTHERN ITALY.

III.

MAGNA GRAECIA.—I.

If we except the fine colonnade of the temple of Metapontum, so well known by the work of the Duc de Luynes, and the remains of the temple of Hera Lakinia, near Croton, only the colossal base of which is in great part preserved, with one column still standing and intact, it is sites rather than ruins, properly so called, which are to be visited in the district where the chief cities of Magna Graecia stood. But these sites, even in their present state, suggest observations of some interest. Excavations there would be everywhere easy, and would certainly yield valuable results.

There is also much to correct in the commonly accepted views as to the site of many of the cities of Magna Graecia. In short, their topography must be in great part reconstituted. Geographers have not hitherto paid sufficient attention to the general fact of the displacement of the centres of population throughout this region at the beginning of the Middle Ages. The Greek cities were all placed on the seashore, or at a very short distance from it, in positions favourable to traffic by sea, but ill adapted for purposes of defence. During the centuries when Saracen corsairs were masters of Sicily, and periodically ravaged the coasts of

Southern Italy, these positions became untenable, exposed as they were to devastation of every kind. The inhabitants abandoned them, and withdrew some five or six miles from the sea, leaving the coast absolutely deserted. Croton alone escaped abandonment, because the escarped hill on which its acropolis was built allowed of the establishment of a sufficiently strong fortress. But all the remaining inhabitants of Copiae (originally Thurium) retired to Cassano, those of Caulonia to Castelvetera, those of Locri to Gerace, whose rocky summit must, in early times, have borne a fort (*πορτίον*) covering the rich plain cultivated by the Locrians against the incursions of the natives of the mountains of Bruttium—a fort which evidently bore the Greek name of *ἱερᾶκιον*, "the hawk's nest," whence Gerace, Hieracium in the Middle Ages. Similarly, on the coast of the Tyrrhene Sea, the population of Velia emigrated to Vallo, and that of Paestum to Capaccio. On this side, one of the few cities of Greek origin which preserved their position is Vibo Valentia, the ancient Hipponium, possibly because it was the most advanced inland post founded by Hellenic colonists. It is, in fact, precisely at Monteleone that the Roman ruins of Vibo Valentia and the remains of the polygonal wall of Hipponium are observable. The spot occupied by San Pietro di Bivona, on the shore, where some geographers have placed the city itself, was most assuredly only its port.

Now, since security has returned to the coasts, thanks to the suppression of piracy in Barbary, which continued to desolate these regions until the taking of Algiers by the French, a precisely opposite movement is in progress. The first step was to plant the seaboard and cultivate it afresh without leaving the inland districts. Next, within the last few years, the railway has been constructed, which skirts the Ionian Sea. Now the inhabitants are gradually descending from the towns built in the Middle Ages on the heights, which, twenty years hence, with the exception of Catanzaro and Squillace, will be in turn almost wholly deserted. They settle round the railway stations on the coast, close to the site of the ancient cities, whose names are reassumed by places of recent creation. Thus we note the foundation of a new Metaponto, a new Caulonia, a new Locri. The last-named, which is honoured with the official designation of Neolocri, has already attained such importance that on January 1, 1880, the sub-prefecture and the tribunal of first instance of Gerace were transferred thither, while the Bishop has already taken up his residence there.

After these general remarks, I will pass to special observations on certain localities.

The Italian Government has taken elaborate measures for the preservation of the temple of Metapontum. Unfortunately, the engineer to whom it has been entrusted has surrounded it with a very ugly wall which prevents the visitor from enjoying a view of the plain and the sea from the foot of the columns.

This temple was situated some distance outside the city, the centre of which may be fixed as near the spot where the *Massaria di Sansone* stands. The site of the neropolis, near the temple, is not sufficiently indicated on the Duc de Luynes' map. The extent of it, however, may be clearly recognised. Excavations on the spot would be extremely easy, and the peasants who till the plain often turn up painted vases, or demolish the tombs to no purpose, for the soil all about is strewn with fragments of vases. There were no tombs with underground chambers. So far as I could see, the tombs consist in the ordinary Greek style of sarcophagi, roughly hewn out of blocks of the tufa of the country, or of rectangular trenches lined with blocks of stone or large tiles. The city was built a few stadia from the

sea, and the port was distinct from it. Its circular basin, dug out by the hand of man, now forms a small lake, communicating with the sea by an entrance which is blocked up with sand, and known as the "Lagone di Santa-Palacina."

On the site of Metapontum not a single vestige of the Roman age is perceptible. In fact the city was destroyed at an early date, and even in the time of Pausanias, in the second century of the Christian era, it was little more than a heap of ruins. It warmly espoused Hannibal's cause in the Second Punic War, and on the victory of the Romans it began to decline. The Servile War seems to have dealt it the finishing blow. It was sacked by the bands of revolted slaves under the leadership of Spartacus, and there is no indication that it ever rallied again from the disaster. Everything, indeed, seems to show that from this moment its site remained desolate.

The site of Heraclea at the spot called Luce, near the farm of Policoro, is absolutely certain, as well as that of Siris on the mouth of the river of the same name, at the Torre di Senna, close to the present Nuova Siri station. Between the two are the luxuriant thickets of the Pantano di Policoro, covering the battle-field of Pyrrhus and the Romans. No thorough or regular excavations have ever been undertaken on the sites of Heraclea and Siris; the discovery of the famous "Tabulae Heracleenses," now preserved in the Naples Museum, was purely accidental. And yet the investigation of the necropolis of Siris especially would be of first-rate importance from an archaeological point of view. There and in the necropolis of Sybaris, likewise unknown even at the present day, the elements will be found which will enable us to gain an exact knowledge of the art and civilisation of the Hellenes in the eighth and seventh centuries B.C. The work of exploration will be difficult and costly, but its final success is certain. It will be of inestimable value for the purposes of science; and since the Italians have hitherto neglected it, it might worthily tempt the zeal of a Schliemann or a Carapanos.

In the winter of last year, however, the Italian Government undertook certain excavations in the fine and picturesque, but singularly unhealthy, valley where Sybaris and Thurium successively stood. The results hitherto obtained have been unimportant, and I shall not speak of them at length, especially as they have been described in these columns by my learned friend Prof. Felice Barnabei. The objects discovered in the first campaign are now preserved at the Municipio of the neighbouring town of Corigliano Calabro. With the exception of two or three fragments of terra-cottas and vases dug up near the hamlet of Polinara, and which belong to the time when Sybaris flourished, nothing is of an earlier date than the foundation of Thurium. The *tumuli* excavated, Timpone grande, Timpone Paladino, Timpone della Caccia, served as places of burial for citizens of this Athenian colony, established in the year 443 B.C. They had already been violated and rifled in ancient times, and only a single tomb was discovered intact in the Timpone grande—that of the personage who is shown by the gold plates, covered with Greek inscriptions, which were placed near the head to have been initiated into the Eleusinian and Orphic mysteries. The excavations have therefore hitherto thrown no new light on the still very obscure question of the precise site of Sybaris, which must, however, have been in the direction of Polinara. That of Thurium, however, farther inland, near Terranova, is certain, and there are still to be seen in that place a considerable number of ruins of the Roman colony of Copiae, which succeeded, in 194 B.C., to the Greek city which derived its laws from Charondas.

The wretched country town of Strongoli has

succeeded Petelia, founded according to the legend by Philoktetes, which afterwards belonged successively to the Crotoniates, the Lucanians, and the Brutians, and which, in the Second Punic War, showed itself so heroically devoted to the Roman cause by sustaining against Hannibal a desperate eleven months' siege. The coincidence of the two sites, however, is not absolutely exact. Strongoli occupies the site, and has preserved the name, of the fortified castle of Strongylos, the construction of which, by order of the Emperor Justinian, is related by Procopius. The ancient Petelia was situated some distance lower down and nearer the sea. Its exact site was on the two territories of Brausa, now under cultivation—where a fine fragment of the pavement of the Via Trajana is observable—and of Pianetta, where remains of ancient masonry are yet more abundant. In the latter territory the site of a temple has been identified, a portion of the votive *stips* of which was discovered in the course of some casual excavations in 1848, consisting of several hundred coins of various metals enclosed in vases, and a large hoard of terra-cotta *figurines*. This hoard was, unfortunately, in great part destroyed or dispersed, but a few specimens of the statuettes are still preserved at Strongoli in Signor Ignazio Giunti's collection. A suburb or *proasteion*, running down toward the sea and extending to the port, appears to have existed on the spot called Contrada Tronga.

The modern town of Cotrone, which is very flourishing and is inhabited by a wealthy local aristocracy, is confined to the hill on which stood the acropolis of the ancient Croton, immediately commanding the port. The city, strictly so called, ran down farther into the plain, on the banks of the River Aesarus (now called the Esaro), and its outskirts probably extended beyond the present railway station. But in the whole of this space there is not a single fragment of wall left standing above ground. Any ruins that might have remained were levelled to the ground under the Emperor Charles V., on the construction of the high walls of the fortress of Cotrone, which was entirely composed of ancient materials, the greater number of the blocks employed in the masonry bearing every token of Hellenic workmanship. With ancient blocks, too, torn away for the most part from the neighbouring temple of Hera Lakinia, the moles of the port were rebuilt in the last century on their old Greek foundations. The site of Croton is therefore absolutely destitute of ancient ruins, and a visit is sufficient to prove that the supposed topographical indications with regard to the temples and other buildings of the Greek city, which are so elaborately set forth in Nola-Molisi's *Cronica di Crotone* (Naples, 1649), are pure fancies, such as Italian scholars of the sixteenth and seventeenth centuries but too often indulged in. It is time to reduce them to their real value, and to banish them from serious scholarship, which should never have attached any credence to them.

On the site of Croton, in consequence of a landslide on the banks of the Esaro, the discovery was made but a few months since of a considerable hoard of gold coins of Alexander the Great, Philip Arrhidaeus, and Ptolemy Soter (those of the last named were but few), a hoard the contents of which were analysed in great part in one of the last numbers of the *Berlin Zeitschrift für Numismatik*, with the too vague indication that the discovery was made "in Calabria." I was shown the exact spot where it took place, and I likewise saw, in the hands of inhabitants of Cotrone, several pieces of Alexander and Philip, which had been separated from the main portion of the hoard.

The foundation of the town of Catanzaro only dates from the eighth or ninth century of the Christian era. There is no vestige observable

of any occupation of the site in ancient times, nothing even to suggest that in this very strong position there was a *φρούριον* of the Crotoniates, on whose territory the tourist is still standing. The fortress, built in the eleventh century by Robert Guiscard, and besieged in the sixteenth by Lautrec, has been demolished within the last few years, to facilitate access to the town on the side of the mountains. The church of San Domenico possesses the only picture of any value to be met with in the Calabrias. This is a fine Venetian painting, on panel, representing St. Dominic kneeling at the feet of the Virgin, who is handing him the rosary. Local tradition attributes it, but beyond a doubt wrongly, to Titian; it is really a Palma Vecchio.

Through the exertions of the present prefect, Signor Collucci, a zealous antiquary, a small provincial museum was opened last year at Catanzaro. The superintendent, Signor Marincola-Pistoja, is a very learned man and a good numismatist, the author of some meritorious works on certain points in the ancient topography of the district. This museum is as yet only in germ, but it contains a few inscriptions and two or three pretty terra-cottas from Locri. Its most valuable feature is the collection of medals, already rich in silver coins of the Greek cities of Southern Italy and in Byzantine gold coins down to the eleventh century. There is likewise a series of some extent of Byzantine leaden *bullae*, which are frequently found in Calabria, and of Greek and Roman *tesserae* of the same metal. Among the Greek I noticed a very small and finely wrought specimen, bearing a grasshopper on one side and an ant on the other; the contrast of these two creatures is clearly borrowed from Aesop's well-known fable.

If Catanzaro is devoid of antiquities, La Roccella del Vescovo di Squillace, situated at the entrance of the valley of the Corace, about a mile and a-quarter from the Catanzaro station, shows important traces first of Greek, and afterwards of Roman, occupation. Round a farm which belongs to Signor Massara numerous remains of buildings are visible, together with the ruins of two small temples, one of which is Greek, of the Doric order, with capitals and columns of the calcareous stone of the country, and the other Roman, with Corinthian columns of marble. A small collection of objects, found in the course of tilling and planting operations, has been formed in a room at the farmhouse. The jewel is the fore-arm, with the hand (nearly four feet and a-half long) of a colossal bronze statue in the finest Greek style. It was found in planting an olive tree, and it is very possible that the statue itself may still be lying under the surface, as no search has yet been made for it.

Close by, the walls are to be seen, still almost intact, of a fine Christian basilica, of the fifth or sixth century, entirely of Roman masonry. Finally, built into a wall at the side of the road, where the image is an object of devotion to the peasants, is a very pretty Byzantine bas-relief, exquisitely sculptured, representing the Virgin and Child. The Virgin's costume is precisely that of the Empress Theodora in the mosaics of Ravenna; the child Jesus is dressed like a tiny Roman emperor of the period, with the *chlamys* pinned to the shoulder with a large round clasp, holding the globe in one hand and the *volumen* in the other. It has all the appearance of the figures on the ivory diptychs of the lower empire.

The traveller follows the pavement of the Via Trajana through the midst of the ruins of La Roccella. From these ruins came, beyond a doubt, the Greek inscription of the second century of the Christian era, containing the names of the victors in the torch-races (*λαυρῳδες*), which was found in 1784 during the rebuilding of the Palazzo de' Nobili at Catanzaro, and

wrongly stated in the Berlin *Corpus inscriptionum graecarum* to have been discovered at Squillace. Their site precisely coincides with that of the Crotalla which is placed on the River Crotalus. Of course, if we accepted the opinion of the numerous geographers who recognise in the Corace the River Carcines of Pliny, we should have to consider the ruins of La Roccella del Vescovo di Squillace as those of the Carcinus of Pomponius Mela, situated at the mouth of that river. But it is far more likely that "Carcines," in Pliny, is a false reading that conceals the name of the River Carcinus of Thucydides, Aelian and Pausanias, which formed the boundary between the territories of the Crotoniates and the Cauloniates. The town of Carcinus, in Pomponius Mela, must therefore also be identified with that which Philistus of Syracuse, quoted by Stephen of Byzantium, called *Kalkivov*, and the situation of which, at the mouth of the River Caecinus, corresponds to that of the modern Satriano. The true ancient name of the Corace is "Crotalus," which in Pliny's geographical enumeration falls exactly to the place geographically occupied by the torrent which runs below Catanzaro.

FRANÇOIS LENORMANT.

THE HENDERSON COLLECTION OF POTTERY, ETC.

THE authorities of the British Museum lost no time in giving to the public the benefit of the late Mr. Henderson's valuable bequests. The drawings by Turner, Girtin, Cozens, and Müller, of which a notice appeared in our columns before they were exhibited to the public, have long been on view in the King's Library, and some time has now elapsed since the choice collection of Asiatic and European majolica has lighted up with Oriental splendour one of the rooms made vacant by the migration of stuffed beasts to South Kensington.

These fragile beauties from Persia, Damascus, Rhodes, Italy, Spain, and Sicily seem almost out of place here, like butterflies in a lecture-room; it is difficult to believe that some of them have existed for six or seven centuries in all their pearly freshness. So far, however, from wishing them removed, we trust that the late Mr. Henderson's example will be followed by other collectors, so that our national museum, which is so rich in ancient ceramic work, and has long had some fine specimens of English and Italian, may soon want little to illustrate the history of pottery in all parts of the world. How instructive would it be to place fine small collections of Greek and Chinese beside the Henderson bequest, so that the student, whether of art or history, might study and compare at his ease in one room the characteristics of the three great sources of decorative art—the classical, Mongolian, and Arabian!

Of the last it would be difficult to get together a more beautiful and interesting collection than Mr. Henderson's. The specimens are all choice and perfect, and those of Persian work have been chosen mainly from the beautiful tiles which cover the mosques and palaces of the thirteenth and fourteenth centuries, iridescent as a shell, and full of rich colour as the shoaling of tropical seas. Walls so covered must go far to realise the fabled palaces of pearl and precious stones; and, what is more to the present purpose, these tiles are purely Persian or Arabian in decoration, without that admixture of Chinese influence which is so common in later Persian pottery. The variety of colour and decoration in these tiles is well represented here—the star tiles, with brown lustre and border of Arabic characters, the rare light green and turquoise blue; the beautiful, small pearly tiles, with a phoenix or animal in the centre; the upright tiles of the time of Shah Abbas, with raised figures of horsemen and horsewomen, or beautifully modelled flowers; the deep cobalt tile,

with arabesques of gold and white, reminding one of Limoges enamel; and the large cornice tiles, with their raised Arabic inscriptions, are all here. Here also are some good specimens of lustrated bowls and cups, and of jars and bottles of various shapes.

More generally attractive for their simple colours and bold decoration of conventional flowers and arabesques are the pieces of Rhodian and Damascus ware; these remarkable for their chord of brilliant hues—purple-blue, ferruginous red, and vivid apple-green—those for their softer harmonies of blue and green and lilac. Looking at these well-defined specimens, it would seem an easier task than it really is to decide whether a stray piece should be assigned to Persia, Rhodes, or Damascus. In this collection there is a fragment of Persian pottery which has the Rhodian green. At South Kensington there is a long bottle assigned to Persia which would have infallibly found its way into the Damascus case if it had formed part of this collection; and the same flowers and peculiar palms which form such characteristic features in Rhodian ware, and the method of laying on the colour so thickly that the flowers stand out in slight relief, are found also in pieces of unmistakably Persian origin. A few choice bits of the pretty, mosaic-like ware of Anatolia should not be passed over unnoticed.

If it were only as a lesson in lustre this collection would be singularly interesting, for here it can be traced in its progress and decay through many centuries, from its birth in Persia, through the Arabs and Moors to Spain, Sicily, the Balearic Islands, and Italy. We can see it reflecting the iridescence of dawn at Meshed, gleaming like pure gold of Valencia and Malaga, glowing in company with purple in Sicily, sometimes flashing with ruby and emerald from the ovens of Gubbio, sometimes degraded to copper, as in the later works of Spain. The examples are so many and so choice that there is no space here to particularise specimens. The valuable collection of Oriental armour, with its helmet of Shah Abbas, the interesting specimens of Oriental and Venetian glass, and the numerous fine plates of Italian majolica, including one painted with Martin Schoen's design of the "Death of the Virgin," would of themselves repay many visits to this room, which also contains the valuable remains of the Meyrick collection of armour and other objects of curiosity and art presented by Gen. Meyrick, including some rare enamelled basins of the thirteenth century.

COSMO MONKHOUSE.

NOTES ON ART AND ARCHAEOLOGY.

WE are glad to learn that Mr. Aug. Franks has presented his large historical collection of Oriental porcelain (with a few unimportant reservations) to the British Museum. It will, not, however, we understand, be removed from its present resting-place in the Bethnal Green Museum till the Natural History collections make room for it by their transfer to South Kensington. We propose to give shortly some account of this interesting addition to the national treasures.

THE Royal Academicians may be congratulated on the choice they have recently made of a chemical professor. Mr. A. H. Church has not only achieved a high reputation in science, but is likewise an artist of considerable attainment who is known as a contributor to the Royal Academy exhibitions. He must, therefore, have a practical acquaintance with artistic needs such as few other chemists would be likely to possess; and when we add to this that he has long made the chemistry of colours a subject of study, it will be seen that he has very special qualifications for the post he now occupies, and that much valuable instruction

may be expected from his lectures. Prof. Church begins his course on Monday, February 2. His first two lectures will be on "Pigments: their Composition, Properties, and Tests;" (3) on "Oil, Wax, Paraffin, Gum, and other Vehicles and Varnishes;" (4) on "Canvas, Wood, Paper, and Painting Grounds in General, and on the Conservation and Restoration of Pictures;" (5) on "Marble, Stone, Wood, and the Materials of Sculpture and Architecture;" (6) on "Metals, Enamels, &c., used in the Fine Arts."

A COURSE of readings on artistic and archaeological subjects is at present being given in Dublin by Miss Margaret Stokes before the Alexandra College Literary Society. In the first of these readings, which was held on the 10th inst., Miss Stokes enlarged on the theme, so admirably treated by Mrs. Jameson in her *History of Our Lord in Art*, of the Transfiguration as represented in art from the earliest Christian times to the sixteenth century, when the traditional idea of this wonderful "Metamorphosis," as the Greek Church calls it, culminated in the well-known work of Raphael. Miss Stokes enumerated seventeen examples of the treatment of the Transfiguration in art before Raphael, and we imagine many more could be found. Her lectures are to be continued on every Saturday until February 14, and will deal with the following subjects:—"The Radiated Crown of the Roman Emperors;" "The Painted Tombs on the Via Latina and in the Catacombs;" "The Church of St. Clement and other Subterranean Churches in Rome;" "Ravenna;" "The Paintings of Michelangelo in the Sistine Chapel."

AN "Art Club," as it is called, has lately been formed at the Grosvenor School of Art in North Audley Street for the purpose of studying the living model. The "Grosvenor School of Art" is a school devoted more, perhaps, to the interests of aristocratic amateurs than of hard-working art students; but under the guidance of its principal, Miss Digby Williams, it nevertheless produces very good work, and its utility will doubtless be greatly increased by the formation of these classes for the study of the living model, which are open on different evenings to ladies as well as gentlemen. The meetings begin next month.

WE have received from the Art Union of London their print for the year. It is the engraving by Mr. Lumb Stocks of the late Mr. E. M. Ward's celebrated picture of *Dr. Johnson in the Ante-room of Lord Chesterfield*. This work, which was long at South Kensington, is now to be seen in the National Gallery; and the general fidelity with which Mr. Lumb Stocks has succeeded in translating it is therefore a matter on which the possessor of the engraving may easily satisfy himself. It should be added that this work of Mr. E. M. Ward's was one of his most remarkable achievements in the field of *genre*-painting or in that of historical anecdote. Much has been said of late years against Mr. Ward and the kind of art he represented; much reproach may very justly be made to him for chalkiness or crudity of hue; but he is at all events to be remembered as having fixed certain humorous conceptions very firmly in the popular mind. People generally will see the humour and pathos and something of the accuracy of the scene depicted here, and it will be liked.

AN exhibition of works of art of some interest will be held next month. The pictures exhibited will be selected from the numerous works sent in for competition by subscribers to the *Magazine of Art*, in accordance with a scheme prepared by the editor, and will be on view at the Art Galleries of Messrs. Howell and James, Regent Street. The adjudicators of the

prizes were Mr. H. S. Marks, R.A., Mr. Luke Fildes, A.R.A., and Mrs. Jopling.

MR. THOMAS LANDSEER, A.R.A., the eminent engraver, died on the 20th inst., at his residence in St. John's Wood, aged eighty-six years.

A CLEVER etching, by Lefort, from a very characteristic painting by Jan Steen, entitled *The Family Concert*, and another by G. Greux, from the painting by Paul Potter, called *The Stadtholder's Horses*, are given in the numbers of *L'Art* for January 11 and 18. Both these paintings form part of the rich treasure of Dutch and Flemish art that has so long been preserved in the San Donato collection, the sale of which is now advertised to begin on Tuesday, March 1. Several other illustrations of works of art of various kinds in this princely collection are also given in these numbers of *L'Art*.

THE subscription opened in Paris for a monument to the Prince Imperial is now closed, the sum collected amounting to 200,000 frs. It is proposed that a small round chapel shall be erected somewhere between the Arc de l'Etoile and the Invalides, and that it shall be surrounded by a garden. The authorisation of the Government would be necessary before such a chapel could be opened for public worship.

AT the international competition opened last year at Philadelphia for a monument to Washington, the design of Prof. Siemering, of Berlin, carried off the prize, and the German professor was accordingly entrusted with the execution of the monument. He now considers, however, that the 180,000 dollars subscribed for this purpose will not be sufficient for the expenses.

THE first number of a new work on ornament has just been published by J. Engelhorn, of Stuttgart. It is entitled *Muster-Ornamente aus allen Stilen*, and gives a large number of illustrations from the works of various masters, ancient and modern. The work is to be completed in twenty-five numbers, each containing twelve plates. It would seem as if Germany were bestowing a good deal of attention on the teaching of ornamental and decorative design, if we may judge by the number of important works that have been put forth during the last few years on this subject.

MM. MERCIÉ AND PASCAL have nearly completed the monument to Michelet on which they have been engaged for some time past.

M. COURAJOD has published a pamphlet entitled *Léonard de Vinci et la Statue de Francesco Sforza* (Champion), in which he replies to the criticisms called forth by his article in the *Gazette des Beaux-Arts* of November 1877.

THE *Gazette des Beaux-Arts* begins the year with a rich number, containing three etchings *hors texte* and numerous other illustrations. It opens with a study of the antiquities and curiosities of the town of Sens by M. Anatole de Montaiglon. Sens, the ancient Agendicum, is a place which possesses peculiar interest for archaeologists, and much has already been written upon its history and antiquities. M. de Montaiglon's descriptions are, however, none the less valuable on this account. M. Paul Mantz continues his account of Adrian Brauer. No further particulars concerning the life of this perplexing artist appear to have been gained; but some valuable criticism is offered upon his works, which are considered by M. Mantz to be "almost as rare as those of Leonardo da Vinci." One of the suggestions put forth is that Brauer executed a series of pictures representing the five senses, of which the celebrated *Smoker* in the Louvre is one (Smell); while another, *Taste*, is at Frankfurt—an invalid making a face at some bitter medicine. This, of course, is a bare hypothesis until Touch, Sight, and Hearing are also dis-

covered. In the other articles of the number M. L. Gonse continues his detailed study of Eugène Fromentin; M. de Chennevières reviews the magnificent work on François Boucher, by M. Paul Mantz, recently published by M. Quantin; and M. Charles Ephrussi writes on the rare engraving by some unknown master of the fifteenth century which we have before mentioned as having been acquired recently for the Berlin Print-Room.

THE STAGE.

Midge, the new piece at the Royalty Theatre, is at the same time a success and a failure. Judged by the standards ordinarily applied to the productions of the dramatist's art, it fails distinctly. The story and its chief personage are alike improbable; the scenes lack sequence, and the piece accordingly is wanting in continuous interest. But *Midge* is successful if all that be demanded of it is that it shall furnish to a popular actress a part in which somewhat varied qualities shall be abundantly displayed; and Miss Jennie Lee is herself successful now in London—as heretofore, we understand, in the provinces—in demonstrating that her capacity extends beyond the limits demanded for the performance of Jo. The part of Jo, in the drama drawn from *Bleak House*, required chiefly gifts of characterisation and of pathos—and these Miss Lee had abundantly—while the rôle now newly assumed by the actress in Dean Street is only suitably played by one who can laugh as well as cry, who can say sharp things as well as sad things, who can sing, and who can dance. To the very varied needs of this more recent part Miss Lee succeeds in doing sufficient justice. Indeed, one of the faults of the part and the piece is that they suggest that their own chief *raison d'être* is that Miss Lee shall perform in them. But though the piece, like *Dundreary* and *The Belle*, is what is technically known as a "one-part piece," the representation of those characters which buttress, so to say, the main edifice of Miss Lee's performance has not been neglected. One of the best of these characters, from a stage point of view, is played by Mr. Burnett, an actor not so unknown to London as one or two fellow-writers on the stage have supposed. Mr. Burnett, it may be remembered, played—and played well—the part of Detective Bucket in *Jo* during the long run at the Globe Theatre of that adaptation of the novel of Dickens. Other actors now at the Royalty are not, indeed, much known in London, but they have apparently schooled themselves sufficiently well in the country for the business of supporting Miss Lee in her present performance.

The Lord of the Manor—Mr. Herman Merivale's adaptation of a great German work of literature—has been withdrawn from the boards of the Imperial Theatre after an occupation so brief that we have hardly had occasion to discuss the piece, however shortly. Mr. Merivale is incapable of producing work that is wholly bad, but in the case of *The Lord of the Manor* he is not to be acquitted of the lesser charge of producing work that is wholly unsuccessful.

Le Fils de Coralie—a piece which is strongly suggestive of *Lu Fiammina* of Uchard—has been brought out in Paris at the Gymnase. It turns upon the disagreeable incident of a son's successful marriage being endangered, not to say thwarted, by the discovery that his mother was a fashionable strumpet. He pardons her the discovery, and, by a *ruse* neither very probable in itself nor very creditable to the young lady who adopts it, the young woman whom the disgraced son was to marry does in the end become his wife. M. Tessandier plays fairly well the unhappy creature who is the source of misfortune, and M. Landrol acts an important part. The character

of the son is enacted by one M. Guivry—a gifted youth who not long since passed with success through the trials of the Conservatoire.

MUSIC.

CARL ROSA COMPANY.

HERMANN GOETZ' "TAMING OF THE SHREW."

THE first novelty of the present season, which opened on Saturday, January 10, with Wagner's *Rienzi*, was the production of Goetz' comic opera, *Der Widerspänstigen Zähmung* ("Taming of the Shrew") last Tuesday evening at Her Majesty's Theatre. We sincerely regret that the enterprising and indefatigable director, Carl Rosa, has been unable hitherto to superintend personally any of the performances, having been ordered by his medical advisers to rest a while from his labours. His place has been, however, worthily supplied by Signor Randegger and Mr. John Pew. Band and chorus are as good as ever, and the season bids fair to be one of great success. The name of Hermann Goetz, scarcely known in England two or three years back, is now almost a household word. He died in 1876, before he had completed his thirty-fifth year. His short life was one of trouble and disappointment, but he had the melancholy satisfaction of witnessing the great success of this opera, which was first produced at Mannheim on October 11, 1874. History (alas!) repeats itself, for the short career of Goetz painfully reminds one of Mozart, who also lived a short and troubled life, and died just as fame and honour seemed within his grasp.

The *Taming of the Shrew* was first performed in London at Drury Lane on October 12, 1878, under the direction of Mr. Karl Meyder. Mr. Walter Bolton was the Petruchio on that occasion. Despite some good singing on the part of the male actors, the work was presented in such an unfinished and unsatisfactory manner that until last Tuesday the opera could scarcely be said to have been heard in London.

The German libretto, by Herr Joseph Viktor Widmann, is founded on Shakspeare's play. The spirit of the drama has been preserved, but the action has been greatly simplified and the number of the characters reduced. The translation, by the Rev. J. Troutbeck, is most excellent. It has been made, as far as possible, a faithful copy of the German.

The *dramatis personae* are Baptista (Mr. Snazelle), Katherine and Bianca (Miss Minnie Hauk and Miss Georgina Burns), Hortensio and Lucentio (Mr. Leslie Crotty and Mr. F. Packard), Petruchio (Mr. Walter Bolton), Grumio (Mr. T. Law), a Tailor (Mr. C. Lyall), Steward (Mr. Dudley Thomas), and Housekeeper (Miss Ella Collins).

The opera is in four acts, of which the first three are in Padua and the fourth at Petruchio's house in the country. There is a spirited overture in regular form, of which the principal themes and episodes are composed of snatches from the opera—viz., from Hortensio's serenade, Katherine's song in the second act, and her duet with Petruchio at the close of the same act. The introductory phrase of the fourth scene (act III.), when Petruchio arrives at last on the day of the wedding, is made a leading feature of the overture. At the rising of the curtain Lucentio is before Baptista's house, addressing a serenade to the fair Bianca. He is interrupted by the servants of the house, who rush out expressing their anger and resolute determination to leave on account of the treatment they receive at the hands of Katherine. She appears with her father, who pacifies them with the promise of money and wine. After Baptista and the servants have withdrawn, Lucentio proceeds with his serenade. Bianca appears on the balcony, and a long duet ensues between the two lovers. They are interrupted by the arrival of Hortensio, who appears, with a party of musicians, also to

serenade Bianca. Lucentio addresses Hortensio in an angry tone; the two are about to fight, when Baptista once more appears, requests them to desist from their nocturnal serenades, and informs them that Kate must be wedded before Bianca may be wooed. Meanwhile, Bianca is not unhappy, he says, "for studies she has to comfort her; I pay for teachers and the fruits of learning." The two lovers thus both form the idea of disguising themselves as teachers, and a very comical duet (unfortunately curtailed in performance) is the result. As Hortensio is going away, he stumbles against Petruchio. The latter, in a long conversation with Hortensio, expresses his wish to find a wife worthy of himself. Hortensio describes Katherine as "shrewish and obstinate," but Petruchio resolves at once to woo and, if possible, wed her.

The second act opens with Katherine and Bianca—the former at her morning toilet. She is cross with her maid, sends her away, and then rails against men, and reproaches her sister for being beguiled by a serenade. She expresses in a song her determination "to spend her days a maiden." In the next scene Petruchio demands her hand from the father, and introduces at the same time Hortensio disguised as a music master. Lucentio, also disguised, presents himself as a teacher of languages. Baptista warns Petruchio of his daughter's violent temper, of which Hortensio furnishes an excellent specimen by rushing into the room with the lute round his neck, the instrument having been broken on his head by the passionate Katherine. Petruchio, however, undertakes to tame her; and, after a long interview with her, goes away, promising to return to the wedding by the following Monday. Katherine has shown symptoms of yielding; she has not said *yes*, but has not said *no*.

In the third act the guests who have been summoned to the wedding feast have to be dismissed. Petruchio, the bridegroom, has not arrived. The second scene is the famous "singing lesson," in which Lucentio and Hortensio make love in turn to Bianca. At last Petruchio arrives, and insists on going just as he is, in travelling costume, at once to church. Hortensio gives an amusing description of the ceremony. Petruchio refuses to wait for the banquet, and carries off his bride, against her own will and that of Baptista and the whole company, to his country house. In the last act we have the supper scene. Katherine, when left alone, acknowledges that her strength is spent, and that she is weary of fighting. Then follows the scene with the tailor. She wishes she could persuade Petruchio to be "somewhat mild and meek." The sun-and-moon controversy at length quite tames the shrewish maiden's haughtiness. She promises love and obedience, Petruchio explains to her that the test is ended, and both express their joy and happiness. Baptista arrives with Lucentio and his wife Bianca, Hortensio and his wife, and others. Explanations are given on all sides, and a closing chorus of joy and gladness concludes the opera. We may here notice that this last act was slightly altered in performance. The septet preceding the final chorus was omitted, and an air introduced not in the original score, which was expressly composed by Hermann Goetz for Miss Minnie Hauk a few days before his death—the last notes ever written by him.

So much for the plot; now for the music. It is generally possible in the early works of great geniuses (*e.g.*, Haydn, Mozart, and Beethoven) to trace the influence of composers whom they have, with more or less of consciousness, adopted as their models; and many a passage in Goetz' opera shows how deeply he had studied the works of both the classical and romantic schools. But he possessed that greatest of gifts, *individuality*,

and he had already formed a style of his own, which, had he been spared, would doubtless have become more and more manifest. He had, like Schubert, an apparently exhaustless vein of melody; for example, the lovely duet between Lucentio and Bianca in the first act, the end of the duet between Katherine and Petruchio in the second act, and the marvellously beautiful third scene in the last act. He was well versed in all the mysteries of counterpoint and canon; hence the vigour and, at the same time, clearness of the concerted music. We would note especially the duet between Lucentio and Hortensio in the first act and the magnificent *finale* of the third act. The easy and graceful manner in which Goetz displays his scholastic attainments reminds one of Mozart. His music is both lyrical and dramatic, and his orchestra is ever busy, attempting (as Gluck says, in his Preface to *Alceste*) "to second poetry by enforcing the expression of the sentiment and the interest of the situations." Let us quote Gluck again from the same Preface: "My idea was that the overture ought to indicate the subject, and prepare the spectators for the character of the piece they are about to see." We quote this in reference to Goetz' overture, of which we have already made mention. The happy mixture of recitative and air, and the avoidance of vain repetitions, favour continuity of action, and show most certainly the powerful influence of Wagner. The comic element is well sustained throughout the work. The duet between Lucentio and Hortensio in the first act and the singing lesson in the third act are full of fun. The mixture of tragedy and comedy in the tailor's scene in the last act is very striking. The third act is decidedly the finest of the four. The last, despite its many beauties, appears to us lacking in sustained interest. The orchestration throughout is most masterly. It is never noisy or obtrusive, but always effective. The employment of the wind instruments shows the hand of a master.

Space forbids our going into detail about the performance of last Tuesday, in which there was much to praise and but little to blame. There were only the few shortcomings such as belong to a first performance, to say nothing of the extreme difficulties which the work presents. Miss Minnie Hauk acted and sang the part of Katherine to perfection. She gave a noble rendering of the magnificent *scena* in the last act, "My strength is spent." She was equally successful as the obstinate and as the subdued maiden. Miss Georgina Burns was well suited in the part of the romantic Bianca. Her acting and singing throughout were excellent. We may specially note the duet in the first and the singing lesson in the third act. Mr. Walter Bolton as Petruchio may be praised for his good acting; but he was not in good voice, evidently suffering from a severe cold. Mr. F. Packard made a good Lucentio. He deserves a word of praise for the clear enunciation of his part. Mr. Crotty was a very good Hortensio, Mr. Snazelle an excellent "father," and Mr. Lyall a very funny tailor. The minor parts were well rendered. The concerted music was very fine; so also was the chorus singing, although once or twice the female voices were rather weak.

And last, but certainly not least, we must mention in terms of the highest praise the rendering of the important music by the orchestra, under the able direction of Signor Randegger.

The house was very full, and the work well received. J. S. SHEDLOCK.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,
186 Strand, and Messrs. CURTICE & Co.,
Fleet Street, and Catherine Street, Strand.

Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH or Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

TARAXACUM and PODOPHYLLIN.—A fluid combination for Disarrangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, crowsy feeling, with sensations of faintness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. FEFER, 327, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

Hopkins.

DONNA QUIXOTE. By Justin McCarthy,
Author of "Dear Lady Disdain," "Miss Misanthrope," &c.

"The novel is thoroughly enjoyable. . . . Because of the originality
of its plot and treatment, because of the genuine interest which it excites,
because of the true perception of human nature and the kindly exposure
of human weakness that it conveys, because of the wholesome air which is
breathed in every page of it, and because of its grace and ease of style, it
must take the first place among the novels of the season."—*Scotsman*.

MRS. LINTON'S NEW NOVEL.

3 vols., crown 8vo, with Twelve Illustrations by Arthur Hopkins.

UNDER WHICH LORD? By E. Lynn
LINTON, Author of "Patricia Kemball," &c.

"Mrs. Linton has bent all her great natural power, her remarkable
command of language, and the strength of her lucid intellect to her task.
The impress of conscientious feeling is strong over the whole of it,
its literary merit is very great, and we do not think she has ever written
with more sustained force and energy."—*Daily News*.

OUIDA'S NEW NOVEL.

On the 31st inst., will be ready, in 3 vols., crown 8vo,

MOTHS. By Ouida, Author of "Puck,"

CHATTO & WINDUS, PICCADILLY, W.

HURST & BLACKETT'S
NEW WORKS.

18, Great Marlborough-street.

**CONVERSATIONS with DIS-
TINGUISHED PERSONS DURING the SECOND EMPIRE,** from 1860
to 1863. By the late NASSAU W. WILSON. Edited by his Daughter,
M. C. M. SIMPSON. 2 vols., demy 8vo, 30s. [January 25.]

ROYAL WINDSOR. By W.
HERWORTH DIXON. Vols. III. and IV., demy 8vo, 33s. Completing
the Work. [Just ready.]

DIARY of a TOUR in SWEDEN,
NORWAY, and RUSSIA in 1827. By the MARCHIONESS OF WEST-
MINSTER. 8vo, 15s.
"A bright and lively record."—*Athenaeum*.

**BORAIMA and BRITISH
GUIANA,** with a Glance at Bermuda, the West Indies, and the
Spanish Main. By J. W. BODDAM-WHEATHAM, Author of "Across
Central America," &c. 8vo, with Map and Illustrations, 15s.

**LODGE'S PEERAGE and BARON-
ETAGE** for 1880. Under the Especial Patronage of HER MAJESTY.
Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the
Arms beautifully engraved, 31s. 6d., bound gilt edges.
"This work is the most perfect and elaborate record of the living and
recently deceased members of the Peerage of the Three Kingdoms as it
stands at this day. It is a most useful publication. We are happy to bear
testimony to the fact that scrupulous accuracy is a distinguishing feature of
this book."—*Times*.

THE NEW NOVELS.

IN the SWEET SPRING-TIME.

By Mrs. MACQUOID. Author of "Patty," "Diane," &c. 3 vols.

YOUNG LORD PENRITH. By
JOHN BERNICE HARWOOD, Author of "Lady Flavia," &c. 3 vols.
[Just ready.]

FRIEND and LOVER. By Iza
DUFFUS HARRY. 3 vols.

"A powerful story, well worth reading. The plot is ingenious, original,
and yet perfectly natural. Miss Harry's sketches of character are truthful,
vivid, and exceedingly graphic. It is decidedly one of the best-written
books of the season."—*Review*.

"A most interesting and delightful novel."—*Court Journal*.

**THE GREATEST HEIRESS in
ENGLAND.** By Mrs. OLIPHANT. SECOND EDITION. 3 vols.
"The Greatest Heiress in England" should add to Mrs. Oliphant's
reputation. It is noticeably good among the great number of her good
novels. The story runs along pleasantly, and maintains the reader's
interest completely throughout."—*Athenaeum*.

"This book is a delightful one—fresh, interesting, and well written.
It deserves to take rank among the best works of the author."—*Examiner*.

THROUGH the STORM. By
CHARLES QUENTIN. 3 vols.

"There certainly is in this story not a little that both interests and pleases
the reader."—*Saturday Review*.

"There is more than the average of exciting incident in this decidedly
interesting tale."—*Athenaeum*.

LITTLE MISS PRIMROSE. By
the Author of "St. Olave's," &c. 3 vols.

"The graceful tone and quality of the work of the author of 'St
Olave's' are well known. 'Little Miss Primrose' is a very good example
of her manner."—*Academy*.

YOUNG MRS. JARDINE. By the
AUTHOR OF "JOHN HALIFAX, GENTLEMAN." SECOND
EDITION. 3 vols.

"A pretty story, written in pure English."—*Times*.

"There is much tenderness and good feeling in this book. It is pleasant
and wholesome."—*Athenaeum*.

A SYLVAN QUEEN. By the
AUTHOR OF "RACHEL'S SECRET," &c. 3 vols. [Just ready.]

THE MUSICAL TIMES for JANUARY

contains:—Choral Association—The Great Composers: Mendelssohn
—Appropriate Music—Cambridge University Musical Society—The Crystal
Palace and Monday Popular Concerts—Reviews—Foreign and Country
News, &c.—Price 3d.; post-free, 4d. Annual Subscription 4s., including
postage.

THE MUSICAL TIMES for JANUARY

contains:—"A New Year's Song." Part Song for S.A.T.B., by
BERTHOLD TOURS. Price separately, 14d.

NOVELLO, EWER, & CO.'S CATA-
LOGUES (1880). No. 1.—Organ and Harmonium Music. No. 2.—
Sacred Music with English Words. Post-free on application.

Now ready.

THE ONLY COMPLETE EDITION.

1 vol., 518 pp., folio, handsomely bound, cloth, gilt edges, price 21s. An
entirely new and carefully revised edition of

MENDELSSOHN'S ORIGINAL COM-
POSITIONS for the PIANOFORTE, including the "Lieder ohne
Worte." Also a New 8vo Edition (518 pp.). Price, in paper cover, 7s. 6d.;
cloth, gilt edges, 10s. 6d.

"The volume before us is indeed a model of cheapness combined with
elegance and convenient arrangement. It contains, in 518 neatly printed
pages, everything Mendelssohn has written for the pianoforte, from the
capriccio in F sharp minor, op. 5, composed in 1825, at the age of sixteen,
to his latest works, including several published after his death. . . .
A student will find no end of interesting hints in the works here collected,
but to the more advanced amateur also they will be a source of purest
enjoyment. We need not add that the stately volume before us is eminently
adapted to serve as an elegant and valuable gift-book at this, or indeed at
any, season of the year."—*Times*.

A New Edition of the

LIEDER OHNE WORTE, from the above
(Eight books complete), is also published separately. Price, folio,
paper cover, 3s.; cloth, gilt edges, 5s.; 8vo, paper cover, 2s. 6d.; cloth, gilt
edges, 4s. 6d.

. The only complete edition.

**ELLIOTT'S HARMONIUM VOLUN-
TARIES,** in one volume, price 4s.; or in three books (each containing
Sixty Voluntaries), price 1s.

Just published.

THE SOLICITORS' JOURNAL.

THE ORGAN OF BOTH BRANCHES OF THE LEGAL PROFESSION.

Established 1857. Published every Friday. Price 6d.

Of the general contents of the JOURNAL the following statement will afford some idea:—

CURRENT TOPICS.

Comments on the legal events of the week.

LEADING ARTICLES.

Essays upon branches of law and matters of professional interest.

RECENT DECISIONS.

Explanatory and critical disquisitions on recent cases, pointing out their relations to the previous law.

CASES OF THE WEEK.

Short reports of cases decided during the previous week; during the Long Vacation, reports are given of cases before the Vacation Judge.

REVIEWS.

New legal works are carefully noticed in this department.

GENERAL CORRESPONDENCE.—NEW ORDERS.

All new orders and rules are given, sometimes before they can be obtained by the public.

COURTS.

Special reports are furnished of cases decided by the Railway Commission, and of Solicitors' cases; selected cases in the County Courts are also reported.

PARLIAMENT AND LEGISLATION.—LEGISLATION OF THE YEAR.

Under this head careful criticisms are given during the Long Vacation of the legislative results of the session.

APPOINTMENTS AND OBITUARY.—SOCIETIES AND INSTITUTIONS.

Full Reports of the proceedings of the Law Societies. A Careful Summary is given of all the Legal News of the week, and Special Attention is bestowed on Furnishing Early Copies of all Court Papers.

The First number of Volume XXIV., published October 31st, 1879.

ANNUAL SUBSCRIPTIONS.—"Solicitors' Journal," only, 26s.; by post, 28s.; when paid in advance. Single number, 6d.

PEPPER'S QUININE and IRON TONIC
Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

PAINLESS DENTISTRY.
MR. G. H. JONES,
Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury
(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),
Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),
Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.
TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name."
"G. H. Jones, Esq." "S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen."

GOLD MEDAL PARIS EXHIBITION.
FRY'S COCOA EXTRACT,
IN PACKETS AND TINS.
Pure Cocoa only, with the superfluous oil extracted.
It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.
"It is strictly pure, and well manufactured in every way."
W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.
"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."
Food, Water, and Air, Edited by Dr. HASSALL.
J. S. FRY & SONS, BRISTOL AND LONDON.
Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR
LIEBIG COMPANY'S
EXTRACT
OF MEAT.
A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.
** In use in most households throughout the Kingdom.
CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.
Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

FURNISH your HOUSES or APARTMENTS
THROUGHOUT on

AUTOTYPE.

PERMANENT PHOTOGRAPHIC BOOK

ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are—

1st. The absolutely facsimile nature of the result.

2nd. Its Cheapness for Small Editions of 250, 500, &c.

3rd. The Prints being direct on the Paper there is an absence of all cockling and that disagreeable effect inherent to all Mounted Prints.

* * For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chefs-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN." Illustrated by Jane E. Cook. Second Edition (1860). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIUM." Facsimiled from Rare Prints in the best "states" lent by the Rev. Stopford Brooke, M.A.

A MEDLEY of NOTABLES: What

they said and What others said of them. By G. F. S.
"This little book contains on one side of each page a quotation from some well-known author, and on the other side a brief notice of this author by other authors. If we turn to Shakespeare, for instance, we find quoted Dame Quickly's description of Falstaff's death, while there are given notices of Shakespeare by Keats, Ben Jonson, Browning, Barrowfield, and by some anonymous writer who likely enough is the editor. From him we learn that 'Shakespeare went before all men, and stands in the array of human intellect like the sun in the system, single and unappropriated.'"—Saturday Review.

Published at 31, Castle-street, Holborn.

NOTICE.—The THIRD EDITION of *SISTER DORA: a Biography*, by MARGARET LONSDALE, is now ready. Crown 8vo, with Portrait engraved on steel by C. H. Jeens, and One Illustration, cloth, price 6s.

THE SOLICITORS' JOURNAL.

THE ORGAN OF BOTH BRANCHES OF THE LEGAL PROFESSION.

Established 1857. Published every Friday. Price 6d.

Of the general contents of the JOURNAL the following statement will afford some idea:—

CURRENT TOPICS.

Comments on the legal events of the week.

LEADING ARTICLES.

Essays upon branches of law and matters of professional interest.

RECENT DECISIONS.

Explanatory and critical disquisitions on recent cases, pointing out their relations to the previous law.

CASES OF THE WEEK.

Short reports of cases decided during the previous week; during the Long Vacation, reports are given of cases before the Vacation Judge.

REVIEWS.

New legal works are carefully noticed in this department.

GENERAL CORRESPONDENCE.—NEW ORDERS.

All new orders and rules are given, sometimes before they can be obtained by the public.

COURTS.

Special reports are furnished of cases decided by the Railway Commission, and of Solicitors' cases; selected cases in the County Courts are also reported.

PARLIAMENT AND LEGISLATION.—LEGISLATION OF THE YEAR.

Under this head careful criticisms are given during the Long Vacation of the legislative results of the session.

APPOINTMENTS AND OBITUARY.—SOCIETIES AND INSTITUTIONS.

Full Reports of the proceedings of the Law Societies. A Careful Summary is given of all the Legal News of the week, and Special Attention is bestowed on Furnishing Early Copies of all Court Papers.

The First number of Volume XXIV., published October 31st, 1879.

ANNUAL SUBSCRIPTIONS.—"Solicitors' Journal" only, 28s.; by post, 28s.; when paid in advance. Single number, 6d.

OFFICE: 52, CARR STREET, LINCOLN'S INN.

A RULE of PROPORTION for the HUMAN FIGURE. By JOHN MARSHALL, F.R.S., F.R.C.S., Professor of Anatomy, Royal Academy of Arts. Illustrated by John S. Cuthbert. Folio, in wrapper, 8s.; in portfolio, 9s.

"Professor Marshall's long experience as a teacher of artists has given him exceptional opportunities of studying one of the old physiological problems. . . . To attain the knowledge of anatomy which is requisite to the painter or the sculptor, Professor Marshall's book on the subject is indispensable. As an embodiment of proportions which are true to nature, the 'Rule' is invaluable, and should be possessed by every art student. No book has been published of late years in art literature which promises to be more fruitful in beneficial results. . . . Professor Marshall has given the results of his wide experience in such a form as to be within the reach of all classes. His book is precisely what was needed; and it has been produced in a way which leaves nothing to be desired."—*Architect*.

THE CRIMINAL CODE of the JEWS. (According to the Talmud.) Massecheth Synhedrin. Reprinted from the *Pall Mall Gazette*, with Additions. By PHILIP B. BENNETT. Crown 8vo, 4s. 6d.

SAMPSON LOW, MARSTON, & CO.'S NEW BOOKS.

AT ALL LIBRARIES.

"No one will take it up without reading greedily to the end."—*Athenaeum*.

MEMOIRS of MADAME de RÉMUSAT (1802–1868). By her Grandson, M. PAUL DE RÉMUSAT, Senator. Translated by Mrs. CASHEL HONY and Mr. JOHN LILLIE. 3 vols., demy 8vo, cloth extra, price 33s. [Vol. I. now ready.]

The Work was written by Madame de Rémusat during the time she was living on the most intimate terms with the Empress Josephine, and is full of revelations respecting the private life of Bonaparte, and of men and politics of the first years of the century—revelations which have already created great sensation in Paris.

N.B.—This English Translation is in Two Volumes (the French Original is in Three), and Vol. I., now ready, is equal to Vol. I. and half Vol. II. of the French Edition.

Vol. II. of the English Edition, completing the Work, will be issued simultaneously with Vol. III. of the French.

BIOGRAPHIES OF THE GREAT ARTISTS.

From the *Times*, Jan. 22, 1880.

"Few things in the way of small books upon great subjects, avowedly cheap and necessarily brief, have been hitherto so well done as these biographies of the Great Masters in painting. They afford just what a very large proportion of readers in these hurrying times wish to be provided with—a sort of concentrated food for the mind."

ILLUSTRATED BIOGRAPHIES of the GREAT ARTISTS. Each volume is illustrated with from Twelve to Twenty Full-page Engravings, printed in the best manner, and bound in ornamental cloth cover, 3s. 6d.

The NEW VOLUMES now ready in this Popular Series are—

LEONARDO DA VINCI. By Dr. J. P. Richter, Author of "Die Mosaiken von Ravenna." With Sixteen Illustrations. From Recent Researches.

FIGURE PAINTERS of HOLLAND. By Lord Ronald GOWER, F.S.A., Trustee of the National Portrait Gallery, Author of a "Handbook to the Art Galleries of Holland," &c. With Eighteen Engravings.

The other Volumes already published are on—

TURNER. HOGARTH. RUBENS.
HOLBEIN. TINTORETTO. RAPHAEL.
VAN DYCK and HALS. TITIAN. REMBRANDT.

THE LITTLE MASTERS.

In the Press.

MICHELANGELO. VERNET and DELAROCHE. REYNOLDS.
LANDSEER. GAINSBOROUGH. VAN DYCK.

Other Volumes are in preparation.

NOTICE.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

TWO INDIAN GOVERNORS.

The Marquess Wellesley: Architect of Empire. An Historic Portrait. By W. M. Torrens, M.P. (Chatto & Windus.)

Lord Minto in India: Life and Letters of Gilbert Elliot, First Earl of Minto, from 1807 to 1814. Edited by his Great-Niece, the Countess of Minto. (Longmans.)

ADMITTING that historical contrasts are no less deceitful than historical parallels, we are yet compelled by the contemporaneous publication of these two volumes to institute a comparison which has before now suggested itself to students of Indian history. The Marquess Wellesley was Governor-General of India from 1798 to 1805, and the Earl of Minto was practically, though not in actual order, his successor. The former waged war with Tipu in the south and with the Mahrattas in the north; and by his conquests fixed the political boundaries as they remained almost to our own day. The latter lived at peace with his neighbours, and negotiated treaties of amity with the remote kingdoms of Persia, Afghanistan, the Punjab, and Scinde. The former organised victory and extended the *pomoerium*; the latter settled a series of civil difficulties, and restored equilibrium to the finances. Nor was this difference in their careers due solely to external circumstances. It followed naturally from their characters, and from the theory of politics which they professed. Wellesley was of Irish extraction, endowed with the political genius and restless ambition of his countrymen. A personal favourite of Pitt, he received his policy from the lips of his master, and on his voyage out to India revolved imperial schemes of annexation, which he forthwith carried into execution in defiance of the East India Company. Minto was a Scotchman, cautious and painstaking, the head of a department rather than an irresponsible chief. He was trained in the school of Burke to sympathise with the wrongs of the natives, and to devote all his energies to the improvement of the administrative machine. He was ever mindful of the pacific instructions given him by the Court of Directors, and of their pecuniary interests. The same contrast appears in small things as well as great. Wellesley built the Government House at Calcutta, where he maintained a state surpassing that of King George at Windsor. He never went abroad without the escort of a magnificent body-guard, and he revelled in the novel appellation of Captain General. His pride was sorely tried by the disillusion which attended his return to England. Minto, on the other hand, lived at ease only in the retirement of his country

house at Barrackpore, and was always counting the years and months till he should return to the quiet home on Teviot side, which he was destined never to see again. It may perhaps be thought fanciful if we extend our comparison to the style of the two books before us. Mr. Torrens has adopted the manner of a professional man of letters somewhat over-weighted by the dignity of his subject. Lady Minto, on the other hand, dwells mainly upon the domestic virtues of her great-uncle, quoting from his private letters more freely than from his official despatches. The one poses as the historiographer of a public career; the other has embalmed a family tradition.

Hitherto, the main source of information concerning the Marquess Wellesley has been the six volumes of *Despatches, Minutes, and Correspondence*, edited by Montgomery Martin, of which a selection was published by Prof. Sidney Owen in 1877. There is also in existence a *Life*, in three volumes, by Pearce, but we are ignorant of its value. It is characteristic of Mr. Torrens' mode of treatment that he nowhere mentions either of these authorities. And yet it cannot be said that they are superseded by the present work, for our author, in his laudable desire to compose a drama of character, has been somewhat unduly neglectful of incident. Facts and dates are omitted, in order that motives may be fully explained, or a sentence receive an epigrammatic turn. Perhaps biography gains what history has lost. The volume is not too long to prevent our comprehending in one view the whole of a many-sided life. The first Latin verse-writer of his time at Eton and Oxford, the youthful Irish patriot and friend of Grattan, in later days the honoured disciple of Pitt, the aggressive Governor-General, the short-lived Secretary for Foreign Affairs—all these many parts are shown to be the natural development of one and the same character. To understand rightly such a character is in itself a political lesson, more important than to be able to disentangle the intrigues that preceded the Mahratta War. In Mr. Torrens' eyes Wellesley, as a statesman, was greater in promise than in performance. Even in India he left his work half finished, having been recalled before the conclusion of a permanent peace. On his return home he was pointed at as the heir of Pitt and the necessary Premier. But he lacked the knowledge of parliamentary tactics, and disdained to sit in a Cabinet on terms of equality with his colleagues. Above all, his own self-confidence failed him at more than one crisis of affairs. Since he could not be first Minister, he consented to withdraw from the political field and become Lord-Lieutenant of Ireland, where his love of display and independence could have full scope. He was not long enough a member of the Lower House to learn that the Constitution has no place for one who will not accept the restraints of responsibility to Parliament and the constituencies. In delineating the vicissitudes of such a career, Mr. Torrens has taken pains to show that he is entirely free from the besetting vice of biographers which takes its name from the inimitable Boswell. If practical acquaintance with affairs has qualified him to explore the maze of political ambition, it has not cured him of the tricks of literary embellish-

ment. Anxious for dramatic effect, he has not scrupled to aim some of his most pointed shafts at the breast of his own hero. The "coxccomb of four-and-twenty," "begotten and bred in prodigality and pluck," becomes "the brilliant and ambitious aristocrat in the prime of life," who "indited paeans of triumph which have no parallel in the annals of self-glorification." Indeed, our author's exaggerated use of the picturesque style forms a serious drawback to his material accuracy. He has evidently devoted much research to the study of Wellesley's Indian career. But if he had subjected his proofs to the criticism of some Anglo-Indian friend, he would have been saved from talking of "the outlandish logic of Menu," and from calling Hyder Ali "an Arab mercenary." As regards such combinations as "white-faced irresistible" and "legions of horse," Mr. Torrens is of course entitled to draw his own line between rhetoric and bombast; but, in the name of historical truth, we protest against the anachronism involved in his frequent use of the word "Viceroy."

The fame of Minto has been unduly eclipsed by that of Wellesley. It was his fate to represent that period of tranquillity which in public affairs, as in commerce, seems to alternate at recurring intervals with a period of activity. History has perversely chosen to remember the petty embarrassments of his civil administration, and to forget the uniform success of his foreign policy, which was effective rather than brilliant. The publication of his Indian correspondence, which has been edited with much discretion and good taste, will go far towards correcting the injustice of posterity. The character of the man needed no apology. The charm of his manners in private life was only equalled by his ungrudging devotion to public business; and it was by the force of his personal influence that he managed to overcome the opposition directed against Government by two formidable sections of the Anglo-Indian community. But his career as Governor did require the rehabilitation which it here receives. Not that Lady Minto brings forward excuses, or deliberately assumes the part of an advocate. Minto's own letters are his best monument. The general aim of his foreign policy is shown to have been scarcely less imperial than that of Wellesley himself, though modified by regard to financial considerations and the opinions of other people, to both of which Wellesley was deaf. Runjeet Singh restricted to the west bank of the Sutlej, and a defensive alliance signed with the King of Cabul, may be less splendid achievements than the storming of Seringapatam or the humiliation of Scindiah; but they were won by diplomacy, not by bloodshed, and their results endured for more than a generation. Even as a conqueror Minto may claim the attention of those who care to record only the extension of the empire. He planned the expedition which captured without a blow the French islands of Mauritius and Bourbon, and he accompanied in person the force which drove the French out of Java by hard fighting. On the voyage to Java his personal staff included the ill-fated Leyden, Orientalist and poet, whose sudden death at Batavia was directly

induced by the enthusiasm with which he plunged into a dark and chilly library. The story of Minto's own death is scarcely less pathetic. He had come home to England somewhat indifferent to the implied censure cast upon him by his supersession by the Marquis of Hastings, and eager only to rejoin his wife and family in Scotland, and spend the remainder of his years among his own people. Lingered for a few days in London, it became his melancholy duty to attend the funeral of his brother-in-law, Lord Auckland. The burial took place in the country and at night, in a cold, drizzling rain. The procession from London and back occupied five hours. Little wonder that Minto, just arrived from a seven years' sojourn in a tropical country, himself caught a fatal chill by the side of Auckland's grave. Still his one desire was to reach home; but he could get no farther than Stevenage on the northern road, where he died in the inn, comforted, indeed, by the presence of his son, but without having looked again upon the face of his wife. After such an end, who could be extreme to criticise either the life or the letters which were thus interrupted? But we have already expressed our opinion that Lord Minto's reputation will gain the more it is known. JAS. S. COTTON.

Russia Before and After the War. By the Author of "Society in St. Petersburg," &c. Translated from the German (with later additions by the Author) by Edward Fairfax Taylor. (Longmans.)

THE author of the two series of *Bilder aus der Peterburgischen Gesellschaft*, only the first of which has been made familiar to the English public by a translation, is certainly one of the best-informed of all writers about Russian society and Russian statesmen. He is familiar with the whole career of every Russian of note, especially with those portions on which the gossip of St. Petersburg and Moscow can throw light. His present work will even augment the reputation he enjoys as a keen and shrewd observer of what is going on in those capitals, a trustworthy chronicler of the otherwise unreported events which have lately taken place there, an invaluable preserver of scandals which might otherwise be lost to fame. His portraits are excellent, whether he brings before our eyes agitators like Herzen and Bakunin; or that amiable and aristocratic poet, the late Prince Peter Viazemsky, or the Slavophil controversialist, Yuri Samarin; or Prince Tcherkassky, the reorganiser of Poland and Bulgaria, all of whom now belong to the past, and to each of whom separate chapters are devoted. So long as he deals with biography, he is always, not only instructive, but amusing. His brilliant memoirs must not, however, be accepted as complete biographies. They represent the men whom he describes as they appeared to the world of society, and so far they represent them remarkably well. They are as a general rule compiled with singular impartiality, though a somewhat cynical disbelief in the merits of any Russian man of influence makes itself manifest throughout. It would be difficult to say to what Russian party he belongs, except to

the Liberal party in general—if, indeed, he belongs to any party. His translator lays great stress in his Preface on the fact that the author of the work "not only writes with the authority of one familiar with the conditions of social and political life in Russia, but deals with the subject as a Russian." Russian subject he may be. But whether he is a Russian by blood as well as by domicile may be doubted. From the very interesting account which he gives of his student-life at St. Petersburg it seems probable that he is a Livonian or a Courlander. The University of Dorpat, he tells us, although the lectures given there were all in German, demanded from every candidate for admission "an amount of acquaintance with the Russian language which the writer was not able to master." He is then really a German, which accounts for his writing in German, and generally in a German newspaper, the *Neue Freie Presse*. Now a German, though educated in Russia, is very seldom in sympathy with Russian thought; and his explanations of the events of the day, the popular movements, the oscillations in public feeling, of which he is conscious, are as often based upon ingenious hypotheses as upon a correct appreciation of existing facts.

Among the most interesting chapters of the work are those which describe the want of organisation, and the corruption and jobbery, which brought the Russian army during the war with Turkey to the brink of ruin, and inflicted so much suffering upon the soldiers who fought so bravely, and often upon the people in whose cause they were supposed to be fighting. The effect produced in Russia by the wanton waste of life at Plevna is excellently described, and also the return of the Emperor after that stronghold had fallen, when

"his pale and mournful face, his hair now turned completely gray, and the painful efforts he betrayed to maintain his wonted soldierly bearing and upright carriage, troubled as he was with asthma—all this showed only too plainly that the anxious months of the summer and autumn, spent in the peasant's cottage at Gorny Studen, had seriously shaken his health."

The author always speaks of the Emperor with much sympathy, and of the Czarévitch (the Czarévitch he is called throughout, in compliance, we suppose, with "established error") he gives a very favourable account. It is a refreshing change to turn from the unfounded rumours with which the foreign correspondents of some journals have lately favoured the public to the following statements of fact made by a really well-informed writer. They refer to the period which followed the fall of Plevna.

"It was no secret that the heir to the throne differed totally from his father on questions of momentous importance, and that he made no attempt to conceal this difference of opinion. . . . In his opinion, the internal administration of Russia required a searching reform, supported by the co-operation of Russian society, and her foreign policy needed bold and resolute action, bold enough to satisfy the wishes of the National party and disarm all possible elements of opposition. . . . There were other differences also of a more delicate nature. The Czarévitch, whose private and domestic life was exemplary, had never disguised his unfavourable opinion of the character and

military qualifications of his uncle, the Grand Duke Nicholas, and since the disaster at Plevna had become his open and determined enemy."

But the chapters which will be read just now with most interest are those which describe the recent revolutionary movements and attempt to point out in what they will result. They may be recommended to the attention of all who wish to obtain a clear idea of the present position of Russia, and to understand what are the causes which have brought it about. The author believes that "by far the greater portion of educated Russians shared the opinion which the provincial delegates of Tchernigoff had wished to express in their loyal address to the Emperor, but which was expunged at the urgent desire of the Governor, M. Daragan. 'It is a delusion,' so ran the original text, 'to think that anarchical ideas can be destroyed by measures of violence. These ideas live and flourish so long as they find a favourable soil, and the persons whom it is intended to suppress are replaced by others.'"

Count Tolstoy, the Minister of Public Instruction, he denounces in very strong language, on account of "the brutality with which he has attempted to carry out his system, to destroy the independence of the professorial body at the universities, and to silence every expression of criticism on his actions." When that Minister, in December 1878, demanded a report from the Academical Senate at St. Petersburg on the causes of the spirit of disaffection prevailing among the students, "the Senate told him in plain words that it was due simply and solely to the harshness and tyrannical folly of his dealings with them." There are many officials in other countries, as well as in Russia, who recognise "no argument but force." At the present moment such persons have the power given to them in Russia of causing immense suffering, of producing widespread irritation, and of fanning that revolutionary fire which milder measures might abate.

It is always dangerous to predict, especially when the future of Russia is the subject of the prediction. The author of the present work does not venture on a bare statement of what is about to be. He wisely shelters himself behind a cautious "should," a prudent "if." All that is just now demanded by Liberals who are not fanatics, he says, is "that society in Russia should have a controlling share in the administration," so as to ensure "more uniformity, more method, and more legality in administrative and financial matters." Then he proceeds to say, "Should the present Emperor have the courage to make such a concession; should he have the wisdom to reconcile to his dynasty the western provinces of his empire by enlisting in his support their national, ecclesiastical, and historical peculiarities"—that is to say, to give to Poland and the Baltic Provinces all that they want—"then there is a hope that this dynasty may keep the power in their hands, and be powerful enough to stem the rising flood of discontent." But if, he says, the Government continues to act as it is now acting, it will soon "have difficulties and dangers to confront such as find no parallel even in the present situation." This last utterance is oracularly vague. More definite is his statement that "the fickleness

and irresolution of the masses are nearly unlimited," but it scarcely inspires confidence. To their Church and to their reigning family, the Russian masses have for generation after generation been resolutely staunch. The wild utterances of the revolutionists find no response in the hearts of the many millions of the common people. Nor will the following prediction, modified as it is by the insertion of such saving words as "the probability is," be endorsed by every observer of what is taking place in Russia:—

"Should it come to pass that, not Alexander II., but the heir to his crown, who is pledged already to fulfil the desires of his future subjects, undertakes the 'great reform,' then the probability is that this reform will open the door to a revolution the like of which has never yet been witnessed in Russia."

In his concluding sentence the author openly expresses his opinion that a revolution is "now imminent in Russia," and that it "implies a terrible danger to European peace and civilisation." [A Russian professor of great learning and intelligence, it may be observed, visited our country not long ago, and came to the conclusion that in a few years there will be a Red Republic in England!]

W. R. S. RALSTON.

The Life of Benedict Arnold: his Patriotism and his Treason. By Isaac N. Arnold. (Chicago: Jansen, McClurg & Co.; London: Nimmo & Bain.)

THE author of this volume is careful to point out that the only relationship between him and the person of whom he treats grows out of their descent from a common ancestor who lived some three centuries ago. His motive for writing the book was evolved, he says, out of "the conviction that General Arnold has not had fair treatment;" and, in order "that his life as a patriot and soldier should be truthfully told," he lays before the world a careful and, so far as can be seen, an accurate account of Arnold's career before his treason, which was unquestionably one of the most successful, most distinguished, and most reputable on record so far as the officers of the American army of the Revolution were concerned. But all this has been done before. There has never been a respectable and responsible American historian, from the earliest period to the present day, who has not done ample justice to the early history of Benedict Arnold, for it was inseparable from the national history. As his present biographer rightly says, if, instead of being only severely wounded on the battle-field of Saratoga, of which he was the real hero, he had died on that eventful day, "his name would have been canonised in American history, and his faults and foibles would have been lost in the blaze of glory which would have encircled it." All this may be freely admitted, and, indeed, no one ever thought of denying it, or that Arnold was on several occasions wronged, even greatly wronged, by the governing powers under which he served. These wrongs, however, were of that character which men of honour of all nations and in all ages, both in civil and in military life, have usually met by the resignation of the posts they held, for they consisted in promotions over his head of his inferiors in rank to dignities to which, by his

services, he was clearly entitled. In one instance, it is true, the same superior powers ordered him to be publicly reprimanded for what, at the worst, was a trifling indiscretion; but Washington himself, on whom the task was imposed, marked his sense of the stupidity of the court-martial, and expressed his own estimate of the character and career of the culprit before him, by couching his reprimand in such language that it became at once a rebuke to the former and a compliment to the latter.

Let it be said at once that the present biographer does not attempt to palliate the guilt of Arnold's final treason. In the closing lines of his Introduction he says:—"For General Arnold, the patriot and soldier, I ask a fair hearing and justice; for Benedict Arnold, the traitor, I have no plea but 'guilty.'" What occasion, then, for another volume of four hundred pages? Arnold's own countrymen, and the world so far as it is concerned, freely admit that down to a certain period his career was one worthy of all praise. It may be, and is, fully conceded that as a "patriot and soldier" he was not excelled by Washington himself, and nothing is more certain than that down to the last moment of his connexion with the American service he possessed the entire confidence of his distinguished Commander-in-Chief. This fact alone is a sufficient response to the present plea for "a fair hearing and justice for General Arnold, the patriot and soldier."

But when we are asked, as we are asked in the present instance, to look upon, not, as in the song, "two single gentlemen rolled into one," but upon one individual subdivided into two, the proposition becomes almost too absurd for serious consideration. There is, however, one fact on record which goes far to justify it, and we give the benefit of it to the proposer. When Arnold, after his treason, enquired of an American officer whom he had taken prisoner what would be his own fate if he should chance to fall into the hands of his old comrades, the reply was, "They would cut off your leg that was wounded at Quebec and Saratoga, and bury it with all the honours of war, but the rest of you they would hang on a gibbet." That wounded leg might fairly represent "General Arnold, the patriot and soldier," and the remainder of the carcass as fairly "Benedict Arnold, the traitor." Thus far we may accept the proposed subdivision, but beyond this it is impossible to follow the present biographer. It was precisely what the man *was* that made him what he *became*—the most infamous traitor in modern, if not all, history. His previous character and abilities, his splendid career, and his magnificent services to those whom he afterwards sought to betray only served to render his downfall the greater. Who would attempt to rehabilitate the Prince of Darkness on the miserable plea that he was once an Angel of Light? Yet the effort would be as feasible as that which seeks to reinstate "Benedict Arnold, the traitor," in the position he once held in the estimation of his countrymen and the world. We may, it is true, and no doubt should, whenever his memory recurs to us, regard him with that "infinite pity" now claimed for him; but the emotion should be the same,

both in kind and degree, as that we should extend to any other monstrous sinner, or even to the Prince of Darkness himself. The present biographer openly concedes all this, and repeatedly declares that he neither expects nor hopes to obtain a reversion of the verdict pronounced against Arnold. The object of his volume becomes, therefore, incomprehensible, because, beyond these repeated asseverations, every page seems written under precisely such expectations and such hopes. It is true that he gives us many historical and personal details of considerable interest and value; and, as a literary production, his volume is entirely creditable: but its necessity may be questioned, and more pointedly the policy of reviving and perpetuating, under any circumstances and for any purpose, the history of such a man, either in his single or dual character.

The crime of treason is unlike any other in the Decalogue, or, rather, it includes and outweighs them all. It is an offence, not only against those to whom it is immediately directed, but against the whole world, which rises, under an impulse common to humanity, against the offender. He may receive, in reward for the special service rendered, his "thirty pieces of silver," as Judas did, or his "13,000 acres of land," as Arnold did, but he must count upon no further recognition among honourable men nor from society at large. His presence may be tolerated and his life protected, but he must pass that life as a social pariah. Such is the verdict that common humanity passes upon traitors, and such was passed upon Arnold by the nation in whose midst he was permitted to end his days. No one can doubt the wisdom of it, or entertain any strong sympathy for one who suffers under it, whatever may be the extent of his remorse. It would seem to be the kindest course towards such an outcast to let his very memory perish. If it were deemed necessary to perpetuate his history as a warning to others, that would be a different matter; but such is avowedly not the object of the volume before us. If Benedict Arnold had ever, down to the last moment of his life, manifested the slightest indication of regret for his enormous crime, the appeal for our "infinite pity" might have been advanced with some grace; but there is no evidence that he ever did so. The story that in his dying hours he desired to be dressed in his American uniform, and begged God to forgive him "for ever putting on any other," is confessedly based only on tradition, and may be safely dismissed as fabulous.

While crediting the present biographer with honest intentions, and according praise to his work as a literary effort, it is impossible to restrain the conviction that his time and his talents would have been more profitably employed on the history of almost any one of Arnold's American compatriots than on that of Arnold himself.

There are certain historical details in the volume relating to the unfortunate Major André and his intercourse with Arnold which are of considerable importance, as it seems impossible, with the evidence they afford, to resist the conclusion that this gallant young officer was properly regarded and treated as a spy, and would so have been regarded and

treated by any civilised nation in the world. It is a curious fact that, if André had not been arrested, the treason of Arnold would no doubt have been thoroughly successful, and the efforts of the Americans for independence temporarily, if not permanently, frustrated. Major André may therefore be regarded as, in a certain sense, the saviour of their country, and it is perhaps this sentiment that has produced the enormous amount of sympathy always entertained for him, which culminated during the last year in the erection of a monument to his memory, on the spot where he lost his life, by the descendants of the very men who were compelled by the force of events to take it.

JOSEPH LEMUEL CHESTER.

The Gospel according to the Hebrews: its Fragments translated and annotated, with a Critical Analysis of the External and Internal Evidence relating to it. By Edward Byron Nicholson, M.A. (C. Kegan Paul & Co.)

CONSIDERING the esteem in which it was held by antiquity, the Gospel according to the Hebrews has hardly received from English scholars the attention it deserves, and Mr. Nicholson has rendered an important service in thus collecting and annotating its known and "probable or possible" fragments, and in putting so fully before us the evidence, external and internal, as to its age and authorship. His treatment of the subject, it must be said, is much fuller and more complete than that of Hilgenfeld, from whose views, moreover, he sometimes shows good reason for dissenting. Thus he wishes to restore to this Gospel the passage Matt. i. 18-ii. 23, which Hilgenfeld maintains was wanting, and it is certainly difficult to resist his argument that the quotation from Micah at least must have been in Jerome's copy. Still, besides other objections, there is room for doubting whether the Messianic genealogy could have been originally followed by the story of the supernatural conception; and it is obvious to suggest, though I am not aware that the suggestion has been made before, that the original narrative may have passed at once from Matt. i. 16, with the reading "and Joseph begat Jesus by Mary," to Matt. ii. 1, where the words "Now when Jesus was born in Bethlehem" follow quite naturally. Indeed, the birth in Bethlehem was a more important circumstance for a purely human than for a semi-divine Messiah. Again, Mr. Nicholson with much probability assigns the curious passage in which Jesus speaks of his mother—the Holy Spirit—transporting him by one of his hairs to Mount Tabor, and which is quoted both by Origen and Jerome, to the Temptation rather than the Transfiguration, the former having been Hilgenfeld's original view, which he was led to abandon by the authority of Baur. He seems to me, however, to treat with somewhat unnecessary scorn the view which finds Gnostic or other heresy in this *bizarre* expression, as if it were quite a matter of course that Jesus—the supernatural conception being granted—might speak of the Holy Spirit as his mother. On the contrary, I must agree with Hilgenfeld that this expression is itself an

evidence that the gospel in which it occurs could not have contained the story of the supernatural birth; and the account of the baptism, which makes the Holy Spirit address Jesus as "my Son," and dwell upon the relationship, points to the same conclusion.

The story of the woman taken in adultery (inconceivable in a Hebrew gospel) Mr. Nicholson identifies, as so many others have done, with that narrated by Papias of a woman accused before the Lord of many sins, which the Gospel according to the Hebrews also contained; and his conjecture to account for its appearance in so many copies of John is at least ingenious. Papias is now said to have taken this story from the Gospel according to the Hebrews; the statement of Eusebius, indeed, rather implies the contrary; it is possible then that he may have given it on the authority of John, meaning of course John the Presbyter, and thus someone may easily have been induced to insert it in his copy of John's gospel. In regard to the authorship of this, from every point of view, singularly interesting work, Mr. Nicholson unhesitatingly adopts Hilgenfeld's conclusion that we have here indeed the genuine Matthew; but he unfortunately combines it with the untenable hypothesis—long ago characterised by De Wette as "aus der Luft gegriffen"—that Matthew wrote two editions of his gospel, one in his native Aramaic, the other in Greek, and that our canonical first gospel accordingly is also his.

The external evidence for the apostolic authorship of the Gospel according to the Hebrews, as here set forth—and it is very fairly set forth—certainly presents a very formidable front; but whether it may be pronounced conclusive is a question which depends very much on the value that is attached to this kind of evidence on the whole. The case may perhaps be briefly stated thus:—If Papias knew what he was saying when he affirmed that Matthew wrote a gospel in the Hebrew language, and if Matthew did so write, it is surely far more probable that this gospel was substantially, though it may be with additions and interpolations, that used by the Nazarenes and translated by Jerome, than that all trace of it has utterly perished; and if so, the remains of the Gospel according to the Hebrews must possess the greatest value as an aid towards the hypothetical reconstruction of the genuine Matthew. But what if Papias was mistaken, and was only repeating a current opinion of his time, for which there was no foundation whatever? In that case, it is not clear that much is gained for our Greek Matthew; for there is not, I believe, a single shred of ancient testimony that Matthew ever wrote a gospel in Greek, and the belief down to Jerome's time at least was distinctly the other way.

ROBERT B. DRUMMOND.

History of Corea, Ancient and Modern; with Description of Manners and Customs, Language and Geography. Maps and Illustrations. By the Rev. John Ross, seven years resident in Manchuria. (Paisley: J. & R. Parlane.)

IN this goodly volume Mr. Ross claims a

hearing from a larger portion of the public than in his previous publications. There appeared in 1877 his *Mandarin Primer* (Trübner and Co.); in 1878 his *Corean Primer*; and now we have this *History of Corea*. And this is but the prelude to another work, in which the author intends to give "an account of the reigning dynasty of China from its earliest dawn to the zenith of its power."

Mr. Ross is a missionary of the United Presbyterian Church, and some supporters of the mission cause may think that he would have employed his time better in simply teaching and preaching the Gospel than in writing primers and histories. But we believe it will be found, as a matter of fact, that the most cultured and studious missionaries are the most abundant in labours, and also the most successful in all departments of their work. In their case, as compared with that of others, we have the difference that is always to be found between the results of skilled and unskilled labour.

Nine years ago the Rev. Dr. Williamson, of the same Mission, published his two admirable volumes of *Journeys in North China, Manchuria, and Eastern Mongolia, with some Account of Corea*. We are glad that Mr. Ross, in his own different method, is yet following in the steps of his senior.

We have read through all the *History of Corea*, and understand more fully and freshly than we did before the scenes that have taken place for nearly 3,000 years in that peninsula and in the regions to the north and west of it, extending over ten degrees of longitude, and from the south of Corea to the Sungari River, and what is now the border of Russia on the Amoor. The book may lie side by side with Howorth's *History of the Mongols*, while the details in it are all drawn directly from the proper native sources. Those details, indeed, will be deemed by many of little importance. What, it will be thought, are the struggles and wars, the rise and fall, of those remote Tungusic races to us? But it should be borne in mind that those races continue to the present day, and have preserved, more or less fully, the record of their various fortunes; that their history is closely associated with that of the great empire of China; and that, as our relations with the latter increase, we shall have more and more to do with them. The Corean peninsula, three times as large as Scotland, is almost the only country the population of which have been able to seclude themselves very much from their neighbours, and entirely from ourselves and other nations of the West. This isolation cannot long continue. The more that we are told of Corea the better shall we know what to do with regard to it hereafter. Mr. Ross's work not only gratifies our curiosity in the present, but prepares us for the duty of the future.

Corea is first heard of at the end of the twelfth century B.C., when the Chinese feudal dynasty of Shang was superseded by that of Cháu. Then the first Cháu sovereign invested a nobleman of the Shang line (not a younger brother of his own, as Mr. Ross says, p. 10) with the country of Chao-sien, the north-western part of Corea. From him, it is said, the barbarous natives learned the elements of civilisation. This is problematical,

The peninsula first comes before us distinctly during the time of the Han dynasty (B.C. 206-A.D. 221). It was then subdued, though with difficulty, and divided into four provinces, of which a map is given.

The author then traces the history of the tribes of Hien-bi (Hsien-pi) and of the kingdom of Yen, and brings us down to the great T'ang dynasty (618-906), which commenced hostilities with Corea in the middle of the seventh century. The little peninsula made a gallant defence, and was reduced to subjection only after an immense sacrifice of life and treasure. The T'ang dynasty gave place in the tenth century to the Sung, famous as the Augustan age of Chinese literature. It was more powerful, however, in the fields of criticism and philosophy than in those of battle. The K'i-tan, a Tungusic people whose original seat was north of the Hien-bi, made themselves conspicuous immediately on the fall of T'ang, and before the rise of Sung, and founded the dynasty of Liào in the north, where they held the site of the present Peking. From them came the name of Cathay, applied both to China and its capital.

The K'i-tans finally went down before the Nü-chän Tartars, who came to the front in 1115, and established the Kin or Golden Dynasty, dividing what is now called China proper for more than a century with the Sung. But both of them disappeared before the empire of Jenghiz Khan, which held possession of China, as the Yüan or Mongol dynasty, for eighty-eight years, ending in 1368.

At the close of the chapter on the Nü-chän, Mr. Ross says, what we were not aware of before, and still hesitate to accept:—

"It is generally believed that the Kin dynasty gave its origin to the name China." But, he adds, "the Chin dynasty is more likely, as far as the pronunciation of the name goes, to have done so; for the word Kin is pronounced *Jin* (sometimes, but erroneously, written *Chin*) only since the present Manchu dynasty ascended the throne of their Nü-chän predecessors. That short-lived dynasty which preceded the Han, and built the first Chinese Great Wall, was the Chin. Its reign in the latter half of the third century was styled the Jin, sometimes written Chin or Tsin."

But this Chin or Tsin dynasty was different altogether from the Ch'in or Ts'in that built the great wall. Our author goes on:—

"It is therefore probable that the name China which we now ascribe (?) is the unspirited Ch or J of the Tsin or Chin dynasty. I feel inclined to reject the Tsin of three centuries B.C., because it existed only a few years; and the Great Wall raised so universal a hatred against the dynasty that the Chinese would never call themselves by its title."

But they never do call themselves by that title. *China*, as the name of their country, is known to them only from foreign usage.

The subject is thus concluded:—

"Though the Arabians called China *Sin*, and the Syrians the people *Tsini*, it is absurd to derive the Sinim of Isaiah from either Ts'in or the Tsin or Chin dynasty, for Isaiah died five centuries before Ts'in Shih Hwang began to reign."

But the feudal state of Ch'in or Ts'in in the north-west of the country dated from B.C. 909. It went on growing till it became more powerful than all the other States together,

and brought the Chinese feudal system to an end. Long before Isaiah Ch'in and its people had been to the west the representatives of the kingdom and race to which they belonged. If we must account for the name China, no solution meets the conditions of the problem so well as this—that it was from that western Ch'in that the name began.

To return to Corea. From the time of the T'ang dynasty, the little territory had enjoyed comparative peace, and prospered. When the Chinese Mings drove out the Mongols, the King of Corea sent letters of congratulation to the founder of the new dynasty, who graciously acknowledged his kingship.

In 1592 the peninsular kingdom was attacked by Japan, and in the invading force were many Japanese Christians, the fruits of Jesuit devotion. Mr. Ross suggests that the invasion was arranged by the Japanese Government to get rid of a portion of its people who were occasioning it trouble in their own country. Perhaps some Jesuit missionaries accompanied it. The expedition failed; but some Christians remained in Corea, and a Christian seed from them is there to the present day.

When the Tungusic Manchus effected the subjugation of China in the early part of the seventeenth century, the Coreans were faithful, so long as they could be so, to their old allies. The Manchus, on their part, acted towards them with forbearance and generosity. An understanding between them was at last come to. The Coreans renounced their allegiance to the Mings, and agreed to assist the Manchus in war; and, if themselves attacked, they were to feed the army sent to aid them. Every year they should send congratulations and presents, as they had formerly done to the Court of the Ming. On these conditions, while they must not build or fortify any city without permission, they should be suffered to retain the customs and territories of their ancestors unaltered; and they have done so.

Such is the merest outline of the histories that are to be found in this volume. The style is not brilliant, nor is the use of terms always the most correct; but the narrative is clear. The story is told in a plain and straightforward manner, while the reflective digressions, which are not often introduced, are sound.

The last part contains a chapter on Corean social customs, which shows how their state has been moulded by the books of China. There are here also several plates by a native painter, brilliant but inartistic. There is a second chapter, too brief, on the religion of Corea, which is mainly Buddhism; a third on its government, which concludes with an estimate of the population as between fourteen and fifteen millions; and a fourth on the language, which is polysyllabic and agglutinated. It has, however, an alphabet—the best, Mr. Ross says, which he knows, purely phonetic, and not a syllabary, like Japanese, Mongolian, and Manchu. Mr. Ross also gives a comparative table of between sixty and seventy common words in English, Chinese, Manchu, East Mongol, Japanese, and Corean which must be attractive to philologists. Chinese, however, is extensively studied, and a knowledge of it is the proof of scholarship and gentility. The final chapter

is on the geography of the country, with a complete list of all its cities.

We cannot look forward ourselves without anxiety to what is likely to be the future of Corea. But evil is less likely to come to it from Japan, from ourselves, or from any other Western country through the timely publication of Mr. Ross's volume.

JAMES LEGGE.

RECENT SCHOOL BOOKS.

QUITE a formidable accumulation of volumes lies before us awaiting notice under this head. As usual a considerable proportion of these seem to have no particular reason for existence, being to all appearance neither better nor cheaper than existing works covering precisely the same ground. There are, however, but few—fewer perhaps than usual—which strike us as positively bad; and one or two at least are distinctly above the average, real and valuable additions to the stock of educational literature.

We notice first two Greek grammars, each excellent in its way, and marking a distinct advance on previous works of the kind in English. Prof. W. W. Goodwin's *Elementary Greek Grammar* (Macmillan), in spite of its too modest title, is an exceedingly complete and well-arranged summary of the best results of recent study in this direction. The author has been recognised, ever since the appearance of his admirable treatise on *Greek Moods and Tenses*, as one of the most accurate and original scholars of the day, and his present work is fully worthy of his reputation. The scientific study of Greek syntax has made great advances of late—advances due in great measure to the researches of Prof. Goodwin himself—and we have no reason to think that the work of reform has yet reached its ultimate completion, or that the book before us, good as it is, can be regarded as its final expression. But we distinctly think Prof. Goodwin's the best Greek grammar that has yet appeared in English, and we are confident that its success will be equal to its merits.

The *Primer of Greek Accidence*, by Messrs. Abbot and Mansfield (Rivingtons), which has now reached a second edition, and is fast making its way into many of our principal schools, cannot compare in fullness with Prof. Goodwin's book. But for teaching purposes it is excellent; extremely concise, yet clear, and based from first to last on sound philological principles. It might perhaps be better that such paradigms as those on pp. 66-71, which may be useful for reference but can scarcely be taught to beginners, should be relegated to an Appendix. And we do not greatly value such lists as those on pp. 128-30 of "words differing in meaning according to their accent." They have a certain savour of cram, and the information they give is not particularly valuable. One little slip we notice, which will doubtless be corrected in future editions. All the neuter participles active of contract verbs (on pp. 84-88) are wrongly accented; thus *τιμαον τιμων* for *τιμων τιμων*, etc. This is curious, as on p. 41 the accent is given correctly.

Messrs. Oliver and Boyd (Edinburgh) send us *Rudiments of the Latin Language*, by James Clyde, author of the well-known *Greek Syntax*. This is simply a Latin grammar, containing a good deal of information, but written in a singularly unattractive style. The Preface in particular is so clumsy as to be quite a curiosity. What is an "introduction of some moment"? And is there really in English a verb "to disrupt"? In the body of the work other portents meet us. Why should a boy be taught to construe *furtim* "thief-wise," and (worse still) *armatum* "for to arm"? We have received also two Latin Primers, *Auxilia*

Latina, Part I., by M. J. B. Baddeley (G. Bell), and *First Latin Grammar*, by M. C. Macmillan (Macmillan). How many more Latin Primers, we wonder, differing from one another and from their predecessors mainly in the binding, are to be inflicted on the present race of school-boys?

From the Pitt Press come several fresh instalments of works already noticed in these columns. Thus we have two more books (vii. and viii.) of Mr. Sidgwick's bright and useful school edition of *Vergil*; two (i. and ii.) of Mr. Peskett's *Caesar de B. Gall.*; one (vi.) of Mr. Pretor's *Anabasis*; and another treatise of Cicero by Mr. Reid, the familiar *De Senectute*. Mr. Hailstone edits Xenophon's *Agésilas*, an edition of which was lately produced by Mr. R. W. Taylor. The *Agésilas* is not, perhaps, a very valuable work for teaching purposes; it is rather dull, and the Greek is often difficult. Mr. Hailstone's notes seem scarcely sufficient in the way of explanation, and too much loaded with quotations and references. Thus, taking the very first note (on δὲ τοῦτο, chap. i., sec. 1), a boy who should stick at this very trifling difficulty would want, not two more examples of the construction, but an explanation of it. Again, at chap. i., sec. 10, the beginner should be told plainly to observe the absence of the article and the consequent predicative force of πρώτῃ παῖς. We assume that the book is intended for beginners. If it is not so, fully three-quarters of the notes are altogether superfluous. On the difficult passage, chap. i., sec. 2 (τοῖς προγόνοις ὀνομαζομένοις, &c.), Mr. Hailstone's note strikes us as extremely unsatisfactory. Considering the tense of ὀνομαζομένοις and its position in the sentence, it is surely out of the question to construe it "of high reputation." Probably the dative depends on the following ὁπόσους ἐγένετο, "what was his degree of descent (in succession) to them;" and then ὀνομαζομένοις simply = δταν ονομάζονται, "when they are enumerated by name." If this is what Mr. Hailstone means by the latter part of his note, we can only say that he fails signally to convey his meaning.

The *Clouds* of Aristophanes, by W. W. Merry (Clarendon Press), is a very excellent piece of work. The notes are very full, but clear, and (above all) interesting. It strikes us as odd that the author, trying to translate φροντιστήριον after the model of "refectory," should have lighted on "contemplatory" rather than on "refectory." In ver. 318 περιλαβὴν is scarcely equivalent to "circumlocution;" excess, and not evasiveness, is the idea implied in the prepositional prefix. We are disposed also to think that in ver. 1174-75, the words δοκεῖν ἀδικοῦντ' ἀδικεῖσθαι and κακοῦργοῦντ' οἷδ' ὅτι are best taken as quotations (like τὶ λέγεις σύ, above), specimens of clap-trap protestation on the part of an impudent pleader in a criminal case. But Mr. Merry's different view is no doubt tenable.

Anglice Reddenda, by C. S. Jerram (Clarendon Press), seems, so far as we can judge without actual experiment, a useful book. It consists of a number of short passages in prose and verse from the chief Greek and Latin authors, intended in the first instance, not for "construing" in class, but as exercises in unprepared translation on paper for junior boys. Most of the passages will be pretty familiar to experienced teachers, but it is a great saving of time and trouble to have them collected in this handy shape. A somewhat similar book, but on a smaller scale, and confined to extracts from Latin prose authors, is Mr. A. S. West's *Easy Extracts for Translation at Sight* (Hamilton, Adams and Co.). The author provides a short vocabulary, and advises that boys should be required to translate from the book without dictionaries. Mr. Jerram's book is intended for use either with dictionaries or without them.

Messrs. Macmillan and Co. have enlisted

some very eminent scholars among the contributors to their series of "Classical Writers." Mr. Capes gives us a really admirable little work on the life of *Livy* and the form and matter of his writings. Many scholars will think his estimate of *Livy's* merits excessive; but it is supported by able and effective argument, and Mr. Capes has a right, if anyone has, to an opinion of his own in this matter. Prof. Nettleship's *Vergil* contains a great deal of interesting information and thoughtful criticism. We are struck, however, by a certain want of proportion in the book. The discussion of the legend of Aeneas, interesting and able as it is, occupies space which we think might have been better devoted in a book intended for school use to less technical questions. The closing chapters on *Vergil's* poetical characteristics are all too short, and the book closes with strange abruptness, as though the author had reached the end of his tether before he was aware. Prof. Campbell's *Sophocles* is written with great care and elaboration, but the general effect is singularly heavy and tiresome. The author is perpetually defining and qualifying and breaking up his subject into categories, and these again into minuter sub-divisions, with the result rather of perplexing than of enlightening the reader. The style, again, is far too pretentious, and is encumbered with needless, and sometimes incongruous, metaphors. On p. 60 we read: "the genius of the poet ran at once infallibly, like a spider at watch, along the main thread of emotion that was set vibrating by the elements of the story, and caught that typical aspect of human experience which he knew that the crude mass, when polished by his art, would be most capable of reflecting. He may be said to have entered the heart of man or woman at the point where a breach was indicated, and to have carried forth its secret unimpaired."

Surely this is metaphor run mad. Imagine a spider polishing a crude mass, catching a typical aspect, and holding it up for his crude mass to reflect! We do not pretend to know what an "unimpaired secret" may be, but it seems an odd kind of trophy to be carried forth through a breach; and "breaches," as a rule, are made by besiegers, and not "indicated" to them. Again and again Prof. Campbell pushes his theses to the verge of extravagance. "The fascination of her" (Deianira's) "character is shown," he says, "by the friendship of the Trachinian maidens, amongst whom she is a stranger." "The confused experience of Iole, who, in short space, is orphaned, wedded, widowed, and again betrothed, is best expressed by silence." As if a sympathising chorus, or a "Silent Person" in a Greek play, were phenomena requiring these elaborate and far-fetched justifications!

In the same publishers' series of "Elementary Classics" we notice *Thucydides, Capture of Sphacteria*, by C. E. Graves, and *Herodotus, Second Persian War*, by A. H. Cooke. The former is fairly well adapted for school use; the latter is described as "edited for the use of the lower classes in schools." But, in the first place, we are convinced that lower classes in schools should read no Greek but the most regular Attic. And, secondly, the notes to this edition show that the author's estimate of a lower school-boy's capacity differs widely from that which experience has forced on the present writer. No amount of care and scholarship will produce a good school book for lower classes unless the author has some practical acquaintance with the workings of an average school-boy's mind. And a careful examination of his book leaves us convinced that Mr. Cooke does not possess this qualification.

We have but little space to discuss the remaining works on our list. The *Phormio* of Terence is very well and thoroughly edited by Messrs. Bond and Walpole in Macmillan's

Classical Series. Great attention has been paid to the production of a correct text, and the notes are ample and scholar-like. Mr. Shuckburgh edits, in the same series of "School Class Books," thirteen of Ovid's *Heroidum Epistulae*. As in the case of the book last mentioned, the text has received special attention, the author having himself collated (for the first time) the readings of two MSS. in the Eton College Library, one of them a text of considerable importance, and "pronounced to be of the eleventh century;" the other later, but "a fair specimen" of the thirteenth- or fourteenth-century MSS. To this series belongs also *Cicero pro Lege Manilia* by Prof. A. S. Wilkins. It is founded on K. Halm's well-known edition; but Prof. Wilkins adds an Introduction, and a considerable amount of fresh notes enclosed within square brackets for which he is himself responsible.

Caesar's Gallic War, Books I.-III., by Messrs. Merryweather and Tancock (Rivingtons), exhibits a sufficient advance, we think, on preceding editions to justify its existence. And, considering how many of such editions there are, this is no little praise. The text is that of Kraner (Berlin, 1877); there is a very complete apparatus of Introductions, notes, and indexes; and the whole book is evidently compiled with a thorough appreciation of the difficulties which perplex young readers. The weakest point in the book is, we think, the needless insertion of two Appendices on "Rules of Reported Speech" and "Se and Suus." These do not strike us as in any way superior to the statements which may be found in ordinary grammars; they are certainly not lucid, in some points we think them incomplete, and on the whole we wish them away. Messrs. Rivington send us also new editions of two works which have earned a well-deserved popularity with teachers—Taylor's *Anabasis, Book II.*, and Bennett's *First Latin Writer. Greek Iambics* (Macmillan), by the Head-master of Cheltenham, is a useful practical introduction to the subject, with a capital index of phrases. We cannot recommend *Scenes from Plautus*, by W. Powell James (Newman). Boys who are able to read Plautus with profit would certainly do better to attack a whole play than to study the author in scraps. Dr. L. Schmitz's *Vergilii Aeneidos Libri priores sex* will hardly rank high among the numerous school editions of this poet. The notes are undoubtedly, to quote the title-page, "copious;" but copiousness as such is scarcely a merit, and we do not find in them any other merit in particular. *Angiportus*, by Messrs. Malan and Jerram (Longman), consists of passages for translation into Latin prose, and is intended to help boys over the step between retranslation of translations from Latin authors, and the use of such books as *Foliorum Centuriae*, in which unaltered English extracts are presented for conversion into Latin. Perhaps 150 exercises are rather many for such a purpose; but that is a fault on the right side, and many teachers will find the book useful.

MR. FRANCIS STORR'S *Simple Poems from Cowper* (Rivingtons), a volume of the "English School Classics," may be found useful for younger students. But surely when John Gilpin's spouse says her husband must ride "on horseback after we," "after" is not "here a conjunction, and we must supply 'ride.'" And "The Wash" of Edmonton should scarcely be described as "a brook which runs into the Lea."

We suppose there is always room for a new book of selections from our poets, so vast is the educational consumption of such works. So there is room for Miss Hertz's *Short Readings from English Poetry* (Rivingtons). On the whole, the extracts are praiseworthy for their variety and for their freshness. Not only

Shakspeare represents the Elizabethan drama. But certainly Spenser ought not to have been excluded. We are told it is "scarcely possible to detach short passages of his great work from their context without injuring their force and beauty." This is true; but it is also true of several other works that are represented in this volume.

In *Historical Abstracts* (C. Kegan Paul and Co.) Mr. Johnstone gives us short sketches of the histories of the less prominent States of Europe. He tells us in his Preface that "there is no attempt at originality in these abstracts," and it would be useless to look for that which the author himself disclaims; he gives, however, a good deal of information not easily to be obtained elsewhere in so compact a form.

MR. PEARCE'S *History of Holland and Belgium* (Collins) is a slight volume intended for the use of schools. The history of the Netherlands deserves to be known far better than that of larger countries, and we may welcome any attempt to bring it before English readers.

How to Learn Russian: a Manual for Students of Russian. With a Key. A Graduated Russian Reader. With a Vocabulary. By Henri Riola. (Trübner.) We neglected to notice Mr. Riola's *How to Learn Russian* upon its first appearance, and cannot do better than recal our readers' attention to it now that he has appended to it a useful and copious Russian Reader. The earlier volume is recommended in a prefatory note by Mr. W. R. S. Ralston, whose authority in all Slavonic matters carries very great weight. Hitherto no good Russian Grammar has existed in English; students have been obliged to avail themselves of Reiff, who is far from being a satisfactory guide. Mr. Riola has based his manual on the Ollendorffian system of teaching languages, so that it is purposely adapted for self-instruction. Mr. Ralston vouches from personal knowledge that Mr. Riola has performed his work most conscientiously. Russian is an extremely abstruse and unattractive language, and the very great interest felt in the nation that uses it has not yet inspired any great number of our countrymen to overcome its difficulties; but there is no doubt that that number is increasing, and that Mr. Riola's careful volumes will assist all such students in a thoroughly practical manner. The reading book contains selections in prose and verse, and is provided with a copious glossary.

A Short Geography of the British Isles. By John Richard Green and Alice Stopford Green. (Macmillan.) Mr. Green, in the Introduction to this handy volume, the joint production of himself and his wife, says that "no drearier task can be set for the worst of criminals than that of studying a set of geographical textbooks such as the children in our schools are doomed to use." This is no doubt true of many books enjoying a wide circulation, but it is not true of all. The influence of Ritter and his school is making itself felt, and many teachers of geography no longer confine themselves to forcing their pupils to learn by heart long lists of barren names and figures. The little book now before us is conceived in the right spirit, and we hope it will find as numerous a circle of readers as Mr. Green's *History of the English People*. The authors do not content themselves with presenting us merely with a description of the outline form of these islands, but they "indicate the influence which that form has exerted on human history or human society," and by doing so infuse life into and render attractive a subject which in the hands of a mechanical teacher becomes degraded into a mere exercise of the memory. Geography taught in the spirit pervading this little book will make the pupils—and for that matter the masters too—think; and that, after all, is one of the chief aims of education.

NOTES AND NEWS.

SYDNEY SMITH called Bishop Doyle the Pope of Ireland; and if J. K. L. were now living he might be a cardinal if his Gallican views and enormous breadth of liberality did not tend to disqualify him. His *Life*—published in 1861—has long been out of print; but a new edition, full of letters and anecdotes that had not previously appeared, and entitling it to take rank as almost a new book, is now, we learn, on the eve of publication. Among others, the executors of Lord Montagu, the Duke of Leinster, and the Earls of Darnley and Derby have opened their family papers to Mr. Fitzpatrick. Last, though not least, the Bishop's executors and family have given him cordial aid.

We understand that Messrs. Macmillan and Co. have in contemplation a complete edition, in three crown octavo volumes, of the poetical works of Mr. James Russell Lowell, whose recent appointment to the American embassy in London will have been noticed by our readers with pleasure. The poems will probably be rearranged and corrected for this edition by the author himself.

MESSRS. W. SWAN SONNENSCHNHEIN AND ALLEN announce for early issue a work on the *Great Desert of Sahara*, by Mr. Donald Mackenzie, author of *The Flooding of the Sahara*, who has been for several years past actively engaged in endeavouring to open up communication with this hitherto comparatively unknown region. A description of the Sahara and its inhabitants will be given in the work, which will also contain full details of the suggested railway and other means of communication with the Soudan, as well as of the trading station now being established at Cape Juby with the view of affording increased facility for trading with the district. The book will be illustrated, and the various projects it contains made clear by means of maps, &c.

M. RENAN will publish shortly a second part of *Caliban*.

MR. ALEXANDER J. ELLIS, F.R.S., will, on March 3, before the Society of Arts, read his paper on "The History of Musical Pitch," on which he has been engaged for two years and a-half. It will contain very curious historical facts connected with musical pitch from A.D. 1361 to the present day, comprising over 300 pitches, which will be fully detailed, authenticated, and illustrated, and also the results of entirely new observations on the compass of the human voice collected from about 600 chorus singers, with an account of recent modes of measuring musical pitch, especially by Scheibler's forks, and the methods of Profs. McLeod and Mayer.

THE events of recent years have created a demand in England for works upon the Turkish language. A new edition of Mr. Redhouse's Dictionary—originally compiled in the time of the Crimean War, and hitherto the best book of its kind, but long since out of print—has, therefore, been prepared by Dr. Charles Wells, the most accomplished Anglo-Turkish scholar of the day, and will immediately be published by Mr. Quaritch. Much more copious than the first edition, and supplying the numerous deficiencies in that work which time and experience have discovered, it will mark a new epoch in the study of a language still of great political importance.

MR. RUSKIN, who was thought to have given up lecturing, will be heard again on March 17 by the members of the London Institution, and will take as his title—very appropriately to St. Patrick's Day—"A Caution to Snakes." Mr. Ruskin is a student of snakes, and was an earnest listener at Prof. Huxley's recent lecture on them in the same theatre.

THE title of Sir Travers Twiss's lecture at the

same Institution on February 19 will be "Laws of the Crusaders in Cyprus."

M. TAINÉ will commence his new course of lectures on aesthetics and art history at the Ecole des Beaux-Arts on February 4. He will deal this year with the subject of Greek and Roman sculpture.

PROF. PAUER will give the first of a course of three lectures on Handel, Sebastian Bach, and Joseph Haydn at the Royal Institution next Saturday afternoon, February 7.

THIS evening Mr. Sonnenschein will deliver an address on "Elementary Education at Home and Abroad," in reply to Mr. Matthew Arnold's last Report to the Committee of Council on Education. The chair will be taken (in St. George the Martyr's Schoolroom, Queen Square, W.C.), at eight o'clock, by the Right Hon. James Stansfeld, M.P. We understand that Mr. Sonnenschein has specially visited Paris and Brussels to collect official statistics. This address forms one of the Saturday evening lectures arranged by the Council of the College for Men and Women, Queen Square.

A CORRESPONDENT writes that the late Mr. Pusey often went abroad since the year 1849, when he spent the winter at Malta and Athens. In 1856 he visited St. Petersburg and Moscow, where the library attracted him; in 1867 Paris, Turin, and Milan; in 1858 Madrid and the famous Escorial Library; in 1859 Gibraltar, Malta, Alexandria, Cairo, Mount Sinai, Constantinople, Patmos, the convents of Vatopedki, and the monasteries of Mount Athos, returning home by Florence. In 1860 he made a second visit to Russia; in 1864 a second visit to Mount Athos. Nor does this last include all his visits to Continental towns famous for their libraries.

THE Report of the Council of the Cymmrodorion Society mentions that Mr. Thomas Powell, of Taunton, has been appointed to succeed the Rev. Robert Jones as their editor, and that a number of the society's publications will shortly be delivered to the members. Papers will be read during the ensuing year by Dr. Macfarren, Mr. Thomas Powell, and Dr. Isambard Owen. Through the kindness of Prince Louis-Lucien Bonaparte a facsimile of his unique copy of Griffith Roberts' *Athraweth Gristnogawl* will be issued early in 1880.

THE twenty-seventh Annual Report of the Committee of the Free Public Library, Museum, and Walker Art Gallery of the Borough of Liverpool shows a steady progress of the institution in all its departments. Many additions have been made by donation and purchase, and a very attractive and varied course of free lectures is being given during the present winter season.

DR. WIMMER is about to publish a great work on the Runic inscriptions of Denmark, and Dr. Lorenzen an Old-Danish Dictionary.

PRINCE N. S. GALITZIN is making progress with his *Universal History of War*, which he is publishing simultaneously in Russian and German. He has completed the section of his work relating to the wars of antiquity, and has just issued the first of two dealing with the Middle Ages. This covers the period between the year 476 and the invention of gunpowder, and treats of the little-known wars of the Byzantines, Slavs, Mongols, and Turks.

THE *Revue Politique et Littéraire* states that Mgr. Tripepi, hymnographer to the Holy See and editor of *Il Papato*, has issued a circular to Catholic scholars in various countries, inviting them to assemble at Rome on March 7, on the occasion of the Festival of St. Thomas Aquinas. It is well known that St. Thomas is held in special esteem by the present Pope, who is supervising the preparation of a new and carefully revised edition of his complete works. He has appointed a commission, which is occu-

pied in collecting the best known editions and the original MSS. of the Angelio Doctor.

THE *Gazette des Femmes* gives interesting statistics as to the number of female authors, painters, and sculptors in France. Out of 1,700 female authors, two-thirds are natives of the provinces—more especially the Southern—and one-third of Paris; of this number 1,000 write novels or stories for the young, and 150 educational works, while 200 are poets. 2,150 female artists figure as exhibitors, including 107 sculptors, 602 painters in oil, 193 miniaturists, 754 china painters, 494 water-colour painters, fan painters, &c. Of the 2,150 artists no less than two-thirds are Parisians.

SIGNOR K. TRIANTAFILLIS has just published at Venice a Study on the Origin of Commerce and its Relations to the State in Ancient Greece.

HERR E. GOETZE, of Dresden, is preparing a complete edition of the *Fastnachtspiele* of Hans Sachs.

MESSRS. LOESCHER have just published a work entitled *Le Mura di Roma, con una Pianta direttiva alla Cinte serviana ed aureliana ed alla Città leonina*, by Signor C. Quarenghi.

THE first number of the *Revista das Tradicoes portuguezas* is to appear next month at Oporto, under the editorship of Messrs. Coelho, Braga, and Pedroso.

M. BRAGA will shortly publish a work on the poetic origins of Christianity, and M. Oliveira Martins' *History of Iberian Civilisation* has recently appeared.

A SOCIETY has been formed at Paris for the study of questions relating to secondary education.

M. KLOEPFNER has published at Rostock the first part of a dictionary of English synonyms—*Englische Synonymik*. The work is to be completed in five parts, at two marks a part.

MR. STEINGRIMR THORSTEINSON, of Reykjavik, Iceland, the translator of *Lear* and other plays of Shakspeare, was last Friday unanimously elected a vice-president of the New Shakspeare Society. The society's committee also granted a set of the society's publications up to the end of 1879 to the National Library, or "Landsbókasafn," of Iceland, in this following the example of the committees of the Early-English Text and English Dialect Societies, who have also given sets of their books to the same library. The study of Early and Middle English has of late much increased in the island.

ABOUT the origin of the name "jute" a correspondent writes:—

"There was a tradition in Calcutta some years ago that this fibre was originally brought into the market for the purpose of a spurious imitation or adulteration of hemp, and that on a discussion arising at the Custom House as to the name under which it should be entered, someone settled the question by saying, 'Call it *jhut*,' i.e., lie, or false (hemp). I am afraid this humble but characteristic derivation is disposed of by Dr. Horsburgh's statement that the fibre 'was called jute by the natives' in 1795; but it is curious that, if this was the case, it should not even now be known by that name in the districts which almost exclusively supply it."

THE historical section of the *Görres-Gesellschaft* has commenced the publication of a quarterly review, entitled *Historische Jahrbücher* (Münster: Theissing).

A SOCIETY for Dano-Norwegian Genealogy and Biography has just been established.

DON JOAQUIN RUBIO Y ORS has just published at Tortosa a short biography of Vicente Garcia, Rector of Valfogona, who was born nine-and-twenty years after the death of Rabelais, and whose reputation has not ex-

tended far beyond the limits of his native country. Ticknor dismisses him in a note.

A SEVENTH translation into Spanish of Manzoni's famous ode on the death of Napoleon—*Il Cinque Maggio*—has appeared at Barcelona, from the pen of Don José Llausa.

SIGNOR E. MASI has published at Bologna seventy-three letters of Goldoni written between 1741 and 1792.

MR. C. J. CLAY, printer to the University of Cambridge, writes:—

"'Honour to whom honour.' In Mr. Sanday's notice of Mr. Rushbrooke's *Synopticon* (p. 59 of the ACADEMY of January 24), credit is given to the Cambridge Press for the perfect execution of this work. It is only fair to Messrs. R. Clay, Sons and Taylor, of Bread Street Hill, London, to mention that the work was executed at their press, and not by your obedient servant."

WE have received *The Authenticity, Character, and Purpose of the Fourth Gospel*, by F. T. Dalton, B.A. (Parker); *An Exposition of the Psalms*, considered as being exclusively applicable to Messiah, by the Author of "Diatessaron," 2 vols. (Aberdeen: A. Brown and Co.); *The Gallican Church: Sketches of Church History in France*, by Julius Lloyd, M.A. (S. P. O. K.); *Biblical Things not Generally Known*, Second Series, with Indices to the complete work (Elliot Stock); *Daily Gleanings of the Sainly Life*, compiled by O. M. S., with an Introduction by M. F. Sadler, M.A. (Rivingtons); *Uncle John Vassar; or, the Fight of Faith*, by his nephew, the Rev. T. E. Vassar, with an Introduction by the Rev. A. J. Gordon, D.D. (R. D. Dickinson); *Lessons on Early Church History*, by D. Alcock (Church of England Sunday School Institute); *The Patriarchs*, by the Rev. W. Hanna, D.D., and the Rev. Canon Norris, B.D. (Cassell, Petter, Galpin and Co.); *Haydn's Bible Dictionary*, edited by the late Rev. C. Boutell, M.A., and brought down to the latest date (Ward, Lock and Co.); *The Church History of the First Three Centuries*, by Dr. F. C. Baur, Vol. II., translated by the Rev. Allan Menzies, B.D. (Theological Translation Fund Library) (Williams and Norgate); and *The Migration from Shinar; or, the Earliest Links between the Old and New Continents*, by Capt. George Palmer, R.N., F.R.G.S. (Hodder and Stoughton).

OBITUARY.

M. LÉONCE DE LAVERGNE, life Senator and member of the Institute, died on Sunday, the 18th inst., at Versailles. He was born at Bergerac, a little town in the south of France, in 1809, and first became known by his contributions to the *Revue des Deux-Mondes*. After a short appearance on the political stage as deputy for Lombez, he retired into private life in 1848, and gave himself up wholly to economical, financial, and historical studies. His chief works are an *Essai sur l'Economie rurale de l'Angleterre, de l'Ecosse et de l'Irlande*; *L'Economie rurale de la France depuis 1789*; *L'Agriculture et la Population*; *Les Assemblées provinciales sous Louis XVI.*; and *Les Economistes français du 18^{ème} Siècle*. M. Léonce de Lavergne sided, after the war, with those who followed M. Thiers in seeking the foundation of a Constitutional and Liberal Republic; and as a senator he was an energetic defender of that policy against the Right in the Senate, who submitted to the leadership of the Duc de Broglie.

CAV. IGNAZIO CIAMPI, Professor of Modern History in the Roman University, died at Rome on the 21st inst. Among his best-known works are *Le Cronache e gli Statuti della Città di Viterbo de 1261*; *I Cassiodori*; *Innocenzo X. et la sua Corte*; *La Storia del Viaggiatore Gemelli*; *La Vita di Paolo Mercuri, Incisore*, &c.

M. F. H. WALFERDIN, who has just died in Paris in his eighty-sixth year, was best known by his researches on the central heat of the earth, and by the various kinds of thermometers which he invented. But he likewise published a complete edition of the works of Diderot, and was the owner of a collection of Fragonard's masterpieces.

THE death is also announced of the Rev. G. S. Drew, author of *Scripture Lands in Connexion with their History, Reasons of Faith, Ecclesia Dei*, &c.; of Lady Charlotte Elliott, author of *Stella and other Poems, Medusa and other Poems*, &c.; of Dr. E. C. Seaton, author of a *Handbook of Vaccination*, &c.; of Mr. G. G. Richardson, author of *The Corn and Cattle-producing Districts of France*, &c.; of the Abbé Noirot, Professor of Philosophy at Lyons 1827-52, aged eighty-six; and of Gen. the Hon. Sir George Cadogan, K.C.B., author of *Letters from Headquarters in the Crimea*, "by a Staff Officer," aged sixty-five.

MAGAZINES AND REVIEWS.

IN the *New Quarterly Magazine*—the first number for the year—Mr. Julian Sturgis shows much humour, as well as some distinct power of analysis, in his completed story, "Michael and I," and the *New Quarterly's* scheme of issuing a complete work of fiction in each number is on all grounds justified. The sooner the public can be got to understand that brief fictitious narrative may be of as high quality as even the best three-volume novel, the greater will be the chance of abolishing that common nuisance, the three-volume novel of indifferent quality. The article on "The Revival of the Drama," though written in a good spirit, is disappointing; but, on the whole, the *New Quarterly Magazine*—especially, perhaps, this time in those articles which do not come within the scheme of a notice in a literary journal—maintains the great position it has recently made.

THE *Edinburgh Review* has an article on Turner, noticeable, in the first place, for telling us little that is new; and, in the second, for what we cannot but consider a not very enlightened support of the recent criticism, which, though generally thoughtful and suggestive, somehow fails to appreciate the unique position of the universal genius of modern landscape. Mr. Ruskin himself receives, we fancy, somewhat scanty justice in the article; but no one but an unreasoning enthusiast can be disposed to find fault with the writer for his implied disapproval of the adoption by Mr. Ruskin of "canons of criticism which could not fail to lower the work of all other painters as much as they exalted that of Turner." The writer, however, does not seem to freely recognise that the model *Life* of Turner—we will even say the adequate *Life*—the book which years ago might have been written—has never been written at all, excellent in their own way as are recent efforts to supply the deficiency. Mr. Brodrick's *Political Studies*, Mr. Escott's *England*, and Mr. Giffen's *Essays on Finance* form the subject of a substantial paper—the last in the *Edinburgh's* present number.

THE current number of *Mind* contains little that is either interesting or instructive. The most attractive article is that by Miss Bevington, on "Determinism and Duty;" but few readers will find much that is striking in her remarks. To assert that "the testimony in favour of determinism does not necessarily gainsay the belief that will, as will, contributes to action," but only that "the choice itself was its own originator;" or that the abandonment of belief in free-will does not "involve, either logically or practically, the abandonment of belief in human instrumentality as able to forward human well-being," is to maintain little but what would be

accepted by any rational advocate of free-will. The real question in the free-will controversy refers, not to the connexion between motives and the will, but to the constitution of the motives themselves. Effect must follow cause no less in the spiritual than in the material world; but the difference is, that whereas in the world of nature causes are made (so to speak) for us, in the moral world we make them for ourselves. This Miss Bevington fails to see; and her consequent *ignoratio elenchi* is shared by Prof. Bain in the lengthy "note" with which he replies to Dr. Ward. Mr. Bain seeks to show that the mind's "anti-impulsive efforts" to which Dr. Ward particularly appealed are "due to the stored-up recollections of the past, and are no more exempted from the law of uniformity than the impulses of the present are so exempted." But, we should venture to assert, the real freedom of the will just lies in selecting, and determining the force of, these stored-up recollections; and the anti-impulsive effort may be, and often is, shown just in resisting such recollections. Unsatisfying, however, as are the arguments of Miss Bevington and Mr. Bain, they are at least clearly expressed and written in a tongue "understandable" of philosophers. But this much can hardly be said of Mr. Edmund Montgomery's paper on "The Dependence of Quality on Specific Energies." His conception of the work falling to philosophy is no doubt sufficiently exalted. "Surely it is," he says, "the philosopher's stone" of our age so to wield quantitative arrangements that therefrom may arise the great magisterial essence—quality." But when he comes to announce that, "unless the conception of inherent sensibility be altogether abandoned, neuroglia will henceforth have to be considered the medium in which the synthesis of elementary neural activities takes place," he arrives at a result which must be left for those who "can receive" it. Still less interesting to most readers will be Mr. Hugh McColl's paper on "Symbolical Reasoning;" and we have not found anything very suggestive in Mr. Carveth Read's review of "The Philosophy of Reflection." Prof. Bain concludes his biography of Stuart Mill, and takes exception to the importance which Mill allowed to Greek and Latin in the rectorial address delivered at St. Andrews.

THE *Dublin Review* opens with an interesting anonymous article on Mauritius, which contains a few specimens of the curious Negro *lingua franca* of the island, known as Creole French. This is the first account that we can recollect in print of this amusing dialect, which, like the kindred Creole English of Jamaica, possesses real philological value from its analogy in origin to the Romance languages of modern Europe. The parallelism between the changes which French undergoes in passing into Creole, and those which Latin underwent in passing into French, is absolutely complete; and the subject merits more extended treatment at the hands of a competent philologist. Mr. Aubrey Clerke has a thoughtful paper on the Land Question, which he treats on the whole from the Conservative standpoint. But the chief interest of the number lies in the final instalment of Prof. Mivart's long criticism on Mr. Herbert Spencer's philosophy. Probably no contemporary writer has called forth so many answers and refutations as Mr. Spencer, and none among them have been more amusing to lookers-on than Prof. Mivart's. The present article sums up the long indictment against Mr. Spencer with a naive dogmatism which reminds one of its author's *bizarre* little volume on *Contemporary Evolution*. Here we learn that "Mr. Spencer is evidently far from suspecting his own proximity to truth"—the truth, that is to say, as it is in St. Thomas Aquinas; and that "Mr. Spencer's philosophy has quite special claims on the interest and attention of Catholics." "It is

much to be regretted," Prof. Mivart believes, "that Mr. Spencer has never become acquainted with Catholic philosophy." Had he done so, he would apparently have saved himself from many unfortunate slips in his views on metaphysical terminology.

"Far more still is it to be desired," concludes the earnest critic, "that he would open his mind to Catholic theology; therein he would find all that would reconcile the philosophic and scientific truths he holds, and would meet with that 'universal congruity' which he says is 'the goal' which philosophy can alone aspire to reach."

It is to be feared, however, that our great psychologist will still remain totally impervious to Aquinian reasoning if we may take as a specimen the following passage:—

"Mr. Spencer's examples of inconceivable propositions are unfortunate. Thus, he instances the offering resistance by what is unextended, a proposition which we Catholics have little difficulty indeed in conceiving, believing, as we do, in the action on matter of unextended spirits, and this is an example of how revelation aids philosophy and supplements reason."

Whenever Prof. Mivart descends from his theological pinnacle to examine his opponent's statements, he contrives greatly to misrepresent their meaning. It is absurd, for example, to epitomise Mr. Spencer as asserting that "Mind is essentially the same as physiological activity," when Mr. Spencer really argues that the two are parallel or obverse aspects of the same fact. But Prof. Mivart's idea of a fair statement may best be gathered from four paragraphs in his final summary of the Psychology, which run after this fashion, with all the emphasis of numbered conclusions:—

"(7) It takes no cognisance of our perception of truth, goodness, and beauty, as such, nor of our apprehension of the relatedness of relations. (8) It is absolutely fatal to every germ of morality. (9) It entirely negatives every form of religion. (10) It absolutely stultifies itself by proclaiming its own untruth, as included in its operation that all our knowledge is but phenomenal and relative."

After all this, it is a little surprising to learn that "Mr. Spencer's theology has its hopeful side." Only so ingenious and original a reasoner as Prof. Mivart could discover and reconcile so many discordant statements.

THE *Theologisch Tijdschrift* for January contains a discriminating notice of Herbert Spencer's *Data of Ethics*, by Hugenholtz; an essay on St. Paul's doctrine of Abraham's righteousness of faith, by Blom; and an account, by Berlage, of some highly ingenious conjectures on the text of the Greek Testament by Naber published in the *Mnemosyne* for 1877 and 1878. Take these for specimens.—Gal. ii. 11, κατέργασεν ὁ θεός; Acts xvii. 22, κατὰ πάντα καὶ πανταχῶς; Phil. ii. 6, οὐχὶ πρᾶγμα ἡγήσατο.

CORRESPONDENCE.

A FRAGMENT OF AN ANTE-HIERONYMIAN VERSION OF THE GOSPELS.

Library of Trinity College, Dublin: Jan. 26, 1880.

In the *Proceedings* of the Royal Irish Academy, vol. iii., p. 374, will be found a description (read on January 25, 1847) by the late Rev. J. H. Todd, D.D., of a fragment of an ante-Hieronymian version of the gospels on purple vellum, which he had purchased some years before in Dublin. In the *ACADEMY* of March 1, 1879, appeared a letter by Mr. T. Graves Law, stating that this fragment was a missing leaf of the Codex Palatinus at Vienna, published by Tischendorf in 1847. The writer added that, to the best of his knowledge, the leaf was no longer to be found, he having been unable to obtain any information regarding it at Trinity College, Dublin, where, from Mr. Westwood's account in his *Palaeographia Sacra Pictoria*, it would seem to have been preserved.

Will you allow me to state that on a careful search, made at my suggestion by my assistant, Mr. Thomas French, the long-missing leaf has been found in a part of the library where it would not naturally be looked for, and where it had doubtless been deposited by Dr. Todd, until he should have chosen a definitive place for it? On comparing it with Tischendorf's description and text of the codex, the correctness of Mr. Law's statement is at once evident. That gentleman, though he appears never to have seen the leaf, has quite correctly inferred from the accounts of it by Dr. Todd and Mr. Westwood that it is a fragment of the Codex Palatinus. How the leaf became detached from the codex is a mystery. The latter certainly was not in the Vienna Library before 1800, and is first mentioned as being there in 1829. Whether the leaf came from Vienna to Ireland, or the codex went from Ireland to Vienna, we have no means of determining.

The Rev. T. K. Abbott, Professor of Hebrew in this University, will shortly publish a new edition of the well-known Dublin Codex Bezae Cantabrigiae (Z) of St. Matthew's Gospel, together with another Dublin Palimpsest, and he will give as an Appendix to the volume a lithographed copy of the fragment of the Codex Palatinus.

JOHN K. INGRAM.

EDDA.

Oxford: Jan. 17, 1880.

Now that Prof. Bugge's studies have again drawn attention to the influence of Goidelic literature on Scandinavia, perhaps the following note may be of interest to some of your readers. Some eighteen months ago Dr. Vigfússon told me that he had reasons to suspect that the Norse word *Edda* was of Celtic origin, and that he had traced many of the Eddic lays to the sojourn of the Nor-men in the Orkneys and the Western Isles. I was not able at the time to adduce anything that would confirm him in his view; but since then it has occurred to me that the Goidelic word wanted to complete his theory is one with which every student of Irish literature is familiar—I mean *aideadh* ("death"). It is the regular title given in Irish to a number of "Historic Tales," as O'Curry calls them, in which the death of the principal personage is described. In his *Lectures on the Manuscript Materials of Ancient Irish History*, the author referred to calls them "Tragedies," and in the Appendix (No. lxxxix.) he gives a list of the tales named in the Book of Leinster. Among them he enumerates no less than thirteen which went by the title of *aideadh*. The others in that list are classed under the headings of Destructions, Cow-spoils, Courtships, Battles, Caves, Navigations, Feasts, Sieges, Adventures, Elopements, Slaughters, Expeditions, and Progresses. O'Curry writes the singular of the word in question *aideadh*, while he gives the plural as *aideadha* or *oitte*; and in the Book of the Dun Cow, dating before the year 1106, in which two tales called by this name are given, the singular is written *aided*, but it is not easy to ascertain how early the final dental, which is now mute, became so. I learn from Dr. Vigfússon that all this agrees well enough with the fact that the first part of the Edda is a great drama ending with the destruction of the gods; further, he thinks that the word would have been borrowed in the tenth century, whence it would seem as though the plural *oitte* (written also probably *aite*) was the one taken up by the Norsemen, and not the singular *aided*. But before pronouncing on this point it would be necessary to know whether the latter had no other form in old and early mediaeval Irish. As to Dr. Vigfússon's published account of the Edda, the reader may be referred to the thirty-third chapter of his *Prolegomena* to the *Sturlunga Saga* and to the article *s. v.* in the *Icelandic Dictionary*.

J. REYS.

BRAUWER'S SERIES OF THE FIVE SENSES.

Olapham: Jan. 24, 1880.

In the notice of the new number of the *Gazette des Beaux-Arts* in to-day's ACADEMY, your reviewer says that the suggestion that Brauwer executed a series of pictures representing the Five Senses is of course "a bare hypothesis." May I be allowed to point out that five such panels by him were sold by auction at Amsterdam on April 13, 1695, for the sum of 16 florins? Another set of five, attributed to him, nine inches high by fourteen broad, were sold at Antwerp on August 25, 1762, for 104 florins. These last five were all interiors. The hypothesis is therefore very probably correct.

W. H. JAMES WEALE.

IRISH MISSALS.

Dublin: Jan. 17, 1880.

The very ancient MS. called the "Stowe Missal," in the possession of Lord Ashburnham, described by Mr. Warren in the ACADEMY (Nos. 353, 395, 399), had already attracted the notice, as Mr. Warren observes, of Dr. Charles O'Connor and Dr. Todd. Dr. O'Connor's account of the MS. (Cat. Bibl. MS. Stowensis, App. 1) is very full. Dr. Todd's description of it (*Transactions of the Royal Irish Academy*, vol. xxiii.), though not so full, is more accurate.

To one like me, who am neither a liturgist, ritualist, nor rubricist, but a mere student of Celtic, the chief value of the MS. consists in the Irish notes or rubrics which it contains. A few of these have been printed by O'Connor, a few additional by Dr. Todd, and some more by Mr. Warren in his communication to the ACADEMY of December 27, 1879.

I regret that Mr. Warren, in printing these rubrics, has not specified the chapters or sections to which they are respectively prefixed in the original. If he had done so, it would be possible to suggest some emendation of a few manifest errors of transcription in the passages printed by him. At the same time, I wish to state that Mr. Warren deserves thanks for the trouble he has taken in endeavouring to transcribe these Irish notes, some of which consist of many words so closely joined together that only a person well versed in Old Irish could venture to divide them into grammatical forms. Indeed, Dr. O'Connor, writing in 1818, asserted that "not one Irishman in 10,000, now living, could decipher them."

The first rubric printed by Mr. Warren from the "Ordo Missae," *lethdirech sund*, has been translated "half-uncovering here" by Dr. Todd, who states that the rubric introduces the "Lesson from St. John vi.;" and rubric ii., *Landirech sund*, is explained as meaning "full-uncovering here" by the same scholar, who adds that the rubrics direct that the chalice should be "half uncovered before, and fully uncovered after, the reading of the Gospel from St. John."

Certainly, *lethdirech sund* would, at first sight, appear to mean simply "half-straight here," being comp. of *leth* ("half"), *direch* ("straight," "even" = Lat. *directus*), and *sund*, an adv. of place signifying "here." *Landirech sund* would also seem to mean "full-straight here" (*lan* being an Ir. adj. signifying "full," *direch* and *sund* as before). The superlat. of *direch* (*dirgimem*) is glossed "aequissima" in the Milan Irish Cod. 49d. But in the St. Gall MS., the verbal form *dirgetar* (deriv. from *direch*) is glossed "exuatur" (Nigra, *Rel. Celtiq.*, 48), which would go to support the meaning assigned by Dr. Todd to the word *direch* in the foregoing passages.

Rubric [iii.], in which the words are not divided by intermediate spaces, should read thus:—*Isund totet dignum intormaig ind maid* "per quem" *bes ina DIUDIDI thall*, i.e., "Here an additional 'dignum' enters, if it is 'per quem' that may be in its . . . beyond." I have ventured to correct some obvious errors of transcription or typography in Mr. Warren's printed text, and submit for his information an explanation of all the Irish words in the passage except one. *Isund* for *is-sund*, lit. "'tis here" (is being the 3 sg. pres. of the Ir. verb *subst.*, and *sund*, sometimes written *sunt* and *sunna*, an adverb of place signifying "here"); *totet* (better *dotet*), 3 sg. pres. of an irregular verb meaning "to go" (see Zeuss, 503); *intormaig*, gen. sg. of *intormach*, "increase" (or rather excess, in being an intens. prefix, and *tormach* meaning "increase," addition"); *ind*, a comp. preposition, signifying "in it," or "into it"; *maid* (better *mad*), "if"; *bes*, 3 sg. rel. fut. of the verb *subst.*; *ina*, comp. prepos., signif. "in its —" or "in

their —." Of DIUDIDI I can make nothing; I fear it has been inaccurately transcribed or printed. *Thall* is an adverb, meaning "yonder," "beyond," or "within."

Rubric iv. is the same as rubric iii., except that the "per quem" of No. iii. is represented by "Sanctus" in No. iv. in Mr. Warren's printed copy, in which the letter *r* of *irtormaig* should certainly be *n*.

Rubric v. is, I fear, not correctly given by Mr. Warren:—*Isund conogabar indablis tuair* FORR cailech FOBDI DICLIR OETH nubuirgine (read "na bairgine") *ss* (read "is") in cailech. This means, as far as I can make it out (the words printed in small capitals seeming corrupt), "Here the oblation of bread is lifted [over?] the chalice [before putting] the bread into the chalice." *Isund* ("here") *conogabar*, 3 sg. pres. indic. pass. of the verb *togbail*, "to raise," with the particle *con* prefixed. *Indablis tuair*, if correctly transcribed, may mean "the oblation of bread," though I have not met *ablis* before; and *tuair*, if used as the gen. sg. of *tuare*, "cibus" (Zeuss, *passim*), should be *tuari*. Forr is surely wrong (should we read *forin*, "upon the"?); *cailech* "chalice." *Fobdi diclir* I cannot understand in these forms. *Ceth* may be an error for *oeth* [raime], "a fourth," or *leth*, "half." *Na bairgine*, "of the bread" (*bairgine*, gen. sg. of *bairgen*, "panis": see Stokes's *Irish Glosses*, pp. 52, 90). *Is in*, "into the" (a comp. prepos.), *cailech*, "chalice."

Rubric vi.:—*Isund conbongar in bairgen* means "Here the bread is broken." The words are simple, and scarcely require detailed explanation.

Rubric vii. (in the "Ordo Baptismi") should surely read *Isund doberius* (not *dobius*) *in salann* (not *insulunn*) *imbelu ind LELUCTI*, "Here he puts the salt into the mouth of the" [elect?]; *lelucti* is certainly not Irish, and may be a blunder for "electi"].

Rubric viii.:—*Isund dognithen into guth* should, I think, be *Isund dognither int onguth* ("Here the anointing is made"). *Dognither* is the 3 sg. indic. pass. pres. of the verb *gniu* ("facio"). *Int* is the definite article masc. sg. *Onguth*, "ointment," or "anointing" (i.e., the chrism).

If Mr. Warren would furnish a photograph or tracing of the passages, I feel sure that their whole meaning could be explained.

W. MAUNSELL HENNESSY.

MSS. OF CICERO.

Twickenham: Jan. 24, 1880.

It is a curious fact that, of the six MSS. used by Davies for his edition of Cicero's *De Natura Deorum*, the more important half, consisting of the Codex Regius and the two Codices Elienses, have entirely disappeared.

As it cannot be supposed that they have been actually destroyed, it is possible that some of your readers may be able to furnish a clue by which to trace them. In any case, I should be glad to ascertain any further particulars as to their history beyond the facts stated below.

In the Preface to the first edition of the *Natura Deorum* (1718), Davies describes the *Codd. El.* as follows:—"Usum editionis Stephanicæ cum duobus optimis MSS. collatao dedit summus mei, dum in vivis erat, patronus, Joannes Morus, nuper Eliensis Episcopus." Ten years later, in the Preface to his edition of the *De Legibus*, he speaks more slightly of the value of these readings:—"Eliens. varias lectiones significat, quas ex MS. quodam vir doctus editioni Roberti Stephani A.D. MDXXXIX. adlevit. Iste codex, quantum judicare datur, non magnam præ se tulit vetustatem." It will be seen that Davies here employs the sing. codex, as he also does in the list of MSS. used by him for the *Academica I.* A.D. 1725 ("collationem MS. factam in exemplari editionis Stephanicæ"), while for *Academica*

II. he mentions on the same page "varias lectiones ex duobus MSS. excerptas et adlitas orae editionis Stephanicae." Yet, again, after having stated in the Preface to the first edition of the *Tusculans* (1708) that Bishop Moore had lent him his *Stephanus* "cum duobus optimis MSS. collatam," he adds, in the second edition (1723), "hos Eliensem primum ac secundum nominavi. Iis nunc accessit ab eadem manu tertius in pergamena scriptus," and cites all three together in his notes as *Elienses tres* (e.g., on *nisi haereret*, i., § 27). From this it would appear that the collations of the two codices were in the same handwriting, and that, after he had brought out his first edition, Davies had found in Bishop Moore's library a complete text of the *Tusculans* copied out by the writer of the collations. No mention is made of these MSS. in the Preface to either of Davies' editions of the *De Divinatione* and *De Fato* (1721 and 1730), nor have I found any reference to them in the notes to the *De Divinatione*, but "*Cod. El.*" occurs frequently in the notes to the *De Fato*.

Bentley's Life and Letters furnish some additional information on the earlier history of the codices. In July 1692, Bentley, writing to J. G. Graevius, who was then engaged on a new edition of his Cicero, informs him that Moore, then Bishop of Norwich, is prepared to send him "lectiones variantes in Libris Philosophici Ciceronis quas ex vetusto codice descripsit quidam in ora ed. Roberti Stephani in fol." Graevius, in his reply—September 1692—accepts with thanks the Bishop's offer, but says that he must finish the Orations before he proceeds to the philosophical works. In January 1693, Bentley writes again to say that the Bishop will send the volume itself; and remarks, in regard to the importance of the readings, "quantivis esse pretii re ipsa comperies." Graevius, writing in the following December, acknowledges the receipt of the volume, which he says he will guard "nigris diligentius uvis," and all posterity shall know how grateful he is to the lender. Frequent allusions to the book appear in the subsequent correspondence; but Graevius is still too busy to make use of it, until at last the Bishop becomes impatient, and Bentley writes in August 1702, "Saepe mihi aurem vellit celeberrimus Praesul Norwicensis de codice suo, quem jam per decennium, opinor, apud te detines. Optimum esset si velles describere, et codicem huc remittere; dolet enim tam bonum librum tam diu bibliothecae suae locupletissimae deesse." To this Graevius replies, November 1702, "describendas varias mandavi juveni, ne longius justo retineatur hic liber. Proximo vere ut salvis Viro Summo reddatur mihi erit curae;" and again, in December, "Cicero in quo nunc describendo sudat adolescens redibit ad vos prima cum hirundine." The correspondence closes with a letter from Burmann in the following month—January 15, 1703—announcing Graevius' death. It would be interesting to know whether the collation made by the *adolescens* was ever completed, and whether it is still in existence at Utrecht or elsewhere. The volume itself must have been returned to its owner shortly after the death of Graevius, as it was lent to Davies for his first edition of the *Tusculans*, which appeared in 1709, and seems to have been in his possession, or, at any rate, available for his use, until he died in March 1732. As Bishop Moore's library was purchased by George I. and presented to the University of Cambridge in 1715, the *Stephanus* ought to have found its way to the university library, and to be now safely locked up in one of the cases there; but Mr. Bradshaw, the present learned librarian, informs me that he can discover no trace of it; nor is there anything to be heard of it at Queens' College, of which Davies was president.

I turn now to the *Codex Regius*, which Davies describes as follows in his Preface to

the *Natura Deorum*:—"MSS. Elienses excoipit codex membranaceus in Bibliotheca Regia Londini servatus, cujus mihi copiam fecit Richardus Bentleius." The same MS. is described in the Preface to the *De Legibus* as belonging to the Royal Library at St. James's—"Mutulus est, nec ultra mediam partem libri secundi progreditur. Est annorum, ut arbitror, CCCC." It was also used for the *Academica* (book ii.) and for the *De Divinatione* and *De Fato*, but apparently not for the *Tusculans*, where Reg. stands for a Paris codex. Bentley, who succeeded Justell as "Library Keeper to his Majesty at St. James'" in April 1694, writing in May to Graevius, offers to send him "variaes lectiones ex duobus vetustissimis codd. ex Bibliotheca Regia Sancti Jacobi," but it does not appear whether they were ever sent. As the King's Library was removed to the British Museum in 1752, these two codices ought now to be there, but by a strange fatality these also have disappeared. Is it possible that they were among the two hundred volumes "destroyed or greatly injured" by the fire at Abingdon House in 1731 (on which see Monk's *Life of Bentley*, ii. 308)?

It remains for me to say a word or two as to the value attached to these MSS. by later authorities. Madvig, in his Preface to the *De Finibus*, makes a broad distinction between *Cod. El. 1* and *Cod. El. 2*, considering the latter to belong either to the better or to the mixed class of MSS., while he has no hesitation in classing the former with the inferior MSS. He finds great fault with Davies for so frequently confounding the two together. Turning to the *Natura Deorum* we find three generally accepted readings of the first book, which rest either solely or chiefly on the authority of *Cod. El., inscientiam*, § 1, *vim*, § 39, *esse*, § 86; and two in the second book resting on *Cod. Reg., nuptam dicunt*, § 66, *hic quaerat quispian*, § 133. It is evident from these facts that it would be of great service to Ciceronian criticism if these MSS. could be recovered and carefully collated; and as I have for several years been engaged on an edition of the *Natura Deorum*, I should be very grateful to anyone who could supply any information which might lead to this result. JOSEPH B. MAYOR.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Feb. 2, 5 p.m. Royal Institution: General Monthly Meeting.
 6 p.m. London Institution: "The History of Chlorine," by Prof. Armstrong.
 8 p.m. Royal Academy: "Pigments," I., by Prof. A. H. Church.
 8 p.m. Society of Arts: "Manufacture of India-rubber and Gutta-percha," I., by T. Bolas.
 8 p.m. Victoria Institute: "Late Assyrian and Babylonian Research," by Hormuzd Rassam.
 TUESDAY, Feb. 3, 3 p.m. Royal Institution: "Physiology of Muscle," by Prof. Schöffer.
 8 p.m. Civil Engineers: Discussion on "Fixed and Movable Weirs," "Iron and Steel at Low Temperature," by J. J. Webster.
 8 p.m. Society of Arts: "Social and Commercial Prospects in the Transvaal," by the Rev. G. Blencowe.
 8.30 p.m. Zoological.
 8.30 p.m. Biblical Archaeology: "Remarks on Excavations made in Tel-el-yahoudah (the Mound of the Jew) near Cairo, and on some Antiquities brought therefrom, and now in the British Museum," by Prof. T. Hayter Lewis.
 WEDNESDAY, Feb. 4, 7 p.m. Entomological.
 8 p.m. Geological.
 8 p.m. Society of Arts: "Trade and Commerce with Siberia, via the Kara Sea," by H. Seebohm.
 8 p.m. Archaeological Association.
 THURSDAY, Feb. 5, 3 p.m. Royal Institution: "Recent Chemical Progresses," by Prof. Dewar.
 4 p.m. Archaeological Institute.
 7 p.m. London Institution: "Elements of Architectural Design," by H. H. Statham.
 8 p.m. Royal Academy: "Architecture allied with Colours," by E. M. Barry.
 8 p.m. Linnean: "Remarks on the Order Commelinaceae," by C. B. Clarke; "On the Salmonidae and other Fish introduced into New Zealand Waters," by H. M. Brewer.
 8 p.m. Chemical.
 8.30 p.m. Royal. Antiquaries.
 FRIDAY, Feb. 6, 7.30 p.m. Geologists' Association: Anniversary.

- 8 p.m. Royal Academy: "Pigments," II., by Prof. A. H. Church.
 8 p.m. Philological: "On Some Differences between the Speech of Edinburgh and London," by T. B. Sprague; "On the Middle Voice in Virgil's *Aeneid*, Book VI.," by Benj. Dawson; "English Etymologies, correcting some of Prof. Skeat's," III., by H. Nicol.
 9 p.m. Royal Institution: "Photographic Spectra of Stars," by Dr. Huggins.
 SATURDAY, Feb. 7, 3 p.m. Royal Institution: "Handel," by Prof. Pauer.

SCIENCE.

CURRENT SCIENTIFIC LITERATURE.

Animal Life Described and Illustrated. By E. Perceval Wright, M.A., M.D. (Cassell, Petter, Galpin and Co.) This is a fine volume full of good woodcuts from the publishers' vast stores at command, most of them already familiar to readers of popular natural-history works. The book, from its fine series of illustrations alone, would form an excellent present for a boy. It is full of extracts from the writings of Darwin, Palgrave, Bates, Wallace, Tennant, and other distinguished travellers relating to the habits and modes of occurrence of the animals described. Beside this there are introductory chapters based on Prof. Wright's lectures on zoology in Dublin. The osteological details of the mammalian skeleton given in these chapters are far too difficult for a popular work. For example, the details of the structure of the carpus and tarsus are described, although no figures with the bones numbered or lettered for reference are given to assist an unlearned reader. By far the greater part of the book is devoted to the vertebrata—nearly two-thirds to mammals and birds. Such an arrangement, according to the Preface, is necessary to suit the exigency of the public demand. There is nothing novel or important in the zoological treatment of the subject. Indeed, the classification adopted is somewhat antiquated. The Tunicata are placed after the Brachiopoda as a class of the subkingdom Mollusca, with the remarkable statement that, "in placing the species of this class where we do, we depart from the arrangement approved of by Gegenbaur and Haeckel, and we follow that by Milne-Edwards, Huxley, Lankester, and others." Almost the very last place in which Prof. Lankester would place the Tunicata would be among the Mollusca. In his *Notes on Embryology and Classification* and in his Introduction to the translation of Prof. Gegenbaur's *Comparative Anatomy* he has boldly, and we think rightly, referred them to the Vertebrata. In glancing over the book we notice some errors. In the figure of the great albatross upon its nest the mound-like nest is much too large in proportion to the size of the bird, and the bird itself is far too deeply sunk in the hollow at its summit. The tropic bird is spoken of as if there were only one species, *Phaethon aethereus*. The penguins are hopelessly muddled; *Spheniscus magellanicus*, the jackass penguin of Magellan Straits, is said to be the largest known penguin, instead of the giant *Aptenodytes Forsteri* of the Antarctic Sea, which is at least twice as large, and which is not referred to at all. The king penguin (*Aptenodytes Pennantii*) is said to be found in the South Pacific Ocean, instead of the South Atlantic and South Indian Oceans, its head-quarters. The old name, *Eulypates demersa*, which Mr. Darwin applied to the jackass penguin of the Falkland Islands, is retained in the quotation of his account of the animal's habits in his journal. The bird observed by Mr. Darwin hence appears to be a different one from *Spheniscus magellanicus* referred to in the next paragraph, whereas it is the same. In the account of snakes, the treatment to be followed in cases of snake-poisoning is cited from Dr. Günther, and in it the recommendation of the internal use of ammonia in large doses, now so abundantly proved to be useless, is maintained. The book seems to have been, partly at least, written without the use of the figures

for reference, for in the description of the argonaut the arms of the animal are stated to be represented in the figure as partially withdrawn in order to show the margin of the aperture. In fact, the figure referred to represents an entirely empty shell, without arms or animal at all.

Haydn's Dictionary of Popular Medicine and Hygiene. Edited by Edwin Lankester, M.D., F.R.S. (Ward, Lock and Co.) This new edition of a well-known and deservedly popular book has been improved by the addition of an Appendix, one-half of which is devoted to the art of nursing the sick, while the other contains advice to mothers on the management of their own health and that of their infant children. The information given is marked by good sense, and it is as accurate and complete as can fairly be expected in a book intended for the general public.

The Dentist's Register. Printed for the General Medical Council. (Spottiswoode and Co.) This is an official publication, exactly similar to the *Medical Register*, drawn up in accordance with the provisions of the Act passed in 1878 for amending the law relating to dental practitioners. It gives the name, address, and qualifications of every recognised dentist in the United Kingdom.

The Habitation in Relation to Health. By F. S. B. François de Chaumont, M.D., F.R.S. (S. P. C. K.) The three little shilling manuals by the late Dr. Parkes, Prof. Bernays, and Mr. W. N. Hartley, already issued by the Society, are among the best, if not the best, of their kind. The present one is quite worthy of its predecessors. Within the compass of some hundred and thirty pages Dr. de Chaumont succeeds in imparting all the information really necessary for avoiding the innumerable snares laid for the unwary householder by incompetent or dishonest builders. He discusses in succession the site and construction of the edifice, the removal of excreta and refuse, the supply of water and of air, and the special precautions to be adopted when communicable disease happens to effect an entrance. Under all these heads the instructions given are clear and practical, and supported by an adequate presentation of the physical, chemical, and physiological principles from which they are derived.

Children's Lives, and how to Protect Them. By William Lomas, M.D. (Sampson Low and Co.) It is generally admitted that mis-management, commonly due to sheer ignorance on the part of mothers and nurses, is a principal cause of the excessive mortality prevailing among infants in this and other countries. There is no lack of popular books designed to overcome this ignorance, but too many of them are incorrect in the advice they give and slovenly in style. Neither of these charges can be brought against the present work. The information it contains is thoroughly trustworthy, and it is conveyed in language equally free from hard words and from the besetting sin of most books of its class—mawkish sentimentality. It may safely be recommended to parents and others responsible for the welfare of young children.

THE GRAMMAR OF KANDRA.

II.

Kandy: Dec. 18, 1879.

I shall now advert to the work mentioned at the beginning of this paper, which has enabled me to gather the above-mentioned facts regarding Kandra's grammar and several other facts which the limited space of this paper precludes my stating here. It is called the *Bālāvabodhana*, and is a reproduction of Kandra's grammar by a Buddhist priest named Kāsyapa, who lived in Ceylon about seven centuries ago, and of whom I hope to write a short account hereafter. The

reader will be able to form some idea of the work and of its extent when I say that it bears the same relation, as regards matter and arrangement, to Kandra's grammar as the *Laghukaumudī* does to that of Pāṇini. The *Laghukaumudī* is an abridgement of a larger work called the *Siddhāntakaumudī*, containing all the sūtras of Pāṇini, differently arranged and explained; but whether the *Bālāvabodhana* is an abridgement of an already existing work bearing the same relation to Kandra as the *Siddhāntakaumudī* does to Pāṇini is a question which I am not yet in a position to decide. If, however, an introductory verse be any guide, I should be very much inclined to conclude that the work is an original one, or, in other words, that Kāsyapa has effected in the Kāndra system what Rāmakandra has done in the Pāṇiniya by his work called the *Prakriyākaumudī*, which, no doubt, afforded a model for Bhaṭṭoji in the composition of his *Siddhāntakaumudī*. The verse referred to is the following:—

“Bhagavantam gagadvandyaṃ abhivandya ta-
thāgatam |
Bālāvabodhanam bindum Kāndrasindhau karomy
aḥam ||”

Here the author states that the *Bālāvabodhana* which he composed is a drop from the ocean of Kandra. If the work was an abridgement of an already existing re-arrangement of all or the greater number of the sūtras of Kandra, the author would most probably have referred to that work in the Introduction, just as Varadarāga, in the introductory verse to the *Laghukaumudī*, has stated it to be an abridged *Siddhāntakaumudī*.

The book begins with the usual adoration to Buddha as found in almost all Buddhistical works—*Namas tasmai bhagavate 'rṣate samyak-sambuddhāya*. Then follow the introductory verse given above, and the scheme commonly called the *siva-sūtras*, together with a gloss explaining the use of the scheme and the classification and formation of letters. The extraordinary statement in the *Kaumudis* that the vowel *li* has no long form, though it has a prolated one—a statement quite opposed to the *Kātantra*—is also met with in the *Bālāvabodhana*. A reason is assigned for the repetition of the *h* in the scheme, which is that it is repeated in order that it may be included in the *pratyāhāra* val. Such a reason is also mentioned in the *Praudhamanoramā*, which enumerates, besides val, the *pratyāhāras* *ral*, *ghal*, and *sal*.

According to the *Kaumudis* *sthāna* and *prayatna* are concerned with the formation of letters, but in the work under notice a third thing is mentioned, namely, *karana*. The *karanas* are the middle of the tongue, the vicinity of the tip of the tongue, and the tip of the tongue itself, as in pronouncing the palatals, the linguals, and the dentals respectively. In the case of the other letters the *sthāna* and *karana* are the same.

Before leaving the subject of the classification of letters and the mode of their formation, and passing on to the chapter on *sandhi*, a *kārikā* is given restricting the *pratyāhāras* to forty-two, which bears a close resemblance to that given in the *Kāśikā* for the formation of Pāṇini's forty-one *pratyāhāras*, as will be seen on a comparison of the two which I quote here for the purpose:—

“*Nañānavāḥ* syur *ekasmāḥ* *katurbhyas* tu *kaṭau*
nashau |
Dvābhyām *rasmayo* 'pi *pañkabhyo* *las* tu *śaḍbhyo*
vidhiyate ||”

“*Kāśikā*: *Ekasmān* *nañānavatā* *dvābhyām* *śas*
tribhya *eva* *kaṇamāḥ* *synuḥ* |
Gñeyau *kayau* *katurbhyo* *raḥ* *pañkabhyaḥ* *salau*
śaḍbhyāḥ ||”

As regards the arrangement of the subjects in the *Bālāvabodhana*, I am very much inclined

to the opinion that it is more logical and, strange to say, more in consonance with European ideas than the arrangement in the *Kaumudis*. As an instance affording proof of this, I may mention that in the former the declensions of pronouns and numerals are given in separate sections, and not blended with those of nouns, as in the latter.

The MS. in question belongs to the *Lankātilaka-vihāra*, a Buddhist temple in the Central Province of Ceylon, about eight miles from Kandy, the mountain capital of the island. Mr. A. C. Lawrie, district judge of Kandy, and a member of the committee of the Oriental Library of that city, whose services to the library cannot be too highly valued, having received information of there being a good collection of MSS. in this *vihāra*, at once proceeded to the place and had the whole collection examined and catalogued. At his request, Kobbekaduwe Srinivāsa Buddharakkhita, the incumbent of the *vihāra*, lent the work to the library, and it was there that I found it about three months ago. A careful examination of the MS. led me to believe that its publication would be of immense service to Oriental scholars as tending to throw new light upon questions relative to the historical connexion of the different systems of Sanskrit grammar and upon other problems in the solution of which scholars are at present engaged. With a view, therefore, to its publication, I made diligent enquiries for other copies of it, in every quarter where I thought any would be forthcoming, for the purpose of collation, but my search has resulted in the discovery of only two other copies. One of these belongs to the *Suduhumpola-vihāra*, near Kandy, and the other to the learned high-priest, Sumangala, Principal of the Oriental College, Colombo. All the three copies now in my possession—and I do not believe it likely that any more could be added to the number—are in the Sinhalese character; but the edition I intend publishing will appear in the *Devanāgarī* type, together with a preface, explanatory notes, and a list of the sūtras alphabetically arranged. The work of collating is being vigorously carried on, and I hope to send the edition to the press in about two or three months.

W. GOONETILLEKE.

NOTES OF TRAVEL.

WE have received the first part of the *Zeitschrift für wissenschaftliche Geographie*, edited by Dr. J. L. Kettler, and published at the small town of Lahr, in Baden. The leading article, by Dr. R. Pietschmann, deals exhaustively with the question of the Landfall of Columbus, the author's conclusions as regards Guanahani being the same as those previously arrived at by Becher, Peschel, and Major. A translation from the *Istvytyiya* of the Russian Geographical Society, of Syevyertsov's article on the exploration of the Pamir, will be read with interest. A few letters addressed by A. von Humboldt to Klüden are published for the first time. In one of these he complains about the extravagant articles published in American papers to “glorify” him. He says:—

“Nothing is more injurious to a man of learning than such extravagance. A great portion of fame is dependent upon patience and long life, so that one becomes a ‘curiosity,’ and grows more famous in proportion as one increases in imbecility. As regards opinions on me, I far prefer the style of the clerical papers of Vienna and Paris:—‘On dit que l'assassin des âmes a des mérites littéraires. Cela ne sert pas d'excuse. Satan a bien plus d'esprit que M. de Humboldt.’ Expressions like these are more useful than sentimental visits to my den, and natural history description of the old animal (‘Beastie’).”

At the meeting of the Royal Geographical Society on February 9, Major-Gen. Sir M. A.

S. Biddulph, K.C.B., will read a paper on "The Eastern Borders of Pishin and the Basin of the Loras."

THE Government Printing Office at Washington has just published an important and interesting quarto volume, entitled *Narrative of the Second Arctic Expedition made by Charles F. Hall*, being the record of his voyage to Repulse Bay, sledge journeys to the Straits of Fury and Hecla and to King William's Sound, and residence among the Eskimos during the years 1864-69. Among the appendices are Capt. Hall's astronomical and meteorological observations, and notes of his geological collections, by Prof. B. K. Emerson, while the illustrations include steel engravings of Hall and Franklin, and numerous wood-engravings, photo-engravings, and heliotypes. There are also two circum-polar maps, one with explorers' names, and the other showing the geographical discoveries made since 1818, and separate maps of Hall's several detailed journeys, as well as sketches of coast-line drawn by Innuits. This work has been prepared, by order of the Secretary of the Navy, under the able editorship of Prof. J. E. Nourse, U.S.N., in pursuance of a Senate resolution, dated February 6, 1877, and forms a companion volume to the narrative of the *Polaris* expedition, issued in 1876. The present work has been entirely compiled from Capt. Hall's unpublished journals and other papers, which he had hoped to prepare for the press with his own hand.

THE same office has also just issued *Reports of Explorations and Surveys for the Location of Interoceanic Ship-Canals*. This volume deals with two routes—one through the Isthmus of Panama, and the other by way of the valley of the River Napipi, utilising to some extent the Rivers Atrato and Doguado on the Atlantic and Pacific sides respectively. The work is edited by Commander P. Lull, who was in charge of the Panama expedition, and Lieut. Fredk. Collins, the leader of the Napipi expedition, and is copiously illustrated with maps, plans, &c.

WE understand that Capt. H. W. Howgate entertains great hopes of being able to induce the United States Congress to make him a grant of public money in time for the despatch of his polar expedition this year. Through the assistance of Dr. John Rae he has already purchased in this country a small steamer suitable for the purpose, and, in default of State aid, Capt. Howgate will no doubt endeavour to fit out his expedition through the liberality of the New York merchants and others interested in his scheme.

MR. E. W. LEWIS has just published (Moffatt and Paige) a little book entitled *Physical Geography*, being a series of facts and theories arranged upon the basis of questions set at the Oxford and Cambridge Local Examinations. Mr. Lewis's book will, we think, prove of considerable use in schools, for it is concisely and pleasantly written. His information, however, though varied, does not always appear to be brought down to the latest date, for, in speaking of cataracts, he makes no mention of perhaps the most wonderful of all—the Kaieteur Falls in British Guiana, the existence of which has been known for nearly ten years.

ABOUT a year ago (vol. xv., p. 75) we alluded to a somewhat adventurous expedition which a Hungarian traveller well accustomed to mountain exploration, M. Moritz Déchy, was about to undertake in the Himalayas; and it was with much regret that we heard from a fellow-traveller of his being compelled a short time back to return to Buda-Pesth with his constitution seriously impaired from a succession of fevers contracted in the malarious gorges of the northern frontier of India. Though not able to complete his proposed enterprise in consequence of ill-health, M. Déchy, in com-

pany with his Swiss guide, accomplished a certain amount of exploration on the borders of Sikkim and Nepal; he also took a large number of hypsometrical and meteorological observations, as well as a series of photographic views.

News has been received in Brisbane that Messrs. R. Sefton and J. Watson, who are stated to be experienced northern explorers, are organising a party at Gilberton to explore the country about the Nicholson River, which flows into the Gulf of Carpentaria.

MR. WHITE, of Reedbeds, South Australia, is stated to be fitting out a yacht for a two-years' cruise in New Guinea, his chief object being the collection of natural-history specimens.

IN the ACADEMY of February 9, 1878, we noted that in the previous year the Russian Government had despatched Lieut. Tiaguine to Novaya Zemlya to found a permanent station for the relief of shipwrecked seamen, and that he had chosen a spot in Moller Bay on the east coast. On June 29, 1878, we reported that arrangements had been made for his spending a whole year at Karmakul Bay, with a view to the collection of scientific information. He accordingly arrived there in August of last year, and some of the results of his experiences have just become known. Though the climate is, of course, very rigorous, it would appear not to be so bad as might have been expected, for the mean temperature of the five winter months was -12.2° Centigrade (about 10° F.). The month of February showed the lowest mean temperature, viz., -17.8° C. (0.04° F.). Lieut. Tiaguine looks upon wintering in Novaya Zemlya as quite practicable, especially for Samoyedes, of whom his colony was composed. On June 10 Capt. Markham, during his recent cruise in the *Isbjorn*, met with a party of these people in a small undecked boat to the southward of Cape Britwin, at the northern extremity of Moller Bay, but, probably through linguistic difficulties, he failed, we believe, to ascertain the name of their leader and the nature of his mission in Novaya Zemlya.

SCIENCE NOTES.

The Geological Survey of the United States.—Considerable stir has lately been excited in scientific circles in America by the powers of the new survey, which has been placed under the direction of Mr. Clarence King. A committee of the National Academy of Sciences was appointed some time ago to consider the position of the scientific surveys of the United States. Acting on some of the recommendations contained in the Report of this committee, Congress has established, under the Department of the Interior, an independent organisation, to be known as the United States Geological Survey, and to be charged with the study of the geological structure and economic resources of the public domain. It appears, however, that a resolution was introduced into the House of Representatives adding the words "and the States" after "the public domain." Now it is obvious that by such an addition the area under the director's supervision suddenly swells to the dimensions of the entire country, stretching from the Atlantic to the Pacific. The inconvenience and expense of such an expansion have been forcibly pointed out in the *American Journal of Science* by Prof. James D. Dana, who holds that such an increase of area was never contemplated by the original committee, on which he served. The old surveys in the Far West are of course superseded by the new administration under Mr. King. In connexion with this subject, we may remark that two new numbers of the *Bulletin* of Prof. Hayden's survey have just been published.

They contain, however, a number of articles bearing for the most part on zoology rather than upon geology.

THE death is announced of Prof. Karl von Seebach, of the University of Göttingen, in his forty-second year. He was the author of numerous works on earthquakes and the structure of volcanoes.

American Journal of Mathematics Pure and Applied. Vol. II. No. 3. (Baltimore.) Prof. de Morgan once stated, at a meeting, we believe, of the Mathematical Society, that "it has long been known to map makers as a matter of experience that four colours will suffice in any case" to colour a map. Subsequently, at a meeting of the same society (June 13, 1878). Prof. Cayley asked whether this statement had ever been proved; and about the same date Prof. Cayley, in a communication to the Royal Geographical Society, indicated wherein the difficulty of the question consists, and stated that he had not then found a solution. Mr. A. B. Kempe, who has done so much for the linkage question, then tried his hand, and happily succeeded "suddenly, as might be expected, in hitting upon the weak point," and contributes the opening paper of this number, with the title "On the Geographical Problem of the Four Colours." Next, Prof. W. E. Story appends "to the foregoing valuable paper" a short discussion of one or two cases which are liable to occur. A plate of figures accompanies Mr. Kempe's solution; and so one more vexed question appears to be satisfactorily settled. Mr. Stringham gives "Quaternion formulæ for the rectification, quadrature and cubature, of curves, surfaces, and solids and for barycentres." Mr. Stone points out and corrects, in his note on the "Dynamics of a Curved Ball," a mistake into which Prof. Eddy had fallen in a paper we noticed previously in this same volume (pp. 85-88). Prof. Sylvester continues his "Note on Determinants and Duadic Synthèmes," and gives (pp. 223-251) "Tables of the Generating Functions and Ground-Forms for the Binary Quantics of the First Ten Orders." These tables evidence an immense amount of work, and nowhere, perhaps, could they have found a place except on these large pages. The expense of calculating the tables of the seventh to the tenth orders has been defrayed out of the British Association grant. Mr. Franklin was associated with Prof. Sylvester in the work. We note the frequent occurrence of the new word *tamiasage*. Prof. Sylvester also commences a paper "On Certain Ternary Cubic-Form Equations," in which he discusses some additions made by the Rev. Father Pépin to his published theorems on the classes of numbers irresolvable into the *sum* or *difference* of two rational cubes. Mr. Craig contributes a paper "On the Projection of the General Locus of Space of Four Dimensions into Space of Three Dimensions," and also an interesting note on the Motion of an Ellipsoid in a Fluid. Dr. Petersen, of Copenhagen, gives a new proof of the Theorem of Reciprocity; and Mr. Hall writes "On a New Action of the Magnet on Electric Currents" in contravention of a passage in Clerk Maxwell's *Electricity* (vol. ii., p. 149).

DR. THUDICHUM "politely requests" us to state that the matter of nineteen out of twenty-three articles in vol. i. of his *Annals of Chemical Medicine* has never been published by him before; and that only four articles contain matter previously published by him, but much enlarged or much consolidated.

PHILOLOGY NOTES.

PROF. JOH. STORM, of Christiania, is preparing a German translation of his *Engelsk Filologi* reviewed in the ACADEMY of October 11 last year. The translation will be published by Henninger Bros., of Heilbronn, under the title of *Englische Philologie*, 1. Band: "Die lebende Sprache."

MR. J. P. POSTGATE writes:—

"In your report of the last meeting of the Philological Society I am represented as deriving *frenum* from root DHA. I never said so. It is from a root DHAR, which is probably not even remotely connected with DHA, and, so far as I know, this etymology has never been doubted."

Anglia. Vol. III. No. 1. A. Schmidt, "Zur Textkritik des *King Lear*," treats mainly of the relation between the text of the first folio and that of the quartos, the writer coming to the conclusion that the latter is of very little critical value, as it was based on attempts to write down the plays while being performed, the unavoidable contractions and omissions being afterwards expanded and filled in conjecturally. He rejects the current distinction between "authentic" and "spurious" quartos, which in reality is not one between legitimate and pirated editions, but between a more and a less skilful falsification of the text; and agrees with Delius and others that Shakspeare did not rewrite his plays, and consequently that the folio and quarto text of a play cannot represent different recensions of the author. O. Schöpke concludes his study of Dryden's paraphrases of Chaucer's poems, treating of the spurious *Flower and Leaf*, *The Wife of Bath*, and *The Good Parson*. Froescholdt gives a collation of the oldest quarto of Marlowe's *Doctor Faustus* in the Bodleian Library. J. Zupitza gives a brief notice of a hitherto unknown MS. of the *Ancren Riwle* discovered by him in the library of Caius College, Cambridge. H. Varnhagen publishes the Middle-English *Sayings of St. Bernard*. R. Wuelcker reprints the late Old-English Life of St. Neot, with some introductory remarks and critical notes. H. Gering discusses the relation between *Beowulf* and the Icelandic *Grettisaga*, which were first compared by Dr. Vigfússon in his Icelandic Reader. Of the grammatical contributions the longest is "On the Omission of the Relative Pronoun in English," by O. Lohmann. W. Sattler continues his microscopic investigations of the use of the English prepositions; this time it is the distinction between *to be at home* and *to be home*. H. Sweet shows that the preterite of *cuman* in Old English was *cōm*, with a long vowel; gives, under the title of "Disguised Compounds in Old English," the etymologies of *fullum*, *sulung*, *lätteow*, *lirceow*, *intinga*, from *fullteām*, *sullhang*, *lādseow*, *lirdeow*, *inðing*; and derives *left* from an Old-English *lyft*, "maimed," and *bless* from **blōdison* = "redde (the altar) with blood." M. Trautmann takes advantage of reviewing some school-books to make some interesting remarks on the varieties of the consonant *r*, showing clearly that the back (uvular) *r* is of quite late origin in Germany, having been introduced, as he supposes, from France in the last century, where it was first brought into fashion by the *précieuses* of the seventeenth century.

MEETINGS OF SOCIETIES.

BRITISH ARCHAEOLOGICAL ASSOCIATION.—
(Wednesday, Jan. 21.)

H. SYER CUMING, Esq., in the Chair.—Mr. Cope read an interesting and exhaustive paper on "Jade." He showed that, although apparently unknown to, or, at all events, not named by, classical writers, its existence had been known to the earliest nations of antiquity both in the East and in the West, and even in New Zealand, where

it formed the material of the emblem of sovereignty now in the possession of the Queen. Mr. Cope illustrated his paper by a large collection of articles made of, or manufactured out of, jade, including candlesticks, vases, bowls, plates, &c. Other fine specimens of jade were exhibited by the chairman and Mr. Cecil Brent; and some beautiful flints, dug up in the neighbourhood of Highbury and Holloway, by Mr. Worthington Smith. The exhibition of these and of the articles of jade called forth an expression of various opinions, Mr. George R. Wright, the Rev. Mr. Mayo, and other members taking part in the discussion.—Mr. W. de Gray Birch, of the British Museum, reported that since the date of the last congress of the association he had inspected a variety of early MSS. at Norwich, at Ely, and at Wells, an account of which would appear in due course in the *Journal* of the association.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 22.)

EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—The Secretary read a letter from Capt. Sullivan, R.N., forwarded to the society by the Admiralty, containing an account of the discovery of what has been supposed to be the coffin and remains of Christopher Columbus at the Cathedral of San Domingo.* It was intended to remove the bones of Columbus on the cession of the island to the French Republic in the last century, but it has been suggested that, through the destruction of the archives of the cathedral by Francis Drake, it was difficult to identify the coffin, and that the body of his son was taken instead. A bullet was found among the bones; and, though there is no record of Columbus having been wounded, he speaks in some of his letters of suffering from a wound. There is an inscription on the coffin, styling the occupier "Discoverer of America." Mr. Milman said that this matter had been carefully discussed by the Royal Academy of Madrid, who had come to the conclusion that the real remains of Columbus had been removed, and that those now found belonged to his grandson and namesake. The inscription is certainly not contemporaneous, and the word America was never applied to the New World in Spain until 1672.—A letter was read from Mr. Wylie concerning discoveries at lake-dwellings at Neufchâtel, the most important object being a large *bipennis* of pure copper, which, however, Mr. Franks was inclined to consider an ingot, and not an article for use.—Mr. Peacock contributed a paper upon the word "Osmund," a kind of iron ore imported from the North of Europe, and quoted various passages from the statutes and elsewhere in illustration of its meaning.—Mr. Lee, local secretary for Devonshire, exhibited a collection of flint implements found by Mr. Widger in caves and tunnels at Torbryan near Torquay.—Mr. Hodgson Fowler exhibited the ring of Wm. Booth, Archbishop of York from 1452 to 1464, which was found with his skeleton in Southwell Church some years ago when the chapel in which he was buried was demolished. The ring was kept by a mason, who found it, till his death, and then given to a clergyman who is since dead.—Mr. Micklethwaite exhibited some fragments of tiles from St. Albans, with raised patterns, and of various colours.

SPELLING REFORM ASSOCIATION.—(Tuesday, Jan. 27.)

DR. GLADSTONE in the Chair.—A paper was read by the Rev. F. G. Fleay on "The Principle which should determine our Choice of a Reformed English Alphabet." To arrive at such a principle it is necessary to look at the language as a growing organism. There exists already a definite systematic orthography, not acknowledged in the language as a whole, but invariably acknowledged in the formation of new words. This uniform unambiguous system gives us signs for thirty-four sounds out of forty. It only remains to find for the remaining six sounds symbols which should not violate the conditions which had already produced such advantages. Symbols prepared with this object were exhibited by Mr. Fleay. On the whole the lecturer proposed that the main body of a reformed alphabet should consist of such letters and combinations of letters as are in present use in words newly derived

from the classic languages; and that the subsidiary letters necessary to complete the alphabet should be partly derived from alternative types now in use, partly from modifications of existing types. An animated discussion followed, in which Messrs. Evans, Candy, Rundell, Pagliardini, Price, and others took part.

FINE ART.

La Monnaie dans l'Antiquité. Par François Lenormant. Vol. III. (Paris: Lévy.)

We gladly welcome the third volume of M. Lenormant's great work on money, of which the first two volumes have already been noticed in these pages.* Considering the difficulties of the subject and the many pursuits of the author, a volume a year must be considered fair progress, and it is to be hoped that it will be maintained.

The present volume is concerned with "*La loi dans la monnaie antique*," and consists of three sections. In the first, which has appeared in English in the *Contemporary Review*, M. Lenormant sketches slightly the theories of the nature of money which prevailed in antiquity and the consequences they produced. In the second he gives an account of the monetary magistrates among the Greeks and Romans. In the third he discusses the organisation of the mints among the Greeks, and gives lists of the die-cutters hitherto recognised. For some reason unknown M. Lenormant breaks off at this point in the middle of a chapter, and leaves the subject of the organisation of the Roman mints for a future volume.

M. Lenormant's opening essay is luminous, and throws the main fact with which he has to deal into strong relief. This fact is, to put it briefly, that throughout ancient history the Greeks held the true theory of money, considering it merely as metal stamped for convenience, and the Romans held the false view of money, supposing that its value lay, not merely in the metal, but in the authoritative stamp it bore, and so could be arbitrarily raised. Of course, the difference of view did not arise solely from the superiority of the Greek intellect, though the clearness with which Aristotle treats the matter shows that this may be one reason of it. The fact is that the money coined by each Greek city had to undergo a very severe competition. All the cities round also struck money, and the money-changers in the pursuit of their calling were very free from political prejudice. If any mint issued coin below the proper weight and fineness its range of currency would be most restricted, and it would not be accepted abroad in payment of debts. There was no means of forcing it into circulation. The Romans, on the other hand, were always ready to compel the world to accept their money when properly stamped, even at the sword's point. In early times at Rome the monetary magistrates issued a certain proportion of plated pieces, and the progressive degradations of the Roman *as* form an instructive history. It is a curious fact that in imperial times all the bad emperors, such as Nero, Domitian, and Commodus, debased the coin; those of the better sort, like Augustus and Nerva, restored it.

* See ACADEMY, July 5, 1879, p. 7.

* ACADEMY, July 13, 1878.

M. Lenormant's most original and valuable chapter is that in which he deals with the monetary magistrates of Greece; for on this subject little had been done since the days of Eckhel. The material, consisting mainly of the inaccurate descriptions of Mionnet, had to be used with extreme caution; and yet it was most desirable to arrive at general results. When numismatists find a name in the field of a Greek coin, they usually label it as "magistrate's name" and pass on; yet it is clear that if we want to know anything about monetary magistrates our knowledge must be derived from such inscriptions. M. Lenormant shows that Greek coins are sometimes stamped with the name or the signet of the eponymous magistrate of the city; this is the case at Cyrene, after the expulsion of the Battiadae; at Smyrna, Pergamus, and most cities of Asia Minor. At other places, either in addition to, or in substitution for, this name, occurs that of the inferior magistrate who was actually responsible for the weight and fineness of the coin. Thus at Rhodes, where the eponymous magistrate was the priest of Apollo or Helios, the coins bear the name and signet of the *rapias* or public treasurer. At Athens every coin during the Macedonian period bears three names, of which two remain constant for a whole year, while the third changes with every prytany. The first name is that of a man high in honour; probably of the magistrate who stood nominally at the head of the Athenian mint. The second name seems to have belonged to the magistrate in whom the actual control was vested; and the third name would appear to have been that of an inspector who, in the rapid rotation of Athenian offices, held his post but for a month. Not dissimilarly, the late coins of Dyrrhachium and Apollonia in Epirus bear each a name in the genitive which is probably that of the annual eponymous magistrate, and a name in the nominative which is that of the monetary officer responsible for the coin.

On the coins of the cities of Asia Minor in Roman times we find the names of a great variety of magistrates who usually belong to the first of the classes above mentioned. At Pergamus it is the chief Prytanis who signs the coin, at Taba in Caria the Archon, at Mastaura the *Boularchos*, at Ephesus the *Grammateus* of the city ("town clerk" of the Acts). If, in addition to his civil function, the eponymous magistrate was a priest, a high-priest, an Asiarch, or held any other religious function, he often states it on the coin. But M. Lenormant points out to what confusion it leads if we assume with the older writers that it was as priest or as Asiarch that he issued coin. One or two temples in Asia may have retained the right of mintage, but only a few. And in certain cities, such as Eumenia, in Phrygia, a priest was the regular eponymous magistrate; but these are rare exceptions. The bulk of the coinage of Asia was municipal. One class of money deserves a special mention: it is that which bears the inscription *ἀνέθηκε*; *Πολέμων ἀνέθηκε Σμυρναίους*, for instance. It is now acknowledged that the meaning of this inscription is that the person named struck at his own expense and issued coins on behalf of his city. This one fact throws a flood of light on

the constitution of the Asiatic cities at the period.

We cannot follow M. Lenormant in his treatise on the Roman monetary magistrates, and in his account of the practical working of Greek mints; and this is the less necessary because he closely follows Mommsen in dealing with the former subject, and is assisted in his treatment of the latter by works so sound as those of Raoul Rochette and von Sallet. In concluding, I must remark that I have noticed fewer inaccuracies in this volume than in those which preceded it; but still it appears to me that M. Lenormant has not made the most of several opportunities offered in the course of this part of his work for the correction of mistakes which have been pointed out in former volumes. PERCY GARDNER.

CHURCH ARCHITECTURE IN CYPRUS.

Larnica, Cyprus: Jan. 6, 1880.

The Island of Cyprus will be found to present a most interesting and fertile field for the investigations of the architectural student and the ecclesiologist, as it literally abounds with ancient churches as well as with domestic buildings of mediaeval times.

The ecclesiastical buildings may be generally divided into two classes: (1) The ancient Greek churches, built after Byzantine models and in the Byzantine style; and (2) the Latin churches erected under the Lusignan dynasty in the Gothic style of Western Europe, together with those Greek churches which were built during the same period by architects more or less imbued with Gothic feeling. The following rough notes, made during a recent hurried visit to Cyprus, may interest some readers of the ACADEMY.

Of the former class, the most remarkable church which I visited is that of Kiti, a village situated about eight miles from Larnica, and which preserves the name of the ancient Greek city of Kition. This church, which is dedicated to the Blessed Virgin, and has the title of "Built by Angels," is a large building of three aisles with two central domes and terminal apses. To the south aisle, a large side aisle, now used as a school, was added in the Gothic period. The central dome has a fresco of our Lord in the act of blessing, and the central apse has a most curious mosaic of the Theotokos, in a blue dress, standing between two angels swinging censers in the early Byzantine manner. His Eminence the Bishop of Citium, whom I met at Limassol, informed me that this is the only mosaic existing in Cyprus. Its date can scarcely be later than the eleventh or twelfth century. This apse is likewise remarkable for a noble semicircle of white marble steps, with an upper bench for the presbyters in the centre according to primitive arrangement. The iconostasis is magnificent, and blazes with rich gilded carving and sacred pictures. Curiously enough the lower panels are sculptured in the Gothic rather than in the Greek manner. A picture of the Archangel Michael on the screen in the southern aisle is a really fine work of art, and an excellent specimen of a style of an early school of painting which formerly prevailed in Cyprus, and of which nothing seems as yet to be known in England. Yet, undoubtedly, many of the pictures will bear a favourable comparison with those of the Early-Italian painters. In this church I for the first time saw imitations of ostrich eggs, which are commonly suspended in Oriental churches, made of glass as well as of porcelain and painted wood. The windows of the original church are narrow and round-headed. On the walls are numerous remains of very curious ancient frescoes.

At Colossi, near Limassol, close to the magnifi-

cent keep of the castle, is a small but interesting church, now disused, dedicated to St. Eustachius, whose huge equestrian figure is painted in fresco on the north wall. This church is of extremely small dimensions, but situated as it is on the edge of a rock with two or three ancient trees hard by, it is most picturesque. The plan is simple—three aisles, a round central dome, and eastern apses. There are remains of frescoes. Some couple of miles from Colossi, on the road to Episcopi, is another disused and partly ruined church, that of St. George, an admirably proportioned edifice with a single aisle ending in an apse, and with the stone roof of the nave supported by pointed arches. Remains of fine ancient frescoes, including one of the Empress Helena, are found on the walls. Here, as at Episcopi, there is a square altar stone in the chancel of the apse supported on a low round column. No better model could be found for one of the English churches which will be built in Cyprus than this simple but satisfactory building.

One of the almost innumerable churches devastated by the Turks at Famagosta, and now in partial ruin, is a large building with three lofty apsidal aisles. It presents many Gothic features, and was, therefore, no doubt, erected in the early period of the Lusignan dynasty; but the style of the frescoes, which are numerous and important, and the Greek inscriptions show that it belonged to the Cypriotes of the Holy Eastern Church, and not to the Latins.

The cathedral of the Greek Archbishop of Nicosia—a prelate who, like the Byzantine emperors of old, still exercises the unique privilege of affixing his signature in red ink—is a somewhat small building of unpromising exterior, and apparently no very ancient date. It is, however, completely covered inside with most curious and archaic-looking frescoes. The roof is covered with paintings on a blue ground. On the south wall is represented the Last Judgment, with the figure of Christ in the centre. On his right hand are the blessed; on the left the condemned, including an extraordinary number of bishops, descend in a band of flame into hell, represented by the mouth of a huge green monster. At the entrance of hell—crowned, indeed, but chained and attended by devils—is Herodias. In this church are many gorgeous silver lamps, and the only imitation egg in Rhodian porcelain I ever saw. In the wild country between Larnica and Famagosta I noticed what is quite a characteristic feature of Cyprus. Besides the regular church inside each village there is generally another and smaller one at a considerable distance outside, and others are dotted about the vast, treeless plateau of limestone which extends far and wide, far away from the site of any existing habitations.

GREVILLE J. CHESTER.

OBITUARY.

THOMAS LANDSEER, A.R.A., the well-known engraver to whose skill so much of the popularity of his brother Sir Edwin's works is owing, died on the evening of January 20 at his house at St. John's Wood at the ripe age of eighty-six. He was the eldest, though the last survivor, of the three Landseer brothers, all of whom were early trained in art by their father, John Landseer, an engraver of high merit, though he was afterwards excelled even in his own branch of art by his son Thomas, whose works are ranked among the finest examples of mezzotint engraving that the English school has produced. He devoted himself chiefly, but not exclusively, to the engraving of Sir Edwin's celebrated pictures, and has rendered these with an appreciative fidelity of character, beauty of style, and delicacy of execution that leave nothing to be desired. One of the last works

upon which he was engaged was a study by Sir Edwin for one of the lions of the Nelson column, which he has engraved with something of his old skill. It is stated that Thomas Landseer, as well as his brother Charles, has left most of his money to charities, &c., connected with art.

THE painter Auguste Galimard has just died at Montigny-les-Corneilles. He was a pupil of Auguste Hesse and Ingres, and made his *début* at the Salon of 1835. Among his best-known works are *La Vierge en Prière*, now in the church of Pithiviers, and *L'Ange aux Parfums* and *Christ donnant sa Bénédiction*, belonging to that of Périgueux; *La Séduction de Leda*; and *Les Pèlerins d'Emmail*, painted for Saint-Germain-l'Auxerrois. He was also the author of a dialogue in verse entitled *Les Deux Propriétaires*.

THE Swiss sculptor, Raphael Christen, a pupil of Thorwaldsen, has just died at Bern. He was principally known by his great bronze statue symbolical of the Canton of Bern; but he executed a number of thoughtfully conceived works of various kinds that are scattered throughout Switzerland.

THE death is likewise recorded of Henry Carter, better known in the United States under his pseudonym of "Frank Leslie;" and of Gustav Klotz, for many years architect of Strassburg Cathedral.

ART BOOKS.

THE last volume of Dr. Bode's new edition of Burckhardt's *Cicerone* (Leipzig: Seemann) treats of paintings in Italy from the time of the Catacombs to Poussin and Claude. In the account of the early Renaissance masters, we find more complete and trustworthy references than in any of the former editions. Dr. Bode has also carefully revised the critical descriptions of later Italian art, always following the latest authorities. Special attention has been paid to the numerous paintings by Flemish, Dutch, and German masters, the thorough critical account of which will be the more welcome to the reader as the official attributions of pictures by Northern artists in Italian galleries are generally by no means trustworthy. The account of the mosaics and pictures in the Catacombs has been rewritten by Dr. J. P. Richter, and a more commodious arrangement of the local indexes has been adopted.

THE well-known Russian archaeologist, N. Kondakoff, of Odessa, has lately published two interesting works on valuable art monuments preserved in Russia. His learned treatise on the terra-cotta figures excavated in the Crimea is illustrated by six plates, representing thirty-one figures, among which are scarce representations of Orpheus, Venus with Cupid, Penelope, and Niobe. His critical description of the illuminations in a codex at Moscow containing the book of Psalms, and written in the ninth century, refers to a late period of Byzantine art. Three of the fifty-six illustrations, occupying sixteen plates, are coloured facsimiles. As works of art the illuminations of the Moscow codex may appear to be of but little value; but they are certainly of special interest in the history of art, as they were apparently executed by those Byzantine artists who had settled in Russia and became the founders of the national Russian school of painting. On a comparison of these illuminations with the very similar compositions of pure Byzantine style in the MS. Add. No. 19,352 at the British Museum, dated 1066, it becomes evident that both are derived from the same source.

M. LOUIS BLANCARD, the Archiviste des Bouches-du-Rhône, whose brilliant monograph on the mediæval imitations of Oriental coins

known by the name of *Millarès* we have before had occasion to review, has just published the concluding fasciculus of his *Essay on the Money of Charles I., Count of Provence*. The whole work is a model of patient research and scientific arrangement. The first part is occupied with the subject of the intrinsic value of the money, and consists of five chapters, which deal successively with the ten issues of the Count (1249 to 1277); the iconography (types and legends); Marks of the King of France and of Montpellier; the metal, its *provenance*, Provence silver mines, the Marseilles assay, the degrees of assaying, &c.; the weight, *titre*, size, and the like of the Provençal coinage. The second part, also in five chapters, treats of the demonetisation; the market, exportation, importation, price of the Mark, relative values of copper and silver; the Mint and its charges; benefices; extrinsic value, real and fictitious. The third part has four chapters on comparative value, exchange, interest, &c. In the fourth part, on Relative Value, M. Blancard treats of salaries, the price of food, and the buying power of money at the time of Charles. To this are added certain *pièces justificatives*. The present concluding fascicle consists of an Appendix, chiefly concerned with the interesting questions of the *Millarès*, the Sicilian coins of Charles I., and a series of very curious and important observations on such matters as the bezant *sarracénatus*, *tripolatus*, *Michalatus*, &c.

NOTES ON ART AND ARCHAEOLOGY.

REFERENCE was recently made in the Berlin correspondence of the *Times* to the great success of Prof. Menzel's illustrated programme of the *Matinée* for the benefit of the sufferers in Silesia. And the remarkable spirit and vigour of the design certainly justify the appreciation of the Berlin public. It is a photo-lithographic facsimile of a pen-and-ink drawing. The lower portion of the composition represents one of the entrances to the Royal Opera House; carriages slowly file by the edge of the pavement, depositing their occupants as they reach the door, and then rapidly drive away. On the footway groups of pedestrians are pressing forward to the entrance, the men great-coated and shawled, and the ladies in hooded mantles and furred pelisses. Stalwart policemen stand about, programme-sellers dart hither and thither, and in the snow-covered road dragoons direct the order of the carriages. All these groups are marvellous for their realism, and the momentary actions are inimitable—for example, the lady tripping from her carriage, and the coachman turning round to shut the door. The mounted trooper, with the indication of his horse's breath in the frosty atmosphere, is life itself. But, though so uncompromisingly realistic, the treatment is removed from the region of prose by the exquisitely sensitive character of the execution. Moreover, a touch of pure phantasy is given in the upper part of the composition, which is enveloped in clouds. Here two graceful cupids are lustily pulling at bell-ropes to summon the audience. Over all waves a banner whereon is written "*Matinée zum Besten der nothleidenden Oberschlesier, 11. Januar, 1880.*" The design has all the skill and vivacity of the Frederick-the-Great woodcuts, and shows that, though forty years have elapsed since first Prof. Menzel won the admiration of artistic Europe, the hand of the greatest of Continental illustrators has not lost one whit of its power and brilliancy.

THE interesting Crace collection, part of which has been for some time on view at South Kensington, has recently been purchased by the Trustees of the British Museum for £3,000. This collection is especially valuable from an historical point of view, as it affords an import-

ant record of old London, its topography, &c.; but it also contains some rare old portraits which have an artistic value over and above their connexion with the subject they illustrate. The collection will not be transferred to the British Museum before May.

THE Trustees of the British Museum have accepted from an eminent collector a series of etchings by Mr. M. L. Menpes, a young artist who has had a successful career at South Kensington. The etchings include portraits of the late D. Maclise, R.A., Mr. G. Barnett Smith, and Miss Rosa Corder. Miss Ellen Terry has just given sittings to Mr. Menpes for an etching, which, we hear, will attract notice for its power and vigour. This work, as well as the portrait of Mr. Barnett Smith, will be exhibited among the etchings at the Grosvenor Gallery in May next.

MR. C. HEATH WILSON has addressed to the Principal and Senatus of the University of Edinburgh a long and thoughtful letter on the subject of the approaching appointment of a professor of fine art. Mr. Wilson earnestly insists on the necessity of comprehensive training for the student, and, therefore, of comprehensive tastes and knowledge on the part of the professor. He would demur to the election of a partisan, "the chair of fine art in a university being no place for teaching peculiar or partial opinions." He further urges that the professor should be a "good draughtsman;" but if "good draughtsmanship" is to be a necessary condition, it is clear that that choice is already made which we might have supposed was yet to make—the choice between a practical teacher of drawing and design and a literary teacher who deals with the history and criticism of art. The functions of the two persons, as has already, if we mistake not, been pointed out in these columns, are entirely different, and though here and there, and indeed fortunately, an exceptional man may combine excellent criticism with excellent practice, as a rule the art practice of the historian and aesthetic critic is of little excellence, while the skilled artist and practical teacher is singularly devoid of historical knowledge and of a broad view of the aims and the achievements of art. Mr. Wilson's letter raises, in a thoughtful and sympathetic fashion, several interesting questions, and will probably tend to keep comprehensiveness of appreciation before the Senate as an inevitable qualification if it is literary teaching that is to be required; but the first and most immediate question for the Principal and Senatus we opine to be this—Is it sought to establish another drawing school, or is it sought to spread facilities for the acquisition of substantial historical and aesthetic knowledge?

WE hear that an energetic effort is made, or likely to be made, by the Institute of Painters in Water-Colour, or some of its leading members, to place contemporary English water-colour art more prominently before the public. It is felt by the movers in the new scheme that the practical exclusion of our best water-colour works from the Royal Academy, and their present diffusion over several exhibitions—such as that of the Old Society, the Institute, and the Dudley Gallery—tend to lower the consideration in which water-colour painting may be held, and, while they by no means interfere with the earning of large incomes by well-established and popular artists, they stand in the way of the advance of younger men not yet known to fame. And it is held, we believe, that this is increasingly the case in a day when it is no secret that the popularity of the smaller and disconnected exhibitions of the organised societies is on the wane. The chief artists exhibiting at the rooms of the established societies have, of course, no difficulty in selling

their work, nor would any such difficulty arise even if the venerable and excellent societies in question were to shut their doors. But it seems to be felt strongly by certain energetic movers in this matter that the foundation—possibly even the incorporation under Royal Charter—of a new society on an extremely broad basis would serve alike the interests of the public and of water-colour art. The exhibition, besides displaying the work of the society's own members, who would consist of the most eminent practitioners of water-colour art, should be open to all comers, and thus be truly representative, in a way that no present organised society can claim to be, of the whole range of the art of water-colour. That there are difficulties and oppositions to encounter in the furtherance of such a scheme need hardly be said; but it seems to us that the effort is, under any circumstances, a worthy one, and such as might, with great public benefit, be brought to successful issue. It is known that, as far as regards the Institute of Painters in Water-Colour, that body was about two years since engaged in negotiations for the acquisition of a site in Piccadilly. The negotiations came to nothing, as it was felt that the responsibility of quitting the present premises in Pall Mall for much more costly ones was too heavy to undertake with good hope of pecuniary success. But this did not abate the desire on the part of many active members of the Institute to find more prominent and larger quarters. It is again in Piccadilly that a site is offered, and it is said to be one which has every advantage of position and of spaciousness that could be wished. It may safely be added that, whatever may be the views of particular bodies now existing, and however reasonable may be the objections entertained by some to a serious and radical change, the interests of English water-colour art, which are the first thing to be considered by the public in the matter, could not suffer by the speedy realisation of the scheme which has now been agitated. The realisation of the scheme, on a very broad and fair basis, would probably ensure, better than anything else that could be devised, the successful future of water-colour art.

AN exhibition is in contemplation, to be held in the City of London, to which it is hoped that the various guilds and livery companies will contribute some of their treasures. Many of these companies have a great wealth of old artistic plate, as well as pictures and other works of great interest. An instructive and rich exhibition might be formed out of such materials.

THE *Scotsman* announces an interesting "find" of ancient silver coins at Fortrose (Chanonrie) in the Black Isle. They are over a thousand in number, and are all of the time of King Robert III. of Scotland, who reigned from 1390 to 1406. The majority bear the stamp of "Edinburgh," several that of "Perth," and one at least that of "Aberdeen." The hoard was enclosed in a flagon of tarnished copper of the shape in use in Scottish families in the fourteenth and fifteenth centuries.

MR. D. W. STEVENSON, A.R.S.A., Edinburgh, has just completed a statue of John Knox, which is intended to occupy a niche in front of the Institute recently erected in Haddington as a memorial of the Reformer.

THERE has lately been much correspondence in *Notes and Queries* and other papers about a bell inscription, "Sancta Trinitas, ora pro nobis." It is doubtless a mere blunder, yet it is reported from Hordley, Salop; Stoke Charity, Hants; and Stoke Hammond, Bucks.

M. EUGÈNE MÜNTZ has discovered in the

Roman archives the accounts for the buildings erected by the Popes at and near Avignon between 1319 and 1370. These accounts, though very incomplete, contain a great number of minute details concerning the artists engaged and the date of their works, and show that during the early part of their residence at Avignon the Popes chiefly employed French painters, but that after the beginning of the fourteenth century they had recourse to Italian masters almost exclusively. M. Müntz proposes to publish the MS. in a series to be entitled *Les Arts à la Cour des Papes pendant le Moyen Age*, which is to include the inventory of Boniface VIII. and numerous other unpublished documents.

M. DE LIESVILLE has bequeathed to the State a magnificent collection of works of art, weapons, instruments, furniture, pottery, &c., and of autographs and historical documents of the Revolutionary epoch. It will probably form the nucleus of the Museum of the Revolution which is to be established at Versailles.

THE colossal Lion of Belfort, designed by M. Bartholdi as a symbol of the courageous resistance made at Belfort at the time when Paris was besieged, has at last been relieved of all the scaffoldings and hoardings that have hitherto hidden it from view. It now stands out with very fine effect against the front of the rock on which the *château*, or fortress, that overlooks the town is built. It is hewn out of immense blocks of stone of a reddish colour, and produces an overpowering impression of gigantic size and strength. Nearly eight years have been spent in its execution.

THE *Règlement* of the French Salon for this year has recently been published, and has provoked loud criticism from the French press. A perfect hubbub of conflicting opinions has indeed been raised about it, yet the changes made from preceding years do not appear to outsiders of any great importance. The whole of the articles of the *Règlement* were published in the *Chronique des Arts* of January 10, with all the changes printed in italics. The principal of these seem to be:—(1) That special salles and a special appendix to the catalogue shall be reserved for works executed for public monuments or having a decorative character; (2) that the works of foreign artists shall form a section by themselves, and that the works of artists who cannot compete, or who are exempt from the jury of admission, shall also be placed in special salles; (3) four first-class medals will be given for painting, of which one will be for monumental or decorative painting, one for history or portrait, one for *genre*, and one for landscape, animals, flowers, or still life; also ten second-class medals and eighteen third-class will be awarded for painting, four of which will be allotted to drawings in water-colour, pastels, drawings on china, &c., and painted glass; (4) to sculpture will be awarded one first-class medal, six second-class, and twelve third-class, while architecture receives two first-class medals—of which one is to be given either for the restoration of an historical monument or for the construction of a public building in France—four second-class medals, and five third-class. The first two regulations seem to have been made in the interests of the public, and most of the other alterations are merely in trifling details of arrangement, having the same end of greater convenience in view; so it is difficult to understand why they should excite so much controversy. The *Règlement* of the Salon, however, is always a matter that evokes the disputative powers of French critics.

THE picture and sculpture galleries of the Luxembourg were re-opened to the public on the 14th inst., after having been shut for some time in consequence of repairs and alterations.

A good many new works from the last Salon have been added, and some of the former ones cleaned; but probably less has been done than there otherwise would have been, because of the determination, which now seems definitely arrived at, of removing the treasures of art from the Luxembourg and appropriating the whole of the palace to Government offices and other purposes of state. So the Luxembourg Museum, which, in spite of its many inconveniences and bad arrangements, has always had a certain charm for Frenchmen, being looked upon as an old friend whose faults were not to be too closely scrutinised, is to be installed in new quarters, and much discussion has taken place as to where these quarters are to be. Several localities have been proposed, but the Administration of the Fine Arts have decided that it would be unfair to remove the museum very far from its present situation on the left bank of the Seine, in the midst of the colony of young art students, to whom it is especially serviceable. It is therefore proposed, as no suitable building is to be found in that neighbourhood, to build a fine new gallery, with all modern appliances, as near as possible to the old ones—that is to say, in the Garden of the Luxembourg at the back of the Orangery. This, at least, is the site that at present finds favour; but nothing definitive has yet been settled, and it is feared that M. Etienne Arago, the present excellent conservator, will be obliged to pack up the treasures in his keeping and depart before he can find another home for them. One amusing proposition is that he shall make a *tour de province* with the Luxembourg Gallery and exhibit it in caravans, like an ambulant showman.

AN exhibition and sale of works of art has been organised by the Association of Painters and Sculptors in Paris for the benefit of the widow and children of the painter Jules Héreau, who, it will be remembered, was killed in a railway accident last summer on the line between Paris and Auteuil. The sale will take place early in February, and many distinguished artists have promised to contribute.

WE have received the prospectus of an important work on modern German art which has just been published in Berlin. It is called *Stammbuch der National-Galerie*, and consists of etchings from the works of some of the principal German masters of the present century, together with portraits and sketches of their lives. The artists represented are Knaus, Preller, Wittig, Menzel, Kröner, Meyerheim, Dücker, Steffek, Harter, Bleibtreu, A. von Heyden, and Begas, and the etchings are executed by Hans Meyer, E. Forberg, Frau Begas-Parmentier, and sometimes by the painter of the picture reproduced.

A RUSSIAN correspondent of *L'Art* gives some interesting particulars respecting the magnificent Church of Our Saviour at Moscow, the first stone of which was laid by the Emperor Nicholas in 1839, and which is now approaching completion. The most precious materials, such as jasper, porphyry, and malachite, have been employed in the construction of this splendid edifice, as well as the richest mosaics and carvings. No fewer than twelve bronze doors, ornamented with statues of saints, open from the four *façades*, each door being eleven metres in height, and weighing 13,000 kilogrammes, while around the walls of the entire church are sculptured a series of bas-reliefs, with figures more than two metres in height, which have been executed by the Russian artists Loganofsky, Romazonou, and the Baron Klott. Indeed, all the artistic talent of Russia has contributed to the decoration of this church; and, while the exterior glows with mosaic, rich stones, and gilded cupolas, the interior, lit by fifty-six large

windows, vies with it in splendour by means of innumerable paintings, covering the whole of the walls, executed by Markon, Vereschaguine, Siemiradsky, Munkácsy, Neff, and other well-known artists.

THE University of Munich will award a prize of 3,000 marks to the author of the best history of wood-engraving in Germany. Contributions are to be sent in by January 1, 1883.

THE STAGE.

CHANGES of performance at the Vaudeville Theatre are not frequent, and when they occur they are generally worthy of note. On Thursday evening—too late to give us the opportunity of noticing either piece or performance in our present issue—the traditions of the theatre were broken, so to say, by the production of a comedy by Mr. Burnand instead of by Mr. Henry J. Byron. This bears the name of *Ourselves*—a title chosen, we should imagine, more with reference to the success of *Our Boys* than in remembrance of the semi-failure of *The Girls*—and the piece was to be supported on Thursday and subsequent nights by the actors already best known by their connexion with this theatre. Next week we may be able to discuss the production less inadequately if it offers any of those features of interest in which the contemporary stage is generally wanting.

TO-NIGHT the Haymarket Theatre—the “little theatre in the Haymarket,” as it used to be called—reopens, now for the first time under the management of Mr. and Mrs. Bancroft, the public curiosity as to the alterations and the furniture of the theatre having during the last few weeks been pushed very far, and having, it is fair to add, been gratified—not to say stimulated—by frequent public report. With regard to the decorations, a certain portion of the public will to-night see for themselves; and Mr. and Mrs. Bancroft's taste is hardly likely to be found wanting. With regard to certain of the alterations, the case may be different. Mr. and Mrs. Bancroft are innovators. They abolish the pit. The pit has always been the privileged resort of a class of habitual playgoers, not very wealthy, generally very intelligent, and who have from time immemorial been accustomed to get more than their money's worth. For the pit was always far pleasanter than the upper boxes, which cost more to go to; and it is to the upper boxes that Mr. and Mrs. Bancroft propose to send the former frequenters of the pit. Such a change may be exceedingly righteous, but it can hardly be popular.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Fleet Street, and Catherine Street, Strand.

Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

PARIS.

Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.

THE TRAVELLER'S GUIDE: Turkish GRAMMAR, VOCABULARY, and DIALOGUES. 1s. [n.d.]

DR. WELLS' PRACTICAL GRAMMAR of the TURKISH LANGUAGE. 8vo, 12s. [In the Press.]

BERNARD QUARRECH, 15, Piccadilly, London.

W. S. SONNENSCHN & ALLEN.

GRIMM (JACOB), TEUTONIC MYTHOLOGY. Translated from the Fourth Edition by J. S. STALLYERASE. In 3 vols. Vol. I. Demy 8vo, cloth, 12s.

“The author's main aim in this work is to demonstrate the substantial identity of the ancient religious systems of all the Teutonic nations. . . . History, legend, tradition, tale, and song are all pressed into his service, and compelled to yield their quota of evidence.”—*Scotsman*.

“So nearly complete, and so nearly exhaustive, that Grimm's successors can hardly hope to discover anything new in the field he has cultivated. . . . The work deserves nothing but praise, and the translation is most conscientious and written in excellent English.”—*Economist*.

HEWETSON (H.B.), The INFLUENCE of JOY upon the WORKMAN and his WORK. Illustrated by Autotype Facsimiles of Drawings by William Blake and others. 4to, cloth, 6s. [Next week.]

EDUCATIONAL.

PLAUTUS. The Captivi of Plautus.

Edited, with Notes, by E. A. SONNENSCHN, M.A., together with a Critical Apparatus (a Collation of the Vatican and British Museum MSS.), and an Appendix, consisting of Notes and Emendations to the whole of Plautus, discovered in the handwriting of Richard Bentley, in his copy now in the British Museum, with a facsimile. Demy 8vo, cloth, 6s.

SCHOOL EDITION, containing Text, Notes, and Critical Apparatus only. Demy 8vo, cloth, 3s. 6d.

“It would be difficult to mention any English edition of the Plays from which so much may be learnt as to the language and syntax of Plautus as this. . . . The ‘Captivi’ has, besides, a peculiar advantage for school purposes in its moral propriety.”—*Academy*.

INDUSTRIAL GEOGRAPHY of GREAT BRITAIN and IRELAND. By G. PHILLIPS BEYER, F.G.S., F.R.S.

16mo, limp cloth, 1s.

“The Idea is well conceived and the plan is admirably executed. . . . We should like to see this Primer become a standard text-book in all schools.”—*Capital and Labour*.

PRANTL (Prof.), ELEMENTARY TEXT-BOOK of BOTANY, for Schools. Edited by S. H. VINEY, D.Sc., M.A., Fellow and Lecturer of Christ's College, Cambridge. With 275 Woodcuts. Demy 8vo, cloth, 6s. [In a fortnight.]

THE KINDERGARTEN. Froebel Society's SERIES of PAPERS. 12mo.

No. 1.—SHIRREFF (Miss). CONNEXION between KINDERGARTEN and SCHOOL. 3d.

No. 2.—BUCKLAND (Miss). USE of STORIES in the KINDERGARTEN. 3d.

No. 3.—ROGGAN (Mrs., M.D.). THE PHYSICAL EDUCATION of GIRLS. 4d.

THE CHILD and CHILD NATURE. By the BARONESS BÜLOW. Second Edition. Crown 8vo, cloth extra, 3s.

“Abounds with good sense and noble thoughts.”—*Metropolitan*.

The Fifth Edition, much enlarged, with 100 Plates, price 31s., ready October 20th.

HARRISON, Pall Mall.

Just published, price 15s. each.

HISTORY of CIVILISATION in SCOTLAND.

Vols. I. and II.

By JOHN MACKINTOSH.

“His references show that he has diligently read whole piles of Reformation literature, examined the Burgh records, Acts of Parliament, and State papers of the sixteenth and seventeenth centuries, and gone deeply into philosophical works on the growth of religious belief.”—*Dundee Advertiser*.

“Not only does he describe accurately the historic conditions of each age, but he shows us the development of those from all that went before.”—*Daily Review*.

“He has made the history of Scotland a special study; . . . he has collected and classified a large mass of facts bearing more or less testimony to the progress of the nation—many of them from sources little likely to come under the cognisance of the general reader.”—*Scotsman*.

London: SIMPKIN, MARSHALL, & Co. Edinburgh: JOHN MENZIES & Co. Aberdeen: A. BROWN & Co.

Crown 8vo, cloth, price 2s., post-free.

STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds; Glaciers; the Telephone. By W. J. MILLER, C.E., Secretary to the Institution of Engineers and Shipbuilders in Scotland; Author of “Principles of Mechanics,” &c.

“We can confidently recommend Mr. Miller's volume to the attention both of teachers in search of an elementary text-book, and to private students, as well as to the general reader. It unites the utmost lucidity with strict scientific accuracy, and deals with ascertained facts rather than with vague theories.”—*Glasgow Daily Telegraph*.

“This work consists of chapters from several sciences—astronomy, electricity, heat, light, &c. They cover a good deal of ground, and include subjects as wide apart as whirlwinds and spectrum analysis, glaciers and the telephone.”—*Liverpool Albion*.

Published at 31, Castle-street, Holborn.

THE FOLK-LORE SOCIETY.

THE NEXT MEETING of the Society will be held in the ROOMS of the ROYAL ASIATIC SOCIETY, No. 22, ALBEMARLE-STREET, on TUESDAY, 10TH FEBRUARY, 1880, at 8 P.M.

The Paper to be read is:—"Biographical Myths, illustrated from the lives of Buddha and Mohammad," by John Fenton, Esq.

By order,
G. L. GOMME, Honorary Secretary.

ROYAL INSTITUTION, Albemarle-street, W.

Professor ERNST FAUER will THIS DAY (Saturday), FEBRUARY 7TH, at 3 o'clock, begin a COURSE of THREE LECTURES on "HANDEL, SEBASTIAN BACH, and JOSEPH HAYDN" (with Musical Illustrations). Subscription to this Course, Half-a-Guinea; to all the Courses in the Season, Two Guineas.

THE ECCLESIASTICAL ART EXHIBITION.

to be held in London in MAY and JUNE next.—ALL WORKS must be at the EXHIBITION BUILDING on or before MAY 8TH. The following are some of the leading Classes:—

Pictures for Churches (schools, various).—Cartoons for Wall Paintings, Mosaics, &c.—Architectural Drawings.—Cartoons for Stained Glass.—Mosaics.—Sculpture.—Illuminations.—Stained Glass.—Wood Carving, Ivory Carving, &c.—Bells.—Embossing, Tapestry, and Textile Fabrics.—Mosaics.—Heraldry and Sacred Symbolism.—Musical Instruments.—Sacred Books and Vessels.—Metal Work.—Tiles.—Mural Decorations, &c.

Plans of the Building, terms, &c., may be had on application to the Hon. Architect, JOHN P. SEDDON, Esq., or the Secretary, Mr. JOHN BRAY, Office, 257, Strand, W.C.

AUTOTYPE.

PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.

THE AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—

- 1st. The absolutely facsimile nature of the result.
- 2nd. Its cheapness for Small Editions of 250, 500, &c.
- 3rd. The Prints being direct on the Paper there is an absence of all cockling and that disagreeable effect inherent to all Mounted Prints.

*For Terms and Specimens apply to the Manager.

THE AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11, Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY, recently destroyed by collapse and fire. The stock of copies of Drawings by the Great Masters, of reproductions of the chefs-d'œuvre of the Art Galleries of Europe, and the Examples of the works of Modern Artists, is in process of replacement.

Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN," illustrated by Jane E. Cook. Second Edition (1869). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

In preparation.

A NEW EDITION of TURNER'S "LIBER STUDIUM." Facsimiled from Rare Prints in the best "states" lent by the Rev. Stifford Brooks, M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery, at No. 11, RATHBONE PLACE.

The Works, Railing Done, Middlesex.

General Manager, W. S. BIRD.

Director of the Works, J. R. SAWYER.

In 4to, cloth, price 31s. 6d.

A LATIN DICTIONARY, founded on ANDREWS'S

EDITION of "FREUND'S LATIN DICTIONARY." Revised, Enlarged, and in great part Re-written, by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D., Professor of Latin, Columbia College, New York.

"The improvements are such as to defy quotation both from their length and their intrinsic character. New words are added, and new and most happy quotations are introduced; meanings are more carefully differentiated and arranged. The etymological notes certainly far surpass in accuracy and fullness anything as yet attempted in any dictionary."—*Athenæum*.

"The distinguished American scholars under whose care it appears have spared no time or labour to make the book as representative of the present state of Latin scholarship as Liddell and Scott of Greek."—*Guardian*.
"Everything that the most advanced student can fairly require will be found in these pages. The work is evidently one of first-rate merit, and it is sure to command, as it deserves, an extensive circulation."—*British Quarterly Review*.

CONVERSATIONS WITH
DISTINGUISHED PERSONS
DURING THE SECOND EMPIRE.

FROM 1860 to 1863.

By the late NASSAU W. SENIOR.

Edited by his Daughter, M. C. M. SIMPSON.

Among other Persons whose Conversations are given in these volumes are:—Prince Napoleon; The Duke de Broglie; The Marquises Chambrun, Laetevrie, Pallavicini, Vogué; Marshal Randon; Counts Arrivabene, Circourt, Corcelle, Kergorlay, Montalbert, Rémusat, Zamoyiski; Generals Changarnier, Fédion, Trochu; Lords Cowley and Clyde; Sir W. Erle; Messieurs Ampère, Beaumont, Chambol, Chevalier, Cousin, Dayton, Drouyn de Lhuys, Duchâtel, Dufaure, Dumon, Duvergier de Hauranne, Guizot, Haldimand, Hotze, Lamartine, Loménie, Levergne, Lanjuinais, Maury, Marochetti, Maasson, Mérimée, Mohl, Odilon Barrot, Pelletan, Pietri, Renan, St. Hilaire, Slidell, Thiers, De Witt; Mesdames Circourt, Cornu, Mohl, &c.

ROYAL WINDSOR. By W.

HEPWORD DIXON. Vols. III. and IV., demy 8vo, 3s. Completing the Work. [February 13.]

DIARY of a TOUR in SWEDEN,

NORWAY, and RUSSIA in 1857. By the MARCHIONESS OF WESTMINSTER. 8vo, 15s. 6d., bound gilt edges.

"A bright and lively record."—*Athenæum*.

ROBAIMA and BRITISH

GUIANA: with a Glance at Bermuda, the West Indies, and the Spanish Main. By J. W. BODDAM-WHEATMAN, Author of "Across Central America," &c. 8vo, with Map and Illustrations, 15s.

THE YOUTH of QUEEN ELIZA-

BETH. Edited from the French of L. WIESENER. By CHARLOTTE M. YONGE, Author of "The Hair of Redclyffe." 2 vols., 21s.

LORD'S PEERAGE and BARON-

ETAGE for 1880. Under the Especial Patronage of HER MAJESTY. Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the Arms beautifully engraved, 51s. 6d., bound gilt edges.
"This work is the most perfect and elaborate record of the living and recently deceased members of the Peerage of the Three Kingdoms as it stands at this day. It is a most useful publication. We are happy to bear testimony to the fact that scrupulous accuracy is a distinguishing feature of this book."—*Times*.

THE NEW NOVELS.

A SYLVAN QUEEN. By the

AUTHOR of "RACHEL'S SECRET," &c. 3 vols.

YOUNG LORD PENRITH. By

JOHN BEEWICK HARWOOD, Author of "Lady Flavia," &c. 3 vols.

IN the SWEET SPRING-TIME.

By Mrs. MACQUOID, Author of "Patty," "Diane," &c. 3 vols.

"A most interesting story, written in Mrs. Macquoid's best style. It abounds with dramatic situations, and is not wanting in pathos and humor. It is a delightful and refreshing book, in every way deserving of popularity and worthy of its author's reputation."—*Post*.
"A bright and pleasant tale. There are few living novelists who know better how to tell a love story than Mrs. Macquoid. The quiet grace and tenderness of her style seem to lend themselves most readily to such a theme, and she has exceptional skill in depicting and analysing the finer and subtler shades of character and emotion."—*Scotsman*.

FRIEND and LOVER. By Iza

DUFFUS HARDY. 3 vols.

"A powerful story, well worth reading. The plot is ingenious, original, and yet perfectly natural. Miss Hardy's sketches of character are truthful, vivid, and exceedingly graphic. It is decidedly one of the best-written books of the season."—*Post*.
"The best novel Miss Hardy has given us. It is written with much power, and contains many graceful and touching passages, and much life-like character-painting."—*John Bull*.
"A remarkable, powerful, and fascinating book."—*Sunday Times*.

THE GREATEST HEIRESS in

ENGLAND. By Mrs. OLIPHANT. SECOND EDITION. 3 vols.

"The Greatest Heiress in England" should add to Mrs. Oliphant's reputation. It is noticeably good among the great number of her good novels. The story runs along pleasantly, and maintains the reader's interest completely throughout."—*Athenæum*.
"This book is a delightful one—fresh, interesting, and well written. It deserves to take rank among the best works of the author."—*Examiner*.

THROUGH the STORM. By

CHARLES QUENTIN. 3 vols.

"There is more than the average of exciting incident in this decidedly interesting tale."—*Athenæum*.

YOUNG MRS. JARDINE. By the

AUTHOR of "JOHN HALIFAX." SECOND EDITION. 3 vols.

"A pretty story, written in pure English."—*Times*.

LITTLE MISS PRIMROSE. By

the Author of "St. Olave's," &c. 3 vols.

"The author has succeeded in this charming tale in maintaining her popularity. She has drawn in the heroine a delightful character of exceptional grace and elegance."—*Post*.

LILY of the VALLEY. By Mrs.

RANDOLPH, Author of "Gentianella," &c. 3 vols.

[Just ready.]

MUDIE'S SELECT LIBRARY.

BOOKS FOR ALL READERS—NOTICE.

The attention of all Readers of the Best Literature is respectfully requested to the LIST, Revised for the New Season, of the PRINCIPAL RECENT BOOKS in Circulation at MUDIE'S SELECT LIBRARY.

This List contains all the best Recent Works in History, Biography, Religion, Philosophy, Travel and Adventure, and the Higher Class of Fiction.

Fresh Copies of all the leading Books of the Season, and of all New Editions of the popular Standard Works in the Library Catalogue, continue to be added as the demand increases, and arrangements are made with the leading Publishers for an ample supply of all forthcoming Works of general interest as they appear.

In addition to the List of Recent Books in circulation, the following newly revised Catalogues are ready for distribution, and will be forwarded, postage free, on application :—

- 1.—A Catalogue of the Books added to the Library from January, 1878, to the present time.
- 2.—A New Edition of Mudie's Catalogue of well-selected SECOND-HAND BOOKS. This Catalogue contains :—*The Life of the Prince Consort*, by Theodore Martin ; *The Life and Work of St. Paul*, by Canon Farrar ; *Life of Bishop Selwyn* ; *Memoirs of Catharine and Craufurd Tait* ; *Memoirs of Baroness Bunsen* ; *Mrs. Brassey's Voyage in the "Sunbeam"* ; *Poynter's Lectures on Art* ; *Souvenirs of Madame Le Brun* ; *Life of Charles Mathews* ; *Life of Charles Lever* ; *Macvey Napier's Correspondence* ; *Fanny Kemble's Recollections* ; *My Lady Green Sleeves* ; *The Cloven Foot*, by Miss Braddon ; *Cousin Henry*, by Anthony Trollope ; *Sir Gibbie*, by George MacDonald ; *Within the Precincts*, by Mrs. Oliphant ; *High Spirits*, by James Payn ; *No Surrender*, by Ernst Werner ; *Quaker Cousins*, by Mrs. Macdonell ; and many other popular Books of the Past and Present Seasons ; with nearly Three Thousand older Works, many of which are out of print and not otherwise procurable, at the lowest current prices.
- 3.—An Additional Catalogue, consisting chiefly of the Works of Popular Authors, newly and strongly bound in Half-Calf, Half-Roan, or Half-Persian, and well adapted for circulation in Literary Institutions and Public Libraries.
- 4.—A Catalogue of Works of the best Authors, in Morocco, Tree Calf, Calf extra, Vellum, and other Ornamental Bindings, adapted for Gentlemen's Libraries or Drawing Room Tables, and for Wedding or Birthday Presents, and School Prizes.

All the Books in Circulation or on Sale at MUDIE'S SELECT LIBRARY may also be obtained with the least possible delay by all Subscribers to

MUDIE'S LIBRARY, BARTON ARCADE, MANCHESTER,

And (by order) from all Booksellers in connexion with the Library.

MUDIE'S SELECT LIBRARY (LIMITED),

NEW OXFORD STREET, LONDON.

CITY OFFICE: 2, KING STREET CHEAPSIDE.

RICHARD BENTLEY & SON'S LIST.

THE AUTOBIOGRAPHY of PRINCE METTERNICH.

Edited by his Son, Prince METTERNICH.

Translated by ROBINA NAPIER.

2 vols., demy 8vo, with Portrait and Facsimiles, 38s.

Athenæum.

"Of the great value of the work we have already spoken. It not only enables the world for the first time to understand clearly the objects for which Prince Metternich contended throughout his long public life, but casts fresh light on some of the most obscure historical incidents of his day."

Daily Telegraph.

"No more valuable contribution to the literature of our century has been made public for many a day—no wealthier source of authentic and exclusive information has been opened up than has just been disclosed by Prince Metternich."

Pall Mall Gazette.

"The volumes now published include the most important and by far the most dramatic period of Prince Metternich's career."

Next week.

LORD BEACONSFIELD: his Life,
Character, and Works. By GEORGE BRANDES. Translated by Mrs. GEORGE STRONG. In demy 8vo.

THE TEMPLE BAR MAGAZINE.

ADAM and EVE. New Serial Story, commenced in the January number of *THE TEMPLE BAR MAGAZINE*. Price One Shilling.

In 3 vols., crown 8vo.

RICHARD BENTLEY & SON,
NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

REMINGTON'S NEW PUBLICATIONS.

FOURTH EDITION OF

PARIS HERSELF AGAIN. By George Augustus SALA. Containing a new Preface, an additional chapter, and 400 illustrations by the first French Artists of the day. 2 vols., demy, 25s.

"Few Englishmen have the French *verve* like Mr. Sala, or so light a touch on congenial subjects. He has stores of out-of-the-way information, a very many-sided gift of appreciation, with a singularly tenacious memory, and on subjects like these in his present volumes he is at his best."—*Times.*

"For those who do and those who do not know Paris these volumes contain a fund of instruction and amusement which can be 'drawn' at almost any page with the certainty of a 'find.'"—*Saturday Review.*

"Such a pleasant mixture of anecdote, observation, experience, knowledge, intelligence, and insight as none but Mr. Sala could supply."—*Pall Mall Gazette.*

These short extracts give a fair idea of the opinion of the entire Press on Mr. Sala's present volumes.

AMONG the BOERS: Notes of a Trip to
South Africa in Search of Health. By JOHN NIXON. 1 vol., demy 8vo, illustrated and handsomely bound, 10s. 6d.

"At a time when this singularly primitive Dutch folk are compelling us, whether we will or not, to pay attention to their affairs, there is no doubt that the book will be read."—*Scotsman.*

WHEN OTHER LIPS: a Novel. By Mrs. MAILLARD, Author of "Zingra," "Loving and Being Loved," &c. 3 vols., 31s. 6d.
"An admirable novel, in which the interest is concentrated in a remarkable manner."—*Weekly Times.*

A MODERN IAGO: a Novel. By C. DESPARD, Author of "Chaste as Ice, Pure as Snow," "Wandering Fires," &c.
"A striking novel; will recommend itself to all who have still a liking for good English and a healthy tone of writing."—*Morning Post.*

HERMANN: a Novel. By E. Werner, Author of "Under a Charm," "Success, and How He Won it," "Riven Bonds," &c. 1 vol., 10s. 6d.
"A powerful tale, and, like most of the productions of its prolific author, very readable."—*Athenæum.*

AGROUND in the SHALLOWS: a Novel.
By C. RAY, Translator of "The Emperor and the Galilean." 2 vols., 21s.

LED ASTRAY: a Novel. By A. B. CHETWYND. 2 vols., crown 8vo, 21s.

AUTHORS and the PUBLIC are informed that all future first editions of Novels will be published at a Guinea the Three Vols., instead of a Guinea-and-a-Half; Two-Vol. Novels will be published at 14s., and One-Vol. at 7s. Special prices will be quoted to Libraries and others who purchase in large numbers. Authors desirous of submitting MS. with a view to publication are informed that all works not approved are returned within a month from the date of their receipt.

TENDER and TRUE: a Novel. By WM. ARTHUR LAW. 1 vol., crown 8vo, 7s.

A TANGLED WEB: a Novel. From the French of Madame NELLY-LIEUTIER. By MARY DICK. 1 vol., crown 8vo, 7s.

FOLLY: a Novel. By Mrs. Newton Sears, Author of "Kismet," "Cleansing Fires," &c. 3 vols., crown 8vo, One Guinea. [Next Week.]

ILL WEEDS: a Novel. By Madame Foli. Author of "The Spanish Cousins." 1 vol., 7s. [Next Week.]

FIGHTING and FARMING in SOUTH AFRICA: a Narrative of Personal Experiences in the Colony during the years 1877-8-9. By FRED. G. BROWNING, late of the Frontier Light Horse and 3rd Cape Yeomanry. 1 vol., large post 8vo, handsomely bound, 10s. 6d. [Shortly.]

TIME'S WHISPERINGS: Sonnets and Songs. By GEORGE BARLOW, Author of "Through Death to Life," &c. 1 vol., fcap. 8vo, 3s. 6d. [Shortly.]

REMINGTON & Co., 5, Arundel-street, Strand, W.C.

SAMPSON LOW, MARSTON, & CO.'S LIST.

AT ALL THE LIBRARIES.

MEMOIRS of MADAME de RÉMUSAT
(1802-1808). Translated by Mrs. CASHEL HOBY and Mr. JOHN LILLIE. 3 vols., demy 8vo, cloth extra, 32s. [Vol. I. now ready.]

"* These revelations respecting the Private Life of Bonaparte, the Empress Josephine, and other Celebrities of the Political and Social World of Paris, from 1802-1808, have created great sensation in France, and the French Work is already in a Third Edition.

ASK FOR THE ENGLISH EDITION.

"No one will take it up without reading greedily to the end."—*Athenæum.*

"The most fascinating personal narrative which has been published since Madame d'Arbly's Memoirs were given to the world."—*Mayfair.*

"It is almost impossible to convey any idea of the intensely interesting character of the book. The Portrait of Napoleon is one of the finest and most carefully drawn bits of word-painting ever written, and the writer relates a hundred stories which are new to the most diligent explorer of the annals of this astonishing man. . . . She is certainly most charmingly confidential."—*Mayfair.*

"Few classes of books are in our time more interesting than these legacies of past times, especially of times so recently passed that their questions are still burning, and their personages still familiar."—From Leading Article in the *Daily News.*

"These particular memoirs are moreover unusually attractive. As illustrating the interior history of the Bonaparte family, there is hardly any book which can equal them, while the personality of their writer is not the least interesting revelation."—From Leading Article in the *Daily News.*

Now ready, demy 8vo, cloth extra, 21s.

NEW BOOK OF ASIAN TRAVEL.

THE FORBIDDEN LAND: Voyages to the

Corea. By G. OPPERT. With Illustrations and Map.

"Here, then, is the phenomenon of a population of 16,000,000 without a history, and inhabiting a land which has been for centuries a sealed book to European readers. It will be easily guessed, therefore, that Mr. Oppert's book has an interest distinctly unique among late books of travel. . . . It is offered as a picture of an unknown country, and very admirably and faithfully fulfils its end."—*Mayfair.*

RUSSIA and COREA.—The Author says in

his Preface: "Probably at no distant period those Powers which have an interest at stake in Eastern Asia will be compelled, with or against their will, to take into consideration what may be termed the Korean question—we may hope it is too late. The whole of the East Coast as far as the Tumen is already in the possession of Russia; a very small army and a few war vessels are all that is required to occupy and hold permanently the Korean peninsula; and if Russia chooses she may at any moment make herself master of the entire Eastern Coast of Asia down to the Sea of Japan." The Author goes on to suggest that England should be alive to what is going on there.

LIFE and WRITINGS of HENRY

THOMAS BUCKLE, Author of "The History of Civilization." By ALFRED HENRY HUTT. In 3 vols., demy 8vo, cloth extra, with Two Steel Engraved Portraits of Buckle, 32s. Second Edition.

"Mr. Hutt has done his part of those volumes well and thoroughly."—*Saturday Review.*

"MR. HUTT'S BOOK, which seems to be
written with rare sincerity, shows us the man as he was, not the philosopher as he was supposed to be."—*Saturday Review.*

BUCKLE'S LIFE.—"The first volume of
his great book was published in 1857. It became celebrated at once. Unknown correspondents sent him from all parts of the world, and one American young lady (Vol. II., p. 80) was almost as explicit as the maiden in 'Excelsior'—
'Oh! come, the maiden said, 'and rest
Thy weary head upon this breast.'
As to the Russians, they dated on Mr. Buckle's book as the most advanced thing out."—*Saturday Review.*

BIOGRAPHIES of the GREAT ARTISTS.

From the *Times*, Jan. 22, 1880.

"Few things in the way of small books upon great subjects, avowedly cheap and necessarily brief, have been hitherto so well done as these biographies of the Great Masters in painting. They afford just what a very large proportion of readers in these hurrying times wish to be provided with—a sort of concentrated food for the mind."

ILLUSTRATED BIOGRAPHIES of the GREAT ARTISTS. Each volume is illustrated with from Twelve to Twenty Full-page Engravings, printed in the best manner, and bound in ornamental cloth cover, 3s. 6d.

The NEW VOLUMES now ready in this Popular Series are:—
LEONARDO DA VINCI. From Recent Researches. By Dr. J. PAUL RICHTER, Author of "Die Mosaiken von Ravenna." With Sixteen Illustrations.

FIGURE PAINTERS of HOLLAND. By Lord Ronald GOWER, F.R.S., Trustee of the National Portrait Gallery, Author of a "Handbook to the Art Galleries of Holland," &c. With Eighteen Engravings.

The other Volumes already published are on:—
TURNER. HOGARTH. RUBENS.
LANDSEER. VAN DYCK. TINTORETTO. RAFAEL.
VAN DYCK and HALS. TITIAN. REMBRANDT.

In the press.
MICHELANGELO. VERNET and DELAROCHE. REYNOLDS.
LANDSEER. GAINSBOROUGH. VAN EYCK.
Other Volumes in preparation.

LONDON:

SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,

SATURDAY, FEBRUARY 7, 1880.

No. 405, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Life and Writings of Henry Thomas Buckle. By Alfred Henry Huth. 2 vols. (Sampson Low & Co.)

THESE two volumes, which might profitably have been condensed into one, will give a new idea of Buckle to those who know him only from his writings, and have never even heard from any of his acquaintances what manner of man he was in private life. Few people read a book without forming to themselves some picture of the author, and that picture in Buckle's case would almost infallibly have been still farther from the reality than such dim fancies generally are. The combative assertion of paradoxes in his *History of Civilisation* gives one the impression of dryness and acidity. The precise—or, at least, apparently precise—citation of authorities seems to imply a determination and energy which would make paradoxical acridity peculiarly intolerable. An aggressive disposition, supported by an enormous mass of learning, is the idea which Buckle's writings naturally suggest to the minds of his readers.

This was apparently the impression formed of him before personal acquaintance by Mrs. Huth, who contributes by far the best chapter to this somewhat prolix biography. For some time before she made his acquaintance, she had heard a great deal about him, and had learned to "hate that 'friend Buckle,' whose name was constantly in Mr. Capel's mouth and bored her intensely; who was always put forward to contradict her; who was said to know everything and who had seemingly done nothing." Buckle had not then published the first volume of his history, which accounts for Mrs. Huth's belief that he had "done nothing." He was introduced to her before he had done anything in the way of publication—he spent fourteen years in the collection of his materials before he published a line—but he at once impressed her as a man of extraordinary intellect. Still, after the first few interviews, "he seemed to her a cold unfeeling man, with no sympathy for individuals, and caring only for what was beneficial for mankind as a mass." But by degrees she began to form a different opinion, and to discover that abstract speculations did not absorb the whole of his interest.

"The conversations [Mrs. Huth says] which I had in this way with him made me see that there were two Buckles—one cold and unfeeling as Fate, who invariably took the highest and widest view, to whom the good of the individual was as nothing compared to the good of the mass. This man was heard in the *History of Civilisation*, and at dinner-tables where many people were present. The other Buckle was

tender, and capable of feeling every vibration of a little child's heart, self-sacrificing to a degree which he would have blamed in another, and habitually concentrating his great intellect on the consequences of individual actions to the actor."

This second side of Buckle's character is very fully displayed in the letters and anecdotes collected in these volumes. He was not an old man when he died, but he seems to have kept a boyish freshness of feeling beyond the age at which it generally fades. School-boys who had no thought of his intellectual grandeur spoke of him as "a jolly fellow;" and Mrs. Huth and other ladies, who had been dismayed by his reputation for universal learning, found him full of thoughtfulness and considerateness in the smallest concerns of domestic life, and ever ready with advice and sympathy.

If biographies were oftener written by intimate acquaintances, it would probably be found that the traits which are so unexpected in Buckle's character were not so rare as is generally supposed in men devoted to severe and absorbing study. Mr. Huth, who has put this biography together, had the advantage of being one of the boys with whom Buckle, who was unmarried and had no children of his own, delighted to romp in his intervals of idleness. He was a member of the small circle among whom the ardent thinker put off his harness and brushed the cobwebs from his feelings. Wearied with the effort of guiding the unruly and stiff-necked steeds of abstract speculation, he could throw himself with all the greater delight into the sport of dragging toy horses and chariots over the nursery floor. If we were to imitate Buckle's own rashness of generalisation, it would not be difficult to make out a strong case in favour of the theory that men who, like him, spend their whole lives in absorbing studies retain their freshness of feeling and their delight in the companionship of the young longer than any other class. They live at such high pressure that exhausted nature demands a correspondingly great relaxation. Apart from the fact that they do not give themselves time to acquire habits of elaborate amusement, a bear-fight with boys or a game of draughts or backgammon with a beginner must be a grateful relief to excessive mental strain. Robert Hall was once discovered in his study, when he was supposed to be deep in the composition of a sermon, rolling on the carpet, with his children tugging at his hair, and making believe that he was Gulliver among the Lilliputians; and it would not be difficult to accumulate instances of severe and lofty thinkers who have unbent themselves in similar ways.

Perhaps one of the secrets of Buckle's great popularity with the boys of his acquaintance was that he was strongly convinced of the necessity of not burdening their brains with too much work. He had no faith in the efficacy of keeping them long at prescribed lessons, and was all in favour of encouraging them to acquire knowledge by other inducements. When he was consulted by parents—and, indeed, whether he was consulted or not—his advice was always towards the shortening of the hours of lessons

and the extension of the hours of freedom. In this matter he reasoned from his own experience as John Stuart Mill did in his estimate of what a boy could profitably learn. His experience was very different from Mill's, but it was probably quite as unfit to be taken as a general rule of education. Mr. Huth assures us that Shakspeare, Bunyan, the *Arabian Nights*, and *Don Quixote* constituted almost the whole of his reading up to the age of eighteen. He was a feeble and delicate child, and when his mother sent him to school she stipulated that he should learn nothing unless he chose, and should on no account be whipped. Mr. Huth says that "young Buckle did not choose," and learnt only what fell into his head; but a good deal must have so fallen if he was able, on his return from school, to astonish the servants in the kitchen by translating the Lord's Prayer and the Creed into French and Latin. One thing, apparently, he learnt, with characteristic obstinacy, which was not prescribed to him—the lessons in geometry given to a higher class than that in which he was placed. In his fourteenth year he took the first prize in mathematics, and, being then asked by his father what reward he would like for this success, replied, "To be taken from school." There was no further distinction to be won in that school, and the young Alexander was thirsting for other intellectual realms to conquer.

It is to be suspected that Mr. Huth, following Buckle's own sketch, has somewhat overstated the small amount of Buckle's acquisitions in his youth. Buckle seems to have been one of those precocious boys who require to be kept back. He had no taste for boyish sports. His fond mother taught him to knit, simply that he might have some mechanical occupation to keep his restless brain quiet. Though Mr. Huth says that his reading was confined to Shakspeare, Bunyan, the *Arabian Nights*, and *Don Quixote* up to the age of eighteen, it comes out incidentally that before he was seventeen he took delight in discussing subjects of public interest with his father, who was a Tory in politics, and sat up one night to compose a letter enlightening Sir Robert Peel on the subject of Free Trade. Though withdrawn from school at the age of fourteen, he was sent to a private tutor, and was always foremost, though Mr. Huth says he seemed never to learn his lessons.

Some of Mr. Huth's statements would lead one to suppose that Buckle's mind was almost a *tabula rasa* when, at the age of nineteen, made independent by the death of his father, he resolved to devote himself to a life of study. Such a resolution in that case would have been miraculous, and, if recorded for a precedent, might have been made an excuse for much undeserved indulgence to idle boys. Buckle was far from being intellectually idle in his boyhood, though, in consideration of the delicate state of his health, he was exempted from what he calls "any education that would tax the brain"—that is to say, from routine school work—a fortunate thing for any boy, delicate or otherwise. It is somewhat curious that after a boyhood of discursive and indiscriminate browsing in books and newspapers, Buckle should suddenly have planned for

himself, and firmly carried out, a rigidly systematic course of study.

"Between the ages of eighteen and nineteen [he says, in a letter to Theodore Parker, in which, curiously enough, he mistakes his own age] I conceived the plan of my book—dimly, indeed, but still the plan was there; and I set about its execution. From the age of nineteen I have worked as an average nine to ten hours daily. My method was this. In the morning I usually studied physical science; in the forenoon languages (of which, till the age of nineteen, I was deplorably ignorant); and the rest of the day history and jurisprudence; in the evening general literature."

It is a pity that very little remains to show the actual course of Buckle's studies. His first ambition seems to have been to master a number of languages, and with that view he travelled for two years in Germany, Italy, and France. All the time apparently he carried on his studies in physical science, though to what extent we do not know, as he burnt the letters written at this period which would probably have shown what he was busy with. When he returned to London after his two years' travelling he began to record his work in a diary; and one of the first entries is that his studies have hitherto been discursive and irregular, and that henceforth he means to devote himself to the study of the Middle Ages, "not," he says, "so much on account of the interest of the subject—though that is a great inducement—but because there has been comparatively little published about it." Mr. Huth is probably right in conjecturing that the subject was suggested to him by his intimacy with Hallam, whose acquaintance he made during his travels in Italy.

Once resolved to study the history and literature of the Middle Ages, Buckle set about the work in a very systematic way suggestive of his practical disposition and his brief training in his father's office. He began by going steadily through the "*History of the Middle Ages*" published in *Lardner's Cyclopaedia*. "From half-past ten," he records, "till half-past twelve, I read" this work, "first to thirteenth page—referring at the same time to Hallam, as also to Hawkins's little work on Germany for verification of dates." Ten days after this entry we find the following retrospect:—

"The sketch, then, of the *History of France* during the Middle Ages has occupied me just ten days—but then on one of those days I did not read at all (on account of a thick fog), and, besides that, I am now in better trim for reading than I was at first. So that I think, on an average, I may say eight days will in future suffice for each history. It is my intention to go first, in this hasty and superficial way, through European history of the Middle Ages, and then, reading the more elaborate works, make myself as much a master of the subject as is possible, considering the meagre information we at present possess."

If this diary had been continued or preserved all through the time when the idea of writing the *History of Civilisation* was gradually taking definite shape in Buckle's mind, it would have been of the greatest value as a help to tracing the faint suggestions and various influences by which that idea was originated and built up. Apparently, Buckle kept such a diary, recording each day's read-

ing, but destroyed it for the period during which it would have contained most to gratify those who are curious about individual development, and like to follow in detail the movement of influences from one mind to another. One would especially have liked to know when Buckle first read Comte, and what record he made of his first impression, and of the new turn which Comte's method in all probability gave to his aspirations. In 1843, Buckle records that he had begun a *Life of Charles I.*, and from about that date, as I understand, till 1850, by which time he had made sufficient progress with his *History of Civilisation* to have thoughts of looking out for a publisher, there is a blank in the diary in which he registered the daily distribution of his time.

The systematic way in which Buckle pursued his labour of accumulating materials is all the more surprising in view of the impulsiveness of his temperament. He seems to have been one of those rare beings who combine great excitability with great powers of self-control. He had a European reputation as a chess-player, and was particularly distinguished for the reach and daring of his combinations. The same may be said of his way of dealing with historical facts. History was a sort of chess-board to him, and the reading public formed his antagonist, against whom he played off his brilliant combinations. Mr. Huth says that Buckle was a brilliant talker, and this one might almost have inferred from his writing. He was a sort of volutary in generalisation. He revelled in the sense of power which wide and sweeping generalities gave him. Like Bacon, he recommended a caution and patience in making inductions which he was far from practising. Mr. Huth notes, with two marks of exclamation, Mr. Mackenzie Wallace's efforts to convince his Russian friends that Buckle had not created a genuine science of history on the inductive method, but had only thrown out some hints as to how the science ought to be constructed. To call Buckle the founder of a genuine science of history is probably not a greater mistake than to call Bacon the founder of inductive philosophy; but it is, nevertheless, a mistake into which no scientific historian would be likely to fall. Buckle's speculations had a value altogether apart from their positive results. The amazing vivacity of his thinking made him a cause of thought in others. He stirred up the intellectual waters and kept them from stagnating to a degree which no mere clearness of vision or infallible accuracy of induction could have succeeded in doing. If his books have this stirring and stimulating effect, his talk, when he threw out his thick-coming theories with all the freshness and confidence of first thoughts, must have been immensely inspiring.

Buckle's talk seems also to have had this advantage, that he did not take himself and his speculations too seriously. Mr. Huth relates an anecdote of the philosophic historian's youth which may be applied without straining to his behaviour in later days. Once,

"when he went to call on his old nurse, he turned everything there topsy-turvy, romped about, threw the daughter's cat out of the

window, and finally, walking with them down the street, sang and was generally uproarious, seizing fruit from the open shops, and behaving so as to make them quite afraid that he would get into trouble."

In his speculations he took a similarly boisterous pleasure in throwing people's pets out of window, and seems to have really enjoyed getting into trouble. The spirit of the impish, frolicsome boy kept a place in the heart of the ambitious, laborious regenerator of history.

Mr. Huth's biography would have been better if it had been made shorter by a good half. The chapter by Mrs. Huth is worth all the rest of the book, and really tells us all that is worth knowing about the personality of the historian. The two volumes certainly ought to have been lightened of the laborious and unhappy notes and appendix about Mr. Stuart Glennie, which are of a kind to "exhilarate no mortal." The letters to his friends, Mrs. Huth, Miss Shirreff, Mrs. Grey, Mrs. Mitchell (Lady Reay), are too characteristic to have been omitted. They are full of the playful and affectionate spirit which seems to have added so much to the charm of his conversation, and probably preserve that charm better than any transcript of his spoken words.

WILLIAM MINTO.

THE PROPHECY OF JOEL AND ITS INTERPRETERS.

Die Prophetie des Joel und ihre Ausleger von den ältesten Zeiten bis zu den Reformatoren.
Von Adalbert Merx. (Halle-a.-S.)

ANYTHING from the pen of Prof. Merx is welcome; and, taken as a whole, the work before us more than sustains the reputation enjoyed by this eminent scholar. Learned and thorough throughout, in the latter part especially (pp. 110-447), he furnishes us with a history of the interpretation of the prophecy, which, in plan and execution alike, stands at present alone in the literature relating to the Old Testament. The volume opens, however, with a fresh attempt to solve the double riddle which the book of Joel presents to its commentator, touching the two questions of date and interpretation; and to the consideration of this we propose here chiefly to address ourselves.

In the inscription prefixed to the book no date is specified; and the allusions which it contains to historical events being by no means so definite as could be desired, opinions as to the period to which it should be ascribed have not unnaturally been divided. The majority of expositors (influenced partially, perhaps, by the position occupied by it among the other minor prophets) have indeed assigned it to either the ninth or the eighth century B.C.; but a third view has likewise found expression, according to which it was written subsequently to the Captivity, between the years 518 and 458 B.C. Dr. Merx comes forward in support, substantially, of the latter opinion. The argument from direct historical allusions being admitted to be uncertain, what, he asks, is the political, social, and religious condition of the people presupposed in the book? To what period in the history of the nation do its most characteristic ideas belong?

To the period, he answers, between Ezra and Malachi. The people (iv. 1) have been scattered among the Gentiles, and their land divided; the country is under the rule of elders, not of a king; the services of the Temple are carried on in entire conformity with the Levitical legislation; there are none of the allusions, so frequent in the earlier prophets, to worship on the high places, or to idolatry; while the prominence assigned, not by the people only, but by the prophet, to external ritual and to fasting is such as does not occur till the later periods of the history. The point of view from which the heathen nations are regarded does not agree with that of the elder prophets, but is derived from Ezekiel. The spirit of the book is that of an age when the mind of the nation was deeply impressed by the contrast between the actual present around them and the glorious promises of an Isaiah, and when the religiously minded cast their thoughts to the future, in the assurance that the fulfilment was still awaiting them there. Joel's interest throughout is centred upon the "Day of the Lord;" in other words, his prophecy is eschatological. And upon what foundation does he construct his theme? Not, like an older prophet, upon the events of his own day (for these, in the tranquil calm of the Persian period, were not sufficiently stirring or suggestive); but upon an idea, upon his own inward conviction that the deliverance in the future would be the antitype of the former deliverance out of Egypt. Had not Isaiah suggested as much (xi. 11, lii. 12)? A new plague of locusts is thus his starting-point; and that graphic opening chapter refers to no actual invasion, but introduces us at once to the beginning of the world's judgment, when the "apocalyptic locusts" of the future are heralding the immediate advent of the Day of Jehovah (a position which was also Hengstenberg's).

It is in agreement with this view that Joel's style impresses Dr. Merx most unfavourably. Not only is he no original poet, but the materials which he has borrowed from others are combined by him with so little skill as to produce not merely frequent tautology, but also a want of clearness and consistency in his pictures of which an elder prophet would not have been guilty. But more than this, no deep religious ideas are expressed by him; he revels in rhetoric and mere pictorial description, which may appeal indeed to the senses, but not to the heart; and words can hardly be found strong enough (p. 21) to denounce him worthily.

Much that is here urged by Dr. Merx deserves, doubtless, fair consideration; though we do not feel that he has added *substantially* to what was advanced by Oort, but with much greater judgment and moderation, in the *Theol. Tijdschrift* for 1876. For in exegesis, we confess, Dr. Merx is not at his best. Want of sympathy with his author, and a painfully literal method of interpretation, seldom allow him to penetrate beneath the surface; while to find difficulties in the rapid transition from one metaphor to another, or in the familiar artifices by which the prophet imparts vividness and variety to his description, is to mistake altogether the style of the Old Testament, and to demand of the poet what could only be required of the driest, most

matter-of-fact logician. No one, we imagine, will follow him, for example, in the hard and prosaic criticism (pp. 9-21, 37-42) by which he fastens upon Joel every imaginable inconsistency, adopting always the least favourable interpretation of which the words are capable, and missing the obvious meaning of the prophet, until he ends by placing before his readers an actual caricature (p. 20). Tried by such a test, Isaiah himself would fail.

Let us, however, consider, as far as our space will allow us, some of the arguments, which (as we said) merit fair and serious consideration. The spirit, the power, the freshness animating this little book of Joel make one shrink almost instinctively from ranking him with Haggai, Zechariah, and Malachi. The grounds urged by Dr. Merx will naturally have greater weight with those who agree generally with the position of Graf; but even then we may question whether they are decisive. Our earliest witnesses, Amos and Hosea, presuppose certain historical relations, certain religious conceptions, originating in the past. Is there anything in Joel, supposing him to be even anterior to Amos, really incompatible with these? Is he, from a theological point of view, distinctly and necessarily in advance of those prophets? We do not feel that either of these points is clearly established. To be sure, if iv. 2 is to be understood *quite* literally, it cannot have been written before the Captivity; but is it certain that it should be so understood? The expressions in Isa. i. 7 can scarcely be meant *literally*; is it unfair here to regard the words in a similar manner as a rhetorical description of some loss of territory, attended by deportation of the inhabitants, such as from the language of Amos i. 6, 9, and Isa. xi. 11, it is plain might readily have occurred even in those early days? At what time the "nations" were first grouped together in antithesis to Israel it may not be possible to determine, but does Joel's attitude toward them differ otherwise than *formally* from that of Amos ix. 12, Isa. xiv. 26, Mic. iv. 13? The argument *e silentio* in dealing with so short a book is more than usually precarious; the rendering in i. 2 is evidently (from the question which follows) *old men*, not "elders," while in i. 14 the construction expressed by the Septuagint is a perfectly natural one (the part followed by the whole, exactly as verse 12b). Then Dr. Merx lays some stress on the allusions to the "drink-offering," of which, he remarks, no prophet before Ezekiel takes notice as being offered to Jehovah; but is it not presupposed in the "wine" of Hosea ix. 4? And it seems to us to be one thing to set a high estimate on ritual observances, but quite another to look with ominous forebodings upon a calamity so protracted and so severe as to put an end even to the regular services of the sanctuary, which is all that Joel's expressions allow us fairly to infer.

Let us next examine briefly the reasoning by which Dr. Merx endeavours to show that Joel is a mere compiler from the earlier prophets, whose eschatological conceptions (in particular) he endeavoured to unite into a single picture. The mention of the "Day of Jehovah" by itself would of course not surprise us, even in a work of the ninth

century B.C., for it is referred to by Amos (v. 18-20) in terms which indicate that the idea must have been already quite familiar to his hearers. But what is the representation of it given by Joel? An unfortunate, because ambiguous, remark of Knobel's, to the effect that the completest picture of the "Day of Jehovah" was afforded by this prophet, seems here to have led Dr. Merx astray. "Is it more likely," he asks (p. 43), "that the complete picture should have preceded, or that it should have followed, those which are incomplete?" The argument would be a plausible one if the complete picture combined the partial ones into a whole; but this is exactly what Joel (in spite of Dr. Merx) does not do. The completeness of Joel consists, in the second and fourth chapters alike, in the elaboration of a single image, with an individuality, we may add, and power peculiarly his own. An actual extraordinary visitation of locusts (chapter i.) suggests to the prophet the imagery under which, but in far more terrible form—locusts advancing in array with the organisation and intelligence of an army of men—he depicts (chapter ii.) the speedy approach of the "Day of the Lord." This is one image, perfectly consistent throughout. The "Day" itself, in chapter iv., is represented under another image, that of a conflict between the warriors of Jehovah on one side, and the nations on the other—the victory, however, being secured for the former, not by any efforts of their own, but by the voice of terror sounding from Zion. The unity and grandeur of the scene is not marred by the presence of a single incongruous feature (for the transient change of metaphor in v. 13 is easily intelligible); nor is there a single trait which could have been derived by the prophet from any of the "less complete" pictures cited by Dr. Merx, for they have no characteristic point in common with him. The nations do not (as in Ezekiel, and Zechariah xii.-xiv.) advance against Jerusalem for battle, but are brought to the valley of Jehoshaphat for judgment; the sacrifice and other characteristic ideas of Isaiah xxxiv., Ezekiel xxxix. 17-19, &c. (pp. 23, 68), are wholly absent. Zephaniah, in his representation of the "Day" (i. 7, 14-16), does combine a number of different images (how much more appropriate the *darkness and gloom*, as an accompaniment of the "nubes locustarum," Joel ii. 2, than in the place which the same words occupy in Zeph. i. 15!); and Joel, if he wrote with all these passages before him, exhibits surely a remarkable reserve. Dr. Merx, following Hilgenfeld, conceives the mysterious "northern one" (ii. 20) to be a collective designation of those hordes often spoken of in Ezekiel as coming from the "north quarters;" this explanation, however, though ingenious and, at first sight, plausible, has still its difficulties; not only does it depend altogether upon the allegorical interpretation of the earlier part of the book, but the fate of the "northern one" in Joel is plainly that of a swarm of locusts (Ez. x. 19), not of a body of men; whereas, had the idea been derived directly from Ezekiel, the metaphor of the locusts would have been superseded, and a phrase chosen descriptive of the fate of an army. The other coincidences which are appealed to (pp. 29, 65, 68) are still less cogent, the resemblances being mostly

superficial, while due regard is not given to points of difference. We therefore say it emphatically: that Joel is dependent upon the prophets of the middle period, and merely combines their conceptions and ideas into a "compendium" of his own, is not established; on the contrary, the singleness and consistency of his images appears to us, if anything, to favour a different conclusion altogether.

A word on the new rendering suggested for ii. 18-19. Dr. Merx, by a slight change of punctuation, proposes to render the verbs here as optatives: "may the Lord be jealous—may He answer and say,"—all that follows to the end of the book being thus the embodiment of the prophet's own hopes and desires (pp. 38, 43, 91). This, however, seems improbable. We say nothing of the fact that the entire book would, in that case, contain no authoritative declaration whatever; but a device by which the prophet's hopes, occupying thirty-five verses, should be thus unnaturally and circuitously expressed must stand self-condemned. If the supposition of Delitzsch be not approved, that of Grätz (*Einheit Joel's*, 1873, p. 32) is fully adequate, and removes all difficulty.

We frankly admit the existence of features in the book of Joel suggestive of a later date than the one ordinarily assumed, and we feel grateful to Dr. Merx for the vigorous pleadings—for his method throughout is that of an advocate and not of a judge—by which he has made us realise their weight. But our own position at present agrees here substantially with that of Vatke (not quite correctly cited among the "Opponents"), who, after enumerating several of these, remarks that they are not decisive, admitting, as they may, of explanation from the individuality of the prophet himself and from historical circumstances no longer known.

We may be allowed, in conclusion, to devote a few lines to the second part of Dr. Merx's work, though we can give but a faint idea of the rich historical materials with which it is stored, or of the luminous and philosophical treatment by which the influences determining the exegetical principles of different ages and expositors are noted and traced out. It is a comprehensive survey, embracing naturally much beside what has an immediate bearing upon Joel, and is a worthy monument of that historical school of Jena with which Dr. Merx is justly proud to be connected. But those who desire to learn more about Ephrem Syrus and Jerome, Kimchi and Abarbanel, about the theory of prophecy formulated by Maimonides and its influence upon Thomas Aquinas, about Nicolaus of Lyra, and about the successive stages in Luther's attitude towards the methods of exegesis current in his day, must obtain this volume for themselves. And we heartily recommend them to do so; for, in spite of the faults which we have been obliged to note in the Introduction, we can promise them that it will well repay perusal. S. R. DRIVER.

A History of the Reign of Queen Anne.
3 vols. By John Hill Burton, D.C.L.
(Blackwood.)

[Second Notice.]

THE war with France had dragged its slow length along until the dangers which it was intended to avert had ceased to exist. The contest had its origin in the deaths of two monarchs, one of whom had thrown away his kingdom for a Mass, while the other was incapable of thought on any subject of religion or business. The feeling of the English people was outraged by the public recognition by Louis XIV. of the son of their exiled monarch. It recognised a danger to Europe in his decree that the second son of the Dauphin, whom the dying King of Spain had named as his successor, should not forfeit the right which might ultimately be his of uniting France and Spain under one head. Gradually these apprehensions passed away. The Archduke Charles, the candidate of the Allies for the Spanish crown, had never succeeded in pleasing the haughty Spaniards, and his want of promptitude in action had thrown away his chance of establishing his rule by force. The son of the French King, with greater skill, had won to himself the hearts of his subjects. The Allies would have found it hopeless to struggle against the wishes of a nation, even if the succession of the Archduke to the hereditary dominions of the House of Austria in Germany and to the imperial throne had not convinced them that his triumph in Spain involved equal, if not greater, danger to the other countries of the Continent than the victory of his rival. In England, moreover, the hope of a speedy conclusion to the war had given place to dismay at its prolongation. The commercial classes were pinched by trade depression, and had abandoned all hope of sharing in the commerce of the Indies. In this country the recruits were drawn with difficulty from criminals and vagrants, or from simple rustics bewildered by the recruiting sergeant's eloquence and beer; and the incidents of recruiting life form one of the most entertaining episodes in Mr. Burton's narrative. Across the water the necessities of the peasants drove them into the army by hundreds. It was their only resource against starvation; and they fought, not as in the early days of the contest, in the hope of conquest, but for the integrity of their country. There were conclusive reasons for restoring peace to Europe, though the negotiations at Utrecht were primarily due to the accession to office of Marlborough's political opponents. The fortunes of the Tory party depended on cessation from strife, and its leaders were bent on effecting that object at all hazards. They redoubled their efforts for peace on the news of the failure of the expedition against Quebec under the brother of the Queen's favourite; and the discontent among the troops in the Netherlands at their enforced inactivity under Ormond made the Ministry still more eager to put an end to the war. The acquisitions of the English under the treaty were a poor return for the blood and treasure which they had lavished in the contest. Our greatest gain was in the transfer from France to Britain of the

Assiento contract; the chief dishonour was in the desertion of the Catalans. Public opinion in this country would now shrink with horror from pecuniary advantages accruing from the right to supply the colonies of Spain with nearly five thousand negroes in every year; but, in the days of Queen Anne, so lucrative an addition to our national traffic was eagerly welcomed by the City merchants. Dr. Burton seems to palliate the neglect of the Ministry to obtain a recognition of the liberties of the only section of the Spanish people that joined the cause of Charles; but it is significant to remark that the betrayal of the Catalans provoked fierce condemnation in the House of Lords. We may consider the state of English feeling as sufficient reason for acquitting Bolingbroke of any especial guilt in identifying this country with the slave traffic; but we must, by a parity of reasoning, condemn his cruel neglect of the Catalans on the ground that it fell below the political morality of the age.

One domestic event, the ill-fated prosecution of Sacheverell, looms out before all others in the reign of Queen Anne. Its effect on the fortunes of the great parties in the State influenced ecclesiastical legislation until after the death of George II. Dr. Burton has entered very fully into the character of the chief actor and the progress of the trial. The sermons of this vain and truculent priest are, in Dr. Burton's opinion, far above the level of the productions of his clerical contemporaries; it is, perhaps, even more astonishing to find the historian arguing that the prosecution of this turbulent spirit, instead of being incited by the offensive introduction into a sermon delivered in the most prominent pulpit in the kingdom of a coarse nick-name popularly applied to Godolphin, was an act of fixed policy, intended to prove that the most uncompromising of the opponents of the Whigs could only "hesitate dislike" to the Hanoverian succession. A writer in the current number of the *Quarterly Review* seems to share in the belief of Dr. Burton that the prosecution was the deliberate policy of Godolphin to stamp out opinions aimed at the existence of a Whig Government. The Minister did indeed succeed in securing parliamentary recognition of the principles of the Revolution of 1688, but the victory was obtained at the cost of his party's ruin. This view of Dr. Burton inflicts a deadly blow on the reputation of the author of this fatal measure. Who can place reliance in the judgment of a statesman who purposely adopted a line of conduct which accelerated the triumph of his political opponents, and threw into their ranks for generations the whole strength of the most powerful organisation in the State?

Though the financial abilities of Godolphin and his skill in raising the supplies for our armies in foreign lands are the theme of Dr. Burton's excessive admiration, he has not deigned to print a single sentence on the cost of the war, or on the expedients adopted for augmenting the national revenue. The calls for money weighed heavily on the nation's resources, and brought Godolphin a host of counsellors. Many ingenious minds found amusement in furnishing the Treasury with hints for extracting cash from the pockets of the people. In the desperation of their

bewilderment they even suggested imposing taxes on such useless articles as bachelors and the prescriptions of fashionable physicians. The National Debt soon expanded into the respectable dimensions of thirty-eight millions of pounds, and some of the most active schemers in political circles began to whisper about the hateful word "repudiation." This frequent necessity for appeals to the patriotism of the House of Commons to authorise the raising of funds was fraught with important results on the well-being of the country. It was one of the most important elements in raising the influence of the lower House into a position of supremacy. After the Hanoverian succession, the chief Ministers of the Crown were found among the members of the lower House, and it was only in the decline of their years or popularity that they consented to retire into the dignified seclusion of the Lords. The studies of Dr. Burton should have been engaged in the consideration of points like these; but he withholds his help from us, and maintains an unbroken silence.

In the reign of Queen Anne the English universities, through their influence on the minds of the squires and local clergy, framed the policy of the country party. The dons of Oxford were, with few exceptions, favourable to the Tory cause, and many of the college fellows felt little scruple in showing their partiality for the Stewarts. A delightful picture of college life at this epoch might have been painted from the diaries of Hearne, but Dr. Burton has thrust on one side the temptation to enlarge on so attractive a topic. The internal differences which threatened to rend asunder the national Church are described in the analysis of Sacheverell's sermons and Bisset's pamphlets, and in the quarrels of Hoadley and his episcopal opponents. But, save in a few inaccurate sentences on Queen Anne's Bounty, there is no attempt to describe the impoverished condition of the English clergy, and not a line to tell of the growth of the societies for promoting purity of life at home and for sending missionaries into the colonies. The trials and successes of the Scotch emigrants have always formed subjects of interest to Dr. Burton, and in the second volume of this History he has concentrated the fruits of his reading into a passage on the qualities of his fellow-countrymen. He sums up the characteristics of his race in the curious observation that "wherever we find that the Jews now gather the Scots supplied their useful services of old, while in Scotland itself scarce a single Jew has found a living." True to his long-standing pleasure in tracking the footsteps of those whom conscience has driven or enterprise allured from their native shores, he plunges with delight into the history of the French refugees forced by the oppression of their king into seeking refuge in England. These are congenial subjects for the talent of Dr. Burton, and he dwells on them with peculiar pleasure. From a volume entitled *A New View of London*, which was published in 1708, some curious details are drawn for a description of the streets and boundaries of London at that time; but the gratification of the reader would have been enhanced had the historian

peopled its streets with some of the characters in high and low life which are portrayed in the essays of Steele and Addison. The inner life of our ancestors under the last of the Stewarts finds no place in the pages of these volumes.

I enter with considerable pain upon the last part of this notice. No student of English literature can be indifferent to the reputation of Dr. Burton. His works on the humours of book-lovers and the struggles of his countrymen in foreign countries are devoured with avidity, and are eagerly purchased whenever a stray copy finds its way into the shops of the second-hand booksellers. But the truth, though painful both to him that tells and to him that hears, must be spoken; and the truth is that in Dr. Burton's history there are blunders in date and in fact which nothing can excuse. They can only be accounted for by the suggestion that the work has been pushed through the press with improper haste from weariness at the lengthened time which its composition has taken. Take, as one instance, the death of the young Duke of Gloucester—an occurrence of momentous importance to the history of this country. On one page (vol. i., p. 18) it is stated to have occurred in "1701, when Queen Mary had been four years dead." You need only read two pages farther to find that the young prince died at the close of July 1700; and, as Queen Mary died in December 1694, it is obvious that, even after a correction of the erroneous date of 1701, an interval of more than four years elapsed between the two events. Dr. Burton compares the grief of England at the loss of this sickly boy to the anguish which the nation felt at the death of Prince Henry, the eldest son of James I., but introduces a fresh mistake into his narrative by styling Prince Henry the elder brother of the young Duke's grandfather. A few pages farther on (i. 38) the coronation of the Queen is said to have been observed on the 1st of April. The reader is naturally startled at the selection of a day identified with the jests of the populace for the observance of a solemn ceremony of especial honour in a nation's history. His amazement is unnecessary, for the Ministers of Queen Anne were guiltless of such an impropriety. The Queen was crowned on the 23rd of April. This unfortunate propensity for blundering accompanies Dr. Burton throughout his volumes. The greatest misfortune which befell the English army in Spain was inflicted on the battle-field of Almanza. The date for this crushing defeat is given as "the 15th of May in the year 1707" (ii. 168). The proper date is the 14th of April, and, in another passage to be found in the third volume, that date is assigned to it. Let us pass on to the history of the Sacheverell trial, and test the correctness of the day given for the voting of the peers on the question of his guilt. "On the 20th of October the vote was taken" is the statement of Dr. Burton (ii. 256), but here again occurs an error in the month. The mistakes in date seem to thicken as we proceed. The Princess Sophia is said (iii. 230) to have died suddenly "on the 8th of June 1713." Her death occurred in 1714, within a few weeks of the decease of the queen whom

she wished to outlive. A similar blunder the year is committed only two pages later when Anne is stated to have dismissed Lord Oxford in July 1713; the confusion in this case has probably arisen from a misconception of Harley's letter to Swift, which is quoted on the same page. We have not room to exhaust the list of errors, but if anyone will turn to the first volume (p. 40) he will find it mentioned in a curious digression on the ceremony of coronation that Henry Martin, in ridicule of the state ceremonial, "crowned and enrobed George Tuthers, the doggerel poet." Under this extraordinary misprint is disguised the name of the poet Wither, whose works, though of unequal merit, are far from deserving the epithet which Dr. Burton has fastened on them. When discussing the character of Harley, the historian mentions that the Minister recommended to Prior an acquaintance with the Spanish language as a useful accomplishment, and that the poet, after perfecting his knowledge in the hope of a mission to Spain, had only his labour for his pains. If the authority of *Spence's Anecdotes* may be trusted the advice was given to Rowe. In another passage the property of the Harley family is located in the county of Hertford. If we glance at the delineation of Bolingbroke's character (iii. 77) we shall find the same want of correctness in fact. Within the space of half-a-dozen lines his grandfather is called Sir Henry St. John, and the boy is said to have been forced into reading the commentaries of Dr. Martin, a verbose Puritan divine, who gloried in having composed one hundred and nineteen sermons on the 119th Psalm. Bolingbroke's grandfather was Sir Walter St. John, and the name of the Puritan commentator was Dr. Manton. In the page describing the origin of Queen Anne's Bounty, a paragraph of indisputable accuracy at the time when it was written is cited from the *Edinburgh Review* for 1823, as proving that the governors of that institution have gone on increasing the incomes of small livings, so as to make them capable of supporting a resident clergyman, while the intention of the endowment has been frustrated by the clergy holding two or more benefices in plurality, and not residing in either. Fifty-seven years ago the truth of the charge was undeniable: now the supporters of the Established Church can point to the fact that stringent enactments have been passed against such abuses, and that not one clergyman in fifty is the holder of more than one separate living.

Dr. Burton's criticisms of some of the works which have been published on English history prove that he attaches high value to a writer who selects a section of a country's life and fuses into one harmonious whole all the available materials for its history. Every merit which the historian may be endowed with is, however, of little avail without the presence of accuracy. In the case of this history of Queen Anne's reign, this indispensable possession is conspicuous by its absence. Is it too much to suggest that before a second edition of these volumes shall be printed every date and every fact in their pages may be subjected to the test of a rigid examination? W. P. COURTNEY.

NEW NOVELS.

The Greatest Heiress in England. By Mrs. Oliphant. In 3 vols. (Hurst & Blackett.)

Heriot's Choice: a Tale. By Rosa Nouchette Carey. In 3 vols. (R. Bentley & Son.)

Confidence. By Henry James, jun. In 2 vols. (Chatto & Windus.)

Ernestine: a Novel. By the Authoress of "The Vulture Maiden." In 2 vols. (Thomas De la Rue & Co.)

MRS. OLIPHANT'S newest novel attests her inexhaustible versatility in plot-weaving, if it does not rival *Young Musgrave* and some of her later works in sustained and romantic interest. *The Greatest Heiress in England* is rather a chronicle of country-town life, and a history, as far as it goes, of the testamentary crotchets of a retired schoolmaster of the commercial type at Farafeld, who had, at the age of fifty, married the sister and heiress of a townsman named Rainy, returned from India with a fortune. John Trevor's bride was not young, and the six years of her married life were spent in having babies, of whom at her death, Lucy, "the greatest heiress in England," was the sole survivor. The widower ere long solaced himself by wedding his housekeeper, by whom he became in due course the father of a little boy, called in this story Jock, and regarded by his father as a "postscript" or a "mistake," in fact anything rather than a possible sharer in the great Rainy fortune which John Trevor devoted his second widowhood to the task of enhancing and augmenting. Accustomed to saving habits, he secures for himself and his two children a share in the ownership, without housekeeping responsibilities, of No. 6, The Terrace, Farafeld, where the first floor is occupied by Mr. and Mrs. Ford, connexions of his first wife. There, at the opening of the story, he is found daily and hourly revising and perfecting his will, with his little uncared-for boy meanwhile amassing stores of tales from Shakspeare, the *Pilgrim's Progress*, and like food of the imagination, on a rug at his feet, while Lucy, the heiress, is receiving a superior education at Mrs. Stone's—who keeps, with her sister, a select seminary at the White House—and returning daily to her father and brother's society, to be amused with the quaint lore of the latter and bored by the *post-mortem* projects of the former. The tangled web of these last would tax much ampler space than is at our command to unravel; but the gist of it is that the heiress herself is to be for seven years under the guardianship of, and resident with, Lady Randolph, a fashionable dowager, for six months of the year, and with Mr. and Mrs. Ford, at The Terrace, Farafeld, for the other six; while, in the event of proposals of marriage, the consent of four other *quasi*-guardians—the vicar, the Nonconformist minister, Mrs. Stone, the schoolmistress, and Mr. Rushton, the family lawyer—is to be a *sine qua non*. Furthermore, for divers subtle reasons, John Trevor's will directs that a very large portion of what he leaves behind him shall be set apart for Lucy to give away, not in ordinary charities, but in substantial relief on a large scale to necessitous gentlefolk, and this without the same restrictive supervision of a

committee of guardians. Some of the discussions of his favourite scheme between Trevor and his daughter, a dutiful, earnest, rather unromantic girl, who is still in her teens, are indescribably droll, and prepare the way for complications of plot so soon as old John Trevor makes his final bow to the world, with his will signed under difficulties, and with difficulties destined to arise after its signing. As might be expected, the first thought of each guardian blessed with marriageable relatives is his own candidate's chances of Lucy's hand, and as she is at once carried off for six months' chaperonage to a London square by Lady Randolph, a really good and tender-hearted woman, who, at her wish, consents to let "Jock" accompany her ward to town, this period is passed in comparative serenity, undisturbed by prospective suitors, though a fair start is allowed to a rather *fainéant* nephew of her ladyship, the impoverished head of the Randolph family, a baronet no longer in his *première jeunesse*, but a man of the world and a good fellow. By his influence Lucy is saved from one or two compromising mistakes in the way of entanglement with Bertie Russell, a young poet and schoolmaster, to whom Jock is sent, and Bertie Russell's hysterical mother, a female Micawber, who becomes the first recipient of relief to the tune of some thousands under John Trevor's will. On the whole, Lucy passes the happiest portion of her first year of heirship under the wing of her clever and ladylike *chaperon*, and her troubles begin when she returns to The Terrace at Farafeld, to be schemed for by Mrs. Ford and Mrs. Rushton; grudging to strangers in blood by her cousin Philip Rainy, a clever prig, who had successfully taken to her father's school; and made the attraction of picnics and riding parties at which Frank St. Clair, Mrs. Stone's nephew and *protégé*, a barrister, whose health has broken down, Raymond Rushton, a *gauche* and awkward young collegian, and Bertie Russell, the rising author who visits Farafeld *en bon prince*, each in turn are encouraged by the natural kindly interest of the inexperienced heroine into fancying that they have found the way to her affections, a fancy in each case simply and summarily dashed. In short, of such ill-advised schemes upon the heiress the second and third volumes are the chronicle, amusing and fraught with Mrs. Oliphant's usual insight into character. It may be noted, too, that Lucy's embarrassments are shown in each case to flow naturally and by sequence out of one or other of the chief provisions of her father's will. Thus two of her suitors come more or less in the course of the story in the false light of partakers of her bounty; and the poor girl gets into her most awkward complications from the exercise of a simple kindness of heart and an utter absence of knowledge of the world. When she is still spending her second moiety of the year at Farafeld, harassed to death by the misconstruction of her motives by suitors and their supporters, lo! on a certain day, Sir Tom Randolph reappears from the moors, calls on the heiress, and finds her so manifestly relieved by the encouragement of the most genuine and least self-seeking of possible claimants, that he is inspired to storm

the position, and, after winning the consent of the heiress and her several guardians, in due course acquires the right to dispense her charities.

Heriot's Choice is a tale constructed on the model of more than one of Miss Yonge's stories, and has for its main thread the fortunes of Mildred Lambert, a lady who, at the age of twenty-eight, bereaved of the mother whom she has nursed assiduously for the best years of her life, undertakes in exchange the charge of her clerical brother's widowed home in Westmoreland. Arnold Lambert, the widower, has four children, Richard, Roy, Olive, and Chrissy; and the family party receives an accession when Dr. Heriot, the friend of the vicar, a widower himself under circumstances of painful interest, persuades Mildred to undertake the charge of his ward, Polly Ellison, an orphan child of a painter, whom they transplant from Bohemian associations to the vicarage of Kirkby Stephen and its tranquil, orderly routine of studies and duties. To this home, lately bereft of its admirable mistress, to the sad detriment of its unworldly vicar, Mildred Lambert imparts a decision of purpose, a rare gift of the "word in season," and a spirit of helpful counsel which enable her to win silently the love and heed, not only of the young people, over whom she succeeds to *quasi*-maternal influence, but also of her brother's neighbours and intimates, chiefly of Dr. Heriot, Polly Ellison's guardian, and Ethel Trelawney, sole daughter of the proud squire of Kirk Leatham. The interest of the tale consists in the study of the various characters of the vicar's children—Richard, the earnest, ardent, enthusiastic priest in prospect, his father's right hand, and Ethel Trelawney's "Cœur de Lion," so called; Roy, the weaker and more lymphatic would-be artist, whose dangerous illness forms one of the serious episodes of the tale; Olive, of whom one of Roy's jokes was an addition to the Weights and Measures, "How many scruples make an Olive?" but who develops into a poetess, and bids fair in the end to become a worthy helpmate to a missionary; and the rather unclubbable "contradiction," Chrissy—four various types of character owing much of their moulding into loveable proportions to the fosterage of Aunt Milly, "a perfect woman, nobly planned" (a captious critic would say "too perfect"), who so entirely subdues self as well-nigh to miss the crowning prize of her sojourn at Kirkby Stephen—the love of Dr. Heriot—by loyal endeavours to further his too hasty addresses to his ward, Polly Ellison, whose heart, meanwhile, though she knows it not, is won by Roy Lambert, the young artist. All comes right at last, and Aunt Milly, in the closing scene, is a happy mother where she had so long been a model old maid, amid a band of nephews, nieces, and neighbours, wooed and married as their best friends could desire. *Heriot's Choice* contains several touching episodes and incidents, notably Olive's sickness nigh to death ("The Gate Ajar") in the second volume, the death of Squire Trelawney, and the rescue of Aunt Milly by Heriot from a watery grave at Coop Kernan Hole. Our only objection is that it is too long drawn out, though this

perhaps is because the authoress cannot resist the appeal of Westmoreland scenery, Westmoreland archaeology, dialect, legend-lore, manners, and customs to a share in the tale. Miss Rosa N. Carey might earn a name as a writer on topography and folk-lore.

Confidence is a brisk, stirring novel by the clever author of *The American*. Bernard Longueville and Gordon Wright are two highly civilised American fellow-collegians of easy fortune and tranquil destiny—the former with the reputation of genius, and an “armful of gifts,” the latter the embodiment of intelligent good nature. Just after a *rencontre* with a strikingly handsome girl at Siena, and a very incomplete introduction, Bernard is persuaded by Gordon Wright to pay him a visit at Raden-Baden, where he again falls in with the heroine of Siena, and finds her a certain Angela Vivian, whose mother, an American lady from Boston, is acting *chaperon* also for Blanche Evers, a flippant and inconsequent little coquette, whose devoted slave is a certain English Captain Lovelock, fit only to “caper gaily in a lady’s chamber.” The structure of the plot is very slender and subtle, its mysteries consisting in Angela’s reserve as to the original interview, and Bernard’s readiness in undertaking to report to his friend his estimate of the heroine, upon whom, despite a sneaking kindness for her from the first, he pronounces unfavourably in a privileged communication. The result is a hasty withdrawal from Baden on the part of Gordon, already once rejected, and his marriage, later on, to the inconsequent little flirt, Blanche, “the prettiest of little geese.” Bernard’s point of unfavourable judgment centres in the impression that Angela and her mother care for Gordon’s money, not himself; yet in spite of this, when the coast is clear and the friend’s back turned, Bernard is found in the very same toils. Anon, Bernard spends an autumn with Gordon and his wife, “the same little posturing coquette of a Blanche,” in New York, “the freshest, youngest, easiest, most good-humoured of great capitals;” but getting talked of with Blanche, makes himself scarce, and, after a visit to California, finds his way to the French watering-place of Blanguais, near Havre, dreams of Angela, and waking on the sea-shore beholds her veritable image. This lady is the best-drawn character in the book, and we are impressed with the better half of the “smartest nation beneath creation” proportionately. No wonder that when Gordon, mad with jealousy of Lovelock, gets as far as Paris to “flee himself” and get rid of his domestic encumbrances, finding Bernard engaged to Angela as she might have been at first, he goes into all sorts of frenzies, meditates all manner of revolutions with American marital law, argues that he ought to be allowed to put away Blanche and steal Bernard’s prize, and is only reconciled to things as they are by Angela making him see that his wife and he still care for each other, and that there is no earthly reason to re-sort the couples. *Confidence*, if a little flimsy, is certainly amusing.

Ernestine is a German novel by the original author of *The Vulture Maiden*, ably translated by Mr. Baring-Gould, with a Preface calculated to inspire curiosity and to lead to

the expectation of a “soul-romance.” The *dramatis personae* are for the most part the medical and scientific dwellers near a German town and its environs; the heroine, a much oppressed child of a paralysed widower, Herr von Hartwich, the owner of an extensive manufactory, whose half-brother, Dr. Leuthold Gleissert, and his wife live with him and keep the factory in working order until a purchaser can be obtained. The neglected, cuffed, ill-treated Ernestine is thrust from pillar to post, and made the perpetual subject of her crazy father’s wrath; and her uncle’s unreal kindness is almost as unsatisfactory, seeing that he is a selfish atheist of considerable scientific attainments, but a rogue who, after being drummed out of his university for foul play, had retired to his brother-in-law’s to await his death and trusteeship. A most memorable scene in the first volume is where Ernestine, ill-dressed and unkempt, presents herself at Madame Mollner’s on the day her son has passed a magnificent examination at the capital, and comes home covered with scientific honours; and a chance *rencontre* with Ernestine, banned and put in Coventry by all the youthful visitors at the *fête*, fixes the image of the wondrous child in the remembrance of the young *savant*. Her father’s death in a fit of passion, while beating Ernestine, causes a break-up of the establishment; and when the child has got over this she resolves to study science and atheism, and, retiring to a remote castle, Hochstetten, with the aid of her uncle, lent for his own selfish ends, she reaches the highest scientific honours attainable by a woman, but this at the cost of her faith and belief. Meanwhile, Herr Joannes Mollner and a knot of kindred professors have become interested in her career, though staunch in their own belief, and do their utmost to detach her from her atheistic uncle and her isolated position. One of the best scenes in *Ernestine* is where the professors meet (with some petticoats among them) to adjudicate a prize, which falls to Ernestine’s lot; another, later on, is where a village riot is aroused by her patronage (supposed to savour of witchery) being extended to a peasant’s child. In the sequel the wicked uncle takes poison; Herr Mollner marries Ernestine, converted into “only a girl” again, and restored to her right mind; and the story ends better than might have been expected. *Ernestine* is clever, but foreign; spun out, but not unattractive; much given to endless didacticism, but still possessing ten times the sustained interest of an ordinary English novel.

JAMES DAVIES.

RECENT ECONOMIC LITERATURE.

Economic Studies. By the late Walter Bagehot. (Longmans.) There are passages in this work that almost lead one to suspect that Mr. Bagehot despaired in his heart of making a scientific, or even a consistent and logical, defence of abstract political economy, and sometimes consciously used arguments, at which he smiled in his sleeve, on behalf of a cause which he knew to be lost. He calls it an instance worth a hundred arguments in favour of “our English political economy” that “we find it guiding the finance of Napoleon I.” What Napoleon’s system of finance really was was described by the French economist Say in 1821 in a famous letter to an Englishman, in

which he referred to the fact that Napoleon had suppressed the Department of Moral and Political Sciences (which included political economy) in the Institute of France. And Mr. Bagehot began his own economic studies in days in which Archbishop Whateley and Mr. Lewis were its chief English luminaries, and could hardly have forgotten a passage in the lectures of the former respecting Napoleon’s habitual saying, that if an empire were of granite, political economy would grind it to powder. “That erroneous political economy may do so, he evinced by the experiment he himself tried,” is the archbishop’s comment. “The science of political economy as we have it in England may be defined,” according to Mr. Bagehot, as “the science of business, such as business is in large productive and trading communities. It is an analysis of the ‘great commerce’ by which England has become rich. Dealing with matters of business, it assumes that man is actuated only by motives of business. . . . Political economy deals, not with the entire real man as we know him in fact, but with a simpler imaginary man. The abstract man of this science is engrossed with one desire only—the desire of possessing wealth.”

Yet surely no other writer, unless Mr. Lowe, has thought of controverting Adam Smith’s doctrine that to account for the diversities of wages and profits we must take account of many motives besides the desire of wealth. Mr. Bagehot himself calls Malthus one of the creators of English political economy on account of his theory of population, and it need hardly be said that the laws of population are not deducible from the desire of wealth, and that a mere theory of commercial business makes no place for them. It is characteristic of the abstract method which Mr. Bagehot professes to uphold, that he repudiates on behalf of economists the attempt to investigate the “real laws” of population. “Political economy would have to discuss half physiology, half the science of government, and half several other sciences, if it attempted to investigate the real laws which regulate the multiplication of mankind.” But yet what the economist must not and cannot do, other scientific investigators like Mr. Galton may do. “No political economist has the slightest reason to depreciate the causes which act on population of which his science takes no cognisance. They supplement what he discusses; reality is composed of the influences treated of in his science, *plus* these influences.” By far the most interesting and instructive parts of Mr. Bagehot’s work are indeed those in which he departs from the path to which he confines the economist, in order to discuss researches and speculations such as Mr. Galton’s. Political economy is to remain stationary, while all other branches of scientific enquiry are progressive; and the economist is to fold his arms and say with the sluggard, there is a lion in the path. He is not even to enquire why the wealth of some nations is greater than that of others, because so many causes are concerned.

“If you look over the nations of the world, you see at once that one of the greatest contrasts between them is that of comparative wealth or comparative poverty. But, considered in this way, the science of political economy becomes useless, because of its immense extent. The whole of a man’s nature and the whole of his circumstances must be reckoned up and reasoned upon before you can explain his comparative wealth or poverty.”

Mr. Bagehot’s great and deserved reputation may obtain for his present work a *succès d’estime*, but it is, to use a homely saying, a nail in the coffin of abstract and deductive political economy, which it strips of every cloak and covering, and leaves naked to its enemies. Nor can we think that the account it gives of Ricardo will serve to stay the fall of that writer’s authority.

"It must be remembered," we are told, "that Ricardo was in no high sense an educated man. As far as we know, he had not studied any science, and had no large notion of what science was. To the end of his days, indeed, he never comprehended what he was doing. He dealt with abstractions without knowing that they were such; he thoroughly believed that he was dealing with real things. He thought that he was considering actual human nature in its actual circumstances, when he was really considering a fictitious nature in fictitious circumstances."

It is not quite accurate, we should observe, to say of Malthus, as Mr. Bagehot does, that he was "one of several writers who at the same time discovered the true theory of rent." Hume and Dr. Anderson had discovered it long before, and it was re-discovered about the same time by Malthus and Sir Edward West, not Ricardo, as Ricardo himself owned. Say was a personal friend of Ricardo's, had been his guest at Gatscomb Park and his host in Paris, and carried on a friendly though partly a controversial correspondence with both him and Malthus. And Malthus, writing to Say, says of Ricardo's relation to the doctrine of rent (Say, *Mélanges*, &c., p. 301), *La doctrine était originairement la mienne, comme il en convient lui-même.* The generous terms in which he speaks of John Stuart Mill show how superior Mr. Bagehot was to any feeling of jealousy, and coming from such a man are at the same time an important testimony to Mr. Mill's intellectual power. "All students since see the whole subject with Mill's eyes. Whether it has been altogether good for political economy that a single writer should have so monarchical an influence may be argued, but no testimony can be greater to the ability of that writer and his pre-eminence over his contemporaries."

Reciprocity, Bimetallism, and Land Tenure Reform. By Alexander J. Wilson. (Macmillan and Co.) Mr. Wilson has done well to add the reform of land tenure to the title and subjects of this volume. Reciprocity and bimetallism have become bores, and not even Mr. Wilson's ability can get a patient hearing for or against them. But we cannot think he has done either himself or his theme justice in his discussion of the third subject, about which people are really anxious for some practical suggestions.

"The land," he says, "must be delivered from its bondage and given back to the people. . . . The true remedy for many things in England is to set the land free. The best remedy for all our industrial distress, the best relief for our overcrowded towns, is to let the people go back to the soil. . . . What all land law reformers want is the return of the population to the tillage and ownership of the soil in much larger numbers than now. We want to put it in the power of the farmer, of the peasant, of the retired tradesman with agricultural tastes, to buy land in patches which they could cultivate in perfect security."

Mr. Wilson scouts the means proposed by most reformers for effecting this change—the abolition of the law of primogeniture, the prohibition of entail, and the introduction of a cheap and simple system of land transfer registration—as "inadequate, clumsy, and illogical." And he assumes to have, in a chapter of the present work, "presented the reader with what may be described as a simple, thorough, and lasting remedy for the agrarian anomalies of England." Lord Dufferin has been known to remark that whenever he hears a man say "the case lies in a nutshell," he feels sure there is no kernel; and we cannot think there is so much virtue and efficacy in Mr. Wilson's simple remedy as he supposes.

"The proper way in which to initiate that kind of land reform which is essential to the well-being of the community ought surely to lie in the appropriation of part of the soil for the good of the State. . . . State rent, subject to periodical revision

every thirty years, ought to be levied on the land-owner, leaving him to recoup himself out of his tenants if he could, or to give place to those tenants if he could not."

When the rent of land was steadily rising, as it was when Mr. Mill advocated a tax on its unearned increment, much might be said for such a proposal. But could any more unseasonable occasion than the present be selected for reviving it? And how could a tax on rent tend to lead the people back to the land, or to make farmers, labourers, and retired tradesmen eager and able to buy it? After all, Mr. Wilson himself in his last chapter, on the ground of expediency, gives up his "simple, thorough, and lasting remedy," and is content to urge reforms of the very class which he had previously rejected as "inadequate, clumsy, and illogical." Mr. Wilson, we must add, sometimes weakens his case by the strength of his language. The English agricultural labourers' history is a sad one, and much harm has been done to them "by driving them off the land into villages or towns;" but it is extravagant declamation to say that "the greatest injury ever done by man to man was thus done to the tillers of the soil by those above them." Mr. Wilson seems often to have before his mind some fierce Tory antagonist, whose wild rhetoric provokes him to the point of exclaiming, like Hamlet, "Nay, an' thou'lt mouth, I'll rant as well as thou."

A History of the Precious Metals. By Alexander Del Mar. (Longmans.) Mr. Del Mar was formerly Director of the Bureau of Statistics of the United States, and was a member of the United States Monetary Commission of 1876. As a member of the Monetary Commission, it fell to his part to examine the California and Nevada mines, to take evidence and prepare reports, and to collate returns from American ministers in foreign countries relative to the production of the precious metals; and he has since then given much care and study to the present work. It contains, as might be expected, much information, though we are unable to concur altogether with some of the author's statements on several points, both historical and economic. "The feudal system was," he says, "the especial conservator of metallic money, and whenever and so long as that system lasted all extensions of the monetary circulation by means of bank-notes, or any substitute for specie, were rendered impossible." It is true that feudalism was adverse to the development of commerce and commercial credit, and, therefore, to such improvements as the introduction of economical substitutes for money. But it tended to maintain a system, not of exchanges in money, but of exchanges in kind. The commutation of military service for a scutage was an infraction of the feudal system; so, likewise, was the introduction of money rent and money payments for labour; and money was, in short, one of the chief disintegrants under whose action the feudal structure fell to pieces. "Since the beginning of the eighteenth century," according to Mr. Del Mar, "the precious metals have become less and less the general measure of value, and more and more the measure of the measure of value; which latter is now the whole sum of coin, plus the sum of bank and other paper employed as money." In a very important sense this is true. The effect which a given addition to the stock of coin in the world produces on the purchasing power of money depends now on its proportion to the whole circulating medium, metallic and non-metallic, and not on the amount only of the addition to the stock of coin. Nevertheless, ultimately not only the value of money, but the amount of the non-metallic circulation, depends on the supply of the precious metals. Let gold become as easily obtainable as silver is,

and twenty pounds in either paper or gold would soon have to be used where one pound sufficed before. Money performs two functions: that of a measure of value and that of a medium of exchange; and credit supersedes coin as a medium of exchange, but not as a measure of value. We know of no means of verifying Mr. Del Mar's statement that, "out of about £2,666,000,000 supplied to Europe since the discovery of America, about £720,000,000 have been retained for coin, £600,000,000 shipped to Asia, and £1,340,000,000 consumed in the arts or lost;" but the last figure appears to us a great over-estimate. Relatively to the wealth of the world, the use of gold and silver plate has much declined. We question also the proposition that during the Middle Ages and down to the discovery of America there was a flow of the precious metals from Asia to Europe. The mediæval commerce of Europe with Asia was chiefly for spices, perfumes, silks, and other luxuries, and Europe produced no portable commodities which Asia would take in return, or which would bear the cost of carriage by land. Mr. Del Mar's account of the ruin, both physical and moral, resulting from mining is striking, and much that he says will be new to many readers. Yet the ultimate result of the gold mines of our age has surely been beneficial. They have in the end created communities which for prosperity and promise have no superiors and few equals among older societies. T. E. O. LESLIE.

NOTES AND NEWS.

PROF. MONIER WILLIAMS, who lectures at the London Institution on the 16th inst. upon "Indian Religious Life," will be accompanied by Pandit Syámajī Krishnavarma, who will afterwards illustrate the mode of chanting the Vedas and other points in the lecture.

DR. GORDON HAKE has a new volume of poems in the press, which will be published early next month by Messrs. Chatto and Windus. The work is entitled *Maiden Ecstasy*, and consists of fourteen stories, each illustrating a phase of maiden love.

A NEW novel, entitled *Lily of the Valley*, from the pen of Mrs. Randolph, author of *Gentianella*, &c., will be shortly published by Messrs. Hurst and Blackett.

MR. EDMOND CHESTER WATERS has in the press a supplement to his *Historical Memoirs of the Chesters of Chicheley*, entitled *Genealogical Notes of the Families of Chester of Bristol, Barton Regis, Almondsbury, and London, descended from Henry Chester, who died Sheriff of Bristol in 1740*. The work will be illustrated with sheet pedigrees and shields of arms. Applications for copies should be addressed to the author at Messrs. Robson and Sons', 20 Pancras Road, N.W.

THE REV. H. G. TOMKINS, author of *Studies of the Times of Abraham*, is writing a *Life of Joseph*.

MR. J. A. SYMONDS is said to have a new volume of poems in preparation.

A SERIAL story by Mr. Charles Pearce, entitled "Boscotts of Wood Street: a Story of a London Warehouse," will shortly be commenced in the *Bradford Observer*.

WE understand that Mr. E. Poste, M.A., of Oriel College, Oxford, has placed in the hands of Messrs. Macmillan and Co. for immediate publication a translation with notes of *The Skies and Weather Forecasts of Aratus*. As belonging to the literature of infant astronomy and meteorology, and as a specimen of the popular weather-wisdom of the day, the poems are not without interest for modern readers; while upon the attention of men of science Aratus' work has

some claim from the faith he shows in the possibility of a science of weather-forecasting, and his sense of the importance of such a science.

MESSRS. CHATTO AND WINDUS have in the press a new volume of poems by Mr. Swinburne, and a volume of poems by Mr. W. H. Mallock, author of *The New Republic*.

A USEFUL table, giving at a glance the many variations which occur in the open season for salmon fishing upon all the rivers in England, Ireland, Scotland, and Wales, has been compiled by Mr. Henry Ffennell, and is, we understand, to be published at *Land and Water* office next week.

MESSRS. HURST AND BLACKETT will issue in a few days the third and fourth volumes of Mr. Hepworth Dixon's *Royal Windsor*, which will complete the work.

THE Religious Tract Society has in the press a work by Dr. Dawson, of Montreal, on *Geology and Life*, the leading idea being that of links in a chain, in distinction from evolution in a series. The same society also announces a new work by Dr. Stoughton, *An Introduction to Historical Theology*; a new Handbook to Biblical Hebrew, with Elementary Grammar and Copious Exercises; a Handbook to Church History, by Dr. Green, the society's editor; a Monograph on the Book of Nehemiah, by the Rev. T. C. Finlayson, of Manchester; and another volume of Dr. Edersheim's *Bible History*. The present year being the centenary year of Robert Raikes's work among the children of Gloucester, the society intends to issue a series of large coloured "diagrams" or pictures on cloth, illustrating the early history and growth of Sunday-schools all over the world.

THE total number of journals and periodicals at present appearing in Russia is officially given as 608. Of these, 417 are in Russian, 54 in Polish, 10 in French, 40 in German, 3 in Latin, 11 in Lithuanian, 7 in Estonian, 2 in Finnish, 4 in Hebrew, 7 in Armenian, 3 in Georgian, and 4 in Tatar. There are also 46 journals published in the Grand-Duchy of Finland.

THE Rev. J. Inglis, a missionary of the Free Church of Scotland, has now completed his translation of the whole Bible into the Melanesian language, spoken by the inhabitants of the island of Aneiteum, in the southern part of the New Hebrides group. The whole expense of publishing the work is being borne by the islanders themselves.

M. ERNEST HAVET, professor at the Collège de France, has been elected a member of the Academy of Moral and Political Sciences in place of M. Louis Reybaud.

MR. HORMUZD RASSAM's account of his recent explorations in Nineveh and Babylon was read at a meeting of the Victoria Institute last Monday. The printed copy with which we have been favoured is a lengthy production, largely taken up with a description of the different routes from England to Babylon, with personal details, and edifying comments on the fulfilment of prophecy. One sentence, however, deserves to have as much publicity given to it as possible, and we trust that the point of view which it represents will be earnestly advocated in high quarters.

"The discovery of this obelisk [of Assur-nazir-pal] and the large Sardanapalus cylinder makes me very often wonder how an explorer might miss a most valuable record of the past by merely digging a foot or even a few inches from either side of it; and this fact leads me to hope that, before England abandons the researches in Assyria and Babylonia altogether, where she has been so marvellously successful in her explorations, she will have the mounds of Koyunjik and Nimroud laid bare—that is to say, have them thoroughly examined, by beginning at one end and finishing at the other. I feel confident that if the work was continued for the next

hundred years in the same style in which we have been carrying it on for the past thirty-five years, still, at the end, we might perhaps miss a relic which would be most invaluable to both religious and scientific research."

It is particularly desirable that the mines of Babylon should be well worked. Records of Nebuchadnezzar have already been transmitted to our national collection, but only enough to stimulate our anxiety for more. The official record of the capture of Babylon by Cyrus is another earnest of the treasures awaiting a persevering explorer.

MR. P. A. DANIEL's "Time Analysis of the *Two Gentlemen of Verona*" (read with the Time Analysis of the other comedies at the meeting of the New Shakspeare Society on November 8, 1878) was read at the meeting of the Clifton Shakspeare Society on January 24. Reports were presented from the following departments:—Grammar, by Mr. E. Thelwall; Metre and Authorship, by Miss Constance O'Brien; Dress and Social Customs, by Mrs. E. Thelwall.

A NEW theological quarterly has reached us from Württemberg, and, as its exceedingly unpretending character may perhaps impede its circulation in England, we take this opportunity of recommending it as a sound, scholarly, religious, and yet truly critical organ. The first number, which consists of only eighty-eight small octave pages, contains four articles, relating respectively to the late Prof. Landerer's lectures on Dogmatics, to Essenianism, to the Pauline doctrine of the Resurrection, and to the doctrine of Vicarious Satisfaction. The list of contributors contains the names of Pressel, Nestle, and Pfeleiderer (not the Berlin professor)—a sufficient proof that the new *Zeitschrift* is not the organ of a party, but, as it modestly represents itself to be, of the working clergy of Württemberg. *Theologische Studien aus Württemberg* is the title; Neubert, of Ludwigsburg, the publisher; eight marks the subscription.

M. NAVILLE is wintering at Cannes, busy always with his great task of editing the *Rituel*. Prof. G. Ebers and M. Chabas are at Nice; the former, after two years of ill-health, is fast regaining strength.

MESSRS. MARCUS WARD AND Co. publish immediately *Julian Cloughton; or, Lad-Life in Norfolk*, by Mr. Greville J. Chester, author of *Transatlantic Sketches*, *Songs for Music*, &c.

WE understand that the *Manufacturer*, a representative paper of commerce and manufactures, established in 1868, has recently changed hands, and will be issued from March 1 as a weekly newspaper, price 3d. The assistance of several skilled experts has been secured for expounding the technicalities of special industries, and the paper is intended to be a useful record of inventions, industry, and commerce.

MESSRS. W. H. ALLEN AND Co. have in the press a new volume by Mr. Charles Marvin, entitled *The Eyewitness' Account of the Disastrous Russian Campaign against the Akhal Tekke Turcomans; describing the March across the Burning Desert, the Storming of Dengeel Tepe, and the Retreat to the Caspian*. The work is derived almost exclusively from the letters of the Russian correspondents attached to the expedition, and embodies a complete narrative of the fighting beyond the Kopet Dagh and the military operations accompanying the attack upon Dengeel Tepe; the latter being illustrated by Russian plans representing the aspect of the battle at different periods of the day. The accounts of the correspondents of the defeat of the army and the sufferings attending its retreat are exceedingly circumstantial, and throw an altogether fresh light upon the campaign of last year. Appended to the work is a description

of that *terra incognita*, the Akhal Tekke region; a review of the late campaign by Major-Genl. Markozoff; and maps and march routes of the country lying between Tchikishlar and Askabat.

DR. SCHROEDER will publish shortly *Richardi Bentleyi Opuscula Philologica*. The first part, containing notes extracted from Bentley's copies of Greek and Latin authors now in the British Museum, is in the press, and will appear in the course of the present month; and the second part, containing what Dr. Schroeder finds in Cambridge, will follow in March or April.

IN the review of Mr. E. B. Nicholson's *Gospel according to the Hebrews*, for "Papias is now said to have taken this story from the Gospel according to the Hebrews" read "Papias is not said," &c. Mr. Nicholson writes that later on he will send to all those who subscribed for the book a page or two of additional notes, &c., and will be happy to send them also to any other purchaser of it who will forward him his name.

MR. ELLIOT STOCK announces a series of "Early Reprints for English Readers," edited by the Rev. Herbert E. Reynolds, librarian of Exeter Cathedral. The first number will be from John Gerson. The same house is about to publish a reproduction of the *Eikon Basilike*, with an extended Preface by Mr. Edward Scott of the British Museum, and a facsimile of the unutilated frontispiece from the first edition.

THE Delegates of the Clarendon Press will issue in a few days an annotated edition of Goethe's *Iphigenie auf Tauris* by Prof. Buchheim. A complete Commentary will explain every difficulty, and all the classical allusions and reminiscences will be pointed out. The drama will be preceded by a mythological and a critical Introduction, the latter containing, besides a full analysis, a comparison between the Euripidean *Iphigenia* and the *Iphigenie* of Goethe.

SIGNOR GIACOMO PISANI is to publish in the course of the present year a work on constitutional monarchies, entitled *Discourses on the History of England*.

MAGAZINES AND REVIEWS.

THE *Church Quarterly Review* has a very promising table of contents; but subjects like "The Four Gospels and Modern Scepticism," "How is it that we have a Religion?" require for their proper treatment broader, as well as deeper, ways of thinking than seem to be usual with its contributors. On the whole, the most interesting article in it is that on Farrar's *St. Paul*; the best-written is "Two Scottish Bishops," but Bishop Gleig was not, though Bishop Jolly was, a character of more than provincial or sectarian interest.

THE *Library Journal* for December contains a very careful paper by Prof. W. R. Nichols, of the Massachusetts Institute of Technology "On the Deterioration of Library Bindings." The writer is inclined to throw the blame on the products of gas-burning rather than on heat; but he promises a series of crucial experiments. Mr. Charles Welch, of the Corporation Library, London, has some "Economic Suggestions in the Preparation of Printed Catalogues." He recommends for small libraries short-title handlists, and a full-title card-catalogue. But we fail to see how this can possibly be called an "economical" suggestion. The number contains a great deal of interesting matter, and we are sorry to learn that the *Journal* is not yet a pecuniary success. The publisher, however, promises to continue it for another year.

THE *Revista Contemporanea* of Madrid has passed into new hands. To judge by the

present number (January 15), politics, art, and literature will be more prominent than science under the new editorship. An article entitled "Pallida Mors" is a skit on Cervanto-mania, suggesting that the real hero of the *Quijote* is Death, since in no other work is there so much of his doings. The *Bibliografia* incidentally mentions the Americanist Congress to be held in Madrid in 1881, and demands for that occasion the publication of some of the numerous MSS. on America still existing in Spain. O. F. Duro gives a readable account of the inundations of the Duero, and there is a eulogistic notice of the last volume of poems by G. Nuñez de Arce.

In the *Preussische Jahrbücher* for January Herr von Treitschke returns to the "Jewish Question," anent which his previous article has raised no small commotion in Germany. In answer to his critics he recapitulates his reasons for believing that German civilisation is seriously menaced by the intrusion of a modern Jewish element, and urges on Germany the need of political and moral reforms to beat back the invasion.

THE *Alt-Preussische Monatsschrift* contains a collection of information by Herr Hagen on "The Engravers of Königsberg in the Sixteenth and Seventeenth Century." The writer carefully collects all mentions of engravings executed at Königsberg, and by limiting his review to one place gives us a picture both of the artistic activity of the time of which he treats and also of the causes of its decline. Herr Hagelmann contributes an interesting letter of Count Purgstall, written from Königsberg in April 1795, giving an account of his impressions of Kant. While wishing to worship Kant to the fullest extent, Count Purgstall is obliged to admit that he was dirty, badly dressed, lectured without any grace or arrangement, and in private conversation was dogmatic and impatient of contradiction.

THE *Revue Historique* has a paper by M. Bardinot on "The Condition of the Jews in the Venaissin during the Sojourn of the Popes at Avignon (1309-1376)," which collects a great deal of interesting information on a subject that is generally treated very vaguely. M. Bardinot shows that the Popes were persistently tolerant and kindly to the Jews, and did much to spread toleration among the clergy and the people. To the papal residence at Avignon he attributes the fact that the Jews took firm root in the Venaissin and are found to flourish there at the present day. M. Bréard begins the publication of extracts from the memoirs of Jean Doublet, a Normandy corsair, born at Honfleur in 1655, whose adventures have some connexion with English history, as he gained the favour of the Duchess of Portsmouth and visited London at her invitation in 1676. Baron du Casse gives a *résumé* of a number of inedited documents dealing with the relations between Napoleon I. and King Louis from 1773 to 1809.

"LE LIVRE."

Le Livre. Revue Mensuelle. Première Livraison. Janvier 1880. (Paris: Quantin.) Others beside that class of persons to which the term "bibliophile" is applied in France, and the less complimentary appellation bibliomaniac in England, will be glad of the appearance of this handsome and useful publication, which fills a very notable gap. No periodical of any consequence has hitherto dealt exclusively with bibliography, and the consequence is that students and collectors have been very much at a disadvantage. *Le Livre* consists of two parts, which are not only distinct in point of contents, but are further distinguished by the paper on which they are printed. The

section of "Bibliographie Ancienne" is printed on excellent Dutch paper, and contains articles of more or less permanent interest. The second, appearing on ordinary tinted paper, includes articles from each European country on the literary features and productions of the month and a *catalogue raisonné* of its publications. This is a large scheme, and will necessarily require some time and a good deal of pains on the part of the editor, M. Octave Uzanne, and his staff to get it into satisfactory working order. The English correspondent is Mr. Arthur O'Shaughnessy, and it need hardly be said that both personally and by virtue of his position at the British Museum Mr. O'Shaughnessy is a very well qualified correspondent indeed, though we may not indorse all the critical *dicta* which he pronounces for the information of the readers of *Le Livre*. The ACADEMY, however, has a right to protest amicably against his statement that he has been "pendant assez longtemps presque seul ici" in speaking of the most modern school of French poetry. The more permanent part of *Le Livre* contains articles on Baron Taylor and his Dramatic Library, on Armorial Bindings (with a good many illustrations), on the late M. Delepierre, and on the great binder, Trautz-Bauzonnet, whose portraits given to subscribers. There is also an article headed "La Bibliographie en Angleterre," to the subject of which we must be excused if we take some exception. We are not in the least squeamish in point of literature, and certainly are not inclined to burn incense before the shrine of the Rev. Mr. Bowdler. But when we open an article on English bibliography we do not expect it to contain an elaborate notice of a catalogue of obscene books, upon which it seems somebody or other, who has the grace to write under a pseudonym, has wasted good paper and handsome typography. The reproach of this sort of thing is already heavy on Continental bibliophilism. But in England there is absolutely no excuse for it. The French reviewer himself admits that his pseudonymous muck-raker has gone out of his way to collect details which have nothing whatever to do with bibliography. It is, moreover, a notorious fact (and we can again cite M. Drujon in our support) that such work in England rarely or never possesses the slightest literary value. It is simply the product of a diseased imagination, as in Payne Knight's case; or else of deliberate and mercenary catering for unhealthy tastes, as in the immense majority of cases. In neither instance, perhaps—certainly not in the latter—can the product be considered worthy the attention of the bibliographer. The facts are not exactly the same abroad, and therefore the case is there somewhat different. But if M. Uzanne wishes to continue this sort of thing we shall be obliged to him if he will put it in future under the heading of "Bibliography in Holywell Street," and not of "Bibliography in England."

GEORGE SAINTSBURY.

OBITUARY.

CANON OAKELEY.

In Frederick Oakeley, Canon of Westminster and Missionary Rector of St. John's, Islington, the Catholic Church in England has lost one of her ablest men and most devoted sons. "A typical Oxford man," as Cardinal Newman, in a well-known passage of the *Apologia*, has called him, he must interest Oxford men, even of the younger generation; while, as one of the boldest defenders of the Tractarian position, and then as an able and zealous priest of the Catholic Church, he has left to a wider circle a name and an example that will not soon die. As an undergraduate at Christ Church, Oakeley had early developed a power of elegant composi-

tion, and he gained the Chancellor's prizes for the English and Latin essays and Latin verse, and also the Ellerton prize for a theological essay. But it was not for some time that he began to exhibit that vigour of thought and logical ability which afterwards distinguished him. These qualities were drawn out by controversy, and, perhaps, are best shown by his controversial papers; but those who would see him as the thoughtful and acute student and tutor, should read his *Remarks on the Aristotelian and Platonic Ethics as a Branch of the University Studies*. This pamphlet, published in 1837 (the year in which he became Whitehall preacher), is interesting both for what it shows us of the former character of the Oxford philosophical course and also for some of the illustrations it gives of the maxims and doctrines of the Aristotelian philosophy. One of these is drawn from the system of the Church of England—the "Via Media"—the example, in ecclesiastical polity and teaching, of Aristotle's doctrine of the mean. The "Reformed Catholic Church" is the "Via Media," and it is so, not because it is a compromise, not because it merely steers clear of extremes, but because it is true. "It is the precise exemplification of Aristotle's 'Mean Excellence.'" At this time Oakeley had clearly a perfect confidence in the Anglican position. But now he went on advancing towards Catholicism, and, when his friend Ward was condemned for heresy, he wrote one of the boldest and most vigorous protests that appeared in his defence. A few years afterwards (and but a week or two after Newman) he joined the Catholic Church. Since then his life has been one long activity, and his labours, parochial rather than literary, have drawn forth more than once expressions of admiration from men of very different opinions. Many years before, in his Anglican days, he had worked in London, and, as one of the advanced men of the movement, had made "Margaret Chapel" famous; and now, as a Catholic, he has spent in London his best energies on the service of the poor, and employed his literary talents in helping converts to understand the meaning and appreciate the beauty of Catholic worship. But only those who have lived near him and seen his work can judge of its value and its results.

THE death is announced of Dr. Lockhart Clarke, F.R.S., aged sixty-three; of Adolphe de Granier de Cassagnac, the well-known publicist and deputy, and author of numerous works which are described as "improvisations historiques, signalées pour l'insuffisance des recherches ou la partialité des conclusions," aged seventy-two; of Paul Devaux, of Brussels, author of *Mémoires sur les Guerres médiques*, *Études politiques sur les principaux Événements de l'Histoire*, and of *Études sur les principaux Événements de l'Histoire romaine*, aged seventy-nine; of Prof. David Thomson, of the University of Aberdeen; and of Mr. William M'Combie, Tillyfour, author of *Cattle and Cattle Breeders*.

CORRESPONDENCE.

NORSE MYTHOLOGY.

Berlin: Jan. 28, 1880.

Mr. Nutt's letter in the ACADEMY of January 3 seems to me to be based upon a misapprehension of the exact character of the remarkable discoveries of Dr. Bugge. These discoveries involve no question of "parallelism" between the Scandinavian mythical legends and those of any other time or region, but of the direct derivation of a portion of these legends from extraneous sources. Many parallels have been drawn between the Greek and Teutonic mythologies—between the attributes of Balder and those of "the White Christ," between the character of Loki and that of other evil deities, and so on. But Dr. Bugge shows that in the case of a portion at least of the Northern myths no idea of parallelism is admissible, since Balder is simply Christ, and Loki is Lucifer. Dr. Gudbrand Vigfússon has proved that the most important lays of the so-called "Sæmundar Edda" were the work of poets belonging to the Norse population of the Western Islands; that is to say, of the Hebrides, Orkneys, Shetland, Man, and the adjacent coasts of Scotland and Ireland. These Skálds obtained much of their material (which they knew how to blend in a most ingenious way with the remains of the decadent Odinic theology) from the early school of learning and Christianity known to exist in those parts, and which sent out missionaries to so many of the Teutonic lands. Dr. Bugge's theories involve no necessity for a "Heldensage intermediate," as it were, between those of the Greek and those of the Norsemen. It is not asserted that the Eddic writers borrowed their myths and tales "from Celtic imitations of the Greek stories;" they could very well have drawn their material from Latin works to be found in the Celtic monasteries. Indeed, the next step in these discussions, as Dr. Maurer in a private note points out, is to determine the exact state of learning in the eighth and ninth centuries among the Irish-Scotch clergy, and what books, Christian and Pagan, were at that time read in the Irish monasteries.

To Prof. Jolly's summary of Dr. Maurer's interesting paper, read before the Bavarian Academy of Sciences, I should like to add the statement that Dr. Gudbrand Vigfússon (in his Dictionary, pp. 721-22) suggested, as far back as 1873, the etymological identity of the words Sibylla and Völva—the latter being the name of the mystic prophetess of the Völuspá in the elder Edda. A treatise of some interest bearing

upon the subject is *Völuspá og de Sibyllinske Orakler*, by Dr. A. Chr. Bang (Christiania, 1879). Dr. Bugge's own work will appear in March, in Norwegian at Christiania, and in German at Munich. W. FISKE.

THE "WALDENSIAN" VERSION OF THE LORD'S PRAYER.

Edinburgh: Jan. 24, 1880.

Those readers of the ACADEMY who are interested in the Celtic family of languages have doubtless seen the so-called Waldensian version of the Lord's Prayer, which reads so like unmistakable Irish. This version is given by Fry in his *Pantographia* and by Reid in his *Bibliotheca Scotto-Celtica*, both authors professedly copying it from Chamberlayne's edition of the *Oratio Dominica Centum Linguis Reddita*. Fry accepts the version as genuine, and seemingly on that ground alone classifies the "Waldensian" as a Celtic language. Reid follows Vallency in the opinion that Chamberlayne miscopied his so-called Waldensian version—an opinion in which Irish and Gaelic students may now be said almost unanimously to agree.

But the mistake, however originating, is older than Chamberlayne. I have traced it back to two editions prior to his of the *Oratio Dominica*. The earliest edition to which I have access, that of 1700, is still, however, an *editio novissima*. May I hope, therefore, that some of your learned readers will inform me whether the mistake stands in the first edition of the work, and so help me to hunt up the history of this curious philological puzzle?

I think it possible that the enquiry might lead to important results. In the days when our English "man of blood and iron" sent over Sir Samuel Morland to remonstrate against the cruel persecution of the Waldenses, the Protector's envoy is said to have brought back with him from the mission a great mass of "Waldensian" MSS. Of these no fewer than twenty-one volumes, marked separately with the letters of the alphabet, were in 1658 deposited in the Cambridge University Library. The volume marked F is specially referred to by Reid as containing large portions of the New Testament in "Waldensian." Now, it is not at all unlikely that among these twenty-one volumes of MSS. there may have been an Old-Irish or Erse MS. belonging to some Irish or Scotch missionary brotherhood, who in early times settled among the Vaudois, and that to this source is to be traced the blunder of the *Oratio Dominica*. If such should prove to be the case, it would not only solve the puzzle of this so-called Waldensian version of the Lord's Prayer, but, what is more important, it might bring to light a literary treasure of the utmost value to Celtic scholars. DONALD MASSON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 9, 3 p.m. Royal Institution: "Physiology of Muscle," by Prof. Schüffler.

5 p.m. London Institution: "Hibernation, Aestivation, and Migration," by the Rev. J. G. Wood.

8 p.m. Society of Arts: "The Manufacture of India-rubber and Gutta-percha," II., by T. Bolas.

8 p.m. Royal Academy: "Oil, Wax, Paraffin, Gum, Turpentine, &c.," by Prof. A. H. Church.

8 p.m. British Association.

8 30 p.m. Geographical: "Afghanistan; The Eastern Border of Persia, and the Basin of the Loras," by Major-General Sir Michael A. S. Biddulph.

TUESDAY, Feb. 10, 1 p.m. Horticultural.

8 p.m. Anthropological Institute: "On the Central South African Tribes from the South Coast to the Zambezi," by Dr. E. Holub.

8 p.m. Civil Engineers: "Iron and Steel at Low Temperatures," by J. J. Webster.

8 p.m. Photographic: Anniversary.

WEDNESDAY, Feb. 11, 8 p.m. Society of Arts: "A New Metallic Compound, and its Application to Industrial and Artistic Purposes," by Dr. Granville Cole.

8 p.m. Microscopical: Annual Meeting.

8 p.m. Telegraph Engineers.

THURSDAY, Feb. 12, 3 p.m. Royal Institution: "Recent Chemical Progress," by Prof. Dewar.

7 p.m. London Institution: "The History of Writing," by the Rev. A. H. Sayce.

8 p.m. Society of Arts: "Gas Furnaces and Kilns for Burning Pottery," by Herbert Guthrie.

8 p.m. Mathematical: "Geometrical Notes," by Prof. H. J. S. Smith; "On the Reflections of Vibrations at the Confines of two Media between which the Transition is Gradual," and "On the Stability or Instability of Certain Fluid Motions," by Lord Rayleigh.

8 30 p.m. Royal. Antiquaries.

FRIDAY, Feb. 13, 3 p.m. Astronomical: Anniversary.

8 p.m. Quakers.

8 p.m. Royal Academy: "Canvas, Wood, Paper, and Painting Grounds in General," by Prof. A. H. Church.

8 p.m. New Shakspeare Society: "On Shakspeare's Use of Shakspeare," by W. J. Craig.

9 p.m. Royal Institution: "Wheatstone's Telegraphic Achievements," by W. H. Preece.

SATURDAY, Feb. 14, 3 p.m. Physical: Annual General Meeting; "On a Quartz-Iceland Spar Achromatic Spectroscope," by Dr. W. H. Stone.

8 p.m. Royal Institution: "Sebastian Bach," by Prof. Pauer.

3 45 p.m. Botanic.

SCIENCE.

The Crayfish: an Introduction to the Study of Zoology. With Eighty-two Illustrations. By T. H. Huxley, F.R.S. (C. Kegan Paul & Co.)

THERE are two fundamentally different processes by which the study of biology may be approached. The student may commence by learning a large number of general propositions concerning living things as a whole, and under the guidance of his teacher may, by actual inspection for himself, verify and become familiar with those main points of structure in the various organisms which are of greatest classificatory importance, neglecting secondary details; or, on the other hand, he may commence by a most careful study of all the details of some one particular organism, and, having mastered these, may afterwards gradually extend his range, using the special knowledge acquired as a starting-point and subject of comparison. A very large number of those who have made their names illustrious in connexion with zoology have commenced their studies according to the latter method, having begun with the minute investigation of human anatomy in the course of their medical training.

Opinions are somewhat divided as to which of the methods it is best to pursue in teaching students. It is probably easier to get a beginner to apply himself to the investigation of the details of some one form than to grasp a number of important points extending over a wide field; but on the other hand it is a great satisfaction to a student early to obtain some idea of the range and limits of the animal kingdom.

The object of Prof. Huxley's new book is to afford an opportunity to students to commence the study of zoology by means of a careful verification of nearly all that is known concerning a single animal, the common crayfish. The book is termed an "Introduction to Zoology."

"For whoever will follow its pages, crayfish in hand, and will try to verify for himself the statements which it contains, will find himself brought face to face with all the great zoological questions which excite so lively an interest at the present day."

A curious fact is mentioned in the account of the habits of the crayfish in the first chapter, namely, that crayfish are able sometimes to seize water-rats under water, and suffocate them. It is also somewhat surprising to learn that Paris consumes annually from five to six millions of crayfish, paying

£16,000 for them, and that the artificial cultivation of crayfish is successfully carried on on a large scale both in France and Germany.

Prof. Huxley tells us that the Old-English method of writing the word "crayfish" was "crevis," or "crevice," and that it is uncertain whether the word was derived by us from the French *écrevisse*, or the Low-Dutch *Crevik*. He does not mention the fact that the rock lobster, *Palinurus*, which he figures and describes, is commonly termed a crayfish by fishermen and sailors. We once heard an amusing discussion among a group of blue-jackets as to which was the "crayfish" and which the "crawfish," the fresh-water or the marine animal.

About two hundred pages are devoted to an account of the anatomy, histology, and development from the egg of the crayfish. A very important feature of the book is that scarcely any fact of structure is described which is not fully set forth in a figure. The woodcuts are numerous and most excellent; the full-page illustrations of the various species of Astacidae and allies are especially to be commended.

The most interesting portions of the book to professed zoologists are those which describe the results of the author's researches concerning the classificatory and genetic value of the structure and arrangement of the gills in the Astacidae and allied forms, and on the distribution of the various species in space and time. It would be without purpose to follow here, without either the specimens or woodcuts before us, the various modifications of the gill arrangement in the genera of Astacina, or to trace the steps by which the author arrives at the hypothetically complete branchial formula of decapod crustacea. All the true crayfish inhabiting the Northern hemisphere belong to a single family, the Potamobiidae, those of the southern regions belonging to a different family, Parastacidae. The representatives of these two families have certain points of structure in common which are evidently derived from a common ancestor now extinct, but which may be named Protastacus.

The crayfishes or Astacina and the lobsters or Homarina are closely related, and may be included under the common name Astacomorphae. The Astacomorphae, unless Pempix of the Trias be an example of the group, first appear in the Middle Lias formations, where they are represented by the genus Eryma, in which all the essential characteristics of the Astacomorphs are extremely well-marked, and of which nearly forty different species have been recognised. The nearest ally of the genus Astacus, itself of remote antiquity, is Pseudastacus, which has an extraordinarily close resemblance to the crayfishes of the present day. It occurs, together with Eryma, in the lithographic slates of Solenhofen. Eryma is probably a representative of the ancestor of the lobster, while Pseudastacus may represent that of the crayfish; and, since these two types of the Astacomorphae were already distinct in the Jurassic epoch, and Eryma is known to have existed in the Liassic, it is probable that Pseudastacus existed also at this latter period, and that the common ancestor of the two forms—the

Protastacomorph—is to be sought for in the Trias.

There are two forms of the crayfish common in Europe, recognised by the Germans as *Steinkrebs* and *Edelkrebs*, and by the French as *l'écrevisse à pieds blancs* and *l'écrevisse à pieds rouges* respectively. The second form is much the larger, and fetches a higher price as food in the market. Evidence derived from the artificial culture of crayfish seems to prove that these two forms do not interbreed, and the white-clawed crayfish inhabit swifter water than the larger red-clawed animal. Prof. Huxley, after a most careful comparison of specimens, concludes that the two forms are probably distinct species, and, though he adopts the old scientific name, *Astacus fluviatilis*, for the crayfish on his title-page and elsewhere as including both forms, he, nevertheless, for convenience, speaks of the two forms in later chapters under the distinct names *Astacus torrentium* (*à pieds blancs*) and *A. nobilis* (*à pieds rouges*). The first species alone exists in Great Britain. It occurs also in France, Spain, Greece, Dalmatia, and North Germany, but apparently does not occur in Russia. The second species exists in France, Germany, and Italy, and at Barcelona, though it has not been heard of by the author as occurring elsewhere in Spain. Its south-eastern limit is in Carniola, and it is not found in Dalmatia, Turkey, or Greece. In the Russian empire it inhabits the watershed of the Baltic, and it is sometimes found on the Livonian coast, in the brackish waters of the Baltic itself.

There are many other species of crayfish existing in the various fresh waters of the world. The details of their distribution, full of interest as they naturally prove to be when, as here, collected and explained by Prof. Huxley, cannot, for want of space, be followed in the present article. A most interesting fact is that the genus *Astacus* is represented by several species in British Columbia, Oregon, and California, while on the other side of the Rocky Mountains all the crayfish belong to a different genus—*Cambarus*. Now, the genus *Astacus* occurs in Japan, though not in South-Eastern Asia, Persia, Hindostan, Arabia, Syria, or Africa. The connexion between the faunas of Japan and the Pacific coast of North America thus established is most interestingly borne out in the close relations which botanists have recognised between the floras of these two regions. All the crayfishes of the Northern hemisphere, as already mentioned, belong to the Potamobiidae, and no members of this family exist south of the Equator. Of the crayfishes of the Southern hemisphere, the Parastacidae, the head-quarters lie in Australia, where one species attains a foot or more in length, being as large as a full-sized lobster. Small crayfishes of the same family, in Tasmania, live habitually on land in burrows excavated by them in the soil. New Zealand has a distinct genus of crayfishes—*Paraneuphrops*—which most curiously occurs elsewhere, as far as is yet known, in the Fiji Islands only.

The geographical distribution of crayfishes is displayed upon a map of the world, in which, as an arrangement most nearly in harmony with the facts of the geographical

distribution of living forms generally, Australia is placed in the centre.

Though the vast majority of the stalk-eyed crustacea are exclusively marine animals, there are a good many of them, besides the various crayfishes, or Astacina, which inhabit fresh water. Among the long-tailed crustacea there are the Atyidae, remarkable for the curiously complicated hinging of the claws of their two front pairs of walking legs. The Atyidae have an extremely wide range, a blind form occurring in the Adelsberg caves. Further, there are a large number of species of fluviatile prawns, of the genus *Palaemon*, inhabiting both tropical and temperate latitudes over most of the world. They are very large, some attaining a foot or more in length. They are at once to be distinguished from the Astacidae, even by the most casual observer, by the fact that the chelae, or pincers, which are very large in the fresh-water forms, are developed on the second pair of walking legs, instead of on the first as in the crayfish and lobster. Some species of *Palaemon* ascend rivers for long distances, and species of *Mysis* inhabit the lakes of North America, Scandinavia, and elsewhere. In the cases of the Scandinavian lakes they have probably been imprisoned at the heads of fjords which have been shut off from the sea, and, having thus been converted into lakes, have gradually become filled with fresh water instead of salt.

Of the short-tailed, stalk-eyed crustacea, the fluviatile crabs (*Thelphusa*) compete for the possession of the fresh waters in many parts of the world, and the author thinks it

"not improbable that, under some circumstances, they may be more than a match for crayfishes; so that the latter might either be driven out of the territory they already occupied, as *Astacus leptodactylus* is driving out *A. nobilis* in the Russian rivers; or might be prevented from entering rivers already tenanted by their rivals."

The area occupied by the fluviatile crabs is very nearly the same as that from which crayfishes are excluded, or in which they are scanty.

Prof. Huxley's powers of hard work seem to be inexhaustible; the present work must certainly have cost him a large amount of labour both in the study of monographs, which are cited in a very full list at the end, and still more in the actual investigation of the crayfish itself. Every work from his pen, when announced, is looked forward to by educated readers, not only as a source of interest and pleasure, but as a certain gain to the cause of scientific truth, and it need scarcely be stated that the present volume gratifies such anticipations in all respects. Whatever biological problem becomes from time to time the object of careful research, the more competent the investigator, the more certainly do his results point to one general conclusion, namely, the truth of Mr. Darwin's theory. The results of Prof. Huxley's researches on crayfish have proved no exception to the rule, and he closes his book with a short statement setting forth the harmony of the known facts therein displayed with the theory of evolution and the inapplicability to the problems encountered of the only alternative supposition.

H. N. MOSLEY.

OBITUARY.

THE name of Mr. Edward Hearle Rodd, of Penzance, will be long remembered for his devotion to the science of ornithology. His father, the Rev. Edward Rodd (a member, and subsequently the head, of an old Cornish family resident at Trebartha Hall, near Launceston), was for many years rector of St. Just-in-Rose-land, and Mr. E. H. Rodd was born in the rectory house in 1810. After being admitted solicitor in 1832, he settled at Penzance as partner in the chief legal firm of that town. His communications to the Reports of the Royal Institution of Cornwall on the ornithology of the county commenced in 1838, and have been continued in the journals of that society until quite recently. From 1843 he has contributed frequent notes on the rarer British birds in the West to the pages of *Newman's Zoologist*. The observations of more than a quarter of a century were subsequently revised and published in a *List of British Birds in the Land's End District*. The first edition of this excellent little handbook was printed at Penzance in 1864, and in an enlarged form it was republished in 1869. Messrs. Trübner have for some time announced a more elaborate work by Mr. Rodd on the same subject, and it is earnestly to be hoped that the MSS. have been left by him in a state fit for publication. His name is frequently met with in the volumes of Yarrell and Gould on the birds of Great Britain as affording assistance on the habits of the rare birds visiting the coast of Cornwall. After less than a week's illness Mr. Rodd died at Penzance on January 25.

To the melancholy list of travellers who have died in Africa during the past year we regret to have now to add the name of the Abbé Debaize, the leader of the French scientific expedition, news of whose death at Ujiji has just reached Paris. The deceased, Michel Alexandre Debaize, was born in 1845 at Glazais in the Department of Deux-Sèvres, and was educated chiefly at Suez. It was probably in consequence of his familiarity with Arabic that he was chosen to command the expedition destined for the scientific exploration of the central zone of the African continent. He left France for this purpose towards the end of April 1879, arriving at Zanzibar early in June; and from time to time intelligence has been received from him showing that he possessed great self-reliance of character, and giving promise of very valuable geographical work. He arrived at Ujiji in the course of last spring after a fairly successful journey from the coast, and had, we believe, been since engaged in local exploration and maturing his plans for the immediate future, which included the examination of the country between the head of Lake Tanganyika and the Nyanzas, and afterwards forming a dépôt at the nearest point on the Lualaba-Congo. That work done, he intended to return to Ujiji in order to send home his reports and to receive stores to enable him to continue his journey westwards. He had been detained for some time at Ujiji, endeavouring to obtain boats to transport his party to the Uzighé country at the north end of the lake, but there had been no suggestion that he was in failing health, nor are we aware to what cause his death is to be attributed.

NOTES ON TRAVEL.

THE London Missionary Society have recently received detailed particulars respecting Mr. Hore's examination of the Lukuga Creek, which is now found to be the long-sought outlet of Lake Tanganyika. After obtaining a guide, he descended the river by boat to Stanley's farthest, and, as the rapids beyond (half-a-mile long) were dangerous for his frail craft, he

landed, and, proceeding westwards, passed the Rivers Rabamba, Msengeli, Kawindi, and Luaminwa. He then struggled through the jungle, and reached the base of the Kiyanja Range. Having, with some difficulty, ascended it to a height of nearly 1,200 feet, Mr. Hore obtained bearings, and at night the latitude, which, with the latitude at Kawé Nyange, at the mouth of the river, will enable him to make a plan of the Lukuga. Mr. Hore says that from his camp on the Kiyanja Range he had an extensive and magnificent view of the surrounding country; the reaches of the Lukuga lay at his feet as on a plain, and, sweeping round the base of the mountains, became lost to view among the hills of Kwa Mekito and Kalumbi's in Urua.

THE Royal Geographical Society have received a telegram from Mozambique informing them that the East African Expedition under Mr. J. Thomson reached Bambe, at the south end of Lake Tanganyika, on October 28, arriving two days before the missionary expedition under Mr. James Stewart, O.E., of Livingstonia. Mr. Thomson reports that the distance from the head of Lake Nyassa to Lake Tanganyika is 250 miles, or some seventy miles more than it has usually been supposed to be. He found the intervening country level, and the people friendly. The telegram added that Mr. Thomson was engaged in exploring the western side of Lake Tanganyika; and, as he intends to go to the Lukuga Creek, it may be hoped that he will follow up Mr. Hore's investigations and carry the examination of that river as far as the Lualaba. Mr. Thomson is to be congratulated for the pluck and perseverance with which, notwithstanding his youth and inexperience, he has struggled on since the death of Mr. Keith Johnston. He has accomplished in five months, including all detentions caused by the illness and death of his leader, &c., a journey of great importance, the latter part of which Mr. Johnston was only directed to undertake if he had been able to husband his resources sufficiently for the purpose.

THE new number of the *Monthly Record of Geography* opens with Mr. W. S. Blunt's paper on his visit to Nejd, in Central Arabia, which is illustrated by two maps, one from materials furnished by the author. This is followed by Mr. Thomson's long-promised notes on the route taken by the East African Expedition from the coast to Uhehé, whence the first news was received of him on November 10. His line of march is laid down on a map, which gives other interesting information respecting this portion of East Africa. In the Geographical Notes the news respecting other expeditions in the East and West of Africa is brought up to date, and we also learn that M. Sibiriakoff is about to send to Japan the well-known Norwegian explorer, Capt. Johannessen, to take command of the Arctic exploring vessel, *A. E. Nordenskiöld*, which, as we have before recorded, was wrecked off the northern coast of Japan last August, but which it is now hoped may be saved. There is also a note on Capt. J. Kjelsen's voyage in the Spitzbergen seas last year, when about 82° N. lat. was reached. The Proceedings of foreign societies this month are also of much interest, as they contain a succinct account of Dr. Crevaux' last journey in South America, and some particulars respecting the proposed French "stations" in Africa.

MR. H. M. STANLEY has just founded the first station of the International African Association at the foot of the Yellala Falls of the River Congo, and he has already cut a road twelve feet broad along the northern bank towards Stanley Pool. The third Belgian expedition has thus been far more fortunate and expeditious in its movements than those on the

eastern side of the continent under MM. Cambier and Popelin.

MR. A. MCCALL will shortly leave for West Africa in charge of a missionary expedition destined for the River Congo. We hear that he will afterwards join Mr. H. M. Stanley's party.

CAPT. R. F. BURTON is now in Egypt, and is about to proceed, with a survey party, to the gold mines which he discovered near the shores of the Gulf of Akaba. His visit is stated to be connected with a scheme for working the mines.

WE hear that the member of the Boer Relief Expedition who, as stated in the ACADEMY of December 20, resolved to remain behind and attempt to reach the unfortunate Boers has succeeded in doing so after a ride of twenty days through a desert where water was hardly ever obtainable. He found the remnants of the party in a wretched condition, but the majority are determined to persevere, and, if they cannot find a resting-place elsewhere, they intend to cross the River Cunene into Portuguese territory.

SCIENCE NOTES.

Uranometria Argentina.—By the publication of the first volume of the *Resultados del Observatorio Nacional Argentino en Cordoba* (Benjamin A. Gould, Director), the National Observatory of the Argentine Republic has conferred a real boon upon astronomical science. Though some preliminary notices of the survey of the southern heavens in course of execution at Cordoba may have raised great hopes, it is probable that astronomers will consider the work actually accomplished and now published as surpassing even their most sanguine expectations. Nine years ago, in September 1870, Dr. Gould arrived with four assistants from the United States for the purpose of establishing and working the new southern observatory. Detailed plans had been prepared beforehand, and all portions of the building, except the brickwork, constructed in the United States and shipped; but a series of disappointments and delays deferred the succeeding steps till the meridian circle could be placed in position and the zone observations begun. During the interval the time and energies of the observers were employed in carefully determining the relative magnitudes of the southern stars visible to the naked eye, for the formation of an uranometry analogous to that by which Argelander had rendered such signal service to astronomy thirty years before. But the work, intended to occupy only this interval, engrossed a large share of all available energies for three years, and could not be deemed completed for three years more. The technical difficulties to be overcome in the preparation and reproduction of the Atlas were great beyond anticipation. And the printing of the text, which was executed, and well executed, at Buenos Ayres, at a distance of five hundred miles from Cordoba, entailed much delay. During all the stages of the undertaking and the discouragements which have attended it, Gould found incentive and support in looking forward with hopefulness to the approbation of the great master in this department of astronomy. "To Argelander, living, I desired to dedicate this work. . . . Now I may only dedicate it to his honoured memory." There is no question that Argelander would have rejoiced over the *Uranometria Argentina*. For the work practically realises for the southern heavens, from the south pole to 10° of northern declination, what in his own *Uranometria Nova* of 1843 he could only aim at for the stars visible in our latitudes. The Atlas, consisting of fourteen large charts, gives by far the best representa-

tion of the heavens to be met with, and the careful delineation of the milky way is especially welcome. The names of the constellations might have been banished with advantage to the rims of the charts. The text, in Spanish and English, furnishes in its 400 quarto pages ample proofs of the care and circumspection with which the work has been executed. The degree of accuracy which the observers have attained in estimating the magnitudes of the stars is greater than might have been anticipated. The alterations adopted in the nomenclature and in the constellations and their boundaries seem to have been made with judgment and discretion. The notes appended to the catalogue of stars contain a mass of valuable information referring chiefly to their proved or suspected variability. The examination of the number and distribution of the stars, and the investigation of the course and breadth of the milky way and of its branches and bifurcations, are of great interest; but in this place the mere indication of the high value of the work must suffice.

Geology in Yorkshire.—The last part of the *Proceedings of the Yorkshire Geological and Polytechnic Society*, which has just been issued under the editorial care of Mr. James W. Davis, contains a number of interesting papers on local geology. Mr. Walter Morrison, of Malham, opens the number with a short Address to the Society—an address which is well worthy of being read and digested. The editor himself contributes two papers, in one of which he describes a new fossil fish from the coal-measures of Halifax in Yorkshire. He regards this fish as representing a new genus, and gives to it the name of *Ostracacanthus dilatatus*. Among other contributors we notice Mr. Dakyns, of the Geological Survey. Nor should we omit reference to Prof. Miall's interesting description of a new bone-cave at Raygill, which has yielded remains of *Elephas antiquus*, *Rhinoceros leptorhinus*, hippopotamus, bison, &c. These fossils are now preserved in the excellent museum at Leeds.

MEETINGS OF SOCIETIES.

NEW SHAKSPEARE SOCIETY.—(Friday, Jan. 23.)

TOM TAYLOR, Esq., in the Chair.—Mr. Edward Rose read a paper on the "Inconsistency of Time in Shakspeare's Plays" (as pointed out in Prof. Wilson's Notes on *Othello*, and Mr. P. A. Daniel's Time-Analysis of Shakspeare's Plays), of which the following is a synopsis:—(1) There is throughout Shakspeare's plays a system of *double* (or *inconsistent*) time. The scenes are so linked together that the action is continuous, compressed into a few consecutive days, almost without a break; yet, in all the Tragedies and Histories, the story evidently covers months or years of time. (2) This system combines the advantages of the *Classic* unity of time with those of the *Romantic* freedom in its treatment, and avoids the great drawbacks of both. It combines rapidity of action, and sustained interest, with probability, life-likeness, and historical breadth of time. (3) Examples: the time of *Richard the Third*, fully analysed; and the continuous time-connexion, from scene to scene, of the series of plays from *Richard the Second* to *Richard the Third* (eighty-seven years: 1398-1485). (4) Other dramatists have used this system, but less boldly and consistently. Others let time slip by—Shakspeare always marks its passage. (5) Shakspeare is singularly careful in the construction of his plays, unequalled as a practical dramatist. After the paper, Mr. Taylor gave some account of his own method of constructing historical plays, and Mr. Hetherington pointed out that it was useful to take into consideration, besides the apparent "long" and "short" time of a play, a third time—that actually occupied in its representation.—Notes on the time of *Romeo and Juliet* and of *Julius Caesar*, by Messrs. Kolfe and Hermann Linde, were also read.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, Jan. 28.)

JOSEPH HAYNES, Esq., in the Chair.—Dr. Ingleby read a paper "On the English Spelling Reform Deadlock," in which he stated that he had joined the English Spelling Reform Association because it appeared to him to be expedient in the interests of education to amend the existing spelling of English, the time having now arrived when combined action should be adopted with the view of thoroughly improving the present system. He agreed that a normal orthography should be accepted for the spelling of our language; but he was not prepared to accept a purely phonetic plan, the basis of which ignores our usual pronunciation. Dr. Ingleby added a careful notice of the views proposed by Dr. Melville Bell and Mr. A. J. Ellis.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 29.)

EDWIN FRESHFIELD, Esq., in the Chair.—Mr. Middleton exhibited a drawing of two columns at the Ashmolean Museum, which were evidently two of the original legs of Henry VII.'s tomb.—The Secretary read a paper by Mr. Maoray, giving an account of a book written by John de Luxembour, Abbot of Ivry and Bishop of Pamiers, which purported to be a remonstrance by Anne of Cleves (called "Marie" on the title-page) to Henry VIII. The publication is referred to in a letter from Paget, the English Ambassador in France, on February 26, 1542, printed in the State Papers, vol. viii., p. 662. It is clear that Anne of Cleves herself had no hand in the production of the work, which possesses considerable merit. It passed through two editions, which are without date, and was translated in 1558.—An escutcheon was exhibited, the property of the Hagley Club, Worcestershire, which bears the arms of all the peers of England in 1572. It is possible that it may have been made in honour of Queen Elizabeth's visit to Worcester in 1575. According to the tradition of the neighbourhood, Hagley bowling-green was used as a rendezvous by Guy Fawkes and his fellow-conspirators.—Lord Dillon exhibited a gold bracelet, given by the late King of Naples to Mr. Hamilton.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, Feb. 3.)

PROF. T. HAYTER LEWIS read "Some Remarks on Excavations made in Tel-el-Yahoudee (the Mound of the Jew), near Cairo, and on some Antiquities brought therefrom and now in the British Museum." The mound is about twenty miles from Cairo, on the side of Heliopolis, and has long been considered as enclosing the site of the temple built by Onias under the Ptolemies (B.C. 160). The description of this temple given by Josephus, in his *Antiquities* and *Wars of the Jews*, states that it was built on the site of a deserted temple, and that it was finally closed by Paulinus after the destruction of Jerusalem. Excavations were made in the mound in 1870, when it was found that it covered the site of a walled enclosure, about half-a-mile long and a quarter broad, the best preserved portions of the walls being fifteen feet thick, built in three thicknesses, much as the walls of the Tomb of Osiris at Abydos. In the enclosure were found remains, the most noteworthy being those of a subterranean passage descending under a part of the mound still unexplored, several broken statues, and a square chamber, enclosed by walls of well-cut limestone blocks, and paved with finely polished alabaster slabs. In this chamber were four detached pedestals; but the chief objects of interest were the decorations of the chamber, which were of tiles, in admirable preservation, many of them being of a type hitherto unknown before mediæval times. They are of various kinds; all have patterns upon them, but some are simply in relief, and glazed with the ordinary bluish-green glaze so well known in the little Egyptian sepulchral statuettes; others are inlaid with mosaics, others with brilliant enamels. No such work is known to have been used either by the Egyptians or Assyrians in decorating their walls, although painted bricks were common enough, and mosaic and enamelled work were commonly used by both nations in small objects of personal ornament. In Persia, inlaid enamelled tiles have been used for many centuries, but no antique specimens are known to exist. The

greater part of the tiles from Tel-el-Yahoudee are purely Egyptian in design, and many of them bear the name—a title of Rameses III.; but some others (always of a circular form and without hieroglyphics) are distinguished from the rest in a curious way, viz., by having stamped upon them, on the reverse side, the Greek letters A and E. The problem which these curious relics present is that of ascertaining the nature of the edifice which they adorned, and more particularly whether it was the one constructed or adapted by Onias for his temple. There can be no doubt that an edifice was built by or for Rameses III., as this is proved by the hieroglyphs on the tiles and on the statues. No doubt, careful examination would solve the problem, and this case is just one of those in which a small sum of money put into the hands of a local and zealous antiquary (we may take Dr. Grant as an excellent example) would be likely to produce most important results.—Mr. Pinches announced that he hoped to be able to lay before the next meeting of the Society some account of a tablet of peculiar interest. So far as he had been able to examine it, it appeared to contain the annals of the sixth, seventh, eighth, ninth, tenth, and eleventh years of the reign of Nabonidus (about B.C. 550-539), giving some new information. The reverse of the tablet contained facts of great historical importance, evidently the history of the last year of the reign of Nabonidus (B.C. 538), giving an account of the overthrow of this king and capture of his City of Babylon on the 10th of the month Tammuz by the celebrated general Gobryas, under Cyrus the Great, King of Persia.

FINE ART.

A Memoir and Complete Descriptive Catalogue of the Works of Charles Méryon. Translated from the French of Philip Burty by Marcus B. Huish. (Fine Art Society.)

IN the appearance of a second English catalogue of the works of the great French etcher, and in the fact that two exhibitions of his prints were this winter open in London, we have sufficient evidence that there is in this country a considerable public who are "*passionnée pour les œuvres de Charles Méryon*." But to those like M. Burty, whose faith in Méryon is a thing of no recent date, there must be something saddening in all this posthumous honour, so immediately does it suggest the thought that if only a little of this wide appreciation had come sooner it might have sweetened and comforted the artist's life—would at least have rendered its material conditions more tolerable. While Méryon lived he commanded no public large enough to make his work remunerative; there was, indeed, a group of artists and amateurs who knew his etchings and rightly valued them; who knew the man, and would have done for him all that friendship could do, but from them he was strangely alienated by his mental disorder, which grew upon him with the years and with his increasing sense of failure and disappointment, and which in the end environed him as with a magic and fatal circle that cut him off from human help.

The present work is a translation by Mr. Marcus B. Huish, with additions and alterations, of a biographical paper and a catalogue, contributed by M. Burty many years since to the *Gazette des Beaux-Arts*. The memoir would have gained greatly had it been rendered from the original with a freer and more graceful touch, and had care been taken to avoid various little inaccuracies and inelegances of expression, of which a singularly flagrant example occurs even on the first page,

It contains, however, particulars and anecdotes which will be new and interesting to the English reader; for in the vivid sketch, "Méryon and Méryon's Paris," prefixed by Mr. Wedmore to his Catalogue, the aim of the author was less to map out the details of the artist's career than to gather up into a consistent whole "the idea of his life," the spirit of his art. Mr. Wedmore's estimate of Méryon was like a painter's portrait—"prime nature with an added artistry." M. Burty has set down in order the facts upon which this estimate was based. He gives us interesting particulars of Méryon's tentative efforts in art, of his sketching, in amateurish fashion, during his seafaring years, the classic scenes of Greece and the primeval landscapes of New Caledonia, of his attempts in modelling, of his more systematic study, when nearly thirty, under Phelippes, a pupil of David's. Then, with the impetus towards original and imaginative work strong within him, he began an historical subject on a six-foot canvas—*The Assassination of Marion Dufrené, Captain of a Fire-ship, at the Bay of the Isles, New Zealand*. The cartoon was completed and exhibited in the Salon, but on his attempting to carry out the picture in oils his colour-blindness, previously unsuspected, presented an insurmountable obstacle to his progress. Shortly afterwards he entered the studio of M. Bléry, the engraver, and there "found himself," as the Germans say—found the fitting method for the expression of what was in him. It seems that the sight of Zeeman's prints had much influence in making him an etcher, but it was the influence of incitement, scarcely of guidance; the *technique*, no less than the spirit of his work, was clearly individual. He had but slight knowledge of the art of the world which time has made classic; his interest in it was feeble; only three painters are mentioned in whom he was greatly interested—"exciting all my sympathies," as he said of them—Delacroix and Decamps among Frenchmen, and our own Hogarth, whose paintings he had seen during a short visit to England. In connexion with his splendid etchings of Old Paris and his other original work, into all of which imagination enters so largely, there is a passage quoted from his correspondence which merits attention for its conscious recognition of the power of the designer over his material, for its assertion that, if the artist may not, like the poet, "toss the globe of the world from hand to hand, and use it for the embodiment of every passing thought and fancy," he may at least bend nature to his purposes, treat her in the free and lordly fashion of Turner, and sacrifice truth of individual fact in order to gain truth of impression, truth of feeling. Regarding his plate of *La Pompe, Notre Dame*, Méryon writes that the towers of the cathedral "are slightly higher than in reality, but I consider this a permissible licence, since it is often in this way that the mind works when the object is no longer before our eyes, and the picture is composed from memory."

There are incorporated in the Catalogue various notes on the plates, sent by Méryon himself to M. Burty, and particulars regarding the existence or non-existence of the

various coppers, and as to the number of impressions thrown off in certain of the states. The classification is in some points open to exception as wanting in clearness and simplicity. The first three of the four broad divisions under which the prints are arranged have not sufficiently definite comprehensiveness. A few of the plates, such as the transcripts from Zeeman and Nicolle, in the second section—"Views of Paris"—might equally well fall to be catalogued in the first—"Etchings made after Documents, Engravings, Etchings, &c.;" while Paris subjects are not confined to the second division, some appearing in the third, as "Isolated Views of Paris," in company with the New Zealand scenes. We also occasionally find working states of a plate described as "1st Trial Proof," "2nd Trial Proof," &c.—an objectionable classification, as it is impossible for the most painstaking cataloguer accurately to define the number of trial proofs, each of which is practically unique. Several inaccuracies meet our eye in turning over the pages. In the Catalogue, for instance, it is stated that *L'Arche du Pont Notre-Dame* was the first plate which Méryon executed for his *Eaux-fortes sur Paris*; but in the Memoir a similar priority is assigned to *Le Petit Pont*, another etching of the same series. In spite, however, of such faults as we have indicated, the volume will be useful, especially to those amateurs who are not in possession of the more concise English Catalogue, a work issued, like the present, in a somewhat limited edition.

J. M. GRAY.

OBITUARY.

MR. E. M. BARRY, R.A.

ON Tuesday, January 27, Mr. E. M. Barry died suddenly at Burlington House while attending a meeting of the Council of the Royal Academy, of which he was the treasurer. He was the son of the late Sir Charles Barry, and was scarcely fifty years of age. Although, unlike his father, Mr. Barry could not claim a place among the highest rank of architects, most of his work was good and sound of its kind. He was most successful in street architecture on a large scale, and among his best works are the Charing Cross and Cannon Street Hotels and the Children's Hospital in Great Ormond Street. He also designed the Opera House in Covent Garden and the Floral Hall by its side, and many other buildings, both in town and country. With one conspicuous exception, his Gothic designs were much inferior to the rest of his work. That exception is the National Schoolhouse in Endell Street, concerning which there have been controversies which we do not now care to re-open. It is one of the most successful pieces of picturesque architecture in London. Mr. Barry often entered public competitions, but with singular ill-fortune. More than once he was disappointed after success had seemed to be certain. In the competition for the new Law Courts in 1867, the commissioners awarded him the first place as to plan; but the design with which he clothed his plan was so poor that they wished to associate Mr. Street with him. This led to much disputing, and the end of it was that the work was given to Mr. Street alone. Again, in that strange scramble for public works which took place a few years later, Mr. Barry obtained the rebuilding of the National Gallery. But the intention of rebuilding was given up, and nothing was done

but the addition of some rooms at the back. The planning of these alterations shows much skill, and last year a grant of £5,000 was voted to the architect to console him for the loss of the more ambitious work. Mr. Barry was elected an associate of the Royal Academy in 1861, and an Academician in 1870, and his death leaves a vacancy to the filling up of which we shall look with interest. The selection of the architectural members of the Royal Academy is to us a mystery, whether we regard it in respect of the men chosen or the men passed over.

NOTES ON ART AND ARCHAEOLOGY.

MR. G. W. REID, of the British Museum, promises us an important work of reference, to be published by subscription and issued from the house of Messrs. Trübner. It will be an alphabetical Index of the names of all the exhibitors of works of art who have contributed to certain important exhibitions of old time. These are the Gallery of the Incorporated Society of Artists (1760-90), the Gallery of the Free Society of Artists (1781-83), and the Gallery of the Royal Academy of Arts (1767-1879). There will likewise be other and more detailed information, and the whole cannot fail to make a trustworthy volume of reference, easy of consultation, and, on frequent occasions, of great value. The book will, perhaps, not be found particularly interesting to living artists, but by the students of art—that is, by critics, collectors, connoisseurs, and dealers—it will of necessity be found to be valuable, and great service is rendered by the preparation of such a work.

MISS MARIANNE NORTH is about to present her sketches and studies of tropical vegetation, &c., to the nation, and will build a gallery for them at Kew. The paintings are more than 1,000 in number. We hear that Miss North is shortly to sail for Australia, in order to add still further to her collection.

In a few weeks will be published by C. Gerold's Sohn in Vienna a splendid archaeological work, with numerous illustrations, containing the scientific results of the second Austrian expedition to Samothrace. This expedition, undertaken in 1875, and confided by the Austrian Government to the distinguished archaeologists Drs. A. Conze and Benndorff, was intended to continue and complete the labours of the expedition conducted in 1873 by Conze, Hauser, and Niemann. The new work, containing seventy-six folio plates, and more than fifty illustrations in the text, is accordingly the sequel of the publication of 1875 (see ACADEMY, March 18, 1876, p. 269). It contains (1) communications relating to the principal sanctuary of the famous Samothracian Mysteries which had long been sought for, and which was at last rediscovered in 1875; (2) The restoration of an Ionian Propylæum, erected by Ptolemy II., which bridged over the valley in which the mysteries were celebrated; (3) An investigation of great interest for art-history concerning an *anathema* to which belonged the beautiful torso of *Nike*, found in 1863 by the French Consul, M. Champoiseau, and presented by him to the Louvre. M. Champoiseau had failed to notice some gigantic blocks of marble, curiously formed, an examination of which suggested to Prof. Hauser the idea that they formed, as a whole, the prow of a ship, on the deck of which stood the statue of *Nike*. With the help of fragments preserved in the Louvre, Prof. Zumbusch, of Vienna, has completed the statue of *Nike*, and this restoration, as well as the discovery of the pedestal, proves that the whole monument corresponds exactly with the design on a medal which Demetrius Poliorcetes caused to be struck in remembrance of the naval battle of the year 306 B.C. This research derives peculiar interest and a very welcome

confirmation from the circumstance that M. Champeiseau, at the personal suggestion of Prof. Conze, has lately disinterred the blocks of marble of the pedestal in Samothrace, has taken them to Paris, put them together in the Louvre, and has restored them to their primitive form, that of the colossal prow of a ship.

MR. MADOX BROWN is making steady progress with the grand series of paintings which he has undertaken for the decoration of the Town Hall at Manchester. He is now engaged on the cartoon for the third panel, which represents the expulsion of the Danes from Manchester. The second composition of the series is quite finished. This shows the ancient British town of Maneenion, the Roman Mancunium, now changed into our modern Manchester. Here a number of British peasants are seen working on the wall of a Roman camp under the direction of the soldiers of a Roman legion. In the background runs the River Medlock, the only feature of the scene that has remained unchanged.

It is curious that, in spite of many failures in the way of national monuments, Germany should still continue to open competitions for these works. One has just been held for a statue of *Victory*, to be set up in the Berlin Arsenal; but the results do not seem to have been more encouraging than before, for the prize was not awarded by the jury, though a large number of designs were sent in, those by Schafer and Karl Begas winning second and third prizes.

M. ERNEST BARRIAS has been commissioned by the French Government to erect a monument at St.-Quentin, commemorative of the valiant resistance offered by that place to the German army.

M. ANTONIN MERCIÉ, the sculptor of the famous *Gloria Victis*, has been charged, in connexion with M. Favvel, the architect, with the erection of a monument to M. Thiers, at St.-Germain, opposite the chapel of St. Louis. M. Mercié's design for this monument is quite simple. M. Thiers is represented sitting with a map of France upon his knees, pointing with his finger to some strip of territory saved by his ardent endeavours. The pedestal is plain, only bearing the inscription, *A Thiers, libérateur du territoire, hommage national*. The model of the statue will be exhibited at the coming Salon, and it is hoped that the monument itself will be inaugurated next August.

THE *Zeitschrift für bildende Kunst* opens this month with a biographical sketch by H. Billung of the young French painter Henri Regnault, who was killed during the siege of Paris. A portrait and an illustration of his picture of General Prim are given. A long technical article on the art education given in the Munich Academy, with an account of the various teachers who have succeeded one another in its direction; a concluding article by A. Rosenberg on the Berlin Industrial Exhibition; and a continuation of the interesting description of the Bargello at Florence and its priceless collections, of which, strange to say, up to the present time no catalogue has ever been published, make up, with a few short reviews, the rest of the number.

NOT so many years ago, "Art Notes" would have been about the last heading under which mention could be made of Valentines. But Messrs. Marcus Ward and Co. have changed all that, and their Valentines, which are known wherever the English language is spoken, will, like the other productions of their house, do credit to the taste of him that gives and be acceptable to her that takes.

PROF. CARL VON PILLOTY's new historical

picture, *The Arrival of the Girondists at the Guillotine*, is now on view at Berlin.

IN the Berlin National Gallery there is now exhibited a collection of works by the late Eduard Meyerheim, illustrating his artistic career. The artist wrote an autobiography during the last year and a-half of his life, when he had become incapacitated for work, the special interest of which lies in the artistic reminiscences of his younger days. Auerbach has written a preface for the unpretending little book, and it is further enriched by an etching, copied from Paul Meyerheim's portrait of his father.

PROF. ALEXANDER STRUYS, of Weimar, is occupied upon three large paintings destined for the Wartburg, and illustrating scenes from Luther's career. One of these—*Luther's Death*—will be ready for the coming Düsseldorf Exhibition.

THE STAGE.

A QUESTION OF EXPENSE.

THE half-hour's hubbub at the re-opening of the Haymarket Theatre last Saturday night was not in itself a very important affair, but the circumstances that caused it, and the stage tendencies to which its occurrence points, are worth considering. They have a weighty bearing on the condition of dramatic art in the present and the future; and the last word has by no means been said when the disturbance of Saturday has been spoken of, on the one hand, as "a courteous protest" against the abolition of the Pit, or has been condemned, on the other hand, as the act of a rabble with whom the manager should not have "condescended to argue." On the mere matter of the disturbance and the people who made it the report of eye-witnesses is almost inevitably, though of course unintentionally, biassed either by sympathy with what the old frequenters of the Pit consider their claims or by a cordiality of admiration for the stage dealings of a very clever manager. The one witness holds the disturbers to have been devoted, not to say scholarly, playgoers battling for their privileges; the other holds them to have been roughs. That they were roughs is in the highest degree improbable; more than one respectable citizen has been willing to come forward and bear the responsibility of his share in the turmoil. But whether they were clothed in wisdom as well as in broadcloth is also doubtful. Their sentiment for old times and old associations, combined with an easily comprehensible regret that the period had passed in which they could get for their money more than their money's worth, led them to a demonstration a repetition of which would be yet more ill-advised. But more interesting than any further enquiry into the character of the disturbers or into the judiciousness of their exploit is the question, What was the answer to the protest of which Saturday's noise was the rough expression? And, further, if such an answer is to be accepted as final, what is its bearing on the English stage?

In the advertising columns of the daily newspapers the new manager of the Haymarket had replied, we believe, in advance to the query sure to be raised. Mr. Bancroft said that the expenses of a first-class London theatre were now such that it was not possible to give up the floor to its old frequenters at the old prices. The Pit must go. Actually

questioned amid the hubbub of the opening night—in the disagreeable fashion which he bore courageously, and like the man of business he professes to be—Mr. Bancroft not only repeated his statement that he could not afford a Pit, but pointed to the more recent of the many fortunes of the Haymarket, and asked, by implication at least, whether the late management had not been unsuccessful by its Pit. But the case he cited was hardly, we believe, a case in point. The Haymarket failed to make money during several years, not because it had a Pit, but because it had an empty Pit; or, to be more precisely accurate, its Pit was full when a popular performer was receiving payments which absorbed a gigantic proportion of its proceeds, and empty when the house, with its reputation for general comedy almost ruined, was the scene of the production of plays which had nothing in them to draw the public. But—to dismiss the particular instance cited by the new manager in confirmation of his belief—his general statement that a Pit cannot be afforded is very much open to question, even by those who have not the experience of practical managers. If the expenses of "a first-class theatre" have of recent years greatly increased, so also have its receipts. At a period when the greatest dramatic artists were appearing together on the boards of one theatre—and that theatre not only the vast Drury Lane, but sometimes the Haymarket itself—there were no receipts whatever from stalls. The fashionable resort was that portion of the house whose name still indicates its old pre-eminence—the dress-circle. Later, as eminent actors got fewer, and the theatre fell into comparative disrepute with the educated classes, but was increasingly frequented by the merely wealthy, two or three rows of stalls were timidly introduced. Later still—except, indeed, at the Haymarket—the three became five, six, or seven; and the Pit, driven back, was no longer the coign of vantage that it long had been, though it was still a place that might be gone to. Latest, the price for a stall—already treble that of the same seat in the Pit of old days—was raised from seven shillings to ten. It is difficult to believe that theatrical expenditure has been raised in a like proportion—that the margin between reasonable receipt and reasonable outlay has not been greatly widened. But that is a matter, we admit, for the theatrical manager alone: a theatre, as Mr. Bancroft said, is a place of business; and a manager may, in a business sense, be entitled to the utmost profit he can contrive to secure. If the manager of the Haymarket is mistaken in what he believes—if he and his brethren could better afford than he imagines to suffer the continuance of a Pit—we still have nothing to say to him. It is a business question for each individual manager. If the shop is found to be a dear one, the public need not buy in it.

But if, on the other hand, the statement is literally and absolutely true, then, indeed, we have something to say. For how has it come about—this overwhelming expenditure which requires so much additional provision? Is it that the art of acting has become more costly—that perfect artists who can dictate their terms are engaged by the dozen? Or is it

that the exaggerated luxury of appointments and accessories absorbs so formidable a sum that the old revenues of the theatre are no longer sufficing? It is the latter alternative that is very forcibly suggested by the aspect of more than one of the newly equipped theatres; for the former there is, we fear, too little reason to decide, and this, not because of any reluctance on the part of the managers to engage excellent artists when they can discover them, but because of their scarcity in proportion to the number of playhouses over which excellent artists must be distributed. A disproportionate outlay on scenic decoration and furniture for the performances of modern comedy—nay, even on the playhouse itself—is at the root of the question. It began, no doubt, with genuinely artistic intentions, and has never been dissociated from good taste. But what was an adroit and a justifiable bait to begin with ends by being hardly an attraction at all, and only a tyranny. Luxury has no limits. Its novelty ceases, but not the need it creates. The blue china and the old English furniture that were the material setting of one comedy must be capped by the porcelain of Sevres and the finest marqueterie of Louis Quinze as the setting of another. Nay, the expenses of a first-class theatre may in time become such that a dress worn at a Drawing-room is inadequate to the Stage, and the “paste” of theatrical brilliants must be discarded for the treasures of the jewellers of Bond Street.

The gradual but most pronounced growth of luxurious expenditure—the addition to the attractions of the drama of the attractions of the show-house and the studio—means, sooner or later, with that manager or with this, a still further rise in the price of entry to entertainments presumably dramatic. And that means, of necessity, to most of the best lovers of the drama, less frequent visits to the theatre—it may mean almost the extinction of the older and more critical class of playgoer. It means that playgoing, instead of being a general amusement and a method of cultivation, may be but a costly indulgence for those who have richly dined. The intelligent, not wealthy, playgoer who goes, or has been accustomed to go, very often will go so seldom that his critical opinion will not be worth having—a merely occasional visitor is not at home in the house, and can know nothing of its art. Is it for the advantage of the theatrical profession that the chance audiences drawn from every suburb and provincial town, or drawn from the haunts of only the wealthiest inhabitants of London—people generally listless, often dull—shall supersede wholly as they have already done in part, the audiences who are accustomed to the habitual, and careful, and often delighted observation of the art of acting? What is done cannot be undone. As for the Haymarket pit, the local circumstances, the peculiar construction of the house, may count for something in excuse of its abolition. We make no personal matter of this question. If there is offence, Mr. Bancroft is not the only offender. But it has become time to consider—and the public as well as managers have their share in the consideration—whether the expenses of our theatres shall be suffered to grow yet further in the sterile way of luxurious outlay on material things with

which dramatic art has little to do. Is the Comedy to become a spectacle just as much as the Pantomime?

FREDERICK WEDMORE.

STAGE NOTES.

MR. BURNAND has amused the public so often that it is ungracious to resent the failure of an effort to seriously interest them; and the comedy of *Ourselves*, produced at the Vaudeville last week, contains so many things at which one smiles that the more serious artistic motive of the piece, and the failure to realise it, may be a good deal overlooked. It seems that *Ourselves* is founded on a French piece called *Moi*—a piece played long ago, and now but little known to fame. We confess that we are wholly ignorant of it; but the most profound ignorance does not prevent the conviction that whatever was good in *Moi* is not to be found in *Ourselves*, and that whatever is good in *Ourselves* is quite independent of *Moi*. The titles of both pieces imply that the graver motive in each is a study of egotism. A master of dramatic writing, a penetrating observer, and skilled in the business of expression, might yet, even at this late day, give us a remarkable play founded on such a theme, as Mr. Meredith has very lately given us, though in too uncouth form, a remarkable novel. But the theme is not to be adequately treated by a writer, we do not say of Mr. Burnand's ability, but of his habitual method of work—a method securing chiefly temporary effect, and hardly making possible the searching analysis which such a theme demands. To make the study of egotism interesting on the stage, a new conception as well as a new treatment is required. Of contemporary studies of egotism, Digby Grant, of *Two Roses*, was the best; and the contemporary stage is not likely to improve upon the design of Mr. Albery, executed by Mr. Irving. But such a play as *Ourselves* is not fairly regarded when it is judged wholly by the nearness or distance of its approach to any exalted ideal. *Moi* is responsible for the presence of that serious aim, and may likewise be responsible for the absence of success in reaching it. *Ourselves* has other aims less exalted, and it succeeds fairly well in these. It makes an audience laugh at bright things uttered pretty constantly, and it fits several popular actors with the kind of parts in which habitual playgoers are accustomed to see them. *Ourselves* has very little story, and what there is does not need to be told in detail, especially as we hear now that the days of the drama are numbered. Its leading character is a self-centred bachelor of infirm health, Albany Thorpe—the narrower Major Pendennis of a more provincial society—acted by Mr. Thorne. He has a ward, one Evelyn Grey, a pretty person whom he aspires to marry, since her wealth makes the indulgence of his taste not altogether imprudent. But she is loved by “another,” and the intrigue to separate them occupies a portion of the play. A self-seeking physician, one Dr. Talbot, and a vulgar man of the name of Peddington, who is on very bad terms with his wife and is given to upbraiding his son, are either instruments or assistants in the intrigue; the exposition of their more or less unworthy motives forms the higher comic element of the play, while the lower comic element is supplied by the introduction of two of the doctor's servants, who are always wanting to give “warning” but are never allowed an opportunity. One of these servants—the neat-handed parlour-maid—is played by Miss Cicely Richards, famous for her excellent and lifelike performance of the lodging-house slave in *Our Boys*. The little she has here to do is done very naturally. Miss Larkin, as the separated wife of Mr. Peddington, has hardly

any occasion for those pointed utterances of a shrewd and self-satisfied middle-aged woman—brassy and irresistible—which no one gives better than she. Miss Marie Illington acts the part of Evelyn, the ward of Thorpe—the young woman on whose devotion he counted, and whom he only abandoned when it was falsely reported to him that she suffered under mortal disease. Her unsuspecting attentions to him are of a graceful and filial kind, and Miss Illington plays them very prettily. Her love-scenes, with the lover of her choice, demand little earnestness, and receive what they demand. Mr. Thorne's performance of Thorpe suffers only from the improbability inherent in the part he has to enact. When it is a question of his own invalidism he is natural enough, but the life-likeness ceases when he hears of Evelyn Grey's malady, which frustrates his plan of marriage with her. On the stage a middle-aged suitor, wise in his generation, may be content with the opinion of a country doctor; but in life the most thorough-paced egoist would never have given up his ward to “another,” before he had taken her to a specialist and heard what the delicate ear was told by the stethoscope. Mr. Herbert is a manly and agreeable lover. Mr. James is very funny in his querulous boisterousness, and very sincere in a final moment of rough good feeling, the *raison d'être* of which is apparently that it exactly fits the peculiarity of the actor, and provides him with a telling effect. Indeed, all round, the tolerable success of the representation is the best apology for the piece. The incidents are improbable, but the action is entertaining, and one may laugh at the sharp things that are written, and at the way in which they are said.

THE performance of *Money* at the Haymarket Theatre on Saturday evening, subject at first to the interruptions which have been fully reported in the daily papers, was not felt by the more critical portion of the audience to be altogether satisfactory. The peculiar circumstances must of course be taken into due consideration, and the appearance for the first time in a much larger theatre of a company accustomed to a small one. But the fault committed was that of over-accentuating nearly every portion of the play; exactly the fault of which the Prince of Wales's company is most rarely to be accused. The cast, however, was not only inferior to that with which the play was originally produced at the Haymarket about forty years ago, when Macready and Miss Helen Faucit filled principal parts and actors hardly less illustrious appeared as minor characters; but it was inferior to that of the Prince of Wales's revival of a few years since. Much was atoned for, however, by Mrs. Bancroft's Lady Franklyn, an impersonation as sunny and agreeable, and withal as pointed as possible. Miss Marion Terry was Clara Douglas; Miss Linda Dietz, Georgina; Mr. Conway, Evelyn; Mr. Arthur Cecil, Graves; Mr. Odell, Sir John Vesey; Mr. Bancroft, Sir Frederick Blount; and Mr. Voltaire the Old Member. The fault of over-acting is chiefly to be charged upon the men. The “Club” scene was unaccountably noisy, and thus, in a measure, lost its effectiveness.

MRS. BATEMAN has revived, at New Sadler's Wells, Mr. Tom Taylor's very effective and carefully considered play of *Mary Warner*, which was specially written for Mrs. Crowe (Miss Bateman) several years ago, and was acted by her with success at the Haymarket. Mrs. Crowe again enacts the principal character, and with her wonted judgment and force. Mr. W. H. Vernon is specially engaged for a part of importance. This programme, we doubt not, will suffice Mrs. Bateman until, in a few weeks' time, she begins the Shaksperian performances which she has announced, and for which the neighbourhood of the New River is, by its traditions, rendered a fitting place.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,
186 Strand, and Messrs. CURTICE & Co.,
Fleet Street, and Catherine Street, Strand.

Copies of the ACADEMY can also be obtained
every Saturday Morning in EDINBURGH or
Mr. MENZIES; in DUBLIN of Messrs. W. H.
SMITH AND SONS; in MANCHESTER of Mr.
J. HEYWOOD. Ten days after date of publi-
cation, in NEW YORK, of Messrs. G. P.
PUTNAM'S SONS.

PARIS.

Copies can be obtained in Paris every Satur-
day morning of M. FOTHERINGHAM, 8 Rue
Neuve des Capucines.

KERBY & ENDEAN'S NEW BOOKS.

MIECISLAS: a Study from Life. From
the Original by T. LOUIS OXLEY. Demy 8vo, cloth, 3s.; paper
covers, 2s.
"It is the misery of dogmatism that it wishes to teach what only life can
do."—*AURFACE.*

LE FILS NATUREL: a Play in Five
Acts. By ALEXANDRE DUMAS, F.R.S. Translated from the Original
by T. LOUIS OXLEY, Author of "From Calais to Karlsbad." Crown 8vo,
Second Edition, cloth, 5s.

FROM CALAIS to KARLSBAD. By T.
LOUIS OXLEY. New Edition. Crown 8vo, cloth, 2s. 6d.
"Striking and lively narrative, well written."—*Leeds Mercury.*
"To intending tourists it has a special recommendation."—*News of the*
World.

YADASTE (The Wager): an Original
Comedy in One Act. By MIECISLAS KAMIENSKI. Translated and
adapted to the English Stage by T. LOUIS OXLEY. Crown 8vo, paper
cover, 1s.

THE MARVELLOUS LITTLE HOUSE-KEEPERS: What they Did, and How they Did it. By IDA
JOSCELYNE. Fcap. 8vo, illustrated, 2s. 6d.

"No book recently published contains more useful information interest-
ingly conveyed than this, and it fully deserves all the commendation exten-
sively given to it."

London: KERBY & ENDEAN, 190, Oxford-street.

Crown 8vo, cloth, price 2s., post-free.

STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars
and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds;
Glaciers; the Telephone. By W. J. MILLAR, C.E., Secretary to the Institu-
tion of Engineers and Shipbuilders, in Scotland; Author of "Principles of
Mechanics," &c.
"We can confidently recommend Mr. Millar's volume to the attention
both of teachers in search of an elementary text-book, and to private
students, as well as to the general reader. It unites the utmost lucidity
with strict scientific accuracy, and deals with ascertained facts rather than
with vague theories."—*Greenock Daily Telegraph.*

"This work consists of chapters from several sciences—astronomy, elec-
tricity, heat, light, &c. They cover a good deal of ground, and include
subjects as wide apart as whirlwinds and spectrum analysis, glaciers and
the telephone."—*Liverpool Albion.*

Published at 21, Castlereach, Holborn.

W. S. SONNENSCHN & ALLEN.

**GRIMM (JACOB), TEUTONIC MYTHOL-
OGY.** Translated from the Fourth Edition by J. S. STALLYBRASS. In
3 vols. Vol. I., demy 8vo, cloth, 15s.

"The author's main aim in this work is to demonstrate the substantial
identity of the ancient religious systems of all the Teutonic nations. . . .
History, legend, tradition, tale, and song are all pressed into his service,
and compelled to yield their quota of evidence."—*Scotsman.*

"So nearly complete, and so nearly exhaustive, that Grimm's successors
can hardly hope to discover anything new in the field he has cultivated.
The work deserves nothing but praise, and the translation is most
conscientious and written in excellent English."—*Examiner.*

HEWETSON (H.B.), The INFLUENCE of
JOY upon the WORKMAN and his WORK. Illustrated by Autotype
Facsimiles of Drawings by William Blake and others. 4to, cloth, 5s.
[Next week.]

EDUCATIONAL.

PLAUTUS. The Captivi of Plautus.
Edited, with Notes, by E. A. SONNENSCHN, M.A., together with a
Critical Apparatus (a Collation of the Vatican and British Museum
MSS.), and an Appendix, consisting of Notes and Emendations to the
whole of Plautus, discovered in the handwriting of Richard Bentley,
in his copy now in the British Museum, with a facsimile. Demy 8vo,
cloth, 6s.

SCHOOL EDITION, containing Text, Notes, and Critical Apparatus
only. Demy 8vo, cloth, 3s. 6d.

"It would be difficult to mention any English edition of the Plays from
which so much may be learnt as to the language and syntax of Plautus as
this. . . . The 'Captivi' has, besides, a peculiar advantage for school
purposes in its moral propriety."—*Academy.*

**INDUSTRIAL GEOGRAPHY of GREAT
BRITAIN and IRELAND.** By G. PHILLIPS BEVAN, F.G.S., F.S.S.
16mo, limp cloth, 1s.

"The idea is well conceived and the plan is admirably executed. . . .
We should like to see this Primer become a standard text-book in all
schools."—*Capital and Labour.*

**PRANTL (Prof.), ELEMENTARY TEXT-
BOOK of BOTANY, for Schools.** Edited by S. H. VINES, D.Sc.,
M.A., Fellow and Lecturer of Christ's College, Cambridge. With 275
Woodcuts. Demy 8vo, cloth, 6s. [In a few weeks.]

THE KINDERGARTEN. Froebel Society's
SERIES of PAPERS. 12mo.

No. 1.—SHIRREFF (Miss). CONNEXION between KINDERGARTEN
and SCHOOL. 3d.

No. 2.—BUCKLAND (Miss). USE of STORIES in the KINDER-
GARTEN. 3d.

No. 3.—HOGGAN (Mrs., M.D.). THE PHYSICAL EDUCATION of
GIRLS. 4d.

THE CHILD and CHILD NATURE. By
the BARONESS DÜLOW. Second Edition. Crown 8vo, cloth extra, 2s.
"Abounds with good sense and noble thoughts."—*Metropolitan.*

LONDON:

W. SWAN SONNENSCHN & ALLEN,
PATERNOSTER SQUARE.

A NEW LIBRARY EDITION

OF

SIR T. MORE'S UTOPIA.

With copious Notes and a Biographical Literary
Introduction by the

REV. T. F. DIBDIN, D.D., F.S.A.

Printed from Sir H. Ellis's copy, with additional Notes and
Corrections.

Finely printed; with Head-pieces, Borders, &c., copied
from the beautiful Books of Hours of the Early French
Printers—the most elegant productions of the press; a
Portrait of Sir T. More, engraved by Scriven; and a
beautiful Outline Engraving of the Family of Sir T. More,
from paintings by Holbein.

This edition contains copious extracts from More's Works
of a very interesting and amusing character—now reprinted
for the first time. It may be had in the following sizes,
every copy numbered and signed:—

475 Demy 8vo, uncut, antique gilt cloth, £1 1s.
100 Demy 8vo, on old ribbed paper, vellum back, £1 5s.; or whole
vellum, circuit edges, 31s. 6d.
50 Royal 8vo, vellum back, £1 11s. 6d. (all sold).
30 Imperial 8vo, vel. back, pub. £2 12s. 6d., raised to £3 3s. (all sold).

"This volume is a remarkably choice example of the typographical art,
and of that careful editing which is rare in this age of hurry, and only at-
tainable, perhaps, when the printer and publisher happens, as in this case,
to be a scholarly devotee of his noble craft. It comes from Boston, Lin-
colnshire, and does honour to the name of Mr. Robert Roberts, of that
town."—*Daily News*, July 27, 1879.

"The volumes that have been issued at rare intervals from Mr. Roberts's
Lincolnshire press are among the most accomplished specimens of biblio-
graphy which have been produced in England. . . . There can be no
question that the work before us is a most elegant and desirable one."—*Academy*, May 24, 1879.

"We lately had occasion to speak of Mr. Roberts and his fondness for
sumptuous reprints of Old English authors. The present volume may be
called the masterpiece of his printer. . . . The ornaments are the truly
remarkable feature of the volume. They are so good that it is to be regretted
that they are not catalogued with reference to their sources. We are sorry
to learn that, with this volume, Mr. Roberts's career as a printer is to close.
We in England can ill afford to lose one of the very few men who have
really made an effort to treat printing as a fine art. . . . Do what we
will, we can seldom attain to the perfection of the French in this depart-
ment; but Mr. Roberts at his best is not far behind them."

"Hallam was quite right when he called it a 'book of genius.' . . .
What copiousness of wisdom in the treatment of the separate departments
of life! What a grasp of the whole conditions of private and public
happiness! Religion, education, labour, punishment, service, marriage,
the treatment of the sick, the disposal of the dead, warfare, social life,
amusements—everything is touched upon. . . . The difficulty is to find
a sentence that is not striking, so rich is More's mind, so vivid the English
of his Elizabethan translator. But now that Mr. Roberts has given every
one a fresh opportunity of reading the whole book, we may with the less
unwillingness abridge our quotations."—*Saturday Review*, May 3, 1879.

ROBERT ROBERTS, BOSTON, LINCOLNSHIRE.

The Solicitors' Journal.

THE ORGAN OF BOTH BRANCHES OF
THE LEGAL PROFESSION.

ESTABLISHED 1857.

Published every Friday. Price 6d.

Of the general contents of the JOURNAL the following
statement will afford some idea:—

CURRENT TOPICS.

Comments on the legal events of the week.

LEADING ARTICLES.

Essays upon branches of law and matters of pro-
fessional interest.

RECENT DECISIONS.

Explanatory and critical disquisitions on recent
cases, pointing out their relations to the previous
law.

CASES OF THE WEEK.

Short reports of cases decided during the previous
week; during the Long Vacation, reports are
given of cases before the Vacation Judge.

REVIEWS.

New legal works are carefully noticed in this
department.

GENERAL CORRESPONDENCE. NEW ORDERS.

All new orders and rules are given, sometimes
before they can be obtained by the public.

COURTS.

Special reports are furnished of cases decided by
the Railway Commission, and of Solicitors' cases;
selected cases in the County Courts are also
reported.

PARLIAMENT AND LEGISLATION.

LEGISLATION OF THE YEAR.

Under this head careful criticisms are given
during the Long Vacation of the legislative results
of the session.

APPOINTMENTS AND OBITUARY.

SOCIETIES AND INSTITUTIONS.

Full Reports of the proceedings of the Law
Societies. A Careful Summary is given of all the
Legal News of the week, and Special Attention is
bestowed on Furnishing Early Copies of all Court
Papers.

The First number of Volume XXIV,
published October 31st, 1879.

ANNUAL SUBSCRIPTIONS.—"Solicitors' Journal"
only, 26s.; by post, 28s.; when paid in advance.

The Bank undertakes the custody of Securities of Customers, and the Collection of Bills of Exchange, Dividends, and Coupons. Stocks and Shares purchased and sold, and Advances made thereon.
Office hours from 10 till 4, excepting Saturdays; then from 10 to 3. On Mondays the Bank is open until 9 P.M.
A Pamphlet, with full particulars, on application.

FRANCIS RAVENSCROFT, Manager.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 28 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FOR JELLIES USE

NELSON'S OPAQUE GELATINE.

NELSON'S CITRIC ACID.

NELSON'S ESSENCE OF LEMON.

A new and Economical Recipe in each Packet of Gelatine.

Boxes containing Twelve 6d. packets Gelatine, Twelve 3d. packets CITRIC ACID, One 1s. bottle ESSENCE OF LEMON, sufficient to make 12 Quarts Jelly, PRICE 10s.

May now be obtained by order from all Grocers, Italian Warehousemen, &c., &c. The several articles may also be bought separately as heretofore.

BRAND & CO.'S OWN SAUCE,**SOUPS, PRESERVED PROVISIONS, and****POTTED MEATS & YORK & GAME PIES.**

Also

ESSENCE of BEEF, BEEF TEA.**TURTLE SOUP, and JELLY, and other****SPECIALITIES for INVALIDS.**

CAUTION—BEWARE OF IMITATIONS.

SOLE ADDRESS:—

11, LITTLE STANHOPE STREET
MAYFAIR, W.

DINNEFORD'S MAGNESIA.

The Medical Profession for over Forty Years have approved of this pure solution as the BEST REMEDY for

Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion,

And as the safest Aperient for Delicate Constitutions, Ladies, Children, and Infants.

DINNEFORD'S MAGNESIA.**PAINLESS DENTISTRY.****MR. G. H. JONES,**

Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—“Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name.”

“G. H. Jones, Esq.”

“J. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.”

GOLD MEDAL PARIS EXHIBITION.**FRY'S COCOA EXTRACT,**

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

“It is strictly pure, and well manufactured in every way.”

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

“If properly prepared, there is no nicer or more wholesome preparation of Cocoa.”

Food, Water, and Air, Edited by Dr. HAMALL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—“A delicious preparation.”

ASK FOR**LIEBIG COMPANY'S EXTRACT OF MEAT.**

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

WAUKENPHAST'S BOOTS OF ALL KINDS ALWAYS READY FOR IMMEDIATE WEAR.**IN WINTER—**

THE FIFTH AND LAST VOLUME OF

THE LIFE

OF

HIS ROYAL HIGHNESS

THE PRINCE CONSORT.

By THEODORE MARTIN.

LIFE of LIEUT.-GENERAL SIR

JAMES OUTRAM. By Major-General Sir FREDERICK J. GOLDSMID, C.B., K.C.S.I. 2 vols., demy 8vo. [In the Press.]

A RULE of PROPORTION for the

HUMAN FIGURE. By JOHN MARSHALL, F.R.S., F.R.C.S., Professor of Anatomy, Royal Academy of Arts. Illustrated by John S. Cuthbert, Folio, in wrapper, 8s.; in portfolio, 9s.

"Professor Marshall's long experience as a teacher of artists has given him exceptional opportunities of studying one of the old physiological problems. . . . To attain the knowledge of anatomy which is requisite to the painter or the sculptor, Professor Marshall's book on the subject is indispensable. As an embodiment of proportions which are true to nature, the 'Rule' is invaluable, and should be possessed by every art student. No book has been published of late years in art literature which promises to be more fruitful in beneficial results. . . . Professor Marshall has given the results of his wide experience in such a form as to be within the reach of all classes. His book is precisely what was needed; and it has been produced in a way which leaves nothing to be desired."—*Architect*.

THE CRIMINAL CODE of the

JEWS. (According to the Talmud.) Massocheth Syn hedrin. Reprinted from the *Pall Mall Gazette*, with Additions. By PHILIP B. BENNETT. Crown 8vo, 4s. 6d.

London: WM. H. ALLEN & CO., 13, Waterloo-place.

W. S. SONNENSCHN & ALLEN.

GRIMM (JACOB), TEUTONIC MYTHOLOGY. Translated from the Fourth Edition by J. S. STALLERSS. In 8 vols. Vol. I., demy 8vo, cloth, 10s.

"The author's main aim in this work is to demonstrate the substantial identity of the ancient religious systems of all the Teutonic nations. . . . History, legend, tradition tale, and song are all pressed into his service, and compelled to yield their quota of evidence."—*Spectator*.

"So nearly complete, and so nearly exhaustive, that Grimm's successors can hardly hope to discover anything new in the field he has cultivated. . . . The work deserves nothing but praise, and the translation is most conscientious and written in excellent English."—*Examiner*.

HEWETSON (H.B.), THE INFLUENCE of JOY upon the WORKMAN and his WORK. Illustrated by Autotype Facsimiles of Drawings by William Blake and others. 4to, cloth, 5s. [Next week.]

EDUCATIONAL.

PLAUTUS. The Captivi of Plautus. Edited, with Notes, by E. A. SONNENSCHN, M.A., together with a Critical Apparatus (a Collation of the Vatican and British Museum MSS.), and an Appendix, consisting of Notes and Emendations to the whole of Plautus, discovered in the handwriting of Richard Bentley, in his copy now in the British Museum, with a facsimile. Demy 8vo, cloth, 6s.

SCHOOL EDITION, containing Text, Notes, and Critical Apparatus only. Demy 8vo, cloth, 3s. 6d.

"It would be difficult to mention any English edition of the Plays from which so much may be learnt as to the language and syntax of Plautus as this. . . . The 'Captivi' has, besides, a peculiar advantage for school purposes in its moral propriety."—*Academy*.

INDUSTRIAL GEOGRAPHY of GREAT BRITAIN and IRELAND. By G. PHILLIPS BEVAN, F.G.S., F.S.S. 16mo, limp cloth, 1s.

"The idea is well conceived and the plan is admirably executed. We should like to see this Primer become a standard text-book in all schools."—*Copied and Lower*.

PRANTL (Prof.) ELEMENTARY TEXT-BOOK of BOTANY, for Schools. Edited by S. H. VINES, D.Sc., M.A., Fellow and Lecturer of Christ's College, Cambridge. With 275 Woodcuts. Demy 8vo, cloth, 6s. [In a few weeks.]

THE PHILOSOPHY of MUSIC: being the Substance of a Course of Lectures delivered at the Royal Institution of Great Britain in February and March, 1877. By WILLIAM POLE, Mus. Doc. Oxon., one of the Examiners in Music to the University of London.

LONDON: TRÜBNER & CO., LUDGATE HILL.

Published Monthly, price One Shilling, in crown 4to, tastefully printed on hand-made paper, with rough edges, and occasionally Illustrated.
No. 1 on DECEMBER 20th, 1879.

The Antiquary:

A MAGAZINE DEVOTED to the STUDY of the PAST.

Edited by EDWARD WALFORD, M.A.,

Formerly Scholar of Balliol College, Oxford, and late Editor of the "Gentleman's Magazine," and Author of "County Families," &c., &c.

The ANTIQUARY is published monthly, and contains original articles on the various subjects which come within the range of antiquarian research in the present day, such as Bibliography, Archaeology, Biography, Ceramic Art, Curiosa, Engravings, and Etchings; Genealogy, Heraldry, Folk-lore, Numismatics, Provincial Dialects, Topography, &c., &c. It records recent Antiquarian Discoveries, and the Meetings of the various Societies, London and Provincial, in an epitomised form; opens its columns to correspondence on subjects interesting to the Antiquarian; and reviews at length, or notices briefly, recent Books, and articles on antiquarian subjects.

The ANTIQUARY is tastefully printed on Dutch hand-made paper, with rough edges, and published at One Shilling.

A full Prospectus, giving the plan of the Magazine, the subjects treated of in its pages, and a list of the gentlemen who are assisting in its conduct will be sent post-free on application.

CONTENTS of No. I.

1. PROLOGUE. By Austin Dobson.
2. THE VALUE and CHARM of ANTIQUARIAN STUDY. By G. C. SWAYNE.
3. INSTRUCTIONS from JAMES II. to the EARL of TYRCONNELL. Part I. By LORD TALBOT DE MALAHIDE.
4. DAVID MALLETT and the BALLAD of WILLIAM and MARGARET. By W. CHAPPELL, F.S.A.
5. HISTORICAL MEMORIES of TEWKESBURY ABBEY. Part I. By Rev. H. HAYMAN, D.D.
6. FOLK-LORE and the FOLK-LORE SOCIETY. By G. L. GOMME, F.S.A.
7. LAST RELICS of the CORNISH TONGUE. Part I. By the Rev. W. LACK-SZYEMBA.
8. THE CANTERBURY COINS of EDWARD I., II., and III. By H. W. HENFREY.
9. OLD PAROCHIAL REGISTERS of ENGLAND. By GEORGE SETON, M.A.
10. THE SIEGE of COLCHESTER. From an old Broadside (with an illustration).
11. FRANKING MEMORANDA. By Major J. BAILLIE.
12. THE SCHOOLMASTER-PRINTER of ST. ALBANS. By W. BLADES.
13. AN "INDIAN MONEY COWRIE" in a BRITISH BARROW. By W. C. BORLASE, F.S.A.
14. THE PUBLIC RECORDS of ENGLAND. — MEETINGS of ANTIQUARIAN SOCIETIES.
15. THE ANTIQUARY'S NOTE-BOOK. Antiquarian News—Correspondence—Antiquary Exchange Column, &c.

CONTENTS of No. II.

1. INSTRUCTIONS from JAMES II. to the EARL of TYRCONNELL. Part II. By LORD TALBOT DE MALAHIDE.
2. A VALHALLA of SOMERSET WORTHIES. By R. ARTHUR KINGLAKE, Esq.
3. HISTORICAL MEMORIES of TEWKESBURY ABBEY. Part II. By the Rev. H. HAYMAN, D.D.
4. THE PUBLIC RECORDS of ENGLAND. Part II.
5. ON the IMITATION of CHRIST by THOMAS à KEMPIS. By EDMUND WATERTON, F.S.A.
6. LAST RELICS of the CORNISH TONGUE. Part II. By the Rev. W. LACK-SZYEMBA.
7. CIVIC and other MACES. By GEORGE LAMBERT, F.S.A.
8. THE OXFORD of PAST AGES. With Illustrations.
9. NOTES on BOOK PLATES. By a COLLECTOR.
10. REVIEWS—MEETINGS of ANTIQUARIAN SOCIETIES—The ANTIQUARY'S NOTE-BOOK—ANTIQUARIAN NEWS, &c., &c.

The ANTIQUARY can be obtained of any Bookseller, or direct from the Publisher,

ELLIOT STOCK, 62, PATERNOSTER ROW, LONDON, E.C.

Eikon Basilike:

THE PORTRAITURE of HIS SACRED MAGESTIE in HIS SOLITUDE and SUFFERINGS.

A Reprint of the edition of 1648, with a Facsimile of the Original Frontispiece and the explanation of the emblem found only in Dugard's copies; accompanied by an exhaustive Introduction throwing fresh light upon the authorship of the work by

EDMOND J. L. SCOTT, M.A.,

Assistant Keeper of MSS., British Museum.

The Preface to this New Edition of the EIKON BASILIKE contains fresh evidence concerning the authorship of the Work, which it is believed settles the question conclusively in favour of Charles I. The new evidence is drawn from a fresh study of the book itself, from a new investigation of the Frontispiece, with the Explanatory Key added by Dugard; and from the recently discovered papers of Sir EDMOND NICHOLAS, Secretary to Charles I., and an unpublished Letter from Dr. GAUDEN and his Wife to Henry Cromwell, Lord Deputy of Ireland.

. A small Subscription Edition will be issued. A Prospectus of the Work, giving particulars concerning the Preface, will be sent on application to

ELLIOT STOCK, 62, PATERNOSTER ROW, LONDON, E.C.

Interesting Facsimile Reproduction.

Now ready, price, in contemporary binding, or paper boards, 10s. 6d.; polished morocco antique, 21s.

The Imitation of Christ:

Being the AUTOGRAPH MANUSCRIPT of THOMAS à KEMPIS,

Reproduced in Facsimile from the Original, Preserved in the Royal Library, Brussels.

With an Introduction by CHARLES RUELENS,

Keeper of Department of MSS., Royal Library, Brussels.

Believing that a reproduction of this valuable MS. would be highly prized by those who value the *De Imitatione* for its devotional teaching; and that it would also be acceptable to a large number of collectors for its bibliographical interest, the Publisher has produced an exact facsimile of the work. The volume is copied by a Photographic process which exactly reproduces the original, page for page; it is printed on Dutch hand-made paper of the same texture and colour as that on which the original is written, and is bound in contemporary leather binding of very beautiful design. The reader will thus be able to see the exact form in which this most valued and widely read book of devotion came fresh from the pen of the author in the fifteenth century.

The study of this MS. has brought to light, for the first time, a system of arbitrary signs and punctuation, which indicate that the work was written in rhythmic form. This peculiar feature and other characteristics discovered in the MS. settle conclusively the vexed question of the authorship of the treatise, which for two hundred years has risen at intervals in the ecclesiastical world, proving decisively that no other than THOMAS à KEMPIS could have written the "IMITATION OF CHRIST." These points are most ably and lucidly set forth in the Preface, written by M. CHARLES RUELENS, Keeper of the MSS. in the Royal Library at Brussels, which accompanies the volume; an interesting history of the preservation of the MS. during the last four hundred years, and of the dangers to which it was subjected during the wars of the Netherlands and in later times, is also contained in the Preface.

ELLIOT STOCK, 62, PATERNOSTER ROW, LONDON, E.C.

RICHARD BENTLEY & SON'S LIST.

THE AUTOBIOGRAPHY of PRINCE METTERNICH.

Edited by his Son, Prince METTERNICH.

Translated by ROBINA NAPIER.

In 2 vols., demy 8vo, with Portrait and Facsimiles, 36s.

THE OLD RÉGIME: its Court, Salons, and Theatres. By CATHERINE CHARLOTTE LADY JACKSON, Author of "Old Paris." With Portraits of Louis XV., Marie Antoinette, Rousseau, Voltaire, M^{de} du Barry, M^{lle}. Clairon. In 2 vols., large crown 8vo, 24s. *[Immediately.]*

LORD BEACONSFIELD: his Life, Character, and Works. By GEORGE BRANDES. From the German, by Mrs. GEORGE STURGE. In demy 8vo, 10s. 6d.

THE HEART of HOLLAND. By Henry HAVARD, Author of "The Dead Cities of the Zuyder Zee," &c. Translated by Mrs. CASHEL HOKY. Demy 8vo, with Eight Illustrations, 15s. *[Immediately.]*

JOURNAL KEPT DURING a SECOND TOUR in EUROPE. By the SHAH of PERSIA, and rendered into English by General SCHINDLER. Demy 8vo, 12s.

Four New Novels, at all Libraries.

I.
TWO WOMEN. By Georgiana M. Craik. In 3 vols., crown 8vo.

II.
NEW IRISH STORY, BY THE AUTHOR OF

"THE GRAPHIC" GALLERY OF BEAUTY.

ON MONDAY NEXT

Will be open to the Public an

EXHIBITION OF FEMALE TYPES of BEAUTY

Painted expressly for the Proprietors of "THE GRAPHIC" by
the following Artists among others:—

SIR FREDERICK LEIGHTON,
P.R.A.

ALMA TADEMA, A.R.A.

E. LONG, A.R.A.

P. H. CALDERON, R.A.

G. D. LESLIE, R.A.

J. J. TISSOT.

G. STOREY, A.R.A.

MARCUS STONE, A.R.A.

PHIL. MORRIS, A.R.A.

AND

"CHERRY RIPE,"

By J. E. MILLAIS, R.A.

ADMISSION: ONE SHILLING.

14, GRAFTON STREET,
ONE DOOR FROM
164, NEW BOND STREET.

NOTE.—As the proceeds will be given to a charitable fund for the benefit of Artists, no free invitations will be issued.

SAMPSON LOW, MARSTON, & CO.'S LIST.

* A SECOND EDITION is in the Press of

MEMOIRS of MADAME de RÉMUSAT
(1802–1808). Translated by Mrs. CASHEL HOKY and Mr. JOHN LALLIE.
2 vols., demy 8vo, cloth extra, 38s. *[Vol. I. now ready.]*

* These revelations respecting the Private Life of Bonaparte, the Empress Josephine, and other Celebrities of the Political and Social World of Paris, from 1802–1808, have created great sensation in France, and the French Work is already in a Third Edition.

"The translators have done their work with great spirit, and the English is so clear and easy that the most delicate points of the original are sharply preserved."—*Mayfair.*

"It is delightful reading. . . . It would be difficult to overpraise the grace of style which marks this book. . . . There is a fine crispness in all her anecdotes."—*Scotsman.*

"No one will take it up without reading greedily to the end."—*Athenæum.*

"The most fascinating personal narrative which has been published since Madame d'Arlay's Memoirs were given to the world."—*Mayfair.*

"It is almost impossible to convey any idea of the intensely interesting character of the book. The Portrait of Napoleon is one of the finest and most carefully minute bits of word-painting ever written, and the writer relates a hundred stories which are new to the most diligent explorer of the annals of this astonishing man. . . . She is certainly most charmingly confidential."—*Mayfair.*

"Few classes of books are in our time more interesting than these legacies of past times, especially of times so recently passed that their questions are still burning, and their personages still familiar."—From Leading Article in the *Daily News.*

"These particular memoirs are moreover unusually attractive. As illustrating the interior history of the Bonaparte family, there is hardly any book which can equal them, while the personality of their writer is not the least interesting revelation."—From Leading Article in the *Daily News.*

Now ready, demy 8vo, cloth extra, 21s.

NEW BOOK OF ASIAN TRAVEL.

**THE FORBIDDEN LAND: Voyages to the
Corée.** By G. OPPERT. With Illustrations and Map.

"Here, then, is the phenomenon of a population of 16,000,000 without a history, and inhabiting a land which has been for centuries a sealed book to European research. It will be easily guessed, therefore, that Mr. Oppert's book has an interest distinctly unique among later books of travel. . . . It is offered as a picture of an unknown country, and very admirably and faithfully fulfils its end."—*Mayfair.*

SECOND EDITION.

**LIFE and WRITINGS of HENRY
THOMAS BUCKLE,** Author of "The History of Civilisation." By
ALFRED HENRY HUTCH. In 2 vols., demy 8vo, cloth extra, with
Two Steel Engraved Portraits of Buckle, 38s.

"Mr. Hutch has done his part of these volumes well and thoroughly."—*Saturday Review.*

"Mr. Hutch's book, which seems to be written with rare sincerity, shows us the man as he was, not the philosopher as he was supposed to be."—*Saturday Review.*

"Buckle was a man whose story must excite interest and rouse sympathy."—*Scotsman.*

Now ready, demy 8vo, cloth extra, 8s. 6d.

**THE CONFLICT of CHRISTIANITY with
HEATHENISM.** By Dr. GERHARD UHLHORN. Edited and Translated
from the Third German Edition by G. C. SMYTH and C. J. H. ROPEZ.

Now ready, crown 8vo, cloth extra, 5s.

A FOOL'S ERRAND. By One of the
FOOLS.

"This is an able little book. . . . Will be read with interest and not a little astonishment. The Fool responsible for the narrative has a good deal to tell, and he tells it in such a manner as to be always picturesque and impressive. . . . Everyone should read the book. . . . The Fool is a competent and clever student of character. . . . Singularly commendable."—*Athenæum.*

**WEALTH or WEAL? a Word on the
Political Aspect of Free Trade and the Land Question.** 8vo, price 1s.

Now ready, small post 8vo, 6s.

**HOW to GET STRONG and HOW to
STAY SO.** By WILLIAM BLAINE. A Manual of Rational Physical
Exercise. With Illustrations.

"Worthy of everyone's attention, whether old or young."—*Graphic.*

LITERATURE.

Fifty Years of the English Constitution. By Sheldon Amos, M.A., Barrister-at-Law. (Longmans.)

A GREAT deal of attention has latterly been given in England to contemporary history. Much has been attempted in the very numerous biographies of public men; though here, as may be expected, the narrative is generally, in the Greek sense of the word, an apology, for the object of these biographies is quite as much the maintenance of a deceased statesman's policy as it is the vindication of his reputation. Even the memoirs of the most exalted personages have been recorded with this purpose, for no one can doubt that the labours of Mr. Theodore Martin are quite as much devoted to an active future as they are to a philosophical retrospect, or that Mr. Ashley's estimate of Lord Palmerston's career is as fully intended to vindicate the reputation of a certain school in modern politics as to describe the action of a man who was better liked and more disliked than almost any person of his time. Political biography holds, then, a middle place between the political criticism of newspapers and reviews and the attempts which have latterly been made to form a general estimate of the forces, political and social, which are influencing and modifying the England of our own time. The public has fairly responded to the efforts which have been made by men of letters, and has manifested an adequate interest in the narrative of contemporary history. The fact is instructive, because it shows that an increasing number of persons is striving to form a judgment on current facts, or on facts so near that they are still affecting opinion and action; and also because it is evidence that the highest positions and the most exalted reputations are to be criticised, or that criticism on them should be disarmed, or that, if possible, they and their acts should be made popular. To modify the words of one among these personages, public men, as well as constitutional government, are on their trial; and though, perhaps, it is too much to expect that biographers should be dispassionate, they have to take for granted that the public will be, and thereupon try to conciliate them. In brief, the present age is reviving the epoch in which peers and prelates wrote or published partisan histories, such as those of Burnet and Clarendon, when Ralph told the story of Anne's reign to her contemporaries, when parties patronised the press, when Swift tried to popularise Harley's policy, and Bolingbroke invited the English people, in the best English at his command,

and very good it was, to surrender the liberties they had won to the restored Stuarts. The criticism of modern events has made progress since the time that Mr. Irving published his useful volume of newspaper cuttings, and the success of Mr. Justin McCarthy's work is not more creditable to the author than it is to the public. There is reason to believe that an increasing number of persons is desirous of being informed of the manner in which English history has been made during the last fifty years, and of becoming able to criticise as well as to read partisan newspapers.

The work of Mr. Amos is a contribution to this novel but useful kind of literature. It purports to give an account of how the several forces which, when adjusted and working together, make up what people call the Constitution, have gained or lost strength during the changes of the fifty years which, roughly speaking, have followed the passage of the first Reform Bill. Mr. Amos is as far qualified for the task as the able son of a very distinguished father might be, for he is entitled to appeal to the reputation which his father obtained, and it is well known that he has inherited his father's tastes and followed his father's studies. He has, however, undertaken a task which is not easily fulfilled; for, while the collection and arrangement of constitutional antiquities is a work which needs very little discretion and no great parts beyond industry and accuracy, the interpretation of contemporary events in a judicial manner requires a very great deal of discrimination, as well as a very broad view. Besides, to handle topics of the day, in a fashion which precludes the author from the apology which is fairly and justly made for the usages of party warfare, requires a great deal of courage. A man may think that the iron which he handles is cold, but may find that it may scorch him after all. And, as Mr. Amos has dealt very largely with the events of the last half-dozen years, and has treated them with sufficient clearness, though constantly with judicial caution, it will be strange if the real merits of his book are acknowledged by partisans.

The least satisfactory part of the work of Mr. Amos is that which treats (chapter iv.) of the Liberty of the Subject. The topic is very large, and properly requires separate handling, for the attitude which law takes towards individual liberty, when it is not engaged in supplying a remedy for personal wrongs, or assisting the prosecution of private rights, or chastising crime, but is merely controlling society in the real or reputed interests of society, is one which needs a very careful and a very analytical study. It is certainly, we believe, incorrect to say that "legislative assemblies are not the less despotic for being democratised." Mr. Amos would be the first to admit that, since the House of Commons has become a more popular assembly, it has given civil liberties which a narrower franchise refused or dreaded, and that it has never pretended to control liberty except in cases where it believed that the interests of all were concerned, or where existing freedom was really the power of oppressing others, or where it has been persuaded that the constraint of law is a

means for quickening education in a demonstrable truth. Since the passage of the Reform Bill no restraint of individual action has been enacted which is to be compared with that virtual serfdom which property imposed on labour under the old law of parochial settlement, and in the interests of property only. It may be that the Factory Acts are open to adverse criticism, that some so-called sanitary laws are of doubtful policy, of doubtful justice, or are even mischievous errors, but they have been adopted in honest error; and because, through the peculiar character and conduct of the English Parliament, it is frequently necessary to trust to experts who are always very positive, and probably are, to the great public inconvenience, often in the wrong. But it would be worth while for the students of political ethics to examine, in the light of facts, the question—To what extent is the formation of individual character aided or hindered by the restraints of law?

It is a common practice to praise the English Constitution because it is unwritten and, therefore, elastic. Such praise can be accorded to it only when it acts in the clear light of day, when the Government is, except on those rare occasions in which the public security requires a temporary secrecy, absolutely candid and truthful to Parliament, and when the various elements of the State are content to abide by the historical position which long usage has assigned them. For the English Constitution is, above all, a balance of powers, in which each factor could theoretically arrogate far more to itself than it practically pretends to do, but which could not, as it well understands, when it is not misled by evil counsellors and political adventurers, claim more than it possesses without danger to itself. For a hundred and forty years the Lords virtually ruled this country, and they surrendered their power only to the dread of revolution. But they surrendered it irrevocably. George III. was personally a popular Sovereign. But he attempted personal rule; he affected, though only a Sovereign by Act of Parliament, and with fifty members of the European royal houses who had by English custom a better title to the Crown than himself, to believe in the possession of a right which was stronger than that which constituted his true strength, and his throne was never in such peril as it was just before the English people veered suddenly round in view of the first excesses of the French Revolution. The chief danger which the happy expedient of the collective authority of the administration runs—an authority which is virtually the second or inner chamber of Parliament—is in the risk of rousing the jealousy or suspicion of the nation by furtive practices, and ostentatious exhibitions of the prerogative. It may seem a paradox, but it is a truth, that the origin of English loyalty to the Crown lies in the fact that the English royal family is where it is by Act of Parliament only, a fact which Mr. Amos sees very clearly and Baron Stockmar did not see at all.

JAMES E. THOROLD ROGERS.

The Greek New Testament, edited from Ancient Authorities, with their Various Readings in Full and the Latin Version of Jerome. By Samuel Prideaux Tregelles, LL.D. (Samuel Bagster & Sons.)

SUCH is the title issued with the seventh and concluding part of Dr. Tregelles' great work, containing a text of the New Testament in Greek, the result of more than thirty years' laborious consultation of ancient MSS., versions, and commentaries. In this short notice we confine our attention to the recently published seventh part. All who are interested in these matters know that it is a posthumous publication, and all of course were aware that, whenever it should come out, it would want the editor's finishing touch, and must exhibit a very imperfect representation of what the introductory matter would have furnished if this indefatigable collator had lived to bring his task to an end. But we never remember having been so bitterly disappointed in the completion of any work. Dr. Hort is, we suppose, the responsible editor, though he has associated the name of Mr. Streane with his own, and it does not exactly appear what parts have been assigned to each editor. The seventh part, which is nearly of the same size with the preceding ones, consists of thirty-two pages of introductory matter, and several leaves which are folded over so as to lie open when wanted, with the printed portion (one-fourth of the whole leaf) visible, while the reader has another page of the Testament before him. It is a most inconvenient arrangement, as the leaves will be sure to get crumpled as soon as ever they are used. These leaves contain the *Addenda et Corrigenda* which Dr. Tregelles would have appended to the completed edition of his Greek Testament. Of course it is no fault of the present editors that they could find no more information in what Dr. Tregelles left; but, as they had undertaken the work, we should have been glad to have some connected account in their own words of his labours, his views, and opinions. He would unquestionably have given us his opinion as to the value of the Codex Sinaiticus, the *facsimile* of which had not been printed when he issued his first instalment. It would have been something if only his editors had given some opinion on their own part how far the text of the first two gospels would have been modified by the additional evidence afforded by probably the most ancient, certainly the most valuable, of all existing MSS.

We have taken the trouble to compare the text of these two gospels with a text which we had ourselves composed from a comparison of the Sinaitic and other early uncials, neglecting all modern editions and cursive MSS., and the result is that in about one-tenth of the variations from the *Textus Receptus*—which, speaking generally, and omitting, of course, all variations of less importance, were about six hundred, which we considered nearly certain—we differed from Tregelles' text. Of this tenth we found that in most cases we had selected a reading which was witnessed to by the Codex Sinaiticus. How far Dr. Tregelles would have modified his text after seeing this single additional MS. it is impossible for us to say; but

we think the fact we have stated shows how great is the agreement of the earlier documents when the text at the most would so very rarely have had to be altered through the discovery of this most valuable MS.

We have referred to but one point which we think might have been advantageously illustrated by the editors, whose business it surely was to have written in their own words a preface, describing what they have put together as prolegomena in Dr. Tregelles' language, in passages detached from each other and selected from various works. After glancing over these—which, of course, do not profess to contain anything new, and which are almost entirely in Dr. Tregelles' own words—we come to an "Account of Preparatory Labours" printed in smaller type, also in his own words, and then to the real *Addenda et Corrigenda*, prefaced by four pages of Introduction signed with the initials F. J. A. H. Accordingly, in the *Addenda et Corrigenda*, we expected to find the same arrangement followed, instead of which we find a mixture of notes, which are for the most part, we suppose, due to Dr. Tregelles, but in many of which Dr. Tregelles' name is quoted. Thus, on the very first page, we have the following notice, which perhaps implies some dissent from his opinion:—

"In part ii. Dr. Tregelles silently raises to the class of 'later uncial MSS. of special importance' the two following:—

"*Frag. Mosq.*—Dr. Tregelles reprinted from Matthæi these fragments of John i. and xx. as an appendix to the Codex Zacynthius. They have since been re-collated by Tischendorf, in whose chief editions they stand as O."

"Y.—This MS. contains John xvi. 3-xix. 41.

"To this class (b) may now be added fragments of Mark vii.-ix. in the library of Trinity College, Cambridge, called W^a by Tischendorf, and believed by him to be of the ninth century."

It will be seen that what we have been complaining of in this most disappointing completion of so valuable a work is, first, the reticence, secondly, the inconsistency, of those who have taken upon themselves the task of editing it. They ought, we think, either to have said less or more than they have done.

NICHOLAS POCOCK.

Lectures and Essays. By the late William Kingdon Clifford, F.R.S. Edited by Leslie Stephen and Frederick Pollock, with an Introduction by F. Pollock. (Macmillan.)

[First Notice.]

THESE volumes, the publication of which is due to the labours of two pairs of friendly and thoroughly competent hands, bring together, from the reports of societies and from magazines, most of Prof. Clifford's non-mathematical Lectures and Essays. The many who were in the habit of looking out for Clifford's name in a list of popular lectures, and in the best-known of our reviews, certain that the presence of that name meant some new intellectual stimulus, will be grateful to the editors for the service they have here rendered them. Whatever the permanent value of Clifford's discussions of contemporary questions of science and philosophy, there is a freshness and a charm about his way of conceiving and presenting his subject which gives a real

literary value to these papers. Even the lectures, which, as Mr. Pollock tells us, were hardly ever written out, are not wanting in this literary attraction. And the reason of this is not far to seek. Clifford's utterances, whether spoken or written, owed their fascination less to their external finish than to the directness of the enclosed thought, to the freshness and vividness of the ideas expressed. And this kind of attraction makes itself felt almost as much when the spoken words are written down and merely read as when they are actually heard.

The intellectual traits that reveal themselves with some distinctness in these papers are made still clearer by the Introduction, which consists of a very attractive biographical sketch by Mr. Pollock, and of selections from Clifford's letters. What struck one most in reading Clifford's occasional papers was the restless versatility of his mind, its boldness in attacking new problems of thought, its wide and almost catholic interest in ideas, and its passion for truth of every kind. And these prominent characteristics are amply done justice to in the biography. One often heard Clifford's admirers say what a pity it was that he did not devote himself to his own special field of mathematics. But what is told us here leads us to think that such a course would have been impossible to Clifford. He had too much intellectual sensibility, was too easily stirred by any idea in the air, and had too wide and insatiable a curiosity, to make a good typical specialist. This was illustrated even at Cambridge, where he would, on Prof. Sylvester's authority, pretty certainly have obtained the first place in the Mathematical Tripos but for his too wide reading. In the first few years after his degree Clifford's mind, we are told, ranged through various forms of speculation, physical, metaphysical, social and ethical. He was always trying new theories:—

"He had a singular power of taking up any theory that seemed to him at all worth investigating, realising it, working it out, and making it completely his own for the time being, and yet all the while consciously holding it as an experiment, and being perfectly ready to give it up when found wanting" (vol. i., p. 12).

Nevertheless, we must not suppose that Clifford never reached any definite fixed beliefs. Through all these various intellectual tentatives he was steadily feeling his way to sure results. In his different lines of enquiry, he was aiming at a consolidation of his conclusions by help of some large uniting principles. Such principles he held that he had reached, and his papers breathe all the confidence of a mind that, though perfectly aware of the vast extent of the unknown, is conscious of resting on a firm basis of carefully ascertained truth. One may add that the biographical sketch paints Clifford's whole nature as one singularly amiable and engaging. He seems to have reserved the severity and even the bitterness that occasionally mark his writings for his public utterances: in private he was gentle, disinclined to combat, a sympathetic companion and a warm-hearted friend. More than this, he combined with an earnestness of conviction that might almost be called religious a gaiety and playfulness of mind that won for him the strong liking of all who came in

contact with him, among whom children seem to have occupied a prominent place. One can hardly wonder at his popularity with the latter after reading the exquisite bit of drollery written for children under the title "The Giant's Shoes" (p. 64). Those who had the privilege of knowing Clifford even slightly will be able to bear out the truthfulness of this delineation. It was only by those who thought they could divine the man through his writings that he was ever supposed to be violent or harsh.

Clifford's Essays fall into two groups—those which handle questions of physical science, and those which deal with properly philosophic questions, more especially ethics and metaphysics. These groups are so far connected that the scientific papers discuss for the most part those ultimate ideas of physical science, force, atoms, number, and space, which can only be treated in a philosophic spirit, and with some reference to the nature and limits of human knowledge. The love of definiteness of conception and precision of statement that marks the mathematical mind shows itself throughout the scientific expositions. Clifford's power of clear presentation was a very remarkable one. He had a way of reducing the most abstruse and complicated subject to a simple and easily intelligible form. It is possible that this rare gift of exposition in science depended on an exceptional force of visual, and more specially geometrical, imagination, by which he was enabled to see under the form of definite mental pictures what others saw only hazily. The invisible world of molecular action seemed to reveal itself to Clifford with the distinctness that belongs to the visible universe. This observation is borne out by the story told by Mr. Pollock of Clifford's clearing up to him, during their undergraduate days, some difficulty in analytical statics:—"As he spoke he appeared not to be working out a question, but simply telling what he saw" (p. 4). This faculty is strikingly exemplified in the paper on Atoms (vol. i.), which is a masterly explanation of the laws of the transmission and interruption of sound and light, the relation of the pressure of a gas to its volume and temperature, and the laws of chemical combination, by help of a few simple hypotheses respecting the structure, number, and mode of movement of atoms. The chain of reasoning, though needing close attention, can be followed by any reader of general intelligence. One wonders how many men besides Clifford would have had the courage to try such a topic with a Sunday lecture audience.

The author's views on the underlying conceptions of the physical sciences are indicated more especially in three papers of the first volume, "On Theories of the Physical Forces," "On the Aims and Instruments of Scientific Thought," and "The Philosophy of the Pure Sciences." These essays are reprints of lectures delivered before the Royal Institution and the British Association. They touch on a number of interesting problems—sometimes too lightly—and are full of suggestiveness. The meaning of the exactness and reasonableness we attribute to the order of nature is carefully examined in the end of these papers. Clifford knew of

no such thing as an absolutely universal law of nature:—

"When we say that the uniformity which we observe in the course of events is exact and universal, we mean no more than this: that we are able to state general rules which are far more exact than direct experiment, and which apply to all cases that we are at present likely to come across" (i. 141).

That is to say, scientific knowledge has a relative and practical, not an absolute, certainty. This ought to be remembered in connexion with Clifford's strong affirmations of scientific against religious propositions. He can only be called a dogmatic scientist in the sense of being sure within certain well-defined limits. Beyond these he saw as plainly as any man how precarious all extension of inference becomes.

His view of the reasonableness of nature's order is a little curious. He of course rejected the idea of purpose as supplying this element, but what is unexpected is that he equally rejected the idea of cause. He writes, "I, at least, have never yet seen any single meaning of the word [*scil.*, cause] that could be fairly applied to the whole order of nature;" and he objects, though without giving his reasons, to Prof. Bain's connexion of the idea of cause with the law of the conservation of energy (i. 151). Elsewhere (ii. 77) he writes, "The word *cause*, *πολλὰχὼς λεγόμενον*, and misleading as it is, having no legitimate place in science or philosophy, may yet be of some use in conversation," &c. It is a pity that this subject is not more thoroughly gone into; but alas! this is a remark that suggests itself very often in reading Clifford's papers. A mind so brimful of ideas as his cannot, perhaps, be expected to treat exhaustively all the subjects it touches, especially when the occasion of touching them is that of the popular exposition of a lecture-room. What he did believe respecting the order of things was that to every reasonable question respecting nature there is an intelligible answer "which either we or posterity may know." The reader may be reminded here of G. H. Lewes's later conception of the scope and nature of philosophic enquiry.

Clifford's favourite idea of the absolute uncertainty of knowledge comes out again in the first of the three papers named above, where he discusses the possibility that our apparently continuous perceptions of moving bodies are really made up of little jumps, or discontinuous impressions, like those given by the wheel of life. Yet he always combined with this philosophic doubt a firm assurance of the range of scientific certainty; and in this same paper he expounds the doctrine that "the entire history of a single particle is involved in a complete knowledge of its state at any moment," and that consequently "the history of eternity is contained in every second of time." So, too, in the third and most elaborate of these essays he is concerned to show that the laws of space and number, while something more than inductions from experience, as J. S. Mill affirms, are not absolutely universal. His views on these subjects are among the most striking of his utterances. He sets out from an examination of Kant's position, and contends that as long as the principles of the pure sciences are regarded

as universal the empirical solution, even extended by help of Mr. Spencer's doctrine of inherited knowledge, is inadequate. The real solution, according to Clifford, in the case of geometric truths, is supplied by the reasonings of Lobatchewsky, Riemann, and Helmholtz, which go to show that some of Euclid's postulates may be not strictly true of very large regions of space, while it can be shown that other postulates may be untrue "on the side of the very small," like our perception of the continuity of water or of the motion in a wheel of life.

JAMES SULLY.

Teutonic Mythology. By Jacob Grimm. Translated from the fourth edition, with Notes and Appendix, by James Steven Stallybrass. (W. Swan Sonnenschein & Allen.)

WHEN the Folk-lore Society was first founded, it proposed, at the suggestion of Prof. Max Müller, to undertake a translation of Jacob Grimm's *Deutsche Mythologie*. We believe that this undertaking was looked forward to by those members of the society who had promised to perform a part of the work with no slight fear and trembling. For that immortal monument of Jacob Grimm's learning is an exceedingly difficult book to translate. The translator must not only possess a thorough mastery over both German and English, but he must himself be a scholar, a comparative philologist and mythologist. Otherwise, he would never be able to fully understand, and render clearly intelligible, the wise utterances of the great master who first pointed out the right paths through so many of those wide fields of popular fiction in which explorers, unless led by the hand of a trustworthy guide, are so apt to go astray. The qualifications we have mentioned seem to be possessed by Mr. J. S. Stallybrass, and the consequence is that he has produced a translation which is an, in every way, admirable piece of work. Only the first volume has as yet appeared; but the remaining two volumes are likely, we trust, to be published before very long. When the translation is complete, accompanied by "a full classified bibliography and an accurate and detailed index to the whole work," it will, if the second and third volumes are as well interpreted as the first, reflect the greatest credit upon the translator, who has worked so intelligently and so conscientiously, and the publishers, who have had the courage to undertake so costly, it might seem so hazardous, an enterprise.

The task of bringing out the fourth edition of the *Deutsche Mythologie*, which the present translation follows, was entrusted by Grimm's heirs, after his death, to Prof. E. H. Meyer, of Berlin. To it was appended "such additional matter as the author had collected in his note-book for future use." So great was this mass of miscellaneous information that it occupies no less than 370 pages of the third volume of that edition, the various items being arranged according to the order of subjects in the book. Mr. Stallybrass proposes

"to digest this supplement, selecting the most valuable parts, and adding original articles by the editor himself and by other gentlemen who

have devoted special attention to individual branches of the science of folk-knowledge."

A few extracts from this Supplement have been given in the footnotes to the present volume, and the translator has added a few of his own—very few, but generally very much to the purpose. We may take as specimens the following. At p. 130 the text says, speaking of the days of the week,

"Byzantium had no influence over Lithuanians and Finns, and had it over a part only of the Slavs. These in their counting begin with Monday as the first day after rest; consequently Tuesday is their second and Thursday their fourth, altogether deviating from the Latin and Icelandic reckoning."

To which the translator adds in a note:—

"e.g., in Russian: 1, *voskresénie*, resurrection (but O. Sl. *ne-déla*, no-doing); 2, *ponedél'nik*, day after-no-work; 3, *vtórník*, second day; 4, *seredá*, middle; 5, *chetvérg*, fourth day; 6, *piatnitsa*, fifth day; 7, *subbóta*, Sabbath."

It is very fortunate that the task of translating the *Deutsche Mythologie* should have been undertaken by a scholar who can interpret the Slavonic as well as the other languages quoted in the text. Very much to the point, and very different from Prof. Bugge's recent etymological parallels, is Mr. Stallybrass's comparison (p. 97) of "the Slavic *volkhv*, magus," a magician or conjuror, with "the term *völva*, which," as Grimm points out, "first denotes any magic-wielding soothsayeress, and is afterwards attached to a particular mythic *Völva*, of whom one of the oldest Eddic songs, the *öluspá*, treats." Of interest also is such information on the translator's part (p. 187) as that "to the Boriát Mongols beyond L. Baikal, fairy-rings in grass are 'where the sons of the lightning have danced.'" And a really valuable addition to the author's short account of the Servian Vilas is contributed by the following note of the translator at p. 436:—

"The Bulgarian *samodiva* or *samovila* corresponds to the Servian vila. When the wounded Pomák cries to his 'sister' *samodiva*, she comes and cures him. The *samodivy* carry off children; and mischief wrought by the elements, by storms, &c., is ascribed to them. Like the Fates, they beget the new born. Three *samodivy* visit the infant Jesus; one sews him a shirt, another knits him a band, and the third trims a cap for him. Some stories about them closely resemble those of the swanmaids. Stoyán finds three *samodivy* bathing, removes their clothes, restores those of the two eldest, but takes the youngest (*Mariyka*) home, and marries her. St. John christens her first child, and asks her to dance, as do the *samodivy*. But she cannot without her '*samodivski drékh*.' Stoyán produces them; she flies away," &c.

The original of the *Deutsche Mythologie* is no doubt possessed by many English scholars. But they will readily admit that it is a tough book to read, and a difficult one to refer to rapidly. So even they ought to welcome the present translation. To the great majority of students who occupy themselves with mythology and folk-lore, it will be a priceless boon. There will now be no excuse for mythologists who write without first consulting the great teacher whose wise utterances compare so favourably with the hasty assertions of too many recent interpreters of tradition. W. R. S. RALSTON.

Indian Finance: Three Essays (republished from the *Nineteenth Century*). With an Introduction and Appendix. By Henry Fawcett, M.P. (Macmillan.)

ACCORDING to a well-known story, Burke once fairly roused the House of Commons to economy by thundering out the quotation, "*parsimonia magnum vectigal*," and pronouncing *vectigal* with a short penultimate. Mr. Fawcett may claim to have won a similar success last session, when, by force of his importunity, he compelled the Indian Government to enter upon a systematic course of retrenchment. Never since the Viceroyalty of Lord Mayo, who in this as in so many other matters had the courage of his convictions, has any practical attempt been made to balance fairly the budget of India. The expenditure of the Afghan War, coming upon the top of annual losses by famine and by exchange, carried home the lesson which ordinary experience failed to teach. If the revenue is destitute of elasticity, and if heavy exceptional charges are always liable to recur, it is plain that no other means of escaping deficit is left than the deliberate cutting-down of the normal expenditure. The general system of our administration has been organised upon a too extravagant scale—not extravagant in the sense of wasteful or corrupt, but as compared with the ways and means at our disposal. To retrench an accustomed item is never agreeable, but it often becomes the duty of an honest man in private life. Figuratively speaking, India must lay down her carriage, and exchange her footman for a parlour-maid; or, if the phrase be preferred, she must travel third, instead of first, class.

Mr. Fawcett's great merit as an economist is that he has always insisted upon this simple principle, without losing himself in details. To the public, no questions of finance are attractive unless they take the form of a direct demand upon the pocket, or of a reduction in the price of a necessary commodity. Indian finance in especial is enveloped in a thick jungle of repulsive difficulties of its own. When you have converted rupees into sterling at whatever rate of exchange you please, when you have plucked the heart out of the mystery hidden in the phrase "extraordinary expenditure," you are confronted by a fundamental change in the method of keeping accounts which some new finance Minister has thought fit to introduce. At one time both sides of the balance-sheet are relieved by the transfer of important items from imperial to provincial columns; at another time they are swollen by the insertion of all the income and expenses of railway management. If any man, not an Indian official, is capable of finding his way through such obstacles, that man is Mr. Fawcett. In the volume before us he makes no pretensions to special knowledge. Indeed, he seems to pass over these difficulties as matters of detail from his present point of view. But, at the same time, he shows that he is well aware of what he is eliminating from discussion, and that he is not so acting through ignorance. His single aim is to fix the attention of the British people upon certain broad principles, which they are capable of understanding, and which it is important that they should know. His

grasp of the subject is masterful, his mode of exposition clear and free from passion. Those who have no previous knowledge may read with profit, and not altogether without pleasure; while that smaller class who have already cudgelled their brains over the same subject will thank the author both for the light which he throws and for the steadfastness with which he holds it up.

JAS. S. COTTON.

NEW NOVELS.

In the Sweet Spring-time: a Love Story. By Katherine S. Macquoid. In 3 vols. (Hurst & Blackett.)

A Beleaguered City: a Story of the Seen and the Unseen. By Mrs. Oliphant. (Macmillan & Co.)

Mrs. Denys of Cote. By Holme Lee. In 3 vols. (Smith, Elder & Co.)

Across the Zodiac. By Percy Greg. In 2 vols. (Trübner & Co.)

MRS. MACQUOID'S new story is a graceful and artistic piece of work, slight in actual texture, and with no attempted intricacy of plot, but pleasantly readable. She has put the love-making of which her title-page tells in the most prominent place by narrating the fortunes of two men who are in love with the same woman, and two women who are in love with the same man. In both cases, whatever the verdict of ladies may be, the male critic's sympathies go with the unsuccessful competitors, who happen to be brother and sister, and who are much more individualised and carefully drawn for us than their two rivals, whose merits, apart from good looks and good temper, have rather to be taken on trust, and who are, in any case, of a far more conventional type. There is real skill in the portraiture of the strong-willed, self-asserting, and unrefined Oliver Burrige, engineer and inventor, and of his beautiful sister, Martha, externally unlike him in being the most morbidly shy and reserved of women, and yet with an underlying family resemblance which is very cleverly indicated, without being in any way thrust on the reader's notice. There is also a good sketch of a languid fine lady and of a prematurely wise old woman of the world, aged eighteen, who rivals Lady Mary Penruddock in social ethics. The scene, save for one episode in a Yorkshire manufacturing town—which Mrs. Macquoid has done little more than outline, wisely refraining from attempting local colour—lies in London, its suburbs, and the Isle of Wight; and the sketches of landscape and atmospheric effects, which frequently recur, are not the mere padding, to be heedfully skipped, which such digressions in novels are apt to be, but careful studies with the eyes of one who knows what landscape art is, and who can notice beauties in a Thames-bank mist which others might fail to see in a sun-haze over the Alps.

The title of Mrs. Oliphant's new book appears to be borrowed from a well-known poem of Longfellow's, relating to one of the traditions of Prague, but does not correspond to the actual contents of the book. For, instead of the City of Semur being encom-

passed with a leaguer of ghosts, keeping the inhabitants pent in, contrariwise, in the weird story which she has devised, or possibly adapted from some legend, the unseen hosts of the dead-and-gone citizens pour in, after formal notice, to occupy their former places of resort, while the living inhabitants are forced to give way to them, or to retire outside the walls to such shelter as the neighbouring hamlets and detached *châteaux* can provide. The idea is a weird one, and, handled by a writer of Mrs. Oliphant's experience and skill, cannot be otherwise than effective; though as a piece of spectral literature it is scarcely equal in mere power, albeit superior in imaginative insight, to a shorter tale, based on an old Scottish tradition, which she contributed to *Blackwood* some time ago. She has adopted the plan of distributing the narrative among four persons, the *maire* of the town, who gives the principal and fullest details, his mother and wife, who give their separate experiences, and a fellow-townsmen, who supplements the original narrator's account. It is in the difference of the way in which the very same events are shown as striking minds of different orders that Mrs. Oliphant's workmanship is exhibited at its best in this volume, ranking above the mere uncanniness of the whole atmosphere of her fiction, which, though more prominent on the surface, is really an easier effect to produce. And she is right on all grounds in representing the visitation, however startling at first, when proclaimed as a formal warning, as not leaving any permanent results behind it. Whether she has been equally wise in refraining from indicating with any clearness what adequate motive is to be assigned to the apparition, and what results ought to have followed from it if it had been understood, may be disputed; but there can be no doubt that this hazy indeterminateness, obviously deliberate, adds considerably to the vague eeriness of the conception, and so far helps on the artistic aim of the book. But if a hard-headed person, of scanty imagination, were to ask, "What does it all prove?" it would not be easy to give him any reply, save that it has shown it to be possible to write a ghost-story on comparatively new lines.

The lady who is pleased to use "Holme Lee" as her pen-name has been a diligent and successful writer of fiction ever since the publication of *Kathie Brand*, now many years ago, and is the author of at least twenty works, all possessing merit. But of those known directly to ourselves, *Mrs. Denys of Cote*—this, her latest story—is also her best, ranking with *Basil Godfrey's Caprice* in dainty grace of execution, and above *Gilbert Massinger* in literary power, while having a touch of novelty in conception and execution which is, perhaps, lacking to those other tales. The story is that of the one granddaughter in a large and united family, who, though surrounded by kinsfolk of simple, albeit cultured, tastes, reproduces, through some strain of heredity, certain qualities of a worldly ancestress, and is born with much natural pride, few marked intellectual tendencies, and a keen longing for rank, wealth, and show. Disappointed in an eligible match

which she thought at her feet, while, in truth, a less striking cousin was the real object of the suitor, she hastily and secretly engages herself to a squire in her own county, more than double her age, and of bad reputation personally and ancestrally. She does this, believing him to be a man of great wealth, as the owner of large estates, and of a famous historical seat, and thus able to give her what she covets. No warnings, entreaties, or censures of her parents and kindred have any effect upon her, and she makes the marriage at the cost of home-ties and affection, only to find her husband a deeply embarrassed man with much impoverished and mortgaged land, and the great old house dismantled and converted into farm buildings for nearly half a century, while some at least of the evil things said of himself everywhere prove to be not without foundation. So far, the idea, though not exactly commonplace, may readily drift into triteness and sermonising, with the picture—for which the reader looks—of the girl turning harder and soured, and only not querulous through dread of arousing her masterful owner's temper. Nothing of the sort. The ill-omened union turns out well, and becomes one, not only of mutual affection, but, what seems far more unlikely, mutual respect. The manner in which Mr. and Mrs. Denys set themselves to the work of redeeming the estates and living down the county opposition is very skilfully told; while stress is laid on the fact that the wife's early training and surroundings have made her standard of right and wrong much higher and more trustworthy than the husband's, so that she has to work, not always too successfully, at the task of pulling him up to a higher level without preaching about it, but mellows and ripens herself in the process. The two central characters, to which all the others are carefully subordinated, are boldly and consistently drawn; and next to them, as a typical portrait, ranks the kindly epicurean clergyman, who wishes well to all men, but has not courage to stand up for the rights of the poor against the rich. Much of the opinion of recent economists and sanitarians as to land and buildings has been ingeniously wrought into the texture of the book, in recording the regeneration of Cote and Navestock; and the only fault we have to find with the story is that we do not think the end assigned to the heroine in artistic keeping with her character and the earlier part of the narrative.

Across the Zodiac is one of those imaginary voyages of which Lucian was the first inventor and M. Jules Verne the most popular modern author, though it belongs more strictly to the same allegorical class as Lord Lytton's *Coming Race* and Mr. Samuel Butler's *Erewhon*, and is allied in other respects to a very clever, but now seemingly forgotten, book which appeared several years ago with the title of *Helionde*, and purported to narrate adventures in the sun. The author of the present volumes has made at the outset what can hardly be viewed as other than a mistake. After the usual introductory matter to explain how the MS. recounting the exploration fell into the editor's hands, great ingenuity and pains are spent in describing the machinery

and instruments whereby the force necessary for projecting and guiding the "Astronaut"—a word used, by-the-by, to denote the aerial ship or car itself, and not the voyager, after the analogy of "aëronaut," so that "Astroscaphe" would have been a better coinage—and in making the calculations for the direction and velocity of its path through the heavens. Now, these details and computations, which have clearly given Mr. Greg a great deal of trouble in working, and occupy some fifty pages of his first volume, really do nothing towards throwing an air of probability round the alleged incidents of the voyage. They are altogether too abstruse and technical for the non-scientific reader, who will either skip or be bored by them; while obviously they are naught to the astronomer, as not connoting objective and verifiable facts, nor even containing pregnant guesses at hitherto unsolved problems. Something of the wise abstinence from minute description which marks Swift's Laputan episode in *Gulliver's Travels* and the account of the habitation of the flying women in *Peter Wilkins* might, therefore, have well been observed. When the traveller at last reaches the planet Mars, the goal of his journey, then, of course, he is at liberty to give reins to his imagination, and we are ready to listen complacently to any wonders he has to tell; but mimetic science is a mistake. The book improves decidedly as it goes on, and reveals itself as a disguised social and political satire. Mr. Greg depicts Mars as a planet in which the scientific millennium has long been an established fact. Theism and the belief in a soul have been under a severely penal ban of the laws for many centuries as contrary to the teachings of positive science, and are handed down only as the esoteric tenets of a secret society of Illuminati. Communism had its turn till it ruined the planet, and had to be forcibly suppressed; and reforms were adopted which made it a utilitarian paradise. Absolute legal equality of the sexes is the rule, with the promptest facilities for divorce on the lady's side; all Mars is homogeneous in race and language and under one ruler, so that there are no wars; all heavy labour is done by machinery and domesticated animals; disease has been practically banished by centuries of consummate sanitary and therapeutic science, resulting in perfect physical health; the population is stationary and wealth generally diffused, so that there is little pauperism; and all education is from infancy to manhood and womanhood in the hands of the State, as the universal parent, while natural parents send their children to public nurseries immediately after birth, and never reclaim them. Mr. Greg's ironic faculty is exhibited in the manner in which he works out the results of all these arrangements, representing them as producing a nation of selfish cowards, who, having none but material aims and sanctions, fear death abjectly, and avowedly pursue only personal advantage in any course of action; while the issue of the artificial equality between the sexes, carried out to its strict legal consequences, is recourse to the primeval law of superior physical force, and the substitution of the relation of master and slave for that of husband and wife. The only excep-

tions to the universal paralysis of morals and weariness of life are found among the secret Theists, or Brotherhood of the Star, among whom the aerial voyager finds his place during his brief abode in the planet. Even as a story the latter part of the book is very entertaining, while to such as read between the lines, and appreciate Mr. Greg's suggested lessons, it will recal some of Mr. W. H. Mallock's most trenchant paragraphs.

RICHARD F. LITTLEDALE.

CURRENT LITERATURE.

A Trip to Boerland. By Rowland J. Atcherley, Ph.D. (R. Bentley and Son.) Here is another book on South Africa, but though it has only just appeared the tour it describes is not a very recent one. The author, having, without success, in the early part of 1877, endeavoured to promote a scheme for the formation of a trading and colonising company on a portion of the eastern coast of Africa, determined to proceed with two friends on a journey of experience. It must occur to everyone that he has put the cart before the horse, and that he would have done better to acquaint himself with the country he intended to colonise and trade with before attempting to form his company; and as he did not do so we cannot be surprised that his attempt failed. He landed at Durban in May 1877, proceeded to the Transvaal, where he tried his hand, without success, at gold-digging, and returning to Durban left it for England in April 1878. If there are still any of our readers who have any appetite left for South African travels or politics they will find much to amuse and interest in Mr. Atcherley's book. It is not always easy for writers who wish to be lively or jocosely to escape flippancy and vulgarity, and we cannot entirely acquit the author of either of these faults; but on the whole he recounts his many adventures pleasantly, and gives a graphic account of the country he passed through and the people he met with. He had the satisfaction so dear to our countrymen of killing many of the larger wild animals; he slaughtered a hippopotamus, and was besieged by a rhinoceros. He describes a journey by wagon as "something like a long-continued picnic, pleasant when the weather is fine, the company agreeable, and yourself not in a hurry, but fearfully tedious under other conditions." Some one of these conditions appears generally to have prevailed. We are afraid to say how often a wagon was overturned; the wonder is that the traveller had any bones unbroken. The storms in the winter months are of constant recurrence and terrific force. On one occasion Mr. Atcherley marvellously escaped being carried away by a sudden rush of storm water on a mountain side. He stood for more than two hours on a rocky shallow which divided a foaming torrent some yards wide, and deep enough to drown an elephant, the water up to his knees, and had he moved to the right or left he must have been swept away. We have already remarked on the unanimity with which writers who are acquainted with South Africa condemn the annexation of the Transvaal, and Mr. Atcherley is no exception to the rule. His remarks on this transaction are valuable as coming from a sensible and observant man who seems to have gone to the Transvaal free from prejudice, arrived there only three months after the annexation, and was himself an eyewitness of the lawlessness and corruption which followed that high-handed measure. He exposes the intrigues which led to it, and he considers that the real cause of this, as he calls it, "inglorious acquisition" was the jealousy of the Transvaal entertained by Natal. The

Transvaal threatened to become the more important of the two.

"English capitalists began to see in it a good field for speculation; its mineral resources were great, and gold in paying quantities was being found in it—so much so, indeed, that in the year 1873 £1,000 in sovereigns were actually struck by the Transvaal Government from gold found within the confines of the Republic. A question of a railway from Delagoa Bay to Pretoria was raised, and the *matériel* for the same actually landed at Lourenço Marquez, when the Natal traders and *Boër verneukers* (literally swindlers of Boërs) began to perceive that if they did not take a decisive step, their trade with the Transvaal would soon be lost, and their paltry harbour at Durban, where no ship over 300 tons can enter, would be unemployed excepting for their own colony—all the up-country trade being concentrated at the natural harbour for the Transvaal, that of Delagoa Bay, a large and commodious one. So they put their heads together and hatched a *casus belli* with the unfortunate Boërs, and finally, under pretence of acting for the country's good, sent up a man armed with the Queen's authority to soft-sawder and threaten and wheedle the simple peasants out of allegiance to their own flag. Petitions were got up purporting to come from the Boërs, the names appended to which were in many instances obtained upon incorrect representations; and promises of the most specious description were held out to those who looked upon the emissaries with suspicion."

Every promise made to the Boërs was broken, and Sir Theophilus Shepstone himself, when asked by our author whether a promised railway scheme would be carried out, replied that "No man having common sense would think of scaling the steeps between the low country and the plateau in such a manner."

Songs of Home. By Maria Herbert. (Reigate: W. Allingham; London: Simpkin, Marshall and Co.) This little volume is a really remarkable work to have been produced by the daughter of a labourer who has received no further education than that given in an ordinary village school. The poems show a real poetic insight, and a considerable gift of expression. They are generally of a religious character, and sometimes—as in "A Prayer"—display a force and intensity not often found in verses of that kind. Religious poetry generally tends towards the commonplace.

THE Rev. Prof. H. N. Hudson, the author of the well-known *Life, Art, and Characters of Shakspeare* (1872), has sent us three parts of his School and Class Series of *Shakspeare's Plays* (Boston: Ginn and Heath)—*The Tempest*, *King Lear*, and *Macbeth*. They are not so well got up as Mr. Rolfe's; their illustrative notes are not so full; their texts are too frequently emended; the *Macbeth* takes too freely from Shakspeare lines that are surely his, such as

"My strange and self abuse
Is the initiate fear that wants hard use;
We're yet but young in deed" (III., v., end).

But all the parts have the great merit of being not mere dry-as-dust illustrations of Shakspeare's words and sources, but editions of his creations as works of art, the highest poetry, the truest embodiments of life and character, that literature contains. Let anyone ask an English boy or girl trained or crammed for the Cambridge examination out of the Clarendon Press School Shaksperes, and hear how he or she got up the meanings of the words and allusions and the sources of the play but "didn't do much about the characters and poetry of it because there was nothing about that in the notes, and the teacher didn't say anything about it" (an actual answer given to the writer), and then think what the like American boy or girl, trained on the editions of Prof. Hudson or Mr. Rolfe, would have been after being forced and helped to the appreciation of every leading character and to observe the special "note" and

purpose of every play, and he will then realise what a gain the Transatlantic school-books are, and how they lead young folk quicker to Shakspeare himself. While Mr. Rolfe selects criticisms from other men and women, Prof. Hudson, in the main, writes his own, and his Introductions thus gain a unity that Mr. Rolfe's lack. Much of his criticism on *Lady Macbeth* is admirable, and his application to her of Schiller's line "Bold were my words, because my deeds were not," is most happy. Prof. Hudson's "note" is characterisation. Though he is not of the first order of critics, his comments are distinguished by judgment and good sense. Even Mr. Aldis Wright, who warns his readers against "sign-post criticism," commends Prof. Hudson's. We do so too. But, in future, we wish Mr. Hudson would not confuse his readers by printing the genuine quotations and the spurious (as he considers) lines in one and the same italic type (see p. 153, &c.).

WITH an energy worthy of a better cause Mr. Allan Park Paton goes on publishing the parts of his *Hamnet Shakspeare* on a theory that every page of his text disproves—namely, that the capitals of the First Folio are, in most plays, Shakspeare's own, and show on what words he placed emphasis as he read his own works. Let us try this theory by a few chance passages from the present part v., *The Winter's Tale*, which Mr. Paton has found to contain more than twice as many emphatic capitals as the average of Shakspeare's comedies. When Hermione is condemned with gross unright by her monomaniacal husband, she says to the weeping ladies who love her,

"Do not weep (good Fools).
There is no cause"—p. 29.

Now can anyone in his senses believe that Shakspeare laid his emphasis on *Fools*, and not on *weep* and *no cause*? Again, Hermione, wishing that her father were present to see her misery, says:—

"Oh that he were here alive . . . that he did
but see
The flatness of my misery; yet with eyes
Of Pity, not Revenge"—p. 36.

Can anyone believe that Shakspeare put no emphasis on *Flatness* and *Misery*? Again, when Perdita says, p. 54,

"Not like a Corse; or if, not to be buried,
But quick, and in mine arms,"

did not Shakspeare emphasise *Quick* as strongly as *Corse*? Let anyone compare these and the other folio capitals with Milton's really emphatic ones in his first edition of *Paradise Lost*. He will then know what emphatic capitals are. Next, as to Mr. Paton's plan of modernising the spelling of the folio. He will not spell "paire" and "lawne" as the folio does, for fear this should puzzle people; but when he comes to misprints like "You ptomis'd me a tawdry lace," "Lace for your Crpe," "Whether it like me," he leaves these (pp. 57, 59, 72), as they are not so puzzling as a final "e," we suppose. But in this he is not consistent, for the folio "*Dor*." He hath promis'd you more rhen that" (p. 293, col. 1), appears in Mr. Paton's text as "more than that" (p. 57). We have a third bone to pick with Mr. Paton. If there is one thing well known by all competent students about the history of the Blackfriars and Globe Theatres, it is that the documents about James Burbage building the Blackfriars in 1574, Shakspeare being a shareholder in it in 1589, and the Lord Chamberlain's building the Globe in 1594 are rank forgeries. And yet Mr. Paton sets them all down as gospel, as if Madden, Brewer, Hardy, Staunton, &c., &c., had never lived and judged. We have contemporary evidence, too, that the Globe was built in 1598-99 out of part

of the pulled-down materials of Burbage's "Theatre" in Shoreditch. Further, though the date of *Julius Caesar* is fixed to 1601 at latest by Weever's allusion to it, as well as by the character of its metre, style, and thought, and its links with *Hamlet*, yet here we have Mr. Paton putting it down as one of the plays of "these last quiet years (probably from about 1610 to 1616) in New Place." We do think we may fairly ask Mr. Paton to look about him a little more before writing another Introduction to a play of Shakspeare's.

The Educational Year Book for 1880. (Cassell, Petter, Galpin and Co.) Last year we had occasion, in noticing the first appearance of this annual publication, to make certain objections to its plan, and to point out some grave omissions of fact. These defects were pardonable, or at least easily intelligible, in the case of a new publication dealing with a mass of material so heterogeneous as that furnished by the statistics and resources of English secondary education. It is pleasant to be able to record that the new volume is greatly improved, and that its plan has been remodelled and rendered more logical and comprehensive. We have tested it in several ways, and find it much fuller and more exact than its predecessor. Its classification of schools is much more judicious; and the *vue d'ensemble* which it gives of the means of higher education for girls is specially complete and valuable. On the whole, this book is a long way in advance of any previous scholastic directory. Its plan excludes all reference to primary schools and to the Education Department; and takes no cognisance of private establishments. It concerns itself only with those institutions of a public character in the United Kingdom which provide secondary and superior education, and seeks to give full information respecting their government, their course of instruction, their fees, their resources, and the conditions of admission. This object has been attained with a skill and conscientious diligence which fully entitle the *Year Book* to public favour.

NOTES AND NEWS.

THE "Travers" Lecture, which Sir Travers Twiss has consented to deliver at the London Institution on Thursday, February 19, under the title of "The Laws of the Crusaders in Cyprus," will be on the subject of the early history of the island, and on its laws and constitution before it came under the dominion of the Turks.

MR. JOHN HOGG has in the press an entirely new work on Poe, by Mr. J. H. Ingram, entitled *Edgar Allan Poe: his Life, Letters, and Opinions*. This is the exhaustive Life of the American poet upon which Mr. Ingram is known to have been so long engaged, and in preparing which he has, it is said, obtained much valuable assistance from the late Mrs. Whitman, the late Mrs. Houghton, the poet's "Annie," Mrs. Shelton, John Neal, Mrs. Gore Nichols, "Stella," the Poes of Baltimore, Col. Preston, and many others. The work promises to contain a very large amount of biographical material not hitherto made public, including, beside other matters of interest, more than forty new letters, much fresh information about Poe's parentage, his early life in England and America, his school days, his University and West Point career, adventures in Europe, literary transactions, *affaires de cœur*, a full account of the Dunn English libel and the poet's rejoinder, an explanation of the cause which drove him to stimulants, &c. The work will be issued in two volumes, with new portrait, facsimile, &c.

MESSRS. SAMPSON LOW AND CO. are about to publish *The National Music of the World*, a

posthumous work of the late Henry F. Chorley, edited by his biographer, Mr. H. G. Hewlett. It contains the substance of four lectures delivered at the Royal Institution in 1862, and subsequently at Manchester and Birmingham, which, with considerable additions, the author was preparing for publication shortly before his death. The bulk of the musical illustrations which accompanied the lectures will be reproduced.

MESSRS. W. SWAN SONNENSCHN AND ALLEN will issue, in the course of a few weeks, a little manual of Logic by Mr. Alfred Milnes, M.A., entitled *Elementary Notions of Logic: being the Logic of the First Figure, designed as Prolegomena to the Study of Geometry*. It will be illustrated by a large number of figures, and will form a volume of this firm's series of Science Primers. We understand that Mr. Milnes has also in preparation a short treatise on Political Economy.

WE have dwelt more than once during the last few months on the improvements which have been introduced into the management of the Reading-Room at the British Museum. We return to the subject now for the purpose of acknowledging with gratitude another boon which has been conferred by the Trustees on the reading world. For some time readers unable to attend at the Museum during the day have been permitted to leave, after four o'clock, the tickets of the book they wanted to consult, and to return on the following day with the knowledge that the volume would be ready for their use. This practice has now been legalised, and special tickets of a distinctive colour have been provided for the use of gentlemen desirous of availing themselves of the treasures of the Museum in this novel fashion. The alteration will also have the effect of spreading over the whole of the day the work of the attendants engaged in fetching volumes from the interior of the building. It only remains now for the frequenters of the Museum to express, in a practical manner, their appreciation of these gratifying changes in its working.

UNDER the title of *Who was the Founder of Sunday Schools?* Messrs. Moxon, Saunders and Co. will issue a reprint of Mr. Townshend Mayer's article "On the Origin and Growth of Sunday Schools in England," which appeared two years ago in the *London Quarterly Review*. The article will be considerably enlarged and embellished with two interesting portraits—one of Robert Raikes, and one of his prompter and coadjutor, the Rev. Thomas Stock. Mr. Townshend Mayer has devoted considerable attention to this subject, and has made many researches locally and in London during the last twenty years.

MESSRS. G. P. PUTNAM'S SONS will publish shortly a volume of *Literary Essays* by the late Bayard Taylor.

A FEW weeks ago we announced that Messrs. Griffith and Farran were about to publish a book by Mrs. J. F. B. Firth entitled *More than Coronets*. The publishers now inform us that the title has been taken for a serial tale at present appearing in the *Girls' Own Paper*, and they will therefore publish Mrs. Firth's story under the title of *Kind Hearts*. This and the recent complications in respect of the title of Miss Braddon's latest novel point strongly to the necessity of some method of alphabetically registering the titles of all books published, so that authors and publishers may be certain that they are not adopting titles already in existence. We trust that in any future legislation on the copyright question some scheme of accomplishing this will be included.

MESSRS. GEORGE BELL AND SONS, of York Street, Covent Garden, are about to publish a

new contribution to the evolution theory, in which the author undertakes to reconcile the realities of science with the truths of religion. The views enunciated may be partly gathered from the title, which reads as follows:—*The Constitution of the Earth: being an Interpretation of the Laws of God in Creation, by which the Earth and its Organic Life have been derived from the Sun by a Progressive Development*. The author argues that the evolution of species is only part of a plan of creation by which the entire globe has undergone great constitutional changes.

THE announcement of Mr. Ruskin's lecture at the London Institution has caused so many applications for admission from non-members that, to allow tickets to be issued to them, he has consented to give the lecture both on March 17 at five p.m. and March 23 at seven p.m.

PROF. FLEGLER, of the Germanisches Museum at Nürnberg, has just completed a *History of Democracy*, on which he has long been occupied.

THE ninth annual Report of the Leeds Public Library shows a satisfactory increase in the number of borrowers. The most important addition to the Reference Library consists of a most valuable and rare collection of standard works of natural history, containing over 700 volumes. The total number of volumes in the whole of the libraries is 94,128.

WE are glad to notice the appearance of a second edition of the Baroness Bülow's book, *Child and Child Nature* (W. Swan Sonnenschein and Allen), of which we spoke favourably in our issue of September 27 last.

A LITERARY curiosity and *jeu d'esprit* has just been published at Amsterdam. It consists of three short stories, possessing the peculiarity that in each of them only one vowel is employed, in the first *a*, in the second *e*, and in the third *o*, according to which the stories are entitled "A-Saga," "E-Legende," "O-Sprook." In the Dutch language only would such a feat be possible. The authors of these *tours de force* are the philologists Prof. Boscha, Dr. Jacob van Leuness, and Dr. van der Hoeren, all three now dead, the little stories having lain unpublished for more than ten years.

A SERIAL issue of *The New Testament Commentary for English Readers*, by Bishop Ellicott, will be commenced next month by Messrs. Cassell, Petter, Galpin and Co.

WE have received *Sonnets and Songs*, by Emily Pfeiffer, new edition (O. Kegan Paul and Co.); *St. Albans Diocesan Calendar, 1879* (Griffith and Farran); *The Influence of Colloids upon Crystalline Form and Cohesion*, by W. M. Ord (Stanford); *Melbourne University Calendar for the Academic Years 1878-1880*; *Carl Ritter's Briefwechsel mit Joh. Fried. Ludw. Hausmann*, hrg. v. J. E. Wappäus (Leipzig: Hinrichs); *United States Commission of Fish and Fisheries Report for 1877* (Washington: Government Printing Office); *Guide to the Churches of London and its Suburbs*, by O. Mackeson (Metzler); *Zur Theorie der Wechselwirkung zwischen Leib und Seele*, von C. S. Cornelius (Halle-a.-S.: Nebert); *The Railway Diary and Official Directory, 1880* (McCorquodale); *Octavius Perin-chief*, by O. Lanman (Washington: Anglim); *Histoire élémentaire de la Littérature française*, par Jean Fleury, seconde édition (Paris: Plon); *Caesar: a Dramatic Study*, by H. Peterson (Philadelphia: Peterson); *Robin's Carol, and what came of it*, ed. O. Bullock (Hand and Heart office); &c.

MAGAZINES AND REVIEWS.

WITH the exception of one article there is little in the current number of the *Quarterly* to excite the curious or to instruct the student. The review of Canon Ashwell's unfinished memoir of Bishop Wilberforce may possibly amuse the world by its frank revelations of diocesan business at Cuddesdon, and gratify society by some fresh anecdotes of the Bishop's playfulness and vivacity. In the summary of Prince Metternich's career are some shrewd remarks on his aims and motives. The critic has neither been deluded by the diplomatist's fulsome appeals to the integrity of his conscience nor convinced of the uniform wisdom of his policy. But the article which gives a character to the number is that which describes Lord Bolingbroke's early life and his measures as a Minister of the Crown. It is full of fire, and has evidently been composed at a white heat. Perhaps, from an artistic point of view, the merits of the article would have been enhanced by the excision of some of its elaborate antitheses. Both the language and opinions may not unfrequently be accused of exaggeration, but the reader will be induced to pardon all faults for the sake of the vigour of expression and the thoroughness of the condemnation of Bolingbroke's private and official conduct. "We have little respect for the public conduct of Bolingbroke; we have no liking for his personal character; we regard his political writings with suspicion and his metaphysical writings with abhorrence," are the opening words of the review, and they strike the keynote throughout. His domestic policy is described as naught but intrigue in the palace, and in the senate ostentatious profession of principles which he despised in his heart. His negotiations with foreign Ministers are full of lying and equivocation; the transactions which preceded the Treaty of Utrecht remain as "an everlasting monument of his genius and his infamy." Is it to counterbalance the effect of this fierce exposure of Bolingbroke's political life that the reviewer styles him "as an essayist not inferior to his master, Seneca, as a political satirist second only to Junius," with the additional praise that "as a letter-writer he ranks with Pliny and Cicero?" In the mind of every student of English literature the genius of Swift will rise at once to recollection as dwarfing into insignificance Bolingbroke's talents in political satire. The reviewer is happier in his praises of the Tory statesman's influence on English prose. Although the great masters of prose composition who are now living in our midst have not borrowed their merits directly from St. John, the characteristics of his style are reproduced in their writings through the imitations of Burke and Goldsmith. Those illustrious men were his avowed disciples, and through their works, which are read and re-read, while his are buried in obscurity, perhaps without hope of resurrection, the charm of his language has filtered down to modern times. The notice of Bolingbroke is the first in the number, and it will be the last to linger in the reader's remembrance.

THE *Journal of the National Indian Association* (O. Kegan Paul and Co.) prints the prospectus of a scheme for founding in Bengal an institution to teach the Ayur Veda, or primitive medical system of the Hindus. Besides a staff of teachers and payments to poor students, the scheme contemplates a charitable dispensary and a garden for medicinal herbs. The essence of the project is that science and drugs alike shall be indigenous. The same periodical also records the death of the Nawab Amir Ali, Khan Bahadur, one of the foremost Mohammedan gentlemen in Bengal. An excellent Persian scholar, he wrote several books in that language, including *Amir-namah* (a History of the British

Administration in India), *Wazir-namah* (a History of the Oudh dynasty), and *Baring-namah* (a History of Lord Northbrook's Administration).

In the *Nineteenth Century* an article on "The Present Conditions of Art," by Mr. G. F. Watts, is lengthy and thoughtful, if, like too many similar discussions, it leaves us very much where it found us. It is written with gravity becoming the creator of so many weighty and learned designs; and the thought which is its chief burden—a thought not too hopeful for the future of our art—is put before us plainly if with no highly trained power of literary expression. Indeed, the paper is discursive, and might have been read at a social science meeting or other such gathering for "extra-Parliamentary utterance." Mr. Watts wisely urges a cultivation of the sense of beauty as one of the things likeliest to put us into condition to appreciate the higher sort of art and its value to us in life. With the present common blindness to what is beautiful in line and colour in the objects that meet our eyes daily, it is difficult to estimate at their proper value the refinements of the artist who deals with line and colour in his pictures. This is certainly true. We are surrounded no doubt by ugliness, and Mr. Watts cites our dress clothes as a case to the point:—

"The ugliness of most of our modern habits is most remarkable. A well-dressed gentleman ready for dinner or attired for any ceremony is a pitiable example—his vesture nearly formless and quite foldless, if he can have his will. His legs, unshapen props; his shirt front, a void; his dress coat, an unspeakable piece of ignobleness. Put it into sculpture, and see the result."

Mr. Watts further inveighs against the dress of our women, but forgets that in this matter something has already been done.

Macmillan's Magazine contains a paper on "Stage Anomalies" by Mr. Sutherland Edwards, who has several good stories to tell, and is quite as entertaining as he is instructive.

Time, to judge from the recent numbers—we mean those for January and February—can no longer be considered an amalgam of the *Nineteenth Century* and the old *Household Words*. Its serious articles are fewer, and it goes in for agreeable gossip as well as for bright writing. That was a very clever prophetic sketch of what follows Lord Beaconsfield's death that appeared in the last number; and in the present one there is Mr. Escott's paper and Mr. Scot Henderson's, and an amusing addition to the series known as "Our Doctors." But "Mr. Osric Claypole," with his Louis Seize furniture, his Sèvres, and his "younger Court," might have figured at once in the *World* as a social "Celebrity at Home." Why not "Mr. Oscar Clayton in Harley Street"?

OBITUARY.

MR. G. P. R. PULMAN.

THE lovers of topographical and dialect literature will regret the loss of Mr. George Philip Rigney Pulman, who died at the Hermitage, Uplyme, on the 3rd inst. Mr. Pulman was engaged for the greater part of his life in superintending the management of *Pulman's Weekly News and Advertiser*, a paper which enjoyed a considerable circulation in the districts of Dorset and Devon surrounding the agricultural towns of Crewkerne and Axminster. This paper was started by Mr. Pulman at Crewkerne in 1857, and for more than twenty years it was owned and edited by him. He was throughout his life an enthusiastic follower of the sport of angling, and found in the waters of the Axe abundant opportunities for his favourite pastime. It was in connexion with

this alluring practice that he made his first appearance as an author. His little volume of *Rustic Sketches; or, Poems on Angling* was published originally in 1842. It reached its third edition in 1871. The same honour was accorded in 1851 to his *Vade-mecum of Fly-fishing for Trout*. Mr. Pulman published in 1857 a lecture on the *Names of Places in the West of England*. The Song of Solomon has been a favourite subject of translation into the local dialects of this country, chiefly at the instigation of Prince Louis-Lucien Bonaparte. Mr. Pulman's version in the dialect of East Devonshire was issued in 1860. Of the lovely scenery on the borders of Dorset and Devon he was an ardent admirer, and was never weary of recounting its charms. A narrative of some of his ramblings and roamings in English scenery appeared in 1870, and when, in after-life, he wandered farther a-field in the countries of France, Switzerland, and Belgium, he published a companion volume descriptive of his travels. But the greatest achievement of his literary life was the volume which he published under the misleading title of *The Book of the Axe*. It is a well-known story in the book-world that Mr. Ruskin's *Notes on Sheep-folds* was purchased by the members of a farmers' club under the impression that it dealt with husbandry, and possibly some timber merchants may have ordered Mr. Pulman's volume under the mistaken idea that it related to the felling of trees. In reality, it is a description of the parishes and famous houses which line the banks of the River Axe in its course ere it falls into the sea at Seaton. Two houses of world-wide fame are situated upon that river. Ford Abbey, which Bentham rented, and at which Mr. John Stuart Mill (as all readers of his Autobiography will remember) spent some of the early years of his life with the happiest results, still retains the characteristics of Queen Anne's time. The small house of Ashe, in which the great Duke of Marlborough drew his first breath, has long been occupied by the family of a farmer. Mr. Pulman's topographical volume on this district was received with an extraordinary degree of popularity. The first impression appeared in 1854; the fourth in 1875. W. P. COURTNEY.

M. EUGÈNE BERSOT, head of the Ecole Normale Supérieure, has just died at Paris, aged sixty-four years. He was Victor Cousin's secretary in his youth, and had won a distinguished place in the educational world. After the *coup d'état* he obeyed his liberal convictions, which forbade him to approve the Empire, and he refused to take the oaths. He then became connected with the *Journal des Débats*, to which he contributed many articles on moral philosophy. His doctrines were those of the Scotch school, i.e., of Thomas Reid and Dugald Stewart, as made known in France by Jouffroy. M. Bersot thus expended his energies on a host of little occasional essays, very few of which have appeared in a collective form. After the war of 1870 M. Jules Simon, on becoming a Minister, appointed M. Bersot head of the Ecole Normale. This famous school, which was intended to form professors, has turned out many excellent writers. MM. Taine, About, Sarcey, Prévost-Paradol, J. J. Weiss, Edouard Hervé—to mention only the most popular—were its pupils. M. Bersot's term of office was remarkable for his rare qualities of discernment in the art of developing and controlling the minds of the pupils. He died of a cancer in the cheek, and supported his sufferings with rare stoicism. He was a very excellent man, and a man of great literary taste, and the French press has shown but one opinion as to his merits.

THE death is also announced of the Rev. William Calvert, author of *The Wife's Manual*, &c.; of the Rev. Robert Henniker, author of *Trifles*

for Travellers; of Gen. Morin, member of the Institute, author of *Leçons de Mécanique pratique*, &c.; and of M. Tchernichersky, the translator of Mill's *Political Economy*, and author of a work on the Commune in Russia, and of a novel entitled *What is to be done?* embodying Nihilist ideas.

CORRESPONDENCE.

THE "WALDENSIAN" VERSION OF THE LORD'S PRAYER.

9 Norfolk Terrace, Baywater, W.: Feb. 9, 1880.

I am not aware of any collection of the Lord's Prayer immediately anterior to that of 1700 mentioned by Mr. Donald Masson (see the ACADEMY of last week), except one of 1680, reprinted in 1792, and having this title:—*Oratio Orationum. SS. Orationis Dominicæ Versiones præter authenticam ferè [ferè in the bastard title] centum eaque longè emendatiss quàm antehac et è probatissimis Auctoribus potius quàm prioribus Collectionibus, jamque singulæ genuinis linguae suae characteribus adeoque magnam partem ex aere ad editionem à Barnimò Hagio traditæ, editæque à Thoma Ludckenio, Solvq. March. Berolini, ex officina*

Rungiana, Anno 1680. It is a small quarto of sixty-four pages, besides sixteen pages without number.

In this collection no Waldensian translation appears, and this shows where the egregious blunder of the Waldensian-Celtic dialect began.

L.-L. BONAPARTE.

"GRIFFITH ROBERTS' WELSH GRAMMAR."

Taunton: Feb. 6, 1880.

I have been favoured with a communication from Prince Louis-Lucien Bonaparte relative to the above work, which may be of interest to some readers of the ACADEMY. In the course of the discussion carried on in *Bye-gones* some months ago, and noticed in the ACADEMY, it was stated that no mention of Milan is anywhere found in the work. This is, of course, true in the sense intended; there is no mention of Milan in the body of the Grammar; but his Highness observes that it is not strictly correct as regards the entire work, and calls attention to a number of verses in one of the alliterative compositions included in that part called *Symblen yr Abostolion* (the "Symbolum" or Creed of the Apostles), in which there is an interesting reference to Milan. The composition in which the reference occurs, and another in the same collection, are addressed to one "William Parri," who is described as at that time travelling on the Continent. The verses referred to, which appear on p. 51, describe the route he would take as follows:—

"A mynd uchod mewn dichell,
i weled byd, i wlad bell.
i phrainc gida'r ifaino draw,
i lawr eidal, i rodiaw.
o'r fan hwnt, i Rufain hen,
wedi ymwled, a Mulen."

That is, the writer imagines the traveller as "going in guise to a distant land to see the world; to France with the young afar, to the soil of Italy to roam; from yonder spot to old Rome, after a visit to Milan." During the "visit to Milan" the traveller would doubtless make the acquaintance of his distinguished countryman, Griffith Roberts; at any rate, the publication of these "poems" in this collection points to some intimacy between them.

This "William Parri" was probably no other than Dr. William Parry, the confidential agent of Lord Brougham. Dr. Parry was for a time employed by the English Government as a spy to collect secret information about the English Roman Catholics on the Continent. But having gone over to the Church of Rome, he returned to England, it is said, in 1583, and entering Parliament as member for Queenborough boldly advocated the cause of his co-religionists. He was tried on a charge of high treason February 25, 1584-85, and executed on March 2 following.

In the account given of Dr. Parry in Williams' Biographical Dictionary there is some confusion with regard to the dates. It is there said that he left England in 1588; but this is inconsistent with the statement that he returned in 1583, and was executed in 1585. But whatever the exact date of his visit to the Continent, if it is right to identify him with the subject of these "poems," it will prove that the "Symblen" was not printed until some years (perhaps twenty or more) after the first part of the Grammar—i.e., after 1567.

The same seems likely also from the fact that the collection includes poems by Sion Tudur, who only graduated as a "disciple" in 1568.

The two compositions addressed to "Parri" in the "Symblen" have attached to them only the initials of the author, "S. T.," possibly as a precautionary measure, to avoid compromising him as the friend of a man executed on a charge of treason.

THOMAS POWELL.

THE LATE MR. W. NASSAU SENIOR.

Belfast: Feb. 9, 1880.

A misprint in my review of Mr. Bagehot's *Economic Studies* in the last number of the ACADEMY does an injustice to Mr. Senior, for whose name that of Mr. Lewis was put as one of the chief English luminaries in political economy when Mr. Bagehot's studies of the science began. Sir George Lewis was then Mr. Lewis, and was no doubt an expert and able economist, but he cannot be said to have taken rank among economic luminaries.

T. E. C. LESLIE.

FUTURE EXCAVATIONS IN EGYPT.

Westbury-on-Trym: Feb. 7, 1880.

The text of Mariette Pasha's *Mémoire* read before the Académie des Inscriptions et Belles Lettres* having reached me *in extenso*, I hasten to add a few lines to my former note on this subject. The *Mémoire* hints at the possible solution of many problems connected with the early dynasties. Of these I will take but three.

1. *The Site of This, or Teni*.—It used to be M. Mariette's opinion that the site of Teni was marked by a vast, crude-brick enclosure a little way to the north of Abydos (see Mariette's *Itinéraire*, 1869); but he now suggests that Girgeh (a modern town of some importance, about eight kilometres below Abydos on the left bank of the Nile) may possibly have succeeded to the earliest of Egyptian capitals. This conjecture has so much to recommend it that it is surprising it should not have been hazarded before. Girgeh stands high upon a foundation of ancient mounds; and in the mountain facing the town, on the right bank of the river, are found a number of rock-cut tombs hitherto unexplored, all of which belonged to priests and functionaries of Teni devoted to the cult of Anhour—that ancient local divinity who was to Teni what Osiris was to Abydos. M. Mariette believes that this site will yield a harvest of inscriptions relating to the First and Second Dynasties. To this (bearing in mind the persistence of local handicrafts in the East) I venture to add another link of evidence. Teni was famous from earliest tradition for its purple dyes; and a certain percentage of the population of Girgeh pursue that industry to the present day. The Nile traveller constantly sees the dyers coming down to the water's edge with "purple stained" hands and arms, to perform their ablutions before prayer.

2. *The Wall-decorations of Tombs of the Ancient Empire*.—These wall-decorations are invariably of a pastoral character. The deceased sows, reaps, fishes, hunts, counts his flocks, and leads, apparently, a life of Arcadian peace and plenty. Till now, it has been believed that these scenes represented the actual life of the person whose tomb they adorned; scenes somewhat idealised, perhaps, but valuable as indications of the political and social condition of Egypt some six or seven thousand years ago. M. Mariette dispels that pleasant illusion. In these *tableaux*, he says, we have to do, not with the pastoral life of the time, but with the illustrations to some lost, and very early, *Book of the Dead*; and this book can only be re-constituted by means of a comparative survey of many more examples than have yet been excavated. M. Mariette's argument is essentially practical. The *tableaux*, for instance, always reproduce the same scenes and events; yet the lives of all these persons—royal princes, priests, councillors, military commanders, and private individuals—could not have been so much alike. Again, in a country periodically inundated, how is it possible that every well-born Egyptian should

* See ACADEMY, November 8, 1879.

have owned such vast numbers of farms, villages, flocks, and herds as appear in the inscriptions of this epoch? If the Ptah-hoteps and Sabous of Memphis, and their contemporaries, really owned, each upon his own estate, flocks of upwards of 121,000 cranes and 111,000 ducks, and herds of 15,000 or 16,000 oxen, where could these creatures have been kept, and how fed, when the land was one vast lake swarming with crocodiles and hippopotami? It is therefore evident, says M. Mariette, that we must here be concerned with a future state of ideal felicity. One question, however, suggests itself. How is it that in some of these tombs we find representations of workmen engaged in fashioning sepulchral statues of the deceased, to be buried with him in his tomb? Such work could have no place in the world beyond the grave. One would be glad to know how M. Mariette meets this difficulty.

3. *The Sphinx*.—Pliny averred that the Sphinx was a tomb, and that it contained the ashes of a king named Armâis. This name is evidently a version of Hor-ma-Khu (Horus-on-the-Horizon), here imaged as a human-headed lion. M. Mariette thinks that this ancient tradition may not be wholly baseless, and that there may actually exist in the body of the Sphinx, which is hewn out of the living rock, some kind of subterranean crypt or chapel. He proposes completely to clear the Sphinx and the so-called Temple of the Sphinx from the sand in which they are half buried, and to surround them with a massive wall which shall effectually preserve them for the future. So much for the exploration of this famous monument; but what about its age and origin?

"Would it not be the crowning triumph of our excavations," asks M. Mariette, "if, tracing out the extremest boundaries of Egyptian antiquity, we at last succeeded in proving, step by step, that not only does Menes chronologically precede Abraham by many centuries, but that the Sphinx dates so infinitely before the period of Menes himself that its origin is lost in the night of Time, and that its construction can only be attributed to those prehistoric rulers designated in the hieroglyphs as the Horshesu?"

Such are three out of the many problems which M. Mariette proposes to solve, if only money be forthcoming for his work. The rest are to the full as profoundly interesting and as important.

AMELIA B. EDWARDS.

NORSE MYTHOLOGY.

London: Feb. 10, 1880.

In your last issue, Mr. W. Fiske, supporting the theory of an alleged Kelto-Latin or Christian origin of some Eddic conceptions, says:—

"Dr. Gudbrand Vigfusson (in his Dictionary, pp. 721-22) suggested, as far back as 1873, the etymological identity of the words Sibylla and Völva—the latter being the name of the mystic prophetess of the Völuspá in the elder Edda."

This, taken with the context, evidently means that Völva also is derived from a classic word. Now, allow me to state that exactly the opposite hypothesis is brought forward in Dr. Gudbrand Vigfusson's edition of Cleasby's Icelandic-English Dictionary. We there read:—

"VÖLVA. . . . The nominative Vala is erroneous (etym. uncertain; may not the Norse Völva and the Greek σιβάλλα be relations?). The Greek word first occurs in Aristophanes, and then in Plato; may it not have been adopted from some Scythic tribe—for a word like this, if Greek, could hardly fail to occur in Homer? (ævolva?—in the Greek the *v* would be an inserted vowel). A prophetess, sibyl, wise woman."

Thus Dr. Gudbrand Vigfusson's Dictionary suggests, not that Völva is derived from Sibyl, but, on the contrary, that the Greek word may be derived from a Skytho-Germanic word, and

that both are the offspring of a common parent stock.

In the same letter, Mr. W. Fiske, after mentioning the notion that "Balder is simply Christ" and so forth, says:—"A treatise of some interest bearing upon the subject is the *Völuspaa og de Sibyllinske Orakler*, by Dr. A. Chr. Bang (Christiania, 1879)."

Perhaps it will be useful to observe, for those who consider an unbiassed scientific impartiality one of the most necessary qualities for the treatment of Comparative Mythology, that Dr. A. Chr. Bang, in a theological treatise, upholds views of the strictest orthodoxy as against leading critics. I assume that the author mentioned by Mr. W. Fiske is the same who wrote *Om Kristi Opstandelses Historiske Virkelighed*, af A. Chr. Bang (Kristiania, 1878).

As to the main question at issue, we have to wait for the publication of the evidence of Dr. Bugge's views, which is at present not accessible. The general theory upheld by him was—as Mr. Alfred Nutt has shown—started and fought against a long while ago; and the special arguments upon which Dr. Bugge once more advances that theory are as yet not brought out in print. When they are, something more may have to be said on the subject.

KARL BLIND.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Feb. 16, 4 p.m. Asiatic.
5 p.m. London Institution: "Indian Religious Life," by Prof. Mosier Williams.
8 p.m. Society of Arts: "The Manufacture of India-rubber and Gutta-percha," III., by T. Bolas.
8 p.m. Royal Academy: "The Materials of Sculpture and Architecture," by Prof. A. H. Church.
8 p.m. Victoria Institute: A Paper by the Rev. C. Engham.
TUESDAY, Feb. 17, 3 p.m. Royal Institution: "Physiology of Muscle," by Prof. Schüffler.
7.45 p.m. Statistical: "On Certain Changes in the English Rates of Mortality," by T. A. Welton.
8 p.m. Society of Arts: "Principal Causes of Disease in Tropical Countries, scientifically considered," by A. W. Mitchell.
8 p.m. Civil Engineers: Discussion on "Iron and Steel at Low Temperatures," and "On the Use of Asphalt and Bitumen in Engineering," by W. H. Delaunay.
8.30 p.m. Zoological.
WEDNESDAY, Feb. 18, 7 p.m. Meteorological.
8 p.m. Archaeological Association: "Terra-cotta Tablets found in Assyria and Babylonia," by T. G. Pinches; "Portrait of Henry VI. in Eye Church, Suffolk," by H. Syer Cuming.
8 p.m. Society of Arts: "The Euphrates Valley Railway," by W. P. Andrew.
THURSDAY, Feb. 19, 3 p.m. Royal Institution: "Recent Chemical Progress," by Prof. Dewar.
7 p.m. Numismatic.
7 p.m. London Institution: "Laws of the Crusaders in Cyprus," by Sir Travers Twiss.
8 p.m. Linnean: "Flora of the Kurum Valley, Afghanistan," by Dr. Alcock; "On the Presence of a Phosphorescent Organ in Fishes," by Dr. A. Günther; "Remarks on Specimens of Myrmecodia," by J. Britten.
8 p.m. Chemical.
8 p.m. Historical: "An Outline History of the Hansatic League," by Cornelius Walford; "Dunbravius, Bishop of Orléans (1542-1553)," by the Rev. A. H. Wratislaw.
8.30 p.m. Royal Antiquaries.
FRIDAY, Feb. 20, 1 p.m. Geological: Anniversary.
8 p.m. Royal Academy: "Metals, Enamels, &c., used in the Fine Arts," by Prof. A. H. Church.
8 p.m. Philological: "On the Rhaeto-Romanic Dialect," II., by Russell Martineau.
9 p.m. Royal Institution: "Old Violins," by the Rev. H. R. Hawes.
SATURDAY, Feb. 21, 3 p.m. Royal Institution: "Joseph Haydn," by Prof. Pauer.

SCIENCE.

CURRENT SCIENTIFIC LITERATURE.

Descriptive Geometry and its Applications; consisting of seventy plates to illustrate lectures delivered at the Royal College of Science for Ireland by Thomas F. Pigot. (Dublin: Hodges, Foster and Figgis.) The plates are taken from drawings made by the students at the above-named college, and comprise most of the elementary problems of descriptive geometry; in fact, the Preface states that the book contains all the problems in this subject in Lefebvre de Fourcy's treatise, and that Bradley's *Plane and Solid Geometry* and the diagrams of the *Ecole*

Chrétienne des Frères have also been made use of. Besides, it contains problems in shadows (53 to 61), in stone-cutting (62 to 67), in isometric projection (68 to 70), and *plans cotés* (46 to 52). The size of the pages (17 inches by 12 inches) admits of the figures being drawn to a large scale. In most cases explanatory side-notes are appended. The book is exceedingly well adapted for its purpose.

Plane Trigonometry and Logarithms for Schools and Colleges. With Numerous Exercises. By John Walmsley, B.A. (C. F. Hodgson and Son.) A thoroughly good book on the subject. Mr. Walmsley has been long before the public as the writer of one of our best elementary treatises on Trigonometry, and this work contains most, if not all, of the elementary matter of former editions, with the additional feature of several new chapters, which now render it a most trustworthy as well as complete manual. The author shirks no difficulties, and, in our opinion, throws new light upon parts sometimes insufficiently treated. There is copious practice afforded to the student in the large selection of graduated exercises. At the end are appended thirty short examination papers for revision. There are, we think, no great mistakes in the text; those errors which we have detected are mostly of a typographical description.

Methods and Theories for the Solution of Problems of Geometrical Constructions applied to 410 Problems. By Julius Petersen, Professor at the Royal Polytechnic School at Copenhagen. (Translated by Sophus Haagenesen. (Sampson Low and Co.) Prof. Petersen informs us that this work appeared for the first time in the Danish language in 1866, so that it has been well tried, and he "ventures to say that it has successfully stood the test." It is now to be procured in English, French, and German. The author thinks that problems of construction have hardly gained any foothold in schools, though they "serve well to sharpen the faculty of observation and combination." His object is "to attempt to teach the student how to attack a problem of construction." This he does by solving a number of exercises, then trying to analyse the train of ideas which lead to their solution and to classify them under general heads. His principal object is method; solutions are for the most part indicated; details are left to the teacher. There is a general introduction, then the first chapter is devoted to loci. These are treated of under the heads loci of points, multiplication of curves, method of similitude, inverse figures, loci in general, and loci of lines. The second chapter, on the transformation of the figure, treats of parallel translation, replacing, and revolution around an axis. The third chapter treats of the theory of revolution, and there is an Appendix on the intersection of arcs of circles, systems of circles, and on the possibility of solving a given problem by a straight edge and pair of compasses. This analysis will give an idea of the contents. The mode of treatment quite agrees with what we should have expected from the author of the *Theorie der Algebraischen Gleichungen*. We have so many books already on the subject of geometrical exercises that we did not expect to find much of novelty in the present work, but we are glad to be able to commend it, as there is considerable freshness in the treatment of the subject. We wish, however, as the subjects of geometry and trigonometry have been now sufficiently worked for junior students, that more attention should be devoted to the bringing out of similar manuals, doing like work for physical subjects. A word as to the translation. This is done into English, not quite such as an Englishman would write, but still it is very fairly done, and is always intelligible.

SANSKRIT LITERATURE.

THE stream of Sanskrit publications has of late been most abundant. Leaving out of consideration mere reprints or so-called new editions of texts which have long been known to every Sanskrit scholar, there has been so much new material placed before us that life seems too short to master it all. England, Germany, France, Italy—nay, even Spain and Portugal—each sends its contributions, while in India itself a new literary activity has sprung up which floods our library with books the very titles of which were hardly known before. These native publications seem to have a market of their own in India, for few copies only reach this country, and often when a copy is wanted for our public libraries the whole edition is exhausted. These native editions are generally so cheap that it will soon be impossible to compete with them in Europe, particularly if the practice is continued (and there seems to be no remedy to stop it) of simply reprinting in India Sanskrit texts, on which European scholars have bestowed years of critical labour, without even an acknowledgment, such as it is customary to give in Europe, by putting “ex recensione Dindorfii” or “Bekkeri” on the title-page. In Europe any jury would probably give damages if it could be shown that a single misprint of the original edition had been repeated in the new edition. In India the law seems doubtful, and the native feeling is evidently that the Vedas, and Manu, and the Purāṇas belong to India, and that no Mlekkha could ever claim any proprietorship in them.

The first work we have to mention is a new Sanskrit Dictionary published by Dr. Böhtlingk. Every Sanskrit scholar knows the immense amount of labour that was bestowed by Böhtlingk, Roth, and a number of scholars associated in this undertaking, on the so-called Petersburg Dictionary. It is a true *thesaurus* of Sanskrit, but it can hardly be called a practical dictionary. In order to supply the Sanskrit student with such a work, Dr. Böhtlingk is now engaged in bringing out what he calls an abridged dictionary. In this he omits what was no doubt the most valuable part of the former work—viz., the references. Whoever wants to know the history of a Sanskrit word must therefore have recourse to the original compilation. But the student cannot altogether dispense with the new work either, because, while omitting all such references as are to be found in the former work, Dr. Böhtlingk has added references to all new words, and even to certain new meanings, not to be found in the old dictionary. In this manner the new dictionary is not only an abridgement, but also a supplement, and a most important supplement. It was by no means easy to find out what words and what meanings were given in the original dictionary, there being *addenda* and *corrigenda* to different fasciculi, which were afterwards collected in a separate volume. All these are now incorporated, and many new words and new meanings are added; but alas! there is again at the end of the first part of the new dictionary a large list of *Nachträge und Verbesserungen*. We must not grumble, for nothing shows better the diligence and honesty of the author and his collaborators than this constant influx of new material; but the fact remains that a conscientious student will often have to look in three different places before he can be quite satisfied whether a certain word and a certain meaning is or is not countenanced by the authority of Dr. Böhtlingk. An English translation of this work by a scholar who really understands German would be a great boon, and we are glad to hear that such a work is in contemplation.

The next work on our list is likewise a Dictionary, not Sanskrit-English, but English-Sanskrit. The first volume of this work was

noticed on a former occasion. The second volume of Mr. Anundoram Borooah's *Practical English-Sanskrit Dictionary* has long been expected, and it was hoped that it would complete the work. The first impression on examining the second volume, which has just come to hand, will therefore be one of disappointment. Instead of finishing the Dictionary, it only carries it on from “Falsification” to “Oyster,” so that a third volume will be wanted before we come to the letter Z. When we look, however, more closely into the volume before us, though we do not find in it all that we expected, we find much which we did not expect, which, perhaps, we had no right to expect, but which, for all that, will be extremely welcome to all serious students of Sanskrit. Mr. Anundoram Borooah has added to this second volume of his Dictionary a supplementary treatise on what he calls “Higher Sanskrit Grammar,” or Gender and Syntax—two subjects which have hitherto been much neglected by European grammarians. This supplementary treatise fills nearly three hundred pages, and will by many be considered a most valuable aid to the study of Sanskrit. The rules of gender have been fully treated by native grammarians. On syntax, too, much useful information may be gathered from Pāṇini and his successors. But Mr. Anundoram Borooah is by no means a blind follower of these teachers, and his independent judgment in these matters contrasts most favourably with the almost superstitious reverence paid to Indian grammarians by many European scholars. No one would doubt that Pāṇini's knowledge of Sanskrit was enormous, and far beyond the reach of any man now living, whether in India or in Europe. No conscientious scholar would dare to write down a single rule of Sanskrit grammar without having satisfied himself as to what Pāṇini taught on the subject. But, for all that, we must bear in mind that we should have had a grammar of Sanskrit even if Pāṇini had never lived—namely, the grammar which lives in the immense literature of India. With regard to a certain class of literature, it may indeed be held that any grammatical forms which differ from Pāṇini must be put down as grammatical blunders. The authors of certain poems looked on Pāṇini as their highest authority; and they knew of no Sanskrit except what they had learnt from him. But that does not apply to all Sanskrit literature. There was a literature before Pāṇini from which that great grammarian derived his rules, and, in this process of abstracting general rules from single passages, Pāṇini was as liable to error as we ourselves. If, therefore, we meet in the Vedic poetry forms which run counter to Pāṇini's teaching, we have no right to correct them, or exclude them from a grammar of Sanskrit. Again, there are large portions even of later Sanskrit literature of which it cannot be proved that they were composed in strict obedience to Pāṇini's rules. To brand all forms and constructions occurring in such works as blunders, because non-Pāṇinean, would be preposterous. On the contrary, all such apparently exceptional or irregular forms should be carefully collected, for in them alone will it be possible by-and-by to study that historical growth of Sanskrit which even the weight and authority of Pāṇini could not entirely repress. On all scholars, however, who, without any authority to the contrary, think they may deviate from Pāṇini's teaching, Mr. Anundoram Borooah is justly severe. If Pāṇini says distinctly (Nāpumsaka, 33, *trāntaḥ*—not, as the *ed. princ.* of the Siddhānta-Kaumudī reads, *saṭrāntaḥ*) that nouns ending in *tra* are neuter, with such exceptions as he mentions, why, he asks, should our dictionaries give *Kṣhatra*, a warrior, as masculine, and then confess that the word never occurs as a masculine? If, however, he

meets with passages in classical works running counter to Pāṇini, he notes them carefully. Thus *kāpa*, being a synonym of *kārmuka*, “bow,” ought, according to Pāṇini, to be neuter. So it is; but there are passages in the *Mahābhārata* where *kāpa* is clearly used as a masculine, and it would be rashness to correct that epic poem according to a somewhat general rule of Pāṇini.

Mr. Anundoram Borooah is somewhat indignant at professors of Sanskrit in the great universities of England continuing to teach in their Sanskrit grammars what he shows are simply grammatical blunders, unsupported either by the authority of Pāṇini or any Sanskrit writer. Some of these, however, are most likely mere accidents, which may happen in the first edition of any grammar, but which are not likely to escape the attention of their author in subsequent editions. European scholars ought to be, and I believe most of them are, very grateful for any critical remarks which may reach them from native students. Native students of Sanskrit enjoy, of course, great advantages over their fellow-students in Europe; but it is to be regretted that they should feel tempted to assert their superiority, where it exists, in rather harsh language. For several reasons their judgment of work done by European scholars is very valuable, because entirely uninfluenced by personal considerations. But it would be more valuable still, and certainly more likely to be useful, if conveyed in a more civil form. To point out mistakes in a Sanskrit grammar is quite right; to say that the author has made a complete mess of it is hardly what Hindus used to call *sabhyā*.

Mr. Anundoram Borooah is very much surprised at the small attention that is paid to syntax in our ordinary Sanskrit grammars, and he shows by his rules, which fill more than two hundred pages, that the idea of there being no syntax in Sanskrit is simply absurd. But no one ever entertained such an idea. The reason why hitherto so little space has been allowed to syntax in Sanskrit grammars is simply that they are mostly intended for scholars familiar with the syntactical rules in Greek and Latin, and little in need for their immediate purpose of any instruction on that subject. Sanskrit syntax is in the highest degree simple and intelligible. If Sanskrit scholars had any ambition to write Sanskrit no doubt they would have to learn by heart much of what ought to be observed or avoided in prose or poetry. But Oriental scholarship differs in that respect so much from classical scholarship that it may be doubted whether some of our best scholars ever thought of writing a line of Sanskrit. As an amusement an Egyptian, or Coptic, or Syrian, or Chinese scholar may compose some lines in prose or verse; but his chief object is to understand these languages—to read, not to write them. From this point of view it may be said that there is hardly a single construction to be found in Sanskrit which a classical scholar would not at once comprehend. There are locatives absolute and genitives absolute in Sanskrit, but to anybody accustomed to ablatives absolute they tell their own tale. A school-boy may require an explanation of the dative of interest in Latin, but in Sanskrit *Kasya hitāya* would at once be understood to mean *cui bono*. There are a few constructions, no doubt, which differ from Greek and Latin and require some explanation. But even these are better learnt and appreciated by extensive reading than by learning by rote. A collection of rules and illustrations, however, such as Mr. Anundoram Borooah has given us will no doubt be highly appreciated by all who have to teach Sanskrit, particularly in India, where to be able to write good Sanskrit is still a most valuable accomplishment, and

they will probably before long find a place in so-called practical grammars for the use of beginners in England also.

We have hardly room to do more than repeat what we said on a former occasion of Mr. Anundoram Boroah's *English-Sanskrit Dictionary*. Many of his renderings are extremely happy, and the references given will be valued most highly by all who wish to satisfy themselves that the Sanskrit which is to render an English word is really an equivalent of the English idea. But there still remains the difficulty of finding a passage when we are told no more than that it is taken from Manu, from Pāṇini, or from Sāyana, and we doubt whether it would have much increased Mr. Anundoram Boroah's labours if he had given in every case, not only his authority, but likewise chapter and verse.

Though containing more of old than of new material, Mr. J. Muir's collection of Metrical Translations from Sanskrit Writers,* now forming the eighth volume of the "Oriental Series," will be welcomed by all his friends. Few retired Indian civil servants have spent their leisure to such advantage as Mr. J. Muir. He has not only proved himself a true Maecenas, having founded several prizes for the encouragement of Indian scholarship, endowed a chair of Sanskrit at Edinburgh, and rendered pecuniary and other assistance to almost every Sanskrit student who stood in need of it, both in England and abroad, but he has himself performed most useful work in bringing before the English public the results of modern research in the field of Sanskrit literature. Why will not other civilians, who often complain so loudly that after their return to England there is nothing for them to do, follow his example, if not in his liberality, at least in settling down to some real work for which their experience in India ought to be of the greatest advantage? Mr. Muir's work, however, is not the work of a mere amateur, who thinks he can do in a few leisure hours what requires years of regular and honest labour on the part of a true scholar. His five volumes of selections from Sanskrit texts have been highly praised by competent critics, and his metrical translations have been ranked as equal to the best English poetry of the day. Such success cannot be achieved without true devotion, and we are glad to see, from the long string of capital letters which Mr. Muir now places behind his name, C.I.E., D.C.L., LL.D., Ph.D., that his labours have not been without their well-deserved reward. As to metrical translations in general, we confess that we are always somewhat afraid of them. A faithful translation in prose of an ancient text is in itself a task of enormous difficulty; the additional weight of rhyme and rhythm must often render it impossible. Mr. Muir enables us to judge for ourselves how much of literal faithfulness had to be surrendered for the sake of metre. He gives us, in many cases, a literal to compare with the metrical translation, and we shall enable our readers to judge for themselves of the loss and gain, by printing the two together. We take the very first translation, a verse from the Atharva Veda (p. 1):—

METRICAL.

"The happy man who once has learned to know
The self-existent Soul, from passion pure;
Serene, undying, ever young, secure
From all the change that other natures show,
Whose full perfection no defect abates,
Whom pure essential good for ever sates—
That man alone, no longer dreading death,
With tranquil joy resigns his vital breath."

LITERAL.

"Knowing that soul who is wise (or calm), unde-

* *Metrical Translations from Sanskrit Writers*,
By J. Muir. (Trübner.)

caying, young, free from desire, immortal, self-existent, satisfied with the essence (of good or blessedness), and in no respect imperfect, a man does not dread death."

The words for which there is no definite authority in the original have been printed in italics. They are not many, and they are mostly in keeping with the Sanskrit. But is there not a very perceptible difference between the two utterances? And lastly, does even the prose translation render the thought of the poet quite faithfully? Was it not his purpose, first to describe Svayambhū, the self-existent Brahman, or the Supreme Self, and then to say that he who knows that Brahman to be his own self never fears death? Thus only can we account for the nominatives in the first, and the accusatives in the second, line, and thus only is there an excuse for repeating *dhīra* (intelligent) twice. We should propose, therefore, to translate:—

"Svayambhū, the self-existent, is free from desires, intelligent, immortal, satisfied in his own essence, and in no respect imperfect. He who knows Him alone to be (his own) intelligent, imperishable, and ever young self, has no fear of death."

A mere knowledge of Brahman, as the chief god or as one of many gods, would not remove the fear of death. It is only the higher knowledge that our own self rests in the Brahman or the Eternal Self that gives us the conviction of immortality, and, therefore, removes the fear of death.

But these are questions for scholars only. To the English public at large these translations will give a very good and, for most purposes, sufficiently correct representation of ancient thought in India, and prove full of instruction to all who are willing to learn even from the dark philosophers of the East.

VEUVIUS.

THE new phase of intermittent activity into which Vesuvius entered in November 1878 has of late increased in energy. The great crater of 1872 is now almost filled up by the scoriae and lava emitted from the small cone of 1878. A year ago this cone was not much larger than a conical iron furnace; now it has reached to a height of more than fifty feet above the outside rim of the old crater. Moreover, its dynamic force is distinctly greater than it was a year ago. Masses of glowing cinder are projected to a height of several hundred feet, and twice within the last two months sufficient lava has been emitted to run over the lowest edge of the crater in a continuous stream, which has descended as far as the Atrio del Cavallo.

The latter of these outflows we were so fortunate as to witness from within the crater on the 13th of last month. Palmieri has noticed of late that the violence of the eruption has increased at the time of the new moon. The augmented activity of December 17 was just after the new moon, as was that of January 13. A violent *tramontana* 3° centigrade below the freezing point was blowing at the time, and we were compelled to ascend on the western side, under the lee of the mountain. As we neared the summit, loud thundering noises were heard at intervals, and masses of reddish smoke drifted between us and the sun. We found the crater of 1872 almost filled up by the recent accumulations of *ejectamenta*. Two small streams of lava had recently flowed, one towards the west, the other towards the north-east. We crossed one of these, and could see the red-hot lava within two inches of the surface over which we ran. Yet it was perfectly firm. At the base of the cone of 1878 we saw a small *bocca* apparently not more than four or five feet in diameter. Within this the molten lava was furiously surging. Presently it was thrown up in a dome-shaped mass to a height of a few feet, exactly imitating some of

the small geysirs at Reykir in Iceland; and a moment later the very liquid lava flowed over the edge of the *bocca*, and ran rapidly towards the lowest edge of the crater. Clouds of vapour were disengaged from it, and the *tramontana* as it blew over it was converted into a stifling hot wind. By ten o'clock the same evening this stream, which was about twenty-five feet broad, had flowed half-way down the side of the great cone, and by one o'clock on the morning of the 14th it had reached the Atrio del Cavallo.

It is probable that if the old crater becomes completely choked up by the ejected products of the present small eruption, a paroxysmal outburst, similar to that of 1872, may be expected. The most violent eruptions have usually followed a long period of moderate activity, such as that which has intervened between the great eruption of 1872 and the present time.

The lava which recently flowed is very leucitic in character, and resembles that of 1872. The fumeroles have afforded abundant deposits of chlorides and sulphates, and the spectroscope has shown the presence of thallium and lithium. Indeed, the latter element, once considered very rare, is now believed to be one of the most widely distributed bodies.

Prof. Archangelo Scacchi, who has discovered several new minerals among the products of Vesuvius and Somma, believes that he has isolated a new elementary substance found in incrustations on the lava of 1831. A peculiar green incrustation he calls *Vesbiate of Copper*, and an orange-coloured incrustation *Vesbiate of Aluminium*. But the investigations have not been concluded, and the new element, up to the present time, has not been completely identified. The general belief among the Italian *savans* seems to be that the green incrustation is some obscure compound of copper with a known element.

The Vesuvius railway promises to be soon an accomplished fact. A portion of the rails are already laid, and a number of workmen are daily engaged upon the work. It progresses slowly, however. We saw fifteen men engaged in dragging a single beam of wood up the steep incline (32°) of the cone. The railway starts from a point situated to the west of the observatory, on that side of the cone which is least seldom subject to streams of lava.

The self-registering instruments are still at work at the Vesuvius Observatory. No alterations or improvements appear to have been made in them for some length of time, and the only addition of any note to the existing seismological instruments has been the application of the microphone to the detection of seismic movements by Prof. M. Stefano di Rossi, of Rome.

G. F. RODWELL.

NOTES OF TRAVEL.

THE central committee of the Swiss Alpine Club has lately received many applications from ladies for admission to its membership. As the statutes of the club have made no provision either for or against female membership, the central committee has submitted the question to the various local sections, asking for the expression of their views. The section "Mythen" in Schwyz has been the first to reply, and reports it as the unanimous conclusion of its members that there is no reason for hesitating to receive ladies into the club. The section Oberland, at its late meeting in Bern, elected Oberfürster Kern as its new President. Regierungsrath Studer, the honoured "Altmeister" of the Swiss Alpine Club, the first of Swiss literary authorities upon Alpine travel and climbing, has placed an essay at the disposal of the club, in which he elucidates the widely extended "Sage" of a former glacier-pass between Grindelwald and the Valais. He believes that the "Sage" is a tradition of the

actual truth, that such a pass was known in the fifteenth, and perhaps until the sixteenth, century, and that in all probability it led from Viesch in the Valais along the Viescher glacier over the Mönchjoch (not over the Vieschergrat) to Grindelwald. The road was totally lost by the extraordinary and rapid "Vergletscherung" of the pass between the end of the sixteenth and beginning of the seventeenth century. Some interesting information on the intercourse between the Valais and Grindelwald, the Petronella Chapel, and the still extant bell in Grindelwald, dated 1440, give the essay the character of a contribution to local history.

THE *Mittheilungen* for February contain an extended notice of the exploration of South-Western Patagonia, carried on in 1877 by Lieuts. J. T. Rogers and E. Ibar of the Chili navy. The travellers, starting from Punta Arenas, succeeded in reaching the Lago Argentino, first fully described by Moreno in 1876. Herr von Schrenk gives an account of a journey through the Colombian state of Antioquia, accompanied by a detailed map based upon that of O. S. de Greiff and Villavéces. Herr Hassenstein, in celebration of the twenty-fifth anniversary of the first publication of the *Mittheilungen*, has prepared a coloured diagram, exhibiting, at a glance, the maps published in that invaluable periodical. The number and variety of these maps is almost bewildering.

MESSRS. W. H. ALLEN AND CO. will publish immediately *Desert Life: Recollections of an Expedition in the Soudan*, by B. Solymos (B. E. Falkenberg).

WE hear that, as soon as he has somewhat recovered from the severe illness contracted during his late explorations in India, and has worked out the results of that journey, M. Moritz Déchy, the Hungarian traveller, contemplates undertaking another expedition among the Himalayas.

MR. E. DELMAR MORGAN left last week for St. Petersburg, and will shortly start on an expedition in Central Asia. Mr. Morgan has taken with him an outfit of scientific instruments, and hopes to be able to make useful observations during his journey.

REFERRING to a note in the ACADEMY of November 8, we are glad to learn that the Church Missionary Society have received, via Zanzibar, reassuring intelligence regarding the safety of the Nyanza mission. Messrs. Pearson, Stokes, and Copplestone left Rubaga, King Mtesa's capital, for the south in June, but did not get clear of Uganda till August 28, and only reached Kagei on the south shore of Lake Victoria on September 24. Mr. Pearson was to return to Rubaga at once, but the other two went on to Uyu. There appears good reason to believe that King Mtesa's temporary hostility was mainly due to his suspicion that the reinforcements sent to join the mission by way of the Nile were secret emissaries of the Egyptian Government, of whose encroachments he is in great dread.

BY the last mail from Zanzibar the International African Association have received news that M. Cambier is at length establishing the first Belgian "station" at Karema, some two degrees south of Ujiji. Karema is situated on the eastern shore of Lake Tanganyika at the head of a large bay, and was visited by Mr. H. M. Stanley during his last journey.

WE regret to learn that the third Belgian expedition which, under Mr. H. M. Stanley, is endeavouring to work its way into the centre of Africa by the River Congo has met with its first serious misfortune, one of the steam launches, taken out in pieces in the Barga, having been swept over the Yellala Falls and lost.

As part of the scheme for the extension of American missionary enterprise in Africa, referred to in the ACADEMY of January 3, we learn that Mr. Pinkerton, a missionary in Natal, is expected to explore the country south of the Zambesi near Mount Gorongoso, and perhaps establish a station there. This mountain is not far from Senna and near the sea. The country round is said to be very attractive, fertile, and, what is most important, very healthy.

CAPT. COLVILLE has lately arrived in Algiers from a journey in Eastern Morocco and South-Western Algeria.

IT may be interesting to record that MM. Zweifel and Monstier determined that the Falico source of the Niger rises in long. $10^{\circ} 25'$ west of Greenwich and N. lat. $8^{\circ} 45'$. The Tembe source rises in W. long. $10^{\circ} 33'$ and N. lat. $8^{\circ} 56'$. They have not, however, at present stated the precise position of the Tamincono source.

COMTE MEYNEERS D'ESTREY is engaged on a work entitled *La Papouasie ou Nouvelle Guinée Occidentale et ses Habitants*, based on official documents and the narratives of the most recent Dutch travellers, published by the Philological, Geographical, and Ethnographical Institute of Netherlands India at the Hague. The work will be illustrated with numerous engravings and a general map of the island, as well as several special maps of portions of Western New Guinea.

SCIENCE NOTES.

OUR scientific contemporary *Nature* has for the last few years been in the habit of publishing biographical notices of past and present "Scientific Worthies." These have been the work of eminent men most competent to write on their respective subjects, and have been illustrated by fine engravings by C. H. Jeens. The biography of Prof. Dumas, who is universally admitted to be one of the greatest of living scientists, is of special interest from the fact that it is written by his intimate friend, Dr. A. W. Hoffmann, of Berlin, and a master of English style. Moreover, it is more lengthy (forty pages) and complete than any of the preceding biographies in this series, and the portrait is life-like. For more than thirty years Dumas has been one of the leading representatives of science in Paris, and during the same period he has taken a very active part in the public affairs of his country. He has been Minister of Agriculture and Commerce, Master of the Mint, Senator, and President of the Paris Municipal Council; and now, in his eightieth year, in full enjoyment of intellectual vigour, he still fulfils the arduous duties belonging to the Permanent Secretaryship of the Academy of Sciences. The life of such a man possesses an intense interest from every point of view, not only for the student of science, but for the general reader. Several sciences, among them chemistry, practically took their rise a century ago, and Dumas early made the acquaintance of men who had been intimate friends of Lavoisier and of the members of that grand phalanx of French savans which illuminated the last quarter of the eighteenth century.

PUBLICATION XIV. of the Astronomische Gesellschaft contains the fundamental catalogue for the zone observations which are intended to furnish trustworthy places of all the stars down to the ninth magnitude within the northern hemisphere of the heavens, and which have been in progress at a large number of observatories for the last ten or twelve years. Ephemerides of the apparent places of the 539 stars of the catalogue have been published for the years 1870-79; but the places adopted in these ephemerides were intended to receive final corrections before being used as fundamental

places, and though it has not been found feasible to procure in time all the new observations which, according to the original plan, were to serve for the determination of these corrections, the pressing need of coming to a settlement without further delay has induced Prof. Auwers to prepare the final catalogue from the materials at his disposal, and he has executed his task with great carefulness and circumspection. The catalogue of the 539 stars for the epoch 1875 is founded upon observations made at Pulcowa, Greenwich, Cambridge (Mass.), Leipzig, and Leiden, and will be found of great value for many astronomical purposes.

IN Publication XV. Mr. Hartwig communicates the results of heliometric measurements of the diameters of the planets Venus and Mars, made at Strassburg by means of several of the small heliometers employed in some of the expeditions for observing the transit of Venus, and he also collects and rediscusses the results of former determinations. Rejecting as untrustworthy the observations made with wire micrometers or with double-image micrometers, the errors of which have not been ascertained, he deduces from those series of observations which he considers trustworthy $17.55''$ as the value of the diameter of Venus, seen by reflected sunlight at a distance equal to the mean distance of the earth from the sun. This value is about $0.6''$ greater than that given by some of the measurements of the black disc of Venus made during the transit of 1874. The value of the diameter of Mars deduced by Hartwig is $9.35''$.

"GREAT comet passing sun northwards. Gould." Such is the despatch received by the editor of the *Astronomische Nachrichten* on February 5 from Buenos Ayres, which has set astronomical observers everywhere on the alert, and makes them long for clear skies.

THE *Mastodons of the Rhone*.—No district in France has yielded a richer harvest of mastodon relics than the Basin of the Rhone. The late Dr. Claude Jourdain obtained, at various times between the years 1835 and 1869, a remarkable collection of these proboscidean remains for the Natural History Museum of Lyons—an institution which he may be said to have created. A nobly illustrated memoir on these fossils has lately been published by Dr. Lortet and M. Ernest Chantre in the *Archives du Muséum d'Histoire Naturelle de Lyon*. The mastodons of the Rhone belong to the four types of *M. Arvernensis*, *M. Borsoni*, *M. longirostris*, and *M. Turicensis* or *M. Tapiroides*. They occur in fluviatile sands and gravels, in lignites and lacustrine clays, and in tuffaceous deposits of the sub-basaltic alluvia. Some are of Miocene and others of Pliocene age. The same volume of the *Archives* contains a valuable monograph, by M. Locard, on the Fauna of the Molasse of the Lyonnais and of Dauphiné.

MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 5.)

EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—The Rev. F. W. Bennett read a paper upon some lists of Crown jewels, and accounts of the jewel house in the reign of Charles I., in the possession of Capt. Hervey G. St. John Mildmay, of Haselgrove House, Somerset, which are noticed in the Seventh Report of the Historical MSS. Commission, p. 590. During the King's absence from London until his death, the jewel house was under the charge of Col. Carew Mildmay, who was several times called upon by Parliament to give an account of his charge; but the letters to him on the subject are still extant, endorsed "Not obeyed." He complained of the difficulty of doing so, as many of his books had been taken away, and the office was open to anyone, and made a common sitting house. The office was finally entered by force, and the

colonel committed to the Fleet. The earliest of the papers is a list of presents made by Queen Elizabeth to her principal officers and to foreign ambassadors. Several of the papers of the reign of Charles I. refer to his attempt to dispose of his plate in Holland.—Mr. Freshfield exhibited a copy of the Act of Parliament of February 2, 1659, granting immunity to those who had assisted Sir George Booth in Cheshire in the rising which was put down by Gen. Lambert. The copy in question was addressed by Lady Brereton to her brother, Col. Henry Mainwaring, in Cheshire, whose name, however, does not appear as implicated in the movement.—Canon J. C. Robertson exhibited a document belonging to the Dean and Chapter of Canterbury, being a deed settling the disputed question of the primacy of the see of Canterbury. It is attested by William I., and many bishops and others. The text will be found in William of Malmesbury's *Gesta Pontificum*, lib. i., § 27.

FINE ART.

ARCHAEOLOGICAL NOTES ON A TOUR IN SOUTHERN ITALY.

IV.

MAGNA GRÆCIA.—II.

DESPITE the identity of names, I cannot admit that the modern Squillace, where there is not a trace to be seen of anything earlier than the Middle Ages, occupies the exact site of the ancient Scyllacium or Scylletium. Virgil's epithet, *navifragum Scyllaceum*, cannot be applied to a town so far inland as Squillace, but is more suitable to a place much closer to the sea, to the gulf to which it gave the name of "Scylleticus Sinus." Besides, the description given by Cassiodorus (*Variar.*, xii., ep. xv. *ad Maximam*) of his native town, to which he returned to end his days, is very characteristic, and does not by any means agree with Squillace. "Civitas supra sinum Adriaticum constituta, in modum botrionis pendet in collobis. . . . Ad pedes siquidem Mosci montis saxorum visceribus excavatis." This description applies, on the contrary, with rare precision, to the ruins (consisting of foundations of Roman masonry of a somewhat late epoch) which the traveller sees hanging on to the right flank of the promontory of Staletti, with some very fine grottos in the neighbourhood, dug out in the rocks by the hand of man. This must have been the site of the ancient Scyllacium, the inhabitants of which retired inland, to the escarped rock of Squillace, when the coast became untenable. In this case, as in that of Capua, the emigration of the population of the town caused the transference of the name of the latter to the place where they fixed their new abode.

Of the second-rate towns between Scyllacium and Caulonia, the site of two appears certain: that of Castra Hannibalis at Soverato, and that of Cocynthus at Torre Vedula on Cape Stilo, the promontory Cocynthus of the ancients. As regards Mystia, however, which plays its part in the history of the Italian enterprises of Dionysius of Syracuse, and Consilium, the question raised by these two towns is very obscure. Pliny and Pomponius Mela place them between Cocynthus and Caulonia, which would make them correspond with great probability to Monasterace and Motta-Placanica; but these two authorities invert their several positions, so that if we followed Pliny we should place Consilium at Monasterace, or, if we followed Pomponius Mela, at Motta-Placanica; and *vice versa* with Mystia. A farther complication is that there exists a modern place called Consignano, the name of which seems a mere alteration of Consilium; but if we are guided by this similarity of name, we must, as several German scholars do not hesitate to do, transport Consilium to the south of Caulonia, although the written evidences of antiquity place it to the north. As

to the places mentioned in the Itinerary of Antonine, I shall not attempt to determine their position. It seems to me clear that, from Cocynthus to Decastadium, situated toward Cape Spartivento, the road, the stations on which are recorded in the Itinerary, must have gone off inland, passing at the foot of the mountains, or possibly even running through them; for it leaves Mystia, Caulonia, and Loori on one side, and its three stations of Succianum, Subsicivum, and Hipporum are unknown to the writers who enumerate the places on the coast.

Almost all modern geographers are quite in error in placing Caulonia at Castelvetero. That town by no means corresponds to the indications of the ancients with regard to the situation of the Achæan city founded by Typhoeus of Aegium, and afterwards enlarged by the Crotoniates. The latter was in the valley and close to the sea, while Castelvetero is on the summit of the heights more than five miles farther inland. In reality Castelvetero was the place of refuge to which the inhabitants of Caulonia had to retire when they abandoned their town in the eighth or ninth century. The hill of Aulone, situated between the two branches of the River Alaro, still preserves the name of the latter under its most ancient form, for Stephen of Byzantium and the *Etymologicum Magnum* inform us that the Greek city was originally called Aulon, from its situation in the valley, and that only at a later time the prefixing of a guttural changed the name to Caulonia. From the slope of this hill of Aulone, which is about four miles and a-quarter to the east of Castelvetero, the remains of the ancient Caulonia extend in succession to the sea, where it had a port, mentioned by Philostratus. They are sufficient to enable us to recognise the site, although they have been bandied about in the lower portions by the furious onslaughts of the Alaro, which, of all the *fiumare* of Calabria, produces the greatest havoc in its valley during each winter's floods.

The Alaro unmistakably preserves the name of the River Helorus, on which Diodorus Siculus states that Caulonia was built. There is great cause for astonishment in the persistency with which modern Calabrian writers identify the Alaro with the Sagras, the scene of the famous victory of 10,000 Locrians, supported by a small contingent from Rhegium, over 120,000 Crotoniates. The sole justification for this wholly untenable view is the statement of Giustiniani, that the mountain in which this torrent takes its rise is still called Sagra. But that name is absolutely unknown in the country, and the authority on which it rests is open to grave suspicion; for, in the same passage of his *Dizionario geografico del Regno di Napoli*, Giustiniani at his pleasure alters to "Caulone" the name of the mountain of La Catalana to furnish a proof of the situation of Caulonia at Castelvetero. To an alteration of a similar kind, bearing on the name of the torrent Sairano, which runs into the sea in the southern part of the Gulf of Squillace, we must assign the mention by Cluvier of a supposed Sagriano, still preserving the name of Sagras. As a matter of fact, the Alaro cannot be the Sagras, because the southern branch of that river (called Musa) being of recent formation, the ruins of Caulonia (as likewise Castelvetero) are on its right bank, while Strabo distinctly places the Sagras to the south of Caulonia, which must necessarily have been the case, as it formed the boundary between the territory of that city and that of Locri. The Sagras, therefore, must be looked for more to the southward, and it seems to me very difficult to avoid recognising it in the Turbolo, the narrow valley of which, where it opens to the sea, presents a strategic position eminently fit for a successful defence by a very small army against infinitely superior forces.

When we pass to the territory of Loori, we enter upon a very compact and distinctly marked topographical district. The canton dependent on that town had by way of frontier, on the north the Sagras, on the south the River Alex, the Alece of our own days between Cape Spartivento (Promontorium Herculis) and Cape Bruzzano (Zephyrium promontorium), which separated it from the territory of Rhegium. At the mouth of the Alex stood the little town of Peripolium, the last advanced post of the Locrians, afterwards taken from them by the Rhegians. From the hills of Siderno to Cape Bruzzano there extends along the coastline, with a length of about five-and-twenty miles from north to south, a well-watered and marvellously fertile plain, now covered with plantations of orange, fig, almond, and mulberry trees. From about three and a-half to five miles in breadth, the plain first begins to show gentle undulations at some distance from the coast, rising gradually to the first chain of escarped heights, on the summits of which are perched the little towns of Gerace, Ardore, Bovalino, San-Luca, Bianco Nuovo, the successors of as many ancient fortresses which prevented all risk of a hostile incursion on the part of the half-savage natives, settled in the rugged mountains of the interior, from the Passo del Mercante to the Aspromonte. Such was the stage, marvellously prepared by Nature under the most favourable conditions, on which the Hellenic colony of the Locrians expanded in full security, transforming the country into a perfect garden, which it tends to become once more at the present day.

The town of Loori nestled in the heart of this territory. Of the *φρούρια* which protected it on the land side, the one which had the most brilliant fortune in the Middle Ages was Hieracium, now Gerace. There, to an impregnable position, withdrew, as I have already said, the population of the city, with its bishop, when compelled by the devastations of the pirates to leave the plain along the coast. Gerace is now a-dying; but it richly deserves a visit from the intelligent tourist on account of its citadel, built by Gonsalvo of Cordova, from the summit of which there is an incomparable view, and in front of which there is an esplanade on which yet stands, though partly destroyed, an elegant triumphal monument of the Renaissance in honour of the Great Captain; on account of the priceless Latin inscriptions transported thither from Locri; of its church of San Francesco, a Gothic building of the fourteenth century, with the curious mausoleum *dni Nicolay Russi de Calabr(ia) militis baronialis Bubalini* (Bovalino) *Blanci* (Bianco Vecchio) *Capitis Bruciani* (Cape Bruzzano) *dni*, buried March 13, 1472; last, but not least, on account of its cathedral. This is a building in the shape of a *basilica* erected in the beginning of the eleventh century, and now unfortunately in a melancholy state. The nave is entirely adorned with ancient marble columns, brought from the ruins of Locri. Some of the number are very remarkable in point of material, of *verde antico*, *giallo antico*, and *breccia africana*. But the most precious are six fluted columns of white marble, with their original bases and capitals, which are of Greek Corinthian, bearing the closest resemblance to that of the choragic monument of Lysikrates at Athens, but having the proportions of a large building. A local tradition, the value of which it is impossible to verify, represents them as derived from the famous temple of Persephone, pillaged by Pyrrhus. In any case, these columns and their capitals deserve to be carefully sketched by an architect.

The exact site of the town of Loori was entirely planted with fruit trees some thirty years ago. The works then undertaken unearthed a large quantity of objects of great value for purposes of art and archaeology, which are now dispersed through all the museums of Europe. But they

likewise resulted in the disappearance of the majority of the ruins which till then remained above ground, with the exception of a few Roman buildings and a certain number of fragments of the Hellenic enclosing wall. Regular excavations would now be required to produce fresh discoveries at Locri. But I was enabled to prove to how slight a depth they would have to be carried in order to lead to important results. In the property of Marasà, belonging to Signor Scaglione, syndic of Neolocri, in a search for freestone for the construction of the new town, the workmen have uncovered, some six feet below the surface, and are now demolishing, without so much as making a drawing, the foundations of a large Greek edifice, which must have been one of the chief temples of the town, or rather of its *proasteion* by the sea. It constitutes a massive parallelogram, built of enormous blocks, admirably shaped and fitted together without cement, but rivetted together with cramps set in lead. This parallelogram is surrounded with a flight of steps on the three sides which have been uncovered. Some bronzes were found in these excavations; but the proprietor absolutely refused to allow me to see them. In the hands of different inhabitants of Gerace and Neolocri I was able to examine merely a few objects of very secondary value from the territory of the ancient city. I was, however, surprised to find in the possession of various owners seven *scarabæi* of carnelian and striped agate, similar to those discovered in Etruria. There is likewise a considerable number in the Raccolta Cumana at the Naples Museum, derived from the excavations of the Principe di Siracusa. We might have supposed the latter to have been brought from Etruria to Cumæ, but it is very difficult to imagine this in the case of Locri. I should rather be disposed to conclude from these facts that at some particular epoch the custom of carving *scarabæi* in hard stone must have existed among the Greeks of Southern Italy, as it has been proved to exist in Greece proper. According to this hypothesis, it would be the Hellenes who transmitted it to the Etruscans, like so many other usages which it was at first thought possible to refer to a directly Oriental source.

While traversing the site of the town of Locri, the visitor can still trace amid the plantations, in spite of the effects of cultivation, the main features of its topography. Strabo tells how, when Evanthès landed, at the head of a colony of Ozolian Locrians, to found a settlement on the east coast of Italy, he first dwelt for some years at Cape Zephyrium, but speedily discovered a little to the northward a more advantageous site for his city. He built it on a somewhat high table-land, which, from its agreeable position and its fine view over the surrounding plains, had gained the name of Esopis. This table-land, which is reached from the sea-shore by an almost imperceptible ascent, is on the left bank of the river of Sant' Ilario. Its centre is occupied by the farmstead called Casino dell' Imperatore, built precisely on the ruins of a Doric temple, the columns of which were still in great part standing less than a century ago. The last remaining column was not thrown down till 1828. To the north-west a deepish ravine, shaded with oaks and chestnuts, hides an aqueduct of Greek work, mentioned by Strabo in a passage which has only reached us in a mutilated form. This aqueduct, now called Fontana dell' Imperatore, is hewn out of the rock; its opening is pretty wide, but so low that you can only enter it by crawling on your hands and knees. It runs several hundred yards into the mountain, and ends in a square chamber, tolerably spacious, in which you can stand upright. The water brought by this subterranean channel is sensibly diminishing; it has formed itself a way through the fissures

of the rocks, and escapes a few feet below the ancient outlet. A little torrent, dry throughout the greater portion of the year, runs out of this channel to the sea.

To the rear of Casino dell' Imperatore, looking toward the heights, is an important fragment of Hellenic wall, running from north to south, to which the name of Cusemi is given. This is the remnant of a fortified wall which divided the city into two parts, the eastern and western, the upper town and the lower town. Above Cusemi, in what was the upper town, which must represent pretty nearly the old city of Evanthès, the ground becomes hilly and irregular. To follow the line of the ancient ramparts, which shut in the city on the north side, you must skirt the ravine through which the Fontana dell' Imperatore flows, and make by a winding path for a high point, fortified in ancient times, and designated by the modern name of Mannella. To the south-east of this hill another is seen, only separated from it by the very narrow gorge of the Abadessa, in which fragments of painted vases, with black figures, and heaps of earth newly overturned, mark the spots where the tombs have been ransacked. A strong wall of Greek construction, and in a cottage the first courses of a square tower, betoken the site of an important fortress, which is named Saitta, on this height. To the south a little valley runs between Saitta and a third summit, Il Castellace, on which are still visible some remains of fortifications, among others a fine Greek tower half in ruins. All this constitutes what the inhabitants of the country still call I tre Castelli, and what formed practically a three-fold acropolis for the town of Locri. When Livy, in his thirty-ninth book, tells the history of Hannibal's attempt to retake Locri from the Romans, he speaks, it is to be noticed, of several distinct citadels. The Proprætor Q. Pleminius, coming from Rhegium, succeeded in surprising one of these fortresses, evidently that of Castellace, and the city itself declared in his favour. During this time Hamilcar, with the Carthaginian garrison, had entrenched himself in the other citadel—that is, on the summits of Saitta and Mannella, and from thence kept the Roman troops in check. Hannibal, on receiving intimation of these events, pitched his camp on the River Butrotus, very near Locri—that is, on the river which runs at the foot of Gerace, and flows into the sea by Neolocri. Thence he communicated with Hamilcar, and concerted with him a combined and simultaneous attack upon the city. Leaving the shelter of the acropolis, which he still held, Hamilcar assaulted it on the north-west, while Hannibal vainly sought along the line of the northern ramparts, moving in the direction of the sea, for a point where he could storm with a prospect of success. But toward evening on the first day of the struggle, Scipio himself, who had hurried up from Messina with his fleet, effected a landing at Locri, and threw his legions into the town. At daybreak next morning they made a successful *sortie* upon the army of Hannibal, who was advancing to deliver his assault. The enterprise was thenceforward doomed to failure. Hannibal sent orders to Hamilcar to evacuate the fortresses which he still held; Hamilcar obeyed, burning the adjoining quarter to cover his retreat. Afterward, when Hamilcar had joined him on the Butrotus, Hannibal hastily broke up his camp and retired inland to Bruttium. The whole narrative of the Latin historian becomes strikingly clear when studied on the spot.

The necropolis, which has already yielded so many painted vases, consisting chiefly of those fine *lekkythoi*, with a white ground and designs in deep black, almost as graceful as those of Athens, to which the name of "lekkythoi of Locri" has been given, although vases of the same type are found in Sicily and Greece, lay on the western slopes of the hills of I tre

Castelli. Although it has already been greatly disturbed by irregular researches, it would still furnish a rich field for excavations.

The lower city, to the east of the wall of Cusemi, as you go down to the sea, appears to have been the only part inhabited in Roman times. At least, the ruins of this epoch, which are absolutely wanting in the higher city, are very numerous here, especially in the farms of Stragò and Centocamera, and near the Torre di Portigliola, inaccurately called Torre di Gerace in all the geographies. The Hellenic wall which enclosed this part of the city to the south, along the river of Sant' Ilario, can be still partially traced in the farm of Stragò. And from thence the ancient remains occur almost uninterruptedly amid the fields as far as the torrent which runs down from the ravine of Fontana dell' Imperatore. In this interval is the estate of Marasà, where I have just mentioned the discovery of the foundations of an important temple. A suburb, with its buildings more widely scattered, appears to have extended to the mouth of the River Butrotus.

Although the sea washed the foot of its eastern ramparts, some traces of which are still to be seen at Torre di Portigliola, the town of Locri possessed, strictly speaking, no port, but merely an open roadstead, exposed to every wind, which was only tenable in fine weather, and where ships, when it blew a gale, ran considerable risk of a disaster like that which befell Pyrrhus' fleet and was attributed to the wrath of Persephone. Here, therefore, it was out of the question for the Locrians to moor their triremes and to have their naval arsenal. Their military port was about eighteen miles south of the town, and still exists, in a very good state of preservation, between the little town of Bianco-Vecchio and Cape Bruzzano. Excavated by the hand of man, it now forms a circular *lagune* communicating with the sea, and its general aspect closely recalls that of the port of Metapontum. There in all probability was the spot, close to the promontory of Zephyrium, where Evanthès originally established his colony. Perhaps we must recognise here the Hipporum of the Itinerary of Antonine, if we allow that it was at this precise spot, and not merely at Decastadium, that the road, the stations on which are therein enumerated, struck the sea.

Reggio is entirely a modern town, preserving no vestige of the ancient Rhegium. The nature of the ground, however, enables us to recognise beyond all possibility of doubt the spot which the acropolis must have occupied—the same spot on which the castle afterwards stood in the Middle Ages. There is no public museum or private collection of antiquities at Reggio.

As I passed from Reggio to Messina, and thence sailed direct to Naples, I was not able to explore the coast of Magna Græcia on the Tyrrhenian Sea, as I had explored that of the Ionian Sea. But I have still to jot down a few observations on certain antiquities of Campania, which will form the subject of a concluding letter.

FRANÇOIS LENORMANT.

THE EXHIBITION OF THE ROYAL SCOTTISH ACADEMY.

THE exhibition of the Royal Scottish Academy, which opened to the public last week, is not one of very unusual merit. It contains few pictures of quite exceptional excellence, but the average of the works shown is high. The Academicians are well represented, the productions of several of the younger artists show a marked advance in technical skill, and several excellent pictures are contributed by the Scottish artists resident in London. Of these last, the majority will be well known to frequenters of the metropolitan exhibitions. They include Mr. J. MacWhirter's *Three Graces*; Mr. Erskine Nicol's *Interviewing*

their Member; Mr. Pettie's *Rob Roy*, A Member of the Long Parliament, and his portrait of *Alex. Watt, Esq.*, in sixteenth-century costume; Mr. Orchardson's *Revolutionist*; and Mr. Archer's *Sacrifice to Dionysus* and *Portrait of Herr Joachim*. Mr. Millais contributes two delicate heads, portraits of his daughters; and M. Portaels, among other works, a large historical scene, *The Prayer of Judith*.

Turning to the works by local artists, we have two very poetic subjects by Sir Noel Paton. The larger, *A Dream of Latmos*, is a circular canvas. In the foreground lies the youthful shepherd among the blossoming grass and trailing honeysuckle, his breast half covered with a purple robe and tiger skin, his hunting spear held in one hand. Bending above him is the fair form of the divine huntress, her head encircled by the yellow disc of the full moon. A smaller picture depicts *The Vision of Sir Galahad*. The youthful knight is seen mounted on a white charger, his head uncovered and bowed in reverence as the "gentle sound" reaches his ears, and the midnight sky is illumined by the "awful light" which encompasses the angels that bear the Holy Grail. The armour and equipments of the knight and his steed are given with the artist's accustomed care and precision, and the landscape background is especially impressive, with its distant mountain peaks, behind which rises the crescent moon, casting a line of light on the lonely tarn below. Mr. W. E. Lockhart shows several effective water-colours; among the rest a very large interior of *King's College Chapel, Aberdeen*, with fine treatment of the rich tones and details of the carved oaken stalls. His single oil picture has all the splendour of colour and vivid dramatic action which are characteristic of the artist. It shows the interior of Cardinal Beaton's chamber in St. Andrews Castle on the eve of his murder. His assailants have fired the door, against which the servant is placing a cabinet for defence, and beside which he stands, clad in his red habit, armed with a two-handed sword and prepared to defend himself to the last. Mr. George Hay gives us a very bright sunny picture, *The Spinners*, of which the technique recalls that of Mr. Orchardson. Mr. Hole sends two effective scenes of bygone times, *A Straggler from the Chevalier's Army*, and a last-century dance, *Christmas Eve at the Squire's*. One of the last elected Associates of the Academy, Mr. Lawton Wingate, shows the most important work he has yet produced, a scene with village *Quoilers*, the landscape surroundings, with the sunset burning in the west and great masses of rosy clouds floating overhead, being specially fine. Among the landscape painters, Messrs. Smart and Fraser, Beattie Brown, Waller Paton, and McKay are as usual prominent, and there is a considerable display of the works of Mr. Cassie, a late Academician. Mr. K. Halswell shows a very passionate scene of chill sky and gathering storm; and Mr. J. C. Noble sends several powerful river subjects, with foreground shipping, and grand treatment of great expanses of sky. Mr. George Reid contributes a noble piece of still life, a study of crimson roses. In portraiture the exhibition is strong, the President Sir Daniel Macnee, and Messrs. George Reid, Norman Macbeth, Herdman, Irvine, and M'Taggart, all contributing notable work. Mr. Robert Gibb shows a very excellent head of the late Lord Provost Law; Mr. W. P. Adam and Mr. John H. Lorimer maintain the prestige of previous years; and another young artist, Miss M. Hope, has two works of great promise, very original and picturesque in treatment—*The Student*, busy with his books in an old-fashioned shadowed room; and a portrait of a child, seated on a stair, with pleasantly arranged accessories of gathered flowers and a growing Nile lily.

J. M. GRAY.

ART SALES.

MESSRS. CHRISTIE, MANSON AND WOODS sold recently the large collection of ancient and modern drawings belonging to Mr. Benoni White, the eminent dealer, long of Brownlow Street, Holborn. The drawings perhaps hardly formed as important a part of the collection which this aged dealer left behind him as did the pictures and engravings which were dispersed under the hammer at Messrs. Christie's last season; but they contained a very large representation of the minor, yet still respectable, artists of the early English school, especially of draughtsmen in the medium of water-colours. Mr. Benoni White had long been known for possessing an acquaintance, not only with this school, but with the art generally. Hardly anything that occurred at his most recent sale at Christie's requires detailed record. No very large price was realised for any one example, though the entire collection, inclusive of ancient and modern work, fetched about two thousand pounds. Noticeable among the drawings by Old Masters were a few by Canaletto, of quality unusually fine, and thus, unlike too many others of the drawings, claiming regard, not solely for the authenticity of their attribution, but for their actual merit.

YESTERDAY, or the day before, Messrs. Sotheby, Wilkinson and Hodge were to sell, by order of the trustees, the collection of blue and white china formed by Mr. J. A. M. Whistler, and a certain number of the works of that artist, removed from the White House, Fulham. Messrs. Christie, Manson and Woods are to sell to-day, along with some pictures from another collection, the assemblage of pictures formed by the late Mr. Lionel Lawson, of the *Daily Telegraph*. This includes, besides certain Old Masters and some examples of the elder English school, a somewhat famous example of Boucher, *The Mask*, from the Novar collection.

NOTES ON ART AND ARCHAEOLOGY.

MR. HAMO THORNYCROFT has just finished and sent to the foundry a small figure, two and a-half feet high, which will appear in bronze in the forthcoming exhibition of the Royal Academy. It is entitled *Putting the Stone*, and represents a young athlete at the moment when the missile is ready to fly from the palm of his hand. The weight of the figure is entirely on the right foot, and the great charm of the composition is the contrast between the slack extended limbs of the left side, and the tense, contracted muscles of the right. The treatment of the nude is very accomplished, and shows the rapidity with which the sculptor is advancing in knowledge and skill. Mr. Thornycroft may have a still more important statue ready for the Royal Academy; we hope to describe this when it has more nearly approached completion.

PROF. W. B. RICHMOND is at work on a large picture, sixteen feet long, and containing eighty figures, a composition of great vigour and originality. It represents the triumph of the Israelites over the Egyptians. The army marches with blowing of trumpets and shawms, Miriam dances before it with her timbrel, and the embalmed mummy of Joseph is borne in state in the midst of the procession.

THE death of old M. Walferdin, the veteran collector—as well known as an accomplished amateur as he was as a man of science—does not set free the collection of the works of Fragonard which was his chief artistic possession. It is now many years ago since M. Walferdin sold for an annual pension to be continued to him "for the term of his natural life" the collection of Fragonards which he had already formed.

These are, therefore, now, upon M. Walferdin's death, the property of the noble man who years ago secured the reversion to them. But we understand that M. Walferdin did not relinquish the pursuit of Fragonard at the period of his making the bargain already alluded to, and that all that his diligence enabled him to add, at a period of his life when he was at least an octogenarian, is now free for dispersion among his many brother collectors. Fragonard, whom the English public does not know at all, may now conceivably be better known and more correctly appreciated; though it is hardly likely that more extended acquaintance will result in ensuring him the rank which the fashionable criticism of the time claims for him in France.

THE new number of the *Etcher* gives us a rather disappointing bit of river and boating scenery—*Boat Building on the Yare*—by Charles J. Watson; a quaint bit of Abbeville, sympathetically drawn by Mr. Walter Burgess; and two poetically intentioned, but not powerful, scenes of the every-day country by Mr. Ball. A few art notes are now added to the *Etcher*, and the innovation is a good one.

WE have received from Messrs. Virtue and Co. the first number of a publication called *Remnants of Old Wolverhampton*—a series of etchings with descriptive letterpress. The attempt to preserve a record of what is still interesting in a haunt of modern manufacture is of course praiseworthy, and it has our best wishes, nor has it wholly failed. But the etchings are scratchy.

THOSE interested in the preservation of ancient monuments will be gratified to know the termination of the Pont-l'Abbé case. It will be remembered that the Carmelite cloisters of that town were advertised for sale in the *Times* a few weeks back. Mr. G. P. Boyce sent the advertisement to M. A. Guillon, the landscape painter, who made the fact known to the French public through the medium of the press. His effort to save the monument was warmly supported by several journalists, and, among others, M. H. Fouquier wrote an able article on the subject in the *XIX^{ème} Siècle*. A few days after its appearance, the latter received a note from M. le Ministre des Beaux-Arts stating that he had considered the case, and had granted 2,000 frs., to be added to 15,000 frs. voted by the municipal council of Pont-l'Abbé, to complete the purchase of the cloister, which was thenceforth to be the property of the Commune in perpetuity. The *Moniteur des Arts*, in chronicling the circumstance, concludes with "*Merci à MM. Boyce et Guillon de leurs généreux efforts, et compliments pour leur succès*"—a sentiment we cordially endorse. In Englishmen this little incident is calculated to awaken feelings of the profoundest astonishment. For a Right Honourable Barnacle to take such interest in an historic monument as to devote money for its conservation would be remarkable; but for him to be influenced by a newspaper article, and, furthermore, to inform the writer of that article that he had acted on his suggestion, would be for us, at present, a notion too wild for credence.

It is stated, apparently on good authority, that the Commission in Rome which watches over national monuments and works of art has determined that the scouring of the marble exterior of the Cathedral of Florence shall be arrested. It is to be regretted that they did not sooner oppose the proceedings of the architect of the church. He has chiselled over a great portion of the ancient edifice, removing entirely the golden yellow conferred by age, and, it is said, has whitened the statues by the use of acids. It is to be presumed that the renewal of many blocks of marble was absolutely necessary, but it would have been better to tint these rather than to chisel over the ancient work to make all equally white. No

doubt the masters who built the cathedral meant the marbles of which it is constructed to be seen of their natural colours; but they must have known perfectly well, from the numerous specimens of ancient buildings then existing in Italy, that time would change the hues of their work. It is to no inconsiderable an extent a misfortune that the marble statues in particular become yellow, brown, and almost black in parts, while some prominent features remain pure white, and that they are now seen under an aspect which not only diminishes their beauty, but must be something very different from the sculptors' intentions; but this is no reason whatever for chiselling or otherwise tampering with their surfaces. Much of the blackness is due to the accumulation of dirt and dust which afflicts Florence in consequence of the softness of the pavement. This might be washed away with pure water without injury to the sculpture. It is evident that the parts which remain clean are washed by the rain, and are not thereby injured. It is matter for rejoicing that the chiselling of surfaces and the other barbarisms which have been too long in progress are at last arrested. Time will so far repair them and replace the rich colouring so ruthlessly removed; but as this has been done by chiselling and not by polishing, the original surface of the marble is broken up, and it may never again recover an equal tint. Chemistry might suggest some means for tinting the new white blocks which are so disfiguring.

SIGNOR BERTOLOTTI is to publish next month a work on the Belgian and Dutch artists at Rome in the sixteenth and seventeenth centuries.

SOME months ago we had occasion to notice with high praise the admirable series of reproductions from Turner's sketches for the *Liber Studiorum* which were then being issued by the Autotype Company. Undoubtedly the etched line lends itself better to reproduction than mezzotint engraving. The difficulties in the way of a satisfactory rendering of mezzotint are indeed great; yet it may be supposed that the Autotype Company has found some means of overcoming them, for they have in preparation "a new edition of the *Liber* facsimiled from rare prints in the best states, lent by the Rev. Stopford Brooke." Judging from a few examples of plates intended for this new edition that have been shown to us, we can safely affirm that they far excel any hitherto issued. One of the plates which have already been printed is that known as *The Bridge in Middle Distance*, and another is the splendidly luminous view of Basle, with the sun's rays streaming over river, bridge, and houses. In both these, as well as in the ominous sky and gloomy downs of *Hind Head Hill*, the effect of passing light so admirably expressed in the print is rendered with the utmost faithfulness; indeed, it is astonishing to see how little is lost of the beauty and softness of these world-famed prints in the reproductions that modern science has made possible. We would especially commend them to the notice of art institutes, provincial museums, and educational establishments of all kinds. The study of such works is in truth an art education in itself.

WE have received from Messrs. Trübner and Co. the first three numbers of a magnificent work on decorative art and costume which is now being published in Germany. It is entitled *Trachten, Kunstwerke und Gerüthschaften*, and the examples it gives in illustration are taken from works of art ranging from the earliest Middle Ages to the end of the eighteenth century. All these examples are most carefully printed in colours, sometimes on a gold background like the originals, and always with a delicacy and finish of detail that

produces a very rich and beautiful effect. Some of our readers may perhaps be acquainted with this work in its earlier form, for it first came out in numbers extending from 1840 to 1854, under the title of *Costumes of the Christian Middle Ages, from Contemporary Monuments*. This was followed by another series dealing more especially with the miniatures, furniture, utensils, &c., of the Middle Ages and Renaissance periods, which was not completed until 1863. Now both these works are united, and a new edition brought out, which has been thoroughly revised by the learned author, Dr. J. H. von Hefner-Alteneck, whose labours, begun in 1840, now reach a most satisfactory termination, for during this long interval the processes of printing in colours have been greatly perfected, so that the new edition far exceeds the older ones in richness of colour and accuracy of reproduction. It is, in truth, a work such as is seldom undertaken by private enterprise, and we heartily wish it the success it deserves. To students of the culture, manners, and costumes of the Middle Ages and Renaissance it offers a most valuable source of information.

THE idea of the volume *The Year's Art*, compiled by Mr. M. Huish and lately published by Messrs. Macmillan, is probably due to a French volume of similar character which we some while since had occasion to review, and which dealt with French art matters as the work now before us does with English. Mr. M. Huish's task of compilation must have been somewhat arduous, and, we trust and believe, from the amount of matter incorporated into the volume, is by no means useless; but either he has not escaped error in a labour in which absolute correctness is almost the principal requisite, or else his printer has been allowed to go to press after a not altogether adequate revision of the proof-sheets. Important names are liable to be misspelt, as they should not be in a work that aims to be a book of reference. For van Goyen we read van Gozen, at least once. More than once the well-known collector, the late J. H. Anderdon, is called Anderton; our eminent contributor Mr. Watkiss "Lloyd becomes Mr. Watkins Lloyd; and other misprints or misapprehensions could, of course, be cited, since a very cursory examination has revealed these. We have not come across any particulars with respect to the permanent national collections of Scotland and Ireland, though the English National Gallery finds mention. From the list of books on Art published during the year 1879, which is the year of which this volume chiefly treats, we find omitted Mr. Monkhouse's *Turner*, Mr. Austin Dobson's *Hogarth*, and Mr. Scott's *Little Masters*. The prices of the books that are recorded should in all cases have been given, and not only in a majority of instances. Those art sales of the season which took place at Christie's are chronicled, but little mention is made of any proceedings at Sotheby's, an auction-room which is hardly less the haunt of the collector. There is a list of engravings published during the year which appears to be full and accurate, and should be a warning to the amateur. For it is there set down in black and white how of a popular engraving there are issued in some cases many hundreds in the state absurdly described as "artists' proofs." The purchaser of modern prints is probably not the best advised of investors. The Obituary in *The Year's Art* is very bald, no more than five lines, for example, being assigned to the record of so eminent and poetical a painter as Paul Falconer Poole. But, as we have suggested, the compilation of this volume must have been decidedly laborious, and the writer may next year improve on his present effort.

THE STAGE.

"THE SCHOOL FOR SCANDAL" AT THE VAUDEVILLE THEATRE.

SHERIDAN'S greatest comedy—which is, perhaps, the greatest comedy in English literature—has this week been revived at the Vaudeville Theatre, where, some seven years ago, there was seen the best performance of it that has been witnessed by the younger generation. *The School for Scandal* is again on the whole worthily interpreted, though there are necessarily some changes in the cast. Mr. Howe takes the place of Mr. Farren as Sir Peter Teazle. His performance as that simple-minded, trustful, but testy character is a little warmer than Mr. Farren's, while his appearance may be a little less refined. There is thus not much to choose between the two. Both actors have entered very thoroughly into the part and are equal to its every requirement; and what is strange to notice is the considerable similarity in their performances—a similarity which we attribute not at all to the one having influenced the other, but to both having been influenced by the elder Farren. The common stock from which both Sir Peters spring is visible under the differences of their separate individualities. Again, both performers are well-versed comedians of the elder school, and they have carefully preserved its traditions. With Lady Teazle, as with Sir Peter, there is a change. The death of Miss Amy Fawcitt, preceded by the only too visible and too premature decay of her pleasant and generally spontaneous power, was a loss to those with whom natural vivacity and freshness of interpretation in the art of acting count for much. Miss Kate Bishop is now the Lady Teazle of the Vaudeville, and her performance is at least that of a trained, intelligent, and tasteful actress, incapable, perhaps, of passion or bright enthusiasm, but at least as incapable of grievous offence. Mr. Clayton plays Joseph Surface as he did before, with hearty relish and sly fun, though possibly with somewhat too little indication of the deep treachery of the character. The deceptions of so genial an actor as Mr. Clayton lack the appearance of earnestness; his villany is not only polished and fascinating, as it should be, but apparently superficial. The Charles Surface of Mr. Herbert, who is new to the part, has already been very much praised, and it finds favour with a large proportion of the house. We do not like it. Mr. Herbert is one of the most distinguished young English actors of modern comedy—excellent in bearing and in speech—but he misses the mark in Charles Surface. As Joseph, in Mr. Clayton's hands, is too superficial a villain, so is Charles, in Mr. Herbert's, too profound and permanent a scapegrace. The wrong note is struck at the beginning; the dinner scene, when Sir Harry sings his song, being wanting in unforced vivacity and *élan*; and the same deficiencies in Charles are apparent, we consider, to the end of the performance.

The minor characters—if, indeed, any character can be called a minor character when its outlines have been traced by a hand so certain and so subtle as Sheridan's—are, with hardly an exception, satisfac-

torily filled. Miss Larkin, it is true, was not born to play Mrs. Candour—her habitual expression not suggesting a facile geniality—dangerous to rely upon—but her pointed utterance and her trained intelligence serve her in good stead. Mr. James is a good Moses, though Moses cannot show him at his best. Nothing can be better than Mr. Thorne's Crabtree: a bachelor, with the instincts traditionally assigned to a spinster—of which inordinate love of gossip is the chief. Mr. Lin Rayne, whose Sir Benjamin Backbite was specially remarked during the generally inadequate performance of the comedy at the Prince of Wales's, now repeats that part at the Vaudeville with quite the old success. The fop of the eighteenth century, with that petty patronage of letters that became a man of taste and of quality, is incarnate in Mr. Rayne. Mr. Hargreaves is a good Sir Oliver, his appearance excellently suggestive of that disordered liver which is the fitting penalty of wealth acquired in the Indies. Maria's part was made weak by Sheridan, and Miss Telbin leaves it as she found it. Miss Cecily Richards seems generally too sympathetic to appropriately embody Lady Sneerwell; and if she overdoes anything in the part, it is not the sneer, but "the mellowness," which Mr. Snake declared to be its characteristic. She is, if anything, a trifle too pleasant.

We will venture on a couple of suggestions to the managers, to whom we owe what is, on the whole, an admirable performance of this play. The first is the suppression of as much as possible of the "gag," some of which has during the course of years gradually crept into the dialogue, and some of which would appear to have been introduced more suddenly. If the "gag" cannot be wholly removed, it may, at all events, be weeded. Will any actor have the courage, for instance, to omit the very vulgar "clack, clack, clack," with significant gesture of the thumb behind the shoulder, with which in the screen scene Sir Peter indicates to Charles the whereabouts of "the little French milliner"? The laugh which it invariably wins is bought at the cost of complete departure from Sir Peter's true character. Our second suggestion is that something may be added. Mr. Herbert and Mr. Lin Rayne, Miss Bishop and Miss Richards should dance the minuet. Its introduction at the Prince of Wales's revival was a reasonable thing, and it should become a tradition. FREDERICK WEDMORE.

STAGE NOTES.

ON Saturday night, Mr. W. G. Wills's new play, *Ninon*, was brought out at the Adelphi Theatre, on the occasion of Miss Wallis's re-appearance in London. If *Ninon* at the Adelphi does not throughout maintain the dramatist's work at its highest level, it is yet far more creditable to Mr. Wills than his *Forced from Home* at the Duke's. *Forced from Home* is a good, honest melodrama of the kind that was popular forty years ago, and that still has a chance denied to poetic art. In it we meet the wronged maiden and the highly bred seducer whose acquaintance we have formed before. It is work which a writer may choose to do to meet a demand, but which will not add to his

reputation. In *Ninon*, on the other hand, reputation has been thought about. The play not only abounds in situations—it has poetical lines, appropriate thought expressed in forcible words. The scene is laid at the time of the French Revolution, but the events of the Revolution are seen as in the background, only one historical character—the character of Marat—being introduced, and there is little hint of Charlotte Corday. The interest of the play is a good deal concentrated upon the uncertain loves of its heroine, who is represented, of course, by Miss Wallis. Miss Wallis acts with feeling and some grace, and entirely to the satisfaction of the audience. The chief male character is played by Mr. Neville not less acceptably, while an important part is filled by Mr. Fernandez. There is every reason to suppose that the piece will be a popular success.

AN agreeable revival has taken place at the Imperial Theatre—that of Mr. Tom Taylor's version of *The Vicar of Wakefield*. It will be performed for but a limited number of nights, as *As You Like It* is promised for no distant date. The cast is decidedly strong. Mr. Farren plays the Vicar with subtlety, feeling, and refinement; Miss Litton is at the same time a sprightly and a distinguished Olivia, and Mr. Lionel Brough pleases in a character well suited to him. The performance will hardly fail to interest the better class of playgoers, or those to whom a dramatic version of *The Vicar of Wakefield* is still unfamiliar.

TO-NIGHT Mr. Charles Warner repeats for the last time the powerful but repulsive performance which has given him a notoriety denied to his earlier and quieter efforts. He appears at the same theatre, the Princess's, on Monday, in the revival of *The Streets of London*. The long list of revivals recently made, and to which that of Mr. Boucicault's sensational play is now to be added, is perhaps the most complete answer to the question recently asked whether we have really a lack of original dramatists of power.

MR. HENRY MURRAY, who has an hereditary right to success on the stage and in the lecture-room, is the latest important candidate for public favour as a reader of Shakspeare. He has been delivering at the Steinway Hall recitations from *Othello*—the play compressed into a two hours' entertainment. Mr. Murray has valuable gifts, both of *physique* and of intelligence, and the discretion of his reading finds favour with audiences. His interpretation is habitually thoughtful and well considered.

M. CHARLES BIGOT, the well-known political writer on the *Dix-neuvième Siècle*, has added to his habitual work the, in Paris, important labours of a dramatic critic. He writes the dramatic *feuilleton* of the *Siècle*, the journal to which he was attached in a political capacity before his engagement on the *Dix-neuvième*.

THE actors of Italy have conceived the plan of founding an hospital for old and decrepit members of their profession. The house chosen by them for this purpose is the Royal Castle of San Michele in Bosco, near Bologna, once an old monastery, and inhabited by Pius IX. when in that city. They propose that in this mansion old actors and their families shall reside, and that their children shall here receive gratuitous instruction. Over twenty troupes of comedians have given their assent to this proposal, and promise a contribution of 800 Lire a month. Besides this, the embryo society hopes that the city of Bologna and the State will contribute funds.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,
186 Strand, and Messrs. CURTICE & Co.,
Fleet Street, and Catherine Street, Strand.

MEMORY EXTRAORDINARY by
CORRESPONDENCE.—Particulars post-free of Mr. STOKES,
Teacher of Memory, Royal Polytechnic, 309, Regent-street, London, W.
Class on Tuesdays. "Stokes on Memory," by post 14 stamps. Residence,
5, Margaret-street, Cavendish-square, London, W.

BOOKS.—Upwards of 100,000 Volumes
In various departments of Literature constantly on Sale at SANDELL
& SMITH'S Cheap Book Warehouse, 136, City-road, London, E.C. Estab-
lished half-a-century. Catalogues gratis.
Books bought in any quantity, and the utmost value given in cash, thus
avoiding the expense and uncertainty of auctions.

ANNOUNCEMENT.
HOW TO WORK WITH THE MICROSCOPE.
BY LIONEL S. BEALE, F.R.S.
The Fifth Edition, much enlarged, with 100 Plates, price 21s., ready
October 20th.
HARRISON, Pall Mall.

AUTOTYPE.
PERMANENT PHOTOGRAPHIC BOOK
ILLUSTRATIONS.

The AUTOTYPE COMPANY are producers of Book Illustrations by the
Autotype and Sawyer's Collotype Processes. Employed by the Trustees of
the British Museum, Palaeographical, Numismatical, Royal Geographical,
and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings,
Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illus-
trations are:—

1st. The absolutely facsimile nature of the result.
2nd. Its Cheapness for Small Editions of 500, 500, &c.
3rd. The Prints being direct on the Paper there is an absence of all
cockling and that disagreeable effect inherent to all Mounted Prints.

* For Terms and Specimens apply to the Manager.

The AUTOTYPE COMPANY have taken TEMPORARY OFFICES (No. 11,
Rathbone-place), during the RE-BUILDING of their FINE-ART GALLERY,
recently destroyed by collapse and fire. The stock of copies of Drawings by
the Great Masters, of reproductions of the chefs-d'œuvre of the Art
Galleries of Europe, and the Examples of the works of Modern Artists, is in
process of replacement.

Now ready, price One Guinea.

"THE TIED PIPER OF HAMELIN." Illustrated by Jane E. Cook.
Second Edition (1880). Published with the kind permission of Mr.
Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and
fancifully illustrated Mr. Browning's charming poem."
Academy, January 8th.—"The artist has not neglected the oppor-
tunity of portraying beauty and a character that is curiously comic. She
has entered thoroughly into the spirit of the story told so brightly by Mr.
Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all
the characters."

In preparation.

A NEW EDITION OF TURNER'S "LIBER STUDIUM." Facsimiled
from Rare Prints in the best "states" lent by the Rev. Stopford Brooke,
M.A.

TEMPORARY OFFICES, during the re-building of the Fine-Art Gallery,
at No. 11, RATHBONE PLACE.

DURRANT'S HOTEL,
GEORGE STREET, PORTMAN SQUARE, LONDON.
For Families and Gentlemen. CHARLES DARRANT, Proprietor. Suites of
rooms from 5s. 6d. per day.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a
faithful compound of Quinine, the active principle of Yellow Cinchona, or
Peruvian Bark, blended with a refined, trustworthy preparation of Iron,
produced in a form which the experience of many years has proved the
best. It offers a ready means of gaining the strength and other benefits
afforded by Quinine and Iron, without any fear of ill consequences.—The
name of J. PEPPER is signed in red ink on the label.

Just published, in 1 vol., crown 8vo, price 12s.

HUGH HERON, CH. CH.: an Oxford Novel.

By the Rev. R. St. JOHN TYRWHITT,

Formerly Student and Rhetoric Reader of Ch. Ch., Oxford.

LONDON: STRAHAN & COMPANY (LIMITED).

PAINLESS DENTISTRY.

MR. G. H. JONES,

Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—“Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which reader my satisfaction and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name.”

“G. H. Jones, Esq.”

“S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

“It is strictly pure, and well manufactured in every way.”

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

“If properly prepared, there is no nicer or more wholesome preparation of Cocoa.”

Food, Water, and Air, Edited by Dr. HARRALL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—“A delicious preparation.”

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. F. PERP, 227, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 6d. and 4s. 6d. each. Sold by all Chemists.

NEW AND IMPORTANT ETCHING

By M. RAJON.

M. RAJON is at present completing for

the Scottish Royal Association for the Promotion of the Fine Arts an important Etching about 18 inches by 12—an interior with nine figures—after the picture of "The Legend," by the late G. PAUL CHAMBERS, R.S.A., now in the National Gallery of Scotland.

The following are the different States open for subscription:—

10 Artist's Proofs	90 Guineas.	All subscribed.
100 Proofs before Letters	5 Guineas.	
200 Lettered Proofs	2 Guineas.	
Prints	1 Guinea.	

For each Guinea the Subscriber will also have one chance in the Distribution of Paintings to be made by the Association in July next.

Subscriptions should be intimated without delay to H. W. CORNILLON, Secretary and Treasurer to the Association, 130, George-street, Edinburgh. These prices will be doubled after 31st July, 1880.

WAURIN'S CHRONICLES OF THE ENGLISH.

Now ready, in royal 8vo, pp. 496, price 10s., half-bound.

RECUEIL des CRONIQUEs et

ANCIENNES HISTOIRES de la GRANT BRETAGNE, a present nomme ENGLETERRE (from A.D. 1422 to A.D. 1431). Par JEAN DE WAURIN, Seigneur du Forestal. Edited by WILLIAM HARDY, F.R.S., Deputy-Keeper of the Public Records; and published by the authority of the Lords Commissioners of H.M. Treasury, under the direction of the Master of the Rolls.

These two books of Waurin's Chronicle—a contemporary record of great historical interest and of undoubted authenticity, although unfortunately a fragment—deal with a stirring episode of French medieval annals, beginning with the death of Charles the Well-beloved in 1422, and include the career of Joan of Arc, to her execution at Rouen in 1431, which is related to the Duke of Burgundy in a letter from King Henry VI. (of England).

Now ready, in 2 vols., 8vo, 30s.

CONVERSATIONS WITH DISTINGUISHED PERSONS DURING THE SECOND EMPIRE.

FROM 1860 to 1863.

By the late NASSAU W. SENIOR.

Edited by his Daughter, M. C. M. SIMPSON.

"Mr. Senior's 'Conversations with M. Thiers, M. Gaisot, &c., published about a year and a-half ago, were the most interesting volumes of the series which had appeared up to that time, and these new 'Conversations' are hardly, if at all, less welcome and important. A large part of this delightful book is made up of studies by various critics, from divers points of view, of the character of Louis-Napoleon, and of more or less vivid and accurate explanations of his tortuous policy. The work contains a few extremely interesting reports of conversations with M. Thiers. There are some valuable reminiscences of Lamartine, and, among men of a somewhat later day, of Prince Napoleon, Drouyn de Lhays, Montalembert, Victor Cousin, Renan, and the Chevaliers."—*Athenæum*.

DIARY of a TOUR in SWEDEN,

NORWAY, and RUSSIA in 1827. By the MARCHIONESS OF WESTMINSTER. 8vo, 15s.

"A bright and lively record."—*Athenæum*.

LODGE'S PEERAGE and BARON-

ETAGE for 1880. Under the Especial Patronage of HER MAJESTY. Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the Arms beautifully engraved, 5s. 6d., bound gilt edges.

"This work is the most perfect and elaborate record of the living and recently deceased members of the Peerage of the Three Kingdoms as it stands at this day. It is a most useful publication. We are happy to bear testimony to the fact that scrupulous accuracy is a distinguishing feature of this book."—*Times*.

THE NEW NOVELS.**A SYLVAN QUEEN. By the**

AUTHOR OF "HACHEL'S SECRET," &c. 3 vols.

LILY of the VALLEY. By Mrs.

HARDOLPH, Author of "Gentianella," &c. 3 vols.

YOUNG LORD PENRITH. By

JOHN BERNICK HARDWOOD, Author of "Lady Flavia," &c. 3 vols.

"An interesting and well-told story. The plot is exciting and yet natural. The character of Penrith is very well conceived and worked out, and Maud, the heroine, is a most enchanting young lady."—*Post*.
"The story of 'Young Lord Penrith' makes pleasant reading. The style is easy and fluent, and the interest well sustained."—*Scotsman*.

IN the SWEET SPRING-TIME.

By Mrs. MACQUOID, Author of "Patty," "Diano," &c. 3 vols.

"A most interesting story, written in Mrs. Macquoid's best style. It abounds with dramatic situations, and is not wanting in pathos and humour. It is a delightful and refreshing book, in every way deserving of popularity and worthy of its author's reputation."—*Post*.
"Mrs. Macquoid's new story is a graceful and artistic piece of work, pleasantly readable."—*Academy*.
"A bright and pleasant tale."—*Scotsman*.

FRIEND and LOVER. By Iza

LUFFUS HARDY. 3 vols.

"A powerful story, well worth reading. The plot is ingenious, original, and yet perfectly natural. Miss Hardy's sketches of character are truthful, vivid, and exceedingly graphic. It is decidedly one of the best-written books of the season."—*Post*.

THE GREATEST HEIRESS in

ENGLAND. By Mrs. OLIPHANT. SECOND EDITION. 3 vols.

"The Greatest Heiress in England" should add to Mrs. Oliphant's reputation. It is noticeably good among the great number of her good novels. The story runs along pleasantly, and maintains the reader's interest completely throughout."—*Athenæum*.
"This book is a delightful one—fresh, interesting, and well written. It deserves to take rank among the best works of the author."—*Examiner*.

LITTLE MISS PRIMROSE. By

the Author of "St. Olave's," &c. 3 vols.

NEW BIBLE COMMENTARY.

Messrs. CASSELL, PETTER, GALPIN, & CO. will publish in

MONTHLY PARTS, price 7d.,

TO BE COMPLETED IN 84 PARTS,

THE NEW TESTAMENT COMMENTARY FOR ENGLISH READERS.

Edited by C. J. ELLICOTT, D.D., Lord Bishop of Gloucester and Bristol.

Part 1 ready March 24, 1880.

EXTRACTS FROM THE PREFACE.

"THE present Commentary may in many respects claim to be considered as new in its design and construction, and as an attempt to supply a need which has been long and seriously felt by meditative readers of God's Holy Word.

"We have at present no Commentary of the New Testament which addresses itself especially to that large and increasing class of cultivated English readers who, believing the Holy Scriptures to be what an ancient writer has defined them to be—'the true sayings of the Holy Ghost'—and knowing and feeling them to be living and abiding words, desire to realise them, and to be able intelligently to apply them to their daily wants and to the general context of life around them. This class largely includes those who are unable to read the Holy Scriptures in their original languages, and to whom the many valuable commentaries, based on the original text, which this country and Germany now freely supply, are unavailing and inaccessible. And yet, even if they could read them, they would hardly find in them all they want.

"No class feel more sensibly the need of this vital element in the interpretation of Holy Scripture than the large and intelligent body of thoughtful men and women to which we are especially addressing ourselves. They feel the storm and stress of intellectual difficulties; they realise, often vividly and acutely, the trials to which the childlike faith of early days is now being increasingly subjected; they see old landmarks disappearing, old truths undergoing modification and change, and, in their deep anxiety, they turn, with the true and deep instinct of the Christian soul, to that which they feel inwardly changes not—the enduring and abiding Word of God. They turn to it; and it speaks to them, for it is a living Word; but its consolations are often only imperfectly appreciated, its truths far from fully realised, its promises very inadequately recognised to be the true moving principles of a pure, chivalrous, self-denying, and holy life. They need the sympathetic interpreter. They need one to guide them who has thought as they think, who feels as they feel—one who, from no mere ecclesiastical standpoint, or the supposed vantage-ground of some half-selfish theological adjustment, but simply from the reverent, loving, and prayerful study of the Book of Life, sets forth to them its ever fresh truths, its ever new aspects, its ever pertinent and timely consolations. Such is the commentator and such the commentary that is now more than ever needed by the earnest general reader in these closing years of a progressive and eventful century.

"It is for these interested readers of God's Holy Word that this Commentary has been more especially composed. Though, as has been already said, the deep needs of those who have not yet realised the Book to be what it is have ever been present to our minds; and though every effort has been made indirectly to set forth that greatest of all evidential arguments, the deep life of the written Word, to each truth-seeking and unbiassed reader, yet our chief thought has been for those who desire more fully to realise that in which, by the mercy of God, they have never been tempted to doubt. How many there are who are now earnestly seeking for that which we are here endeavouring to present to them! The student of Holy Scripture, the Christian father of the family where God's Word is loved and revered, the upgrowing children, the teacher in the Sunday-school or the instructor of the Bible-class, and, last and chief of all, that large class of English readers who feel themselves more and more drawn to God's Word by the very restlessness of the times in which they are living. All these, and such as these, are now earnestly craving to have Scripture brought home to their hearts, and that, too, not merely by interpretation of difficulties, but by meditative comments—comments of our time and age, comments that help to make the Book, not only better understood, not only more revered, but more and more loved, more and more felt to be life to the inner soul as well as light to the appreciative mind."

"It is written, as it professes to be, in the interests of the truth, and under the strong conviction that piety alone is no substitute for logic. The book is admirably printed, and its contents so arranged as to be thoroughly and easily accessible to the student; and a greater boon to students of the New Testament than this Commentary has never, we believe, been published in England."—*Spectator*.

"Never before has so much aid been rendered to Biblical students who, not being scholars by profession, wish to penetrate below the surface, to mark the substantial unity of the inspired narrative amidst much superficial variation, and to understand the grounds upon which the existing canon of sacred Scripture has been received in the Christian Church."—*Saturday Review*.

"It would be hard to conceive a work that should do more to correct and expand popular opinion as to the true nature of the New Testament."—*Academy*.

"This work is a real gain to English Christendom. It will be welcomed by thousands as a help tendered by learning to religion."—*Contemporary Review*.

Prospectuses are now ready at all Booksellers', or will be sent post-free on application to

CASSELL, PETTER, GALPIN, & CO., [LUDGATE] HILL, LONDON.

RICHARD BENTLEY & SON'S NEW WORKS.

LITERATURE.

Our Burmese Wars and Relations with Burma. By Col. W. F. B. Laurie. (W. H. Allen & Co.)

THE object of the present work, as we gather from the title-page and preface, was to place in the reader's hands a connected narrative of our relations with Burma from the date of the first Burmese war down to the present time, and in pursuance of this purpose the author has fused into the volume before us his former works on the subject. The plan, no doubt, was a good one. Of the first war, which occurred within ten years of Waterloo, very few veterans can now be living, while even the events of the second are separated from us by such landmarks as the Crimean War and the Indian Mutiny; but a knowledge of those events is necessary to a right understanding of the subsequent and actual state of affairs, to which the author is equally desirous of drawing our attention. Such a volume would form a useful contribution to Indian history; but consecutive historical narration is—if a man may be judged by his works—precisely the class of composition least suited to the bent of our author's genius. The necessary material, or a good deal of it, is there, and compiled by a writer of long experience and personal knowledge of many of the events described; but the reader who wishes to follow the thread of Burmese history will unravel it with difficulty. Passages from his former works are interwoven with notes, supplementary or contradictory, with extracts from leading articles, from reports, from despatches, from the works of other writers, interspersed with many digressions on things in general. But Col. Laurie is evidently one of those writers who must be allowed to tell their story in their own way. There is a pleasant individuality in his style, which is vigorous, chatty, and, above all, highly discursive. If he is discussing the statistics of population, he enlivens it with Dr. Hunter's advice to mothers or Lady Mary Wortley Montagu's efforts in the cause of inoculation. The mention of Pondicherry recalls Dupleix; and Dupleix, Bernadotte; and Bernadotte, the author's visit to Stockholm and presentation of his work on Pegu to Charles XV. In the incarnations of Buddha he believes

"it is, perhaps, not too much to trace the origin of such a remark as that put by Shakespeare into the mouth of Ophelia—'They say the owl was a baker's daughter; we know what we are, but know not what we may be!'"

Through these varied mazes it is, then, not always easy to follow the thread of historical narrative. On the other hand, his account

of the military operations, if sometimes wanting in sequence, leaves on the reader's mind a vivid and, no doubt, accurate impression of the nature of Burmese warfare, especially of the marches, at the mercy of doubtful guides, through dense jungle, skilfully stockaded by an enemy whose personal bravery, fortunately for us, was not further seconded by good generalship. Additional life is given to the picture by personal anecdotes and descriptions of the actors concerned, and by many of those details of incident and adventure which only an eyewitness can supply.

In asserting that Assam, Siam, and Shan are all forms of the same word, the author makes a triple statement very difficult of proof. That the people all belong to the same race may be admitted. Gen. Dalton says that the conquerors of Assam in the thirteenth century took the name of Ahom, signifying "peerless," and Ahom probably = Assam. The name of Siam—apparently, according to Crawford, an old name given by the Siamese to their country—we probably got from the Malays. But, as Col. Laurie himself says of a similar speculation, this one is, perhaps, "as convincing as most proofs from etymology." As to his statement that the Andamanese and Nicobarese are of the same race, all recent authority is against him.

The author is no teetotaler, and considers the dram necessary to the soldiers while exposed during the monsoon; but sobriety, he says, is essential; and "there is much to like in that word *sobriety*—it implies *self-denial*—whereas *total abstinence* has no human grandeur about it." Col. Laurie has a high admiration for Lord Dalhousie, and delights in his reminiscences of the "great proconsul," quoting several of his despatches, which have the sonorous ring of that imperial style of which he was a master. We may be allowed, perhaps, to recal a single sentence, applicable now and at all times to our position in the East:—

"The Government of India," he wrote, "cannot consistently with its own safety appear for one day in an attitude of inferiority, or hope to maintain peace and submission among the numberless princes and people embraced within the vast circuit of the empire, if for one day it gives countenance to a doubt of the absolute superiority of its arms, and of its continued resolution to assert it."

But Col. Laurie, we think, goes too far when, exulting in Lord Dalhousie as a "master of annexation," he impliedly claims him as a supporter of his own extreme views on the subject. Certainly Lord Dalhousie's annexations were many, and big; but each one of them was either supported by weighty—we do not say conclusive—reasoning, or, as in the case of Nagpore, followed upon a rule then in force, but since, wisely as we believe, abrogated. At all events Lord Dalhousie would have judged each case on its own merits, whatever the issue at which he was likely to arrive—the only course, in short, which a statesman could take, seeing it would be as inconvenient for a Government to be pledged never to annex as to be credited with doing so on every possible occasion. We have seldom met so thorough-going an advocate of annexation as our author, who, fortifying

himself with arguments from Paley, sees no limits to its advantages. Besides being an investment as profitable and legitimate as "reproductive public works," it would lead, he declares, to an early and universal establishment of peace and order throughout Asia. Meanwhile, as regards the case of Burma, he candidly admits that Lord Dalhousie, while annexing the coast provinces for substantial reasons, was quite against the absorption of the whole territory, and we do not see that the position has materially altered since those days. Lord Dalhousie's *dictum* still holds good that "no hill tribe is contemptible among its own hills." The "oppressed people" might, as Col. Laurie says, "receive us with open arms," but it would be more important—and less easy—to ascertain beforehand how long that sentiment would last, and what influences might act in the opposite direction. Col. Laurie asserts that it would be to our advantage to have our frontier continuous with China, a proposition which may well be disputed. Throughout the volume he returns repeatedly to the charge, *more suo*, insisting plainly, not to say cynically, on the great advantage to mercantile interests in Rangoon and elsewhere, of the annexation of the kingdom of Burma. It is desirable that every side of such questions should be stated, and the statistics which the author gives of the resources of these countries bear out his high opinion of their value; but from a political point of view we think his arguments, so far from proving his case, rather tend to show that, except in the minds of those whose wish is father to the thought, the question of annexation is in no sense the imminent or pressing question which he represents it to be; and it is to be hoped that no artificial agitation will bring it prematurely "within the range of practical politics."

COURTIS TROTTER.

Mémoire sur la Notion hébraïque de l'Esprit.
Par A. Sabatier.

L'Ange d'Astarté: Etude sur la seconde Inscription d'Oum-el-Awamid. Par Philippe Berger. (Paris: Sandoz et Fischbacher.)

A GRACEFUL recognition of the fiftieth anniversary of M. Reuss's first appointment to his Strasbourg professorship, and at the same time an evidence of the zeal and industry of the new Protestant theological faculty of Paris. M. Sabatier's essay is full of acute suggestions, and offers a very clear and intelligible programme of theological development. In the Old Testament portion, however, he seems to us not to have taken sufficient account of the traces of popular Israelitish religion in the Old Testament, and to have further injured his work by ignoring the records of Assyrian religion. To maintain that there is a radical difference between the *she'ol* and the *refaim* of the Israelites and the Hades and the shades of Greek literature is a position which requires more evidence than our author has adduced. The *refaim* are just as much or as little "the carcasses themselves" as the Homeric shades; the fundamental idea is not peculiar to the Israelites—indeed, *She'ol* is not, properly speaking, a Semitic notion at all, but borrowed from the pre-Semitic Accadians. M. Sabatier also asserts

that the idea of Gehenna, or of "the Catholic hell," is "entirely foreign to the Old Testament." In the striking passage, Isa. lxvi. 24, he sees nothing but the idea of hopeless destruction. The popular language of the Jews in the time of Christ was, he thinks, but a reflex of Greek or Persian notions recently imported. Such bold and questionable statements augur but ill for the theological teaching of the French Protestant pastors, whose chief function, after all, is not so much historical criticism as the keeping alive of spiritual and Biblical religion in opposition to an unbiblical system of forms and ceremonies. Perhaps the treatment of the Pauline doctrine of the *pneuma* is the most successful part of the essay. This at any rate will repay the reader. An interesting illustration is also given from the Crimean War of the saying of our Lord in Matt. xviii. 8, 9.

M. Berger (a brother of the M. Berger whose valuable historical study on the mediaeval glossaries we noticed very lately) gives us a new interpretation of the Malac-Astoret in a famous Phœnician inscription. He endeavours to show that it means, not "King Astoret," or "Moloc-Astoret," but "Angel of Astoret," an appellation analogous to "Angel of Jehovah," "Angel of the Face of Jehovah," in the Old Testament. Much valuable illustration of the latter phrases is adduced from the field of Semitic mythology. It would certainly appear as if the Biblical writers were less afraid of points of contact with heathenism than some of their modern interpreters. M. Berger's proposed explanation of Malac-Astoret, however, seems to us very bold. Is not the title "Angel of Jehovah" most probably a late and artificial formation? If so, we should hardly expect to find an analogue in Phœnician inscriptions. It is quite otherwise with the phrases, "Face of God," "Name of God." These are self-evidently of mythic origin, and, perhaps, none the worse vehicles of religious truth on that account. There is also a difficulty in M. Berger's view arising from the omission of the radical *alef* in "Malac," if, as he supposes, it is equivalent to the Hebrew *mal'ac*, "messenger," "angel." We doubt whether M. Berger meets this quite adequately. But his essay is well worth reading. Few English writers could carry so much learning so lightly. T. K. CHEYNE.

Facsimiles of National Manuscripts of Ireland. Part III. Edited by John T. Gilbert, F.S.A., M.R.I.A., late Secretary of the Public Record Office of Ireland. (Printed for Her Majesty's Stationery Office.)

A SERIES like the present one, which is intended to illustrate the course of national history through some dozen centuries, has two distinct interests. The earlier examples are studied by antiquaries for their own intrinsic value as monuments of ancient writing. The value of the later specimens lies in their historical character. This must more essentially be the case in an Irish series. The very ancient MSS., written in a perfectly-developed national character, and ornamented with a full-grown national decoration (which, for its intricate delicacy, has been the wonder

of all succeeding generations), would, even in default of other proofs, be sufficient evidence of the high cultivation which the Ireland of the early Middle Ages enjoyed. In the first part of his handsome publication, Mr. Gilbert brought together specimens of perhaps one of the most interesting series of MSS. that could be formed for the study of a national style of writing. His second part, bringing down the series to the close of the thirteenth century, may be designated a transitional collection, in which the purely historical element strongly asserts itself; and the present part, which extends to the close of Henry VIII.'s reign, may be said to be of almost entirely historical interest. For, although a certain number of the plates are selected from MSS. written in the Irish character, most of them have no special palaeographical merit, except as examples of the tenacity with which a people, living apart from outside influences, may maintain its national writing and persist in an archaism of forms which—when it comes to a matter of assigning dates to MSS.—is an exasperation to the cautious and a trap to the unwary.

The finest of the Irish MSS. in this volume are:—The well-written codex of Brehon law (pl. viii.), said to be of the early part of the fourteenth century; Cormac's Glossary (pl. xxx.); the Book of Ballimote (pl. xxv.–xxvii.), a large handsome volume which, in 1522, was reckoned as worth one hundred and forty milch cows; the MS. which bears the odd-sounding title of the "Speckled Book" (Leabhar Breac, pl. xxviii., xxix.); and the Great Book of Lecan (pl. xlv., xlv.). From the last three have been selected specimens of the ornamental initial letters. In them still survive the lacertine and grotesque animals which adorn the MSS. of the seventh and eighth centuries; but, though the form is there, the spirit has vanished.

In his Introduction, Mr. Gilbert has given us some slight sketches of the contents of these volumes, generally original compositions in prose and verse. Of the grotesque and weird fancies of early Irish writers, perhaps the one translated from Cormac's Glossary is most impressive, in which is recounted the trial of skill between Senchán Torpest, the Irish poet of the seventh century, and the poetess daughter of O'Dulsaine, the latter quoting the first part of quatrains to which the other was to supply the second lines. It was in a contest of this nature that St. Columcille signally defeated the Devil, who was not so much at home in moral poems as the Saint. But Senchán was aided by a certain mysterious ill-visaged youth:

"Rounder than a blackbird's egg his two eyes; quicker than a millstone his glance; black as death his countenance; rounder than an elevating crane his two cheeks; longer than a smith's anvil-snout his nose; like the blowing of a bellows smelting ore the inhaling and exhaling of his breath; sledges would not knock more sparks off the glowing mass than the fire his lips emitted. More swift than the swallow or the hare on the plain; yellower than gold the points of his teeth; greener than holly their butts; two bare, slender, very speckled shins under him; two pointed, yellow, black-spotted heels; his shin like a distaff; his thigh like a spear-handle; his buttock like half a cheese; his stomach like a sack; his neck like the neck of a crane; large as the helmet of a soldier his

head; longer than pitchforks his arms; larger than the fists of bondsmen his fists."

This strange being, however, was soon to be metamorphosed. He afterwards appears as "a royal splendid youth." A long eye in his head, gold yellow locks upon him." And we are finally told "that there can be no doubt of his having been the spirit of Poetry"! His ill favour is typical of the difficulty of the poetic art to a beginner. That the Irish artist could match this grim creation of the brain with one of his pencil is known to those who have examined the wonderful grotesques which are to be found in the ornamentation of such MSS. as the Book of Kells.

Among the historical documents the first to claim special attention is the *facsimile* of a deed which illustrates the condition of the Ostmen, the descendants of the old Scandinavian settlers in Ireland (pl. vii.). It is taken from the Plea Roll preserved at Dublin, and contains proceedings at Waterford, in the year 1310–11, on a charge of felony brought against Robert le Waleys for slaying John, son of Yvor Mac Gillemory. The accused pleaded that the act was no felony, because the said John was a mere Irishman and not of free blood; and declared himself ready to make compensation to the lord of the dead man. But the plea was not accepted, for it was proved that John belonged to the family of Gerald Mac Gillemory, an Ostman, to whom, for faithful services, King Henry II. had granted the benefit of "lex Anglicorum in Hibernia."

Another notice of the Ostmen is to be found in this volume (pl. i.), in the specimen contributed by the Black Book of Limerick; whence it appears that in 1201, in a jury of thirty-six, summoned on an enquiry in relation to the lands and churches of the see of Limerick, the Ostmen composed a third part of the number, and stood on equal terms with the English and Irish.

In 1395 Richard II. was in Ireland. In his letter, written to the English Privy Council on February 1 (pl. xxii.), he divides the inhabitants of Ireland into "trois maners des gentz—cestassavoir Irrois savages, noz enemis, Irrois rebelx, et Engleis obeissantz." Illustrative of his last visit are the three miniatures (pl. xxxii.–xxxiii.), reproduced, not unsuccessfully, from the Harleian MS. containing Creton's poem, which was so ably edited by Mr. Webb in the *Archæologia*.

Plate xxxvii. is a curious drawing of the Irish Court of Exchequer of the fifteenth century, representing the full course of proceedings in an inconveniently compressed space. Everyone is literally attending to his own business—even the Crier, who, impatient to adjourn, shouts "A demain!" with a fine disregard of judges and suitors, who are all talking at once. The air with which the Chief Remembrancer examines his pen is decidedly critical; and one marvels what sort of calligraphy results from the uncomfortable practice of using the knee as a writing-desk, as followed by the Clerk of the Pipe. We have known modern instances of this habit, with deplorable and illegible results. Whether the same official was so ill-bred as to rest his foot on the table in such a presence may be doubted; but Mr. Gilbert thinks so, and the artist has done his best,

with his faulty perspective, to bring about that breach of good manners.

A memorial addressed by the county of Kildare to Richard, Duke of York, in 1454 (pl. xli.), represents the unhappy condition to which a quarrel between two powerful nobles could reduce a district, so that "this lande of Irland was nevir at the poynt fynaly to be destrued sethen the conquest of this lande as it is now," the county of Kildare and liberty of Meath being threatened with final destruction by "a variance had betwix therle of Wiltesshire, lieutenant of this lande, and Thomas Fitzmorice of the Geraldynes." Again, in 1542, the county of Tipperary raised its voice against the exactions of Sir Thomas Butler, who was acting for the absent Earl of Ormonde, and who seems to have had very definite ideas of the rights of a landlord, even at Christmas time, when "he leviethe and takithe" of his tenants

"vjth xiiijth iiiij^d for the payment of such wyne as he providethe for his house against the said feast. He sessithe them with the cariage as well of all stoones, tymbre, and other necessities to any worke he hath, as also of all such corne, wyne, pailles of butter, and of all other things that he woll have caried for the necessitie or provision of his house or houses. He takithe towards the mariage of every of his daughters a shepe of every flocke and a cowe of every lx kyne" (pl. lxxv.).

We may hope for the sake of the tenants that Sir Thomas had not a large family of daughters. The origin of these and other hardships the complainants trace to the days of James the "White Earl" of Ormonde, who left Ireland to serve the King, Henry VI., in England. It was to him that James Yonge dedicated his translation of the *Secreta Secretorum* (pl. xxxvi.).

Mr. Gilbert has done all in his power to make the volume useful by giving exact descriptions, transcripts, and translations, and by further adding an Appendix of illustrative matter. It is no disparagement to his work to express a wish that he had had at his disposal a better process for the production of the plates. Photozincography is not the best process that modern science has to offer; and it is to be regretted that so obsolete an one should still be employed in national publications.

E. MAUNDE THOMPSON.

Lectures and Essays. By the late William Kingdon Clifford, F.R.S. Edited by Leslie Stephen and Frederick Pollock, with an Introduction by F. Pollock. (Macmillan.)

[Second Notice.]

CLIFFORD shows more of the mathematical craving for definiteness and certainty than of the philosophic temper of doubt when he comes to the problems of metaphysics proper. In three papers contained in these volumes—namely, a section of the essay on "The Philosophy of the Pure Sciences" (i. "Knowledge and Feeling"), and the papers entitled "Body and Mind" and "On the Nature of Things in Themselves" in the second volume—the author distinctly propounds what he holds to be the correct doctrine of the ultimate reality of existence. He seems to have been led to this result by different paths. To begin with, he was a thorough Idealist in so far as he held that what we perceive exists only in our own or somebody else's mind.

But this could not satisfy his intellectual needs. His thorough and hearty acceptance of the doctrine of evolution, elaborated by Mr. Darwin and Mr. Spencer, set him a-thinking on the continuity of pre-organic and organic development and the real underlying process in each. His acquaintance with the later physiology of sensation made him familiar with the hypothesis of a close correlation between the ultimate elements of mental and nervous change. To this it must be added that his mathematical and geometric imagination seized on the idea of a close spatial correspondence between the elements of an external visible object and the cerebral elements engaged in the act of vision. In this way he came to conceive that, though phenomenal objects were nothing but percepts existing in minds, there might answer to these in every case some *quasi*-mental reality, just as we know that in one class of cases, that of cerebral changes, which are a possible object to others, there corresponds a mental reality—namely, the individual consciousness. In other words, if we suppose that the reality in every particle of matter is an element of mind or a bit of "mind-stuff," then the building-up of animate and inanimate bodies with the process of evolution becomes in truth a single process—namely, a gradual combination of such mind-stuff in more and more complex forms. The universe thus becomes something real, independently of our perceptions, and is a unity, conscious mind being but a phase of the one ultimate reality.

This idea is by no means new, though Clifford seems hardly to have been aware of its antiquity. What is new about it is the author's mathematical way of putting it, which reaches its highest expression in the formula (ii. 86):—"As the physical configuration of my cerebral image of the object is to the physical configuration of the object, so is my perception of the object (the object regarded as complex of my feelings) to the thing in itself." Although this bold and brilliant hypothesis is thus deliberately put forward in a paper originally appearing in *Mind*, it is hardly possible to criticise it seriously as a complete and adequate theory of being. Clifford does not touch on any of the many difficulties which must at once suggest themselves to the philosophic student in connexion with the theory, some of which have been pointed out by Mr. Shadworth Hodgson (*Philosophy of Reflection*, i. 170, *et seq.*), and by the present writer (*Encyclopaedia Britannica*, new edition, article "Evolution"). It is doubtful whether Clifford really saw these difficulties, for his philosophic reading, we are told, was not wide. His confidence in this doctrine of being was perfect; he distinctly tells us it is not a speculation, "but a result to which all the greatest minds that have studied this question in the right way have gradually been approximating 'for a long time'" (ii. 61). Mr. Pollock tells us that it is a form of Idealism. But if, as it seems better, we contrast Idealism with Realism rather than with Materialism (whose true correlative would then be Spiritualism), Clifford's theory is distinctly a very pronounced Realism. And if, with Mr. Pollock, we call it a Monism, it will be well to remember that it bears much more resemblance

to Leibnitz' doctrine of countless monads than to Spinoza's conception of one universal substance.

The most generally interesting part of Clifford's philosophic work was the ethical and religious. Here the whole *ethos* of the man comes into view. As already mentioned, Clifford enthusiastically adopted the doctrine of evolution, and he is well known as one of the foremost advocates of its practical teaching. The first paper printed in these volumes, "On some of the Conditions of Mental Development" (a lecture delivered before the Royal Institution, 1868), is an attempt to draw certain practical conclusions from the theory of evolution; namely, the desirability of cultivating action rather than "assimilation," and of avoiding "crystallisation." The first duty is based on the idea that all permanent advancement is the result of spontaneous organic change and not of the direct action of the environment, the putting forward of which shows that the writer had not at that time studied Mr. Spencer's doctrine of evolution. Of a more hortatory character are the papers on "The Scientific Basis of Morals," "Right and Wrong," "The Ethics of Belief," "The Ethics of Religion," and "Cosmic Emotion" in the second volume. These essays, which have appeared in popular reviews, are probably still fresh in the reader's mind, and do not call for detailed notice. They all show the same moral earnestness and the same ethical opposition to religious systems, both as inculcating actions and motives that are wrong and as blinding men to the duty of individual enquiry. It looks as if Clifford, in throwing over his early High Churchism, did not and could not rid himself of the temperament that made him a High Churchman. One may almost perpetrate the paradox of saying that he had a thoroughly religious abhorrence of religion. His religiously nourished imagination seized Darwinism and transformed it into a holy obligation to aid the process of natural selection by a renunciation of the individual self in favour of the "tribal self." Even his language savours throughout of a distinctly religious and, we may add, Biblical type of sentiment. Nowhere does his essentially religious temperament show itself more plainly than in his summary rejection of Utilitarianism—"Happiness is not to be desired for its own sake, but for the sake of something else," namely, effective citizenship. To Clifford the ideal of life must contain an element of *Entsagung*: the asceticism of the Christian religion had penetrated him too deeply for him to adopt Hedonism in the frank way in which Mr. Spencer has recently done. It is the religious temper of the man, too, that breaks out in his curious essay on Cosmic Emotion, in which he labours to prove that it is fit and right to bless the principle of evolution which has brought life, if not immortality, to light on our globe, and probably on other planets also.

It may be added that in these essays there is very little appearance of scientific precision. The doctrine of Mr. Darwin is made the basis of ethics without any preliminary enquiry whether it will bear the weight imposed on it. A reflective reader will seek in vain among these papers

for a clear definition of the extent of the final end of action. Clifford tells us now to live for the tribe or community and now for the race, as though these things were logically connected, instead of being, within certain limits at least, distinctly opposed to one another. And what does the ethics of the tribe say to our relations to the lower animals? But as soon as we begin to raise questions like this, we see that Clifford's moral teaching is not adequately reasoned out. It needed the critical investigation which lectures and magazine articles do not obtain. And this remark applies, indeed, to all his philosophical essays.

Shall we, then, regret that Clifford did not concentrate himself more on some one subject in the great domain of philosophy, reading and reflecting as much as was necessary for a careful elaboration of new views? It would, perhaps, be rash to judge thus. After all, he may have best fulfilled his too short life by boldly mingling with the many conflicts of his time. He has left his mark on contemporary English thought and sentiment, and his writings, fragmentary though they are, may probably carry some bright flashes of insight to other generations than our own. In any case, we who read them, and through them see the living spirit behind, can hardly regret, at the moment when the picture completes itself on our mental retina, the emergence out of our generation of Englishmen of one in whom shone an intellect so clear and penetrating, who was sympathetically moved by all the best forces of his day, and who, at the same time, brought to every question he considered a moral fervour which links him with the best teachers of a more believing and earnest age.

JAMES SULLY.

The Life of Alexander Duff, D.D., LL.D.
By George Smith, C.I.E., LL.D. In 2 Vols. (Hodder & Stoughton.)

DR. SMITH, whose previous biography of Dr. John Wilson, of Bombay, was lately reviewed in these columns, continues in this work his picture of an important chapter in modern Indian history. Were it not for the salutary warning given by Dr. Smith's constant and somewhat tedious use of superlatives, one would feel inclined to say of that school of philanthropists of which Dr. Duff and Dr. Wilson were such distinguished ornaments that its influence and importance could not be over estimated. It would be cause for regret if a panegyric continued in the highest strains of eulogy through more than a thousand stately pages were to produce the opposite effect to that intended by the writer. To expect the personal friend of one so justly admired and revered to give immediately after his death a critical and impartial judgment on his life and work would be unreasonable, and even unseemly. The value of Dr. Smith's biography lies in the very opposite direction. The author shares fully and enthusiastically the hopes, the sympathies, the antipathies, and the creed of his hero. He judges every question that arises from the same Scotch, Evangelical, supernatural, and philanthropic point of view, and he enters completely into the feelings,

motives, and aims which he undertakes to describe. The picture might have gained a greater comparative accuracy, a truer perspective, had it been drawn by one who stood outside the circle of ideas which moulded the character of Dr. Duff. But it may well be doubted whether anyone outside that circle would have undertaken the task of writing the work; or could, if he had, have introduced his reader so fully and frankly behind the scenes.

The two clergymen whose careers Dr. Smith has so enthusiastically portrayed had many points in common. They were alike in ignoring the lessons of history and the results of historical criticism, they were alike in their contempt for the literature and the religion of the peoples among whom they dwelt, and they were alike in their view that the best method of propagating their own belief among the natives of India was to commence by instructing Indian children in Western ideas, and in the rudiments of Western knowledge, through a course of study permeated by Christian influence. But while Dr. Wilson held it also incumbent on the Christian missionary to seek for weak points in the armour of his native opponents by a careful study of the sacred books of their religion, Dr. Duff preferred the contrary method of taking no notice of existing beliefs, and trusting entirely to the inculcation of his own views. When on his voyage out he lost almost all his books and MSS., Dr. Duff wrote to Dr. Inglis:—"They are gone, and, blessed be God, I can say gone without a murmur. So perish all earthly things, the treasure that is laid up in heaven alone is unassailable." Books might be useful, but the intrepid missionary did not need them to build the temple of his faith.

It is possibly owing to this point of view that Dr. Duff left no mark on literature. With the exception of some sermons, newspaper and magazine articles, and ephemeral controversial papers, he published only two series of lectures—the first, entitled *India and India Missions: including Sketches of the Gigantic System of Hinduism both in Theory and Practice* (1839); and the second, entitled *A Voice from the Ganges* (1843). As a contribution to our knowledge of the history of religious belief in India, these lectures are beneath notice, except for the evidence they will hereafter afford of that movement in which Dr. Duff himself took part. For, though the head of the Free Church Institute in Calcutta seems to have trusted to the account contained in the Westminster Confession and in the Catechism of his Church for the true history of the rise of man; and to have neither known, nor cared to know, much of the history of India; yet his long life of earnest activity has, without doubt, affected permanent results which the future historian of India will be required to estimate and to trace.

His biographer defends with vigour the superiority of the system by which Dr. Duff sought to make his influence felt. It is impossible to dispute any of the praise bestowed upon education; but when we remember the remarkable success, from a missionary point of view, of the very opposite system pursued by Francis Xavier, and of the

different systems pursued by Dr. John Wilson, of Bombay, and by the missionaries in Southern India, it becomes difficult to avoid acknowledging that the Christian preacher and the Christian controversialist have not a little to say on their side of the question. And if Dr. Duff's great influence is sufficient to prove that the funds of mission societies are properly expended in founding and conducting schools in order to afford scope to the Christian schoolmaster, the influence of the daily and weekly press might equally be cited in support of investing the capital of missionary societies in providing newspapers of wide circulation in order to afford scope to the Christian journalist. Without venturing to express any opinion on the proper application of missionary funds, we cannot but rejoice that the missionaries should be willing to supply in this respect a little of the lamentable omission of the Government of India. Successive generations of Indian children have received an elementary education in those widely isolated and fortunate spots where the mission schools have been established; and in one or two districts where such schools, belonging either to one or to diverse sects, have been thickly studded, entire peoples have been raised in the standard of civilisation. Yet the Indian Government spends more money in a week on war than it spends in a year to further the education of the many millions of the nations under its control and care.

Dr. Duff devoted his long life with unflagging earnestness and zeal to the cultivation of this neglected field of education; and his zeal, well tempered by tact and wisdom, and knowledge of men, was supported and strengthened by his indomitable will and his high personal character. The oppositions he had to face, not only from those of the same religious opinions as his own, but from both friends and foes of education in the official circle; the difficulties he had to meet—whether arising from want of funds, from the want of pupils, from the occasional conversion of pupils, or from the schism in the Presbyterian church; and the way in which he succeeded in overcoming most of the opposition and all the difficulties—all this is eloquently and well set forth in Dr. Smith's volumes. The present work will not be so interesting to the general public as his *Life of Dr. Wilson*; for it deals at much greater length with a comparatively one-sided career, and is consequently disfigured by frequent repetitions. But it cannot fail to be received with enthusiasm in the circles for whom it is more particularly designed, and it preserves a valuable memorial of the most able of a school of philanthropists who have done so much in many ways for India.

T. W. REYS DAVIDS.

NEW NOVELS.

Friend and Lover. By Iza Duffus Hardy. In 3 vols. (Hurst & Blackett.)

Aground in the Shallows. By C. Ray. In 2 vols. (Remington & Co.)

Dowdenham: a Tale of High Life in the Present Period. By W. R. Anketill. (Marcus Ward & Co.)

Friend and Lover is the kind of reading

which the bereaved Henry I. might safely have indulged in without risk of a single smile—a long and decorous funeral procession, as it were, marshalled by a first-class undertaker. From a professional point of view the job is very neatly turned out. Moist griefs, dry despairs, cambric handkerchiefs both wet and dry, are Miss Hardy's vocation; with one hand she uses her weeds, like Walton's worm, as though she loved them; the other "she reaches forth"—and small blame to her for it—"to catch the far-off interest of tears." But even Mr. Mould could unbend at a wedding; not so Miss Hardy, whose pages carry us back to a country town we know which boasted but one public equipage—a hearse and three mourning coaches. If they crept slowly up the hill, it was a funeral; if they dashed madly round the churchyard corner it was a wedding. Pace was the sole but sufficient test; yet for these rustics, as for Miss Hardy's readers, odours of damp crape and funeral baked meats must mar the orange blossoms, and the nuptial morn glimmer somewhat sadly through the dingy, black-framed windows. But *Friend and Lover* has not even the excuse of necessity. It is not tragedy; it is not sermon; it is only the story of some very ordinary and rather nice people, whom we cannot allow to be heroes just because they sometimes act like brutes and idiots in order to prepare woes for themselves and pathetic scenes for the authoress. It is just because her powers are so genuine and so remarkable that we protest so strongly against their abuse. In spite of our growing disappointment, she leads us on by the charm of a refined style and of a sentiment dignified even when misplaced. We have never met a lady who knows how not to faint, who clutches a table, staggers to a chair, and with set teeth and straining staylances repressing the torrent of her indignation, calmly faces Destiny and the villain more grandly than Roberta, or who loses health and reason with such perfect good taste as Grace. There are several scenes, any one of which might form the climax of a much better book. Here they are quite lost, for *Friend and Lover* is nothing else but scenes from beginning to end linked by a most unfortunate plot. Roberta is a brave woman, whose lover, the widower Max, has been absent for years, and never troubles to write, though he burdens her with the charge of his daughter Grace. She also takes care of the wife and child of the hero, Richard, who, from mere restlessness, wanders to the Cape, where he shoots a man by mistake, who curses him in general terms. Richard hurries home in alarm, quite prepared to find Claire just killed in a collision. Little Effie shall console him—but no, the nursery window is open, and the child of the Curse is not one to lose such a fine opportunity. Poor Richard nurses Grace on his knee, and during another absence a romantic love springs up between them. She grows up, he returns, and proposes on board his yacht. Instant shipwreck is the result. He saves her life. But curses are serious things after all; so next morning he calmly bids her forget yesterday. In her haste to obey, the poor thing marries one Pierce, whom she had met travelling in a caravan at the fair. He robs and beats her. She flies to Roberta; he follows, and is shot

by Richard, who is again suffering from his old enemy, the Curse. Grace lingers long between life and death. Max now returns—but, alas! for Roberta, with a foreign bride. Richard, in disguise, must speak a last word to his victim. This new shock causes a relapse. She mends under the smiles of a new lover named Roy. Richard must now speak just another last word, and is shot for a burglar by Roy. The Curse is thus appeased, for it turns out that its author was Roy's long-lost sire. Richard sinks to rest with a deep sense of the general fitness of things, which permits him to offer a bride in exchange for a father. Had the authoress thus drawn out a bald analysis of her plot, we are sure that she would never have subjected such charming characters as Grace, Roberta, or her brother William to its trammels. We admit her power to make us more wretched than we are already; if only she would cheer up a little, and take less doleful views of life, she might easily succeed in making us a little happier.

We shall not—for we need not—say much in praise of such a fresh and wholesome book as *Aground in the Shallows*. We recommend it strongly and without reserve, but to those only who prefer settled principles, healthy sentiment, and straightforward writing to the spasms and megrims of more fashionable novelists. It is indeed written with a purpose—but a very good one—and is by no means the worse for it. A difficult subject—that of youthful promise ending in failure, not without repentance—is here treated in a way which may be both compared and contrasted somewhat suggestively with Balzac's study of Lucien Chardon. New wine, however good, can hardly dispense with its bush, but at least it needs no lengthy advertisements. So we will not attempt them.

As for *Dowdenham*, those who have ever tried to guess a stupid riddle will appreciate the irritation it has caused us. What does it all mean? who wrote it? why? how? for whom? Yet *Dowdenham*, which is "respectfully dedicated to the Dowager Marchioness of Downshire, *benigno numine*," is quite a serious book. One personage at least, Her Grace of Dowdenham, is, it seems, a deity still incarnate in the flesh, who aforetime has not disdained the author's murky incense, and once even suffered him to attend her on her orbit as Lady Bountiful to the bedside of a village crone, upon whom, with reckless prodigality, she lavished a "beautifully expressed prayer," and a few of the old dame's own gilliflowers, which she rummaged out of a jug on the window-sill. Staggered by this fantastic beneficence, the author pours forth—"I was amazed. Could this, I thought, be the woman whom I had met amid the glitter of rank and state?" and at last perorates thus:—

"Happy rural England, where such things are possible! Would that they were so in the sister country! But there . . . the religious difficulty renders it impracticable, and the want of cottage cleanliness absolutely prohibits ladies from entering the dwellings of the poor."

"Sneering democrats," he fears, will call this "sentimental twaddle." Possibly; but to one indulgent Tory, no twaddle ever seemed more coarsely prosaic. Again, the grand wedding is

also autobiographical, for, speaking of the presents, he exclaims, "Would that we felt ourselves competent to describe the *tableau* which we had the privilege to see," and then refers us to the "*Court Journal*, with its customary eloquence," for details of "that unprecedented display." Next follows the breakfast. One touch is exquisite. "We have, indeed, preserved a *menu* embossed with tinted Cupids and other designs, so ravishingly attractive that, enclosed in a gilded frame, it now adorns our table." How Thackeray would have relished this! Strangest of all is the Preface, the fatuity and bad taste of which beggars description. It consists of a letter from the publisher to the author praising the book, and enclosing some strictures by a "Girl of the Period," and then of the author's triumphant reply. But we must give up the Dowdenham mystery in despair, for even the *Saltire raguly* blazoned on the cover fails to help us. As a novel without a plot it needs no analysis, so we will do no more than fish up a few pearls from its deep sea of nonsense. Its High Life is, after all, rather High Death, or a torpor near akin to it—a mere nightmare born of the intoxication of patronage. The finest conception is the Monster-Duke, quintessence of pomposity, childishness, ignorance, and vulgarity. He is, of course, adored in all his attributes—even in his wit. "The Earl was not, as the Duke humorously hinted, a misogynist" (*sic*); again, "Dowdenham, as the Duke facetiously said, had again become the 'abode of love.'" Of his sweet converse let this suffice: "I'm mum, 'pon honour, Miss Mulligan." "His position as a Privy Councillor" (in Opposition) enables him to utilise during the recess the secrets of the Government, and to prepare for next session under the tuition of the Irish Curate, who boasts of having "commuted, compounded, and cut." Our poor *Duc pour rire* is a far less virulent bore than this Mulligan, whose lectures, ever harking back to Ireland's wrongs, form the staple of the book. No need to say that the ducal portals, barred against "the rush of the democratic avalanche," fly open before this kindred spirit and his sisters—hoydens whose every word is a separate romp, and who address his Grace thus, "Ah, behave now, Duke! It's poking fun at me ye are," or "There now, I've let it all out. I declare to me Maker I'll talk no more." Even the Duchess never permits herself more than an occasional "O my gracious!" The heroine, an opera singer, and adopted child of the Duchess, as a worthy daughter of her *émigré* sire—who, by-the-way, "sank to rest, *décoré* with the insignia of nobility, in a cottage near Fulham. It was recorded that his last words were *Ma femme, ma fille, ma patrie*" (*sic*)—patters thus with a British Earl. "'Ah, *que voulez vous*?—I must—but for a time; all *débutantes* you are aware come out in Paris.' '*C'est vrai*! but we shall hear you in London next season?' '*Cela dépend*! perhaps.'" The Very Rev. the Dean of Dowdenham resides with his curate at the deanery, situated in the heart of the Duke's deer-park, which stretches for miles in every direction. One Macfarlane appears and prates in two chapters; to elucidate which we are referred to the Appendix, where we find a Scotch "Glossary" of ten columns made up of hard words like

auld, burn, canny, and siller. A new remedy, the *Tic Sano*, is handsomely puffed on p. 416. Finally, in the last chapter the funeral is affectingly described, and the epitaph given in *facsimile*, of one Hubert Athelstane, a character who either never appeared in the book at all, or more likely was cut out in its revision. It remains to view Mr. Ancketill as a poet, and a bold one too—for of himself and his fatherland he sings thus (so far as we can we will substitute italics for comments):—

"Thy trophies of warfare they still hang neglected,
Cold as the warriors to whom they were known;
But the harp of Old Erin shall still be respected,
While there lives but one bard to give life to its tone."

Yet to do justice to the *sylphide* Louise he is forced, he says, to borrow from the Sanskrit, which he does with crushing effect.

"Where'er you walk the stately step we see
Of India's elephant excelled by thee."

But his *magnum opus* is the "Courtship of Milcawatha" (an Irish milkmaid) in hexameters, or rather some ten out of the hundred and fifty verses are hexameters, and the rest—well, we do not quite know what they are. This poem is positively no burlesque, but perpetrated in sheer simplicity, even such lines as these:—

"Red were her tresses, bright red and shining,
Like a bundle of carrots
Wash'd in a mountain stream, and glistening with
watery pearl-drops;
Straight out behind her they waved like the tail
of a fiery comet,
As it appears to the eye, unaided by spectral
assistance."

This last line, correct in metre, is superb in its bathos and stupidity. The lover soon appears. As they recal their childish sports, one shudders at the horrible *gourmandise* suggested by the bad syntax:—

"Gathering blackberries on the briar bush down in
the scrubbery;
Sitting with their feet in the water catching
pinkeens, greedily
Trying to gobble a worm as big as themselves,
stuck on a rush."

After this feast we are told they ran home and positively

"Fell asleep, and slept sound, till the hot smoking
porridge was ready,
Got their faces and hands washed, and were told
to go straight to school,
But they didn't, —"

The courtship is rudely disturbed by the damsel's father with "his horny fist," and the lovers decamp to America. The old man dies, and

"The priest took toll for masses for his soul, the
rest into Tipperary
Bank he put: that went smash, in the dreadful
crash, some twenty years ago."

An Epilogue represents the young couple as now Chief and Chiefess of the Red Feet Indians—she, "riding man-like upon her fiery steed;" he, adorned "with tiger's claws, and with Comanche scalps hanging round his swarthy waist." "Upon my word," said the Duke with his usual felicity, "the lines are very good, and I really do believe such things have happened." For our part we are quite ready to believe in anything and everything—from the respected harp of Old Erin to Young Erin's courageous worm-banquets; in Mr. Ancketill's Parnassus—

"that non-euphoniously named Row that bounds the metropolitan park;" in his Hippocrene—the Hibernian bog; yea, even in his Pegasus—the long-snouted, curly-tailed *dacent crathur*, who must, however, as a mere quadruped, have grunted, we fear, somewhat sulkily under this unfair load of eight-footed hexameters.

E. PURCELL.

RECENT VERSE.

Laura Dibalzo. By R. H. Horne. (Newman and Co.) Mr. Horne's new drama is almost entirely one of action, and the literary element is kept much more in the background than has been usual with him. The scene is laid in the worst days of the Bomba rule at Naples, and the plot turns on an abortive conspiracy, the members of which are arrested, plied with all sorts of violence and treachery to make them confess, and, finally, executed in more or less horrible fashions. Where the author has given scope to his poetical power (as in the speeches of the chief conspirators at their interrupted meeting) it is easy to discern that his hand has lost none of its cunning, and everywhere the blank verse is of the best tragic kind. But, as we have said, the play is one almost wholly of bustle and action. It is definitely meant to be represented, and, in days when such work could have been represented, would probably have had good success; but it appeals rather to the direct sympathies of an audience with the pitiful and terrible fate of the characters than to the reader's admiration of perfect literature, and hence it does not lend itself well to purely literary criticism.

A Sinful Woman. By J. T. Burton Wollaston. (James Blackwood.) Mr. Burton Wollaston has written in *Don Juan*-like verse of not bad quality, and has "unambitiously" illustrated a curiously rambling story, the head and the tail of which are not always easy to distinguish. That Mr. Wollaston on one occasion kissed an extremely attractive young lady twenty times in a wood near Gloucester, and at another period met her on the Parade at Lyme Regis, are the facts which are most distinct to us. The first experience must have been satisfactory; the second was, we gather under the circumstances, far from being so. The heroine was not sinful at all to the best of our apprehension, though somebody died of grief because she refused to be sinful. This incoherent and rather pointless legend is told in a manner much superior to the matter. The verse is, as we have said, good, and there are occasional digressive outbursts which lack neither feeling nor felicity of expression. Mr. Wollaston, however, must attend to the ordinary conditions of story-telling if he wishes to tell a story that is to be read.

The Weed. By C. W. Palmer. (O. Kegan Paul and Co.) An odd little poem on tobacco and things in general in heroic couplets of fair quality.

Night Winds. By E. W. Spawton. (Leicester: Oatlow.) A collection of what may without offence be called provincial verse of the usual Poets'-corner kind.

Lays of the Covenanters. By James Dodds. With a Memoir of the Author by the Rev. J. Dodds, of Dundee. (Edinburgh: MacLaren.) The Rev. James Dodds apologises for the length of the Life which he has prefixed to this issue of his cousin's poems. No apology, however, was needed. The Life is a very interesting specimen of biography, and is very well done, allowance being made for a natural and not ungraceful magnifying of the subject. Mr. Dodds, the subject in question, was not an ordinary person. He went through a series of vicissitudes which would have been remarkable

in any case, and which were specially remarkable in the case of a Scotch lad educated like the rest of his kind, half by charity and half by the sturdy self-denial of himself and his kin. Mr. Dodds, who was born in 1813, went through the usual run of common school and university education, apparently with the usual hope of becoming minister or dominie. He was, however, an unusually masterful young person, and he finally broke loose in a fashion the most terrible to his class and nation. He became a strolling actor, and pursued that most godless of vocations for some months in the north of England. Luckily, however—or unluckily, for who can tell?—he was met by a kind acquaintance, and coaxed back into the pale of respectability. Then, for some years, he was schoolmaster at Sandyknowe, under the shadow of Smaylhome Tower, and in the centre of memories of Scott. From this employment promotion took him to the sphere of a writer's clerk in a country town. At length he moved to Edinburgh, and, after becoming a full-fledged solicitor, made his way to London, where affluence seems to have come upon him in his profession of parliamentary lawyer. Very early in his career he had had literary leanings, and the biography contains some admirable letters of Mr. Carlyle's to him on this subject. Later, Leigh Hunt seems also to have been a familiar of his. His business, as his early mentor hinted, made him a much stronger staff than literature, but he did not abandon the Muses. He became, in casual visits to Scotland, celebrated as an orator, and, from the specimens given in this book, we are bound to say that he seems to have become proficient in the tawdry tall-talk which does duty as oratory with provincial audiences. The Covenanters were a favourite subject of his, and he wrote a book on them, which seems to have been popular in Scotland. These "Lays" are not destitute of power. They are, however, very slenderly endowed with any definitely poetical merit, and such interest as they may excite must arise rather from sympathy with the sentiments expressed than from approval of the manner of expression.

Waifs and Strays. By Mrs. A. M. Münster. (Marcus Ward.) This appears to be a collection of verses the composition of which extended over a good many years. We gather this from the inclusion of a poem on "Christmas 1854," which would hardly have suggested itself to anyone whose adolescence was not contemporary with the "Ghost's Derby." Mrs. Münster has a graceful fancy and a correct ear; her work, to a certain extent, lacks distinction, but that it has merit of a minor kind will appear from the following:—

"LAID BY.

"Laid by in my silent chamber
I hear them stirring below;
Voices I love are sounding clear
And steps I know are in mine ear,
Still passing to and fro.
And I ask my heart, Shall I never more
Of mine own will pass through that door?"

"I ask, Oh! is it for ever
That I have ceased to be
One of the group around the hearth,
Sharing their sorrow or their mirth?
Am I from henceforth free
From all concern with the things of life,
Done with its sorrow, and toil, and strife?"

"Shall they carry me forth in silence,
With blind and sealed-up eyes?
Shall they throw the windows wide to the air
And gather mementoes here and there,
As they think, with tears and sighs,
'This she was fond of,—this she wore,
But she never shall need them any more.'"

Tales of My Father's Fireside. By C. Arnold. (Provost.) We have no doubt that these tales

(which form a sort of Salmagundi of prose and verse) were very satisfactorily received at the fireside, where they are said to have been composed. But we fear we cannot congratulate Miss Arnold on the idea of introducing them to a wider public than that which saw their birth. There are many things which are capital as improvisations, but which bear as badly as ordinary wine the severe test of keeping and exposure. For instance, a parody of *Excelsior* with the refrain "Agusuar" would, no doubt, have a success in MS. It can hardly be said to be successful in print.

A Drama, and Poems; also Inventions and Suggestions. By W. J. Bryant. (Wyman and Sons.) It is with a real regret that we feel unable to give the space necessary for a full review of this remarkable book. The "Drama" is couched in a style extremely suggestive of the Abbey of Quedlinburg. The scene is laid on the beach at Hayling Island within sight of Osborne, which latter building is several times referred to with pride. There are smugglers with pistols and fatal consequences, facetious coastguardsmen of an Elizabethan cast, eloquent ladies' maids, an unfortunate lover of the name of Stephenson, and several other choice inventions. Of the poems it may be well to give a short sample:—

"And the trees with garments new
Shew their fine artistic forms
With original effect.
But why should I pursue
A race among these charms,
Or think I can reflect?

"These pleasures to the sense;
For though I could commend [sic]
Language like a river,
Such varied excellence
Appears on either hand
To be described never."

The "Inventions and Suggestions" are of a type usual enough in itself, but very unusual as an Appendix to a volume of poems. They deal with the raising of sunken ships, the prevention of fire, &c., &c. Strange to say, there is not a receipt for a flying-machine among them.

The Exile, and other Verses. By the Hon. Thomas Talbot. (Sampson Low and Co.) Mr. Talbot has a considerable share of the fatal facility in stringing anapaests together which seems to belong to so many Irishmen. He rarely stumbles into absolute prose, but we can hardly say that his verse ever rises into anything approaching the upper region of poetry. His translations are fair, but no more can be said for them, and his selection of the Greek moralists for his chief field of practice is hardly calculated to display his powers, such as they are, to much advantage.

From April to August: Artless Verses. By Edward Grosvenor. (T. H. Roberts and Co.) Mr. Grosvenor ingenuously enough confesses that he has not tried "to give finish to verses which he is not sure are worth the attempt." In fact, nothing is to be found between the covers of his pamphlet but the kind of verse most lads write between fifteen and twenty.

Poems and Ballads. By Mrs. Toogood. (Chapman and Hall.) The following extract from one of Mrs. Toogood's poems will perhaps give a fairer idea of her poetical quality than much elaborate criticism could do:—

"Yes! it is music's dulcet pleading,
Her enchanting power we know;
Breezy spirit, still receding
Far where discord dies below,
O'er rough cliffs in stillness leading
Smooth those placid waters flow.

"Feath'ry winged one, onward soaring,
Bent on the aerial way;
Calling while fierce foes are warring,
We the winning voice obey.

Urgent gusts in strains are pouring;
Following, we pursue the way."

If this is intended for what they call in French an *amphigouri*—that is to say, a parody of sense—it is decidedly good; but if it be intended to be sense itself, we are afraid that Mrs. Toogood has rather missed her mark. She is not always in this seventh heaven of language divorced from meaning, and some of her Wordsworthian poems have merit in their way; but we cannot honestly say that anything in the book strikes us as having been worth the trouble of writing, let alone that of the press.

Poems and Sonnets. By Harriet Stockall. (Simpkin, Marshall and Co.) We have not often come across anything approaching to the desperate mediocrity of this volume. In all its three hundred and odd pages and its possibly six or seven thousand lines, there is hardly one of the usual absurdities of the minor poet, and, at the same time, there is hardly one of the occasional felicities of fancy or expression into which even the minor poet usually stumbles "once in a hundred years," to use the refrain of Mr. O'Shaughnessy's charming poem. Miss Stockall appears to be a regular contributor of occasional verse to the poets' corners of some weekly papers, and in the discharge of this function she has attained to something of the workman-like facility which most practised journalists of some culture can boast. When a steamer goes down, or a princess is married, or a popular author dies, Miss Stockall promptly seeks her davenport and turns out a copy of verses possessing about the same literary merit as the average leading article. The only difference is that the leader-writer does not usually attempt to rescue his journey-work from the oblivion to which the beneficent course of nature condemns it, and Miss Stockall does. We have looked in vain through the volume for any faint *scintilla* of originality, and we have not found it. Of the matter as contradistinguished from the manner of the book it may be sufficient to say that the author congratulates Dickens on having gained "the scholar's bays," and that she arranges Mr. Tennyson's qualifications as those of a

"Great poet, greater preacher, greatest sage."

Russian Despotism; or, the Polish Lovers. A Tragedy in Five Acts. By George Ensor. (Dublin: Gill.) This is a delightful work, to which we regret that space prevents us from doing full justice. A vague reminiscence of dramas of the "Stranger" period pervades it, and the persons and language, though sometimes more outspoken than is customary in these mealy-mouthed days, are very nice. Of the versification, some idea may be obtained from the following lines:—

"The town's alive with news. The patriots
Lately met—a shattered band—in the old
Amphitheatre. By Jove, I tremble for the good
Count's life if what I've heard be true!"

As to the plot, we do not find ourselves equal to the composition of an argument. A fiendish Russian count, of the worst morals, tyrannises right and left, and indulges, or endeavours to indulge, his wicked desires at the expense of a certain Julia Niemur, who is frequently called Miss Niemur—a piece of politeness which rather interferes with the local colour. There is also a very delightful nurse who is able to procure poisons and loaded pistols for the victims of tyranny with the most satisfactory promptitude. The natural result is a tremendous scene at the end which reduces the churchyard passages of *Romeo and Juliet* to insignificance. Everybody poisons or shoots himself and everybody else, and the curtain falls, or ought to fall, amid roars of applause. Why did not Mr. Ensor offer his tragedy to some discriminating manager?

The White Africans. By Pardio. (Tinsley Bros.) This is a book which, with very

great drawbacks, shows evidence of poetical power much superior to that of the ordinary minor poet. The author has unfortunately adopted the incoherent style and has carried it out unflinchingly. His plot is *nil*, though there is a certain sequence of events. A missionary is introduced urging monogamy on the king of an aboriginal race of white Africans. The king tells the history of his taking a second wife, and refuses to put her away. Then, by an abrupt transition, we are thrown into the midst of a war between the white king and his black neighbours. He escapes down a river in a miraculous way, and joins his main forces only to be overthrown by numbers. The fate of the two queens finishes the poem, which is defaced by some utterly unnecessary references in foot-notes to the late Zulu contest. Pardio, as his singular pseudonym would seem to show, has little critical power, and his verse is constantly overstepping the perilous border-line between passion and bombast. But, extravagant as he generally is, he has now and then an unmistakeable ring, as in these lines:—

"On he dashed himself. See! in a moment wide
ope,

As a door, stood the jungle; and slope after slope
Swelled out, and then hid; sparkled flowers of all
dyes,

And with life bright as winged flowers [sic] or
gems, earth and skies
Were all movement and colour, and where the
trees' grace

Would be charm's crown, their columns and frond-
age had place.

Two slight towering forms leaning each towards
each,

Whose boughs flow as robes, and as sound of love-
speech

All their murmurs: a grim giant here: here a
grove

Where like athletes the thronging stems twined
limbs and strove.

And there, to what seems to the up-mountaining
sight

But a needle's point down through a hundred
yards' height,

Evermore widening evenly out round on round
Till the dark branches' tips flickering high o'er
the ground

Feather-like make a tent where a king's court
might rest,

A mimosa stood clear on the fairest knoll-crest."

It is clear that the writer of this has good gifts. At the same time it must be evident how close the style is to becoming a mere chaos of words, and this consummation is too often actually reached in *The White Africans*. Pardio requires, if anything is to be made of him, the most resolute pruning.

NOTES AND NEWS.

Bulgaria since the War: Notes of a Tour in the Autumn of 1879, by James George Minchin, will shortly be brought out by Messrs. C. Kegan Paul and Co.

MESSRS. RIVINGTON have in the press and nearly ready for publication a sketch of the Life of Amalie von Lasaulx (1815-72), translated by Lady Durand from the French of M. Lecoultré; *The Early History of the Athanasian Creed*, the results of some original research, by G. D. W. Ommanney, M.A., Vicar of Draycot, Somerset; a new edition of *The Ober-Ammergau Passion Play*, by the Rev. Malcolm MacColl, M.A., with all the necessary information about this year's performance; and *Apostolical Succession in the Church of Sweden*, by the Rev. Dr. Nicholson.

THE first volume of Mr. Geddes's *History of the Administration of John de Witt* has been translated into Dutch by Dr. van Deventer, of Dordrecht, and a special English edition for the Continent has been brought out at the Hague by Messrs. C. Kegan Paul and Co.

A WANT often felt by lecturers upon the connexion between the monuments of Egypt and Assyria and the Bible has been to some extent supplied by the Rev. S. R. Macphail. In a series of thirty diagrams, lithographed from drawings by Mr. R. Pollock Simpson, he has brought together under the general title of *Monumental Witnesses to Old Testament History* a number of subjects from ancient monuments bearing, or supposed to bear, upon the history of the Jews and circumstances related in the Bible. The plates are of large size, measuring thirty-two inches by twenty-eight, and, being issued in a strong and handsome portfolio, may be taken as the nucleus of a collection, to be from time to time added to in order to suit the requirements of different lecturers. Messrs. William Collins, Sons and Co. are the publishers.

ON August 1 Messrs. Muquardt, of Brussels, will publish a work in four volumes, entitled *Cinquante Ans de Liberté: Tableau du Développement actuel de la Belgique depuis 1830*.

HERR GROTE, who has already published the letters of Catherine II. to Grimm, has been commissioned to publish the letters addressed by Grimm to the Empress; they are about fifty in number, and were discovered in the Imperial Archives and in the collection of Count Vorontsov.

THE Memoirs of Talleyrand will not, it appears, be given to the world till eight years after those of Metternich. When Talleyrand died in 1838, he left his Memoirs to M. de Bacourt, with instructions to publish them thirty years after his death, unless special circumstances should render a longer delay desirable. On the death of M. de Bacourt in 1865 he bequeathed the Memoirs to MM. Andral and Chatelain, forbidding their publication till 1888. It is said that the reason for the further delay was certain references to M. Thiers.

MESSRS. HETZEL AND QUANTIN are about to publish, for the fiftieth anniversary of *Hernani*, the first volume of an edition of the complete works of Victor Hugo. It will comprise, not only all the author's writings which have already appeared or may hereafter appear, but also his inedited works, with notes, variants, &c. The texts will be scrupulously revised under M. Hugo's immediate superintendence.

Πανελληνιον Ἡμερολόγιον, or the *Panhellenic Annual* for the year 1880, edited by Socrates A. Parasyrakos, first year (Williams and Norgate), contains a calendar with the festivals and saints' days of the Greek Church, and a chronological table of the chief events in the Greek War of Independence, together with a number of contributions in prose and poetry by writers both Greek and English. Among those in the former language we may mention a letter of Koraïs of the year 1815, and modern Greek poems by well-known names, such as Rhangabé and Koumanoudes. English readers will be interested by a paper on modern Greek in its relation to the study of classical Greek by Prof. Jebb, and an essay in Greek and English on the present position of the Greek nation by Mr. E. A. Freeman. But the gem of the collection is a poem on "Theseus" by Prof. Blackie, which has great spirit and lyric flow. The work is illustrated by lithographs and photographs of no great merit, among which will be found likenesses of the Patriarch of Constantinople, and of the King, Queen, and heir apparent of Greece, and a view of the new Greek church in London.

MESSRS. W. SACHELL AND Co. are about to issue in parts a novel by Mrs. J. Francis Foster, entitled *Columba*, with occasional papers on subjects connected with the story.

THE *Revue Critique* of the 9th inst. contains a characteristic letter from the Chevalier d'Eon to

l'Abbé Grégoire, written in London, September 4, 1802.

A SPECIAL Committee in connexion with the Russian Ministry of Education has been occupied since 1872 in arranging for publication the correspondence of the Czar Peter the Great. A subsidy of 8,000 roubles has been required for this purpose, and the work, which will contain various annotations and appendices in addition to the letters, and will form a volume of about 115 pages, is expected to appear at St. Petersburg in the course of the present year. In order to preserve the archaisms and orthographical peculiarities, special types are being cast at the foundry belonging to the Second Section of the Emperor's private chancellery. Two hundred copies of a fine edition will be printed for the Imperial family. The edition on ordinary paper will consist of from 1,200 to 1,500 copies.

MR. GEORGE SAINTSBURY will begin a course of four lectures on "Dryden and his Period" at the Royal Institution on Saturday, February 28.

THE sons of the late Dr. Mordtmann have presented their father's MSS. to the American Library of Constantinople, and the gift has been accepted by the Patriarch with a public expression of thanks.

THE English Executive Committee of the International Literary Association are making arrangements for a series of Literary Monday afternoons in aid of the funds of the association, to take place at Steinway Hall in the course of the present season. On Monday, February 23, at three p.m., Mr. Edward Jenkins will read *Ginx's Baby*; on March 8, Mr. Justin McCarthy will tell the story of Dekker's comedy *The Roaring Girl*; and on March 22, Mr. W. B. S. Balston will tell some Russian stories. Other lectures, &c., will be announced in due course.

MR. WILLIAM BEAMONT has just issued, through P. Pearse, of Warrington, a work entitled *Three Dramas of Shakspeare: Richard II., Henry IV. (Part I.), Henry IV. (Part II.)*, being three papers read before the Chester Historic Society, with the object of pointing out the references made in these plays to Chester and Cheshire men and events.

M. LE COMTE DE CHARENCEY, who has already written so much upon ancient symbolism, has had printed in a separate form a paper entitled *Le Fils de Vierge*. In it are collected numerous legends of a miraculous birth of a virgin mother, to be found in the traditions of various countries.

WE learn from the *Revue Critique* that M. E. Senart is preparing a revised translation, with commentary, of the inscriptions of Asoka; M. Ch. Thurot has sent to press his great work on French pronunciation in the sixteenth and seventeenth centuries; MM. Firmin-Didot are to publish immediately a new edition of Sir Walter Scott's novels, with numerous illustrations carefully prepared from documents of the various periods; the Abbé de Broglie is to deliver a course of lectures on the history of non-Christian cults at the Catholic University of Paris; Herr Otto Kimmel has just published (Leipzig: Duncker and Humblot) a volume on the beginnings of German life in Austria to the end of the Carolingian period, forming the first of a series on the history of the German element in Austria; a second and enlarged edition is announced of Signor Giovanni Procacci's *Niccolò Forteguerri e la Satira toscana dei suoi Tempi*.

MESSRS. C. KEGAN PAUL AND Co., following the excellent example of certain Paris publishers, are bringing luxurious editions—at once very dainty and very serviceable—of English classics within the reach of booklovers of modest

means. Books which are also works of art have, indeed, never been wholly extinct among us; but they have hitherto, for the most part, been accessible only to the favoured few. The new edition of Tennyson's *In Memoriam*, and of Selected Poems from Shelley, with their parchment-binding that will grow mellow and not shabby with the lapse of years, their rough hand-made paper undesecrated by trimming, and their exquisite typography—so perfect that we need no imprint to suggest the name of the Chiswick Press—are as moderate in their demand on our purses as they are goodly in their appeal to our eyes. They remove a reproach from the English book-trade, and diminish the poignancy of our regret that we were not contemporaries of the Aldi or the Elzevirs. Though his task was an infinitely easier one, Mr. Richard Garnett has, in the second volume of this series, done for Shelley somewhat the same service as Mr. Matthew Arnold has done for Wordsworth in the "Golden Treasury" Selections.

THE ASTOR LIBRARY.

THE thirty-first annual report of the Astor Library, which has just been submitted to the Legislature at Washington, shows the enormous progress made by this admirable institution. A new era is marked in the history of the library by the fact that Mr. John Jacob Astor, following in the steps of his father and grandfather, has conveyed to the trustees a piece of land adjoining the present building on the north, and he also proposes to furnish the funds for an additional building, increasing the working space of the library by almost one-half. Some facts in connexion with the foundation and the progress of this public benefaction will be of interest to our readers. In 1848, Mr. John Jacob Astor, the well-known millionaire, provided by a bequest of 400,000 dollars "for the establishment of a public library in New York," naming, as first trustees, Washington Irving, William B. Astor, Fitzgreene Halleck, and Samuel B. Ruggles, of whom only Mr. Ruggles now survives. On February 1, 1853, the library was opened, offering, without restriction, to the public use eighty thousand volumes, carefully selected, classified, and systematically arranged. Two years afterwards it was found that more space was required, and Mr. Wm. B. Astor accordingly took most liberal measures to extend the usefulness of the institution. Additional buildings were erected, and in the year 1859 the whole library had a frontage of 130 feet, and contained upwards of 110,000 volumes. The total amount expended for books, beginning with 27,000 dollars in 1849, had risen in 1869—that is, twenty years after the incorporation—to more than 240,000 dollars. By the year 1875 the property of the library had almost doubled. Since that date it has still further increased, through the munificence of the present representative of the family, Mr. John Jacob Astor, so that the total value of the property is now no less than 1,112,957 dollars. The fund for the maintenance of the library has also grown to 421,000 dollars, while the number of books has reached almost 200,000. The Astor Library, which in its inception and its growth is entirely the result of private enterprise, is probably unexampled in the history of similar undertakings.

MAGAZINES AND REVIEWS.

The Antiquary. Vol. I., No. 2, February, 1880. (Elliot Stock.) The present number of the *Antiquary* quite reaches the high level attained by the last. Dr. Hayman's "Historical Memories of Tewkesbury Abbey" is continued therein, and is, without doubt, the most important paper in the number. Mr. Kinglake's "Valhalla of Somerset Worthies" is most

pleasant reading, and if, as is probable, it contains nothing new, there are many things in it which it is well to have recalled to our minds. Some few things are, however, put somewhat too strongly. We do not wish to depreciate Pym. He was a good and honest man, furnished with an intellect of great power and directness, but it is not quite fair to say that "to him we owe practically the constitution under which we live. Had the men of war of his day no share therein? Are the results of Naseby and Dunbar to count for nothing? What, also, of the great Whig nobles of the Revolution time and the days of the early Georges? We have not space to mention all the papers, but must not omit to say that Mr. Lach-Szyrma's article on "The Last Relics of the Cornish Tongue" is important. This cannot be said of the paper on "The Imitation of Christ, by Thomas à Kempis." Whether he or Gersen was really the author of the book is yet an open question. We ourselves lean strongly to the side of the former, but nothing whatever is given here which throws new light on the question.

THE German Lutherans have now their church monthly, and very different it is from any Church Review known in England. The *Zeitschrift für kirchliche Wissenschaft und kirchliches Leben* opens its first number with an important article by Delitzsch (the first of a series on Pentateuch criticism) on the Law of Leprosy in Leviticus, chiefly against the recent criticism of Wellhausen. Kahnis treats of the apologetic argument for Christianity. "The Conscience," "Historical Pictures from Christian Antiquity," and "Luther's Biography" supply the material of solid but not uninteresting articles.

WE have received two numbers for the last year of the *Quarterly Journal* of the Poona Sarvajanic Sabha, which is published for Rs.1.8 (say 3s.), and can be obtained in London from Messrs. Trübner. The Sabha, or Association, appears to be primarily of a political character. Of all great Indian cities, Poona is perhaps the best representative of independent native opinion. It has a numerous and wealthy population, of a distinct national type, who still cherish the traditions of Mahratta supremacy. It possesses several educational institutions, where the highest instruction is imparted in English. At the same time, the proportion of European inhabitants, other than civil and military officials, is comparatively small. Under these circumstances, Poona has developed a form of political agitation which is well deserving of attention. Regarding the opinions expressed we have nothing to say here, except that the style of expression is more vigorous and logical than that of any similar writings that we have seen from the Bengal Presidency. Among literary announcements, we are glad to observe a promise to print translations of unpublished Mahratta chronicles, to be compared with the account of the same events given by Grant Duff. It is not generally known that Macaulay was indebted for not a few of the most vivid touches in his essays on "Clive" and "Hastings" to the contemporary chronicler who compiled the *Sair-i-Mutakharim*. The chief hope of future historians of India lies in the discovery of such fresh materials, which probably exist everywhere in abundance.

THE *Revista Contemporanea* of January 30 contains a valuable report by A. Sanchez Moguel "On the Condition of Romance Philological Studies in Spain." This would have been more useful to foreigners had the writer stated where the various articles on Spanish provincial dialects appeared, and are now to be obtained. There is an excellent review of Señor Sellé's last drama, *El Cielo ó el Suelo*, by J. Ugarte. Fault is found with the plot and ethics, but the

poetic merits of the piece are highly appreciated. The doctrine of non-intervention is warmly advocated by an anonymous writer in the case of Morocco. Lighter literature is represented by an amusing historical sketch, "Las Cuartanas del Principe de Eboli," by Jimenez de la Espada. Revilla begins an earnest pleading for "Necessary Reforms in Education in Spain."

WE have received the first two quarterly numbers of the *Boletín del Ateneo Barcelonés*, the organ of the literary and patriotic revival in Catalonia. An interesting biography of Señor Güell y Ferrer, one of the great Catalan manufacturers, appropriately opens the volume; but the most important piece in these two numbers is a prize essay "On the Causes which hindered the Development and occasioned the Downfall of Industry in Spain," by A. Bech y Puyol. The subject is treated historically; and in the present numbers is continued only to the end of the Austrian dynasty. In the second *Boletín* there is a fine fragment in Catalan verse of Balaguer's unpublished tragedy, "Lo Compte de Foix." The catalogue of works belonging to the Ateneo is not the least useful part of this publication.

OBITUARY.

DR. ALEXANDER KEITH died on February 7 at Buxton at the advanced age of eighty-nine. Born in Aberdeenshire in 1791, he published the first edition of his great work on *The Literal Fulfilment of Prophecy* in 1823, and in 1839 became one of a deputation sent by the General Assembly to various Eastern countries with the view of establishing missions to the Jews. It is worth while to mention this fact, because the missions in which this journey issued were the first strictly Church missions to the Jews since the times of the apostles. Dr. Keith held views on prophecy which very few educated theologians would now endorse. History and the literature of travel were ransacked by him for evidence of the literal fulfilment of prophetic descriptions down to the minutest and apparently poetical details. Jealous as he was for the inspiration of prophecy, as he, at least, understood it, he was a man of an affectionate disposition and no mere controversialist. Readers of the life of Dr. John Duncan will remember the remarkable episode at Pesth in which Dr. Keith plays so important a part.

THE death is also announced of Mr. Joseph O'Logan, the skilful facsimilist of old Gaelic volumes reproduced by the Royal Irish Academy; of Dr. T. M. Brewer, of Boston, joint-author of the *History of North American Birds*; of the Rev. G. B. Paley, author of *Saul of Tarsus: a Dramatic Sketch*, &c.; of the Rev. James French, late Professor of Rhetoric in the Andersonian University, Glasgow; of Mr. A. Sheldon Williams, illustrator of Sidney's *Book of the Horse*, &c.; of Mr. Alex. McNeel-Caird, author of works on Land-Tenure Reform and Poor Law Administration, and of a *Life of Queen Mary*; and of M. Léonce Reynaud, author of a *Traité d'Architecture* and of *Les Travaux publics de la France*.

CAMBRIDGE NOTES.

A CAMBRIDGE correspondent writes:—

"We are living in an epoch of memorials. Not a week passes but a new one is issued from the press. The two most important criticisms the scheme of the University Commissioners. One is largely signed by Conservatives and Conservative-Liberals, the other less numerously by more decided Liberals. The first is unfriendly to the general scheme of the Commissioners; the second is friendly to it. Both criticise its details with great severity. It is a pity that the Commissioners, while adopting so bold a course in their general sketch of reform, took so

little trouble to ascertain facts and actual wants in filling up details. In the last ten or twenty years new subjects of study have crowded upon the University; new teachers have been required in large numbers. The main question for the Commissioners to solve was whether these teachers should be appointed and paid by the University or by the colleges. No one, as far as I know, has drawn up a practical scheme by which the appointment and payment of teachers could be satisfactorily managed by the smaller bodies. Colleges are apt to consider only their own wants, and would not have been ready to provide teachers who are needed by the University, but who would be assigned to studies of which each foundation has only a few representatives. The Commissioners, therefore, took the bold course of organising a hierarchy of public teachers in three ranks—professors, readers, and lecturers—and leaving their appointment and supervision to the different boards of studies, under the general direction of a central board of University studies. This scheme, which has been advocated in these columns and elsewhere, was not at all new. It was acceptable in principle to the great body of Liberals. But in working out its details the Commissioners showed ignorance and carelessness. They did not state the principles on which the apportionment of the £25,000 a-year which they require for the University was assigned to the different colleges; they gave very varying stipends to different professors, without any ascertainable reason for the distinction which they drew; they placed professors under boards of studies to which they did not properly belong; they created thirty readers, but divided them among the boards of study in proportions which recommended themselves to no one; they made a weak attempt to extract more money from the colleges by forming a class of University lecturers, to whom the University was to pay £50 a-year and the separate colleges £150; and, lastly, they tied up so much money in teaching bodies that they had nothing left for buildings and general University purposes. These points have been severely criticised by all parties. The Conservatives, in addition, object to so large a sum as £25,000 a-year being taken from the colleges. Almost all the boards of studies have memorialised the Commissioners in favour of their own specialities. It may be hoped that the result will be that the Commissioners will, while continuing firm in their leading lines, make the fullest use of the knowledge and experience which have been placed at their service.

"Two other memorials have been largely signed on another subject. The number of candidates 'plucked' in the additional subjects for the 'Little go' was, in the last year, suddenly and portentously increased. It leaped at once from eighty to 180. The consequence has been an abandonment of honours for the poll, and a general scare which threatened to drive students to the more indulgent schools of Oxford. Mr. Munro, with chivalrous devotion, has undertaken the cause of the oppressed, and by the labours of a Christmas vacation has induced the strength of the University and the principal public schools to declare against this unnecessary harshness. One memorial circulated by him urges the board of examinations to adopt a more lenient standard, and to give more security against the caprice of individual examiners; another prays that the privileges of a certificate gained in the schools examination may be made at Cambridge similar to what they are at Oxford. The syndicate appointed to decide what substitute, if any, is to be allowed for Greek in the 'Little go' has not yet reported to the senate. It is probable that when it has done so the whole question of the previous examination will be reviewed, and in that case considerable changes may be expected.

"Mr. J. G. Fitch is giving a course of lectures for the Teachers' Training Syndicate on 'The Practice of Education.' They are very largely attended. The class has risen rapidly from sixty or seventy to over a hundred, and a large proportion of the students are men. The first examination for teachers will be held in June, and there is every prospect of a considerable number of candidates. This eagerness of teachers for systematic training and for recognition by the University seems likely to prove a new departure in education.

"Another novelty is the lectures on Early Italian

Literature which are being delivered by Dr. Nathan. The organising of this course of lectures is the first sign of activity which the board of modern and mediæval languages has shown. The Commission propose to merge it in a general board of languages, in which Semitic and Indian languages are equally represented. We may hope that before it is thus extinguished it may do something more for the University than it has yet attempted during the two years of its existence."

EGYPTIAN RESEARCH.

I AM very glad to find that Mariette Pasha's remarkable paper on the discoveries yet to be made in Egypt has been exciting attention, since nothing has impressed me so much during my recent visit to Egypt as the abundance of unexplored archaeological material which still remains in the country. So far from its being a worked-out field, fully two-thirds of it have still to be examined and excavated. Egyptologists and tourists have been contented to visit the same sites, to recopy the same inscriptions, and to admire the same temples. Even so accessible and so frequented a monument as Karnak lies half buried in rubbish, and no one has thought of clearing away the earth which conceals the lower rows of cartouches containing the names of the Jewish and Israelitish towns conquered by Shishak. The discovery of the chamber at Abu Simbel by Miss Edwards' party, or the recently published *Nile Gleanings* of Mr. Villiers Stuart, shows what may be done by the ordinary traveller who makes use of his eyes and goes a little out of the beaten track. Much still remains above ground which has never yet been seen or described by European explorers, and much that has been copied requires to be carefully copied over again. Why cannot one of the numerous visitors to the comfortable hotel at Luxor make a careful study of the plants and birds collected by Thothmes III. from various parts of the world for his botanical and zoological gardens at Thebes, and sculptured on the walls of his ruined chamber at Karnak? (They are reproduced in *facsimile* by M. Mariette in his magnificent work on Karnak, p. 28-31.) Among them I noticed the dūm-palm and its fruit, from which I infer that this species of palm was first introduced into the Thebaid by Thothmes III. The sculptures are in so realistic a style that the naturalist ought to have little difficulty in identifying many of the species represented by them, and, considering the scandalous way in which most of the monuments are allowed to be injured and destroyed by the natives, it is not probable that they will long continue so easily recognisable.

It is astonishing that some among the many visitors to the Nile have not had the patience and curiosity even to copy the multitudinous Greek and Latin *graffiti* which cover the walls of the monuments. No doubt a large number of these have already been copied, but, even where this is the case, new copies are always acceptable. If the Greek *graffiti* only of a single spot, like Abydos, for instance, were thoroughly and systematically copied, the gain to Greek epigraphy would be immense. I feel strongly convinced that among them the autograph of Herodotus himself would, sooner or later, turn up, since it is impossible to suppose that he could have travelled through Egypt without indulging in the favourite custom of his age and countrymen. No doubt many of the monuments visited by Herodotus, such as those of Sais and Memphis, have now perished, but there are others still existing which we know to have been seen by him.

At Abu Simbel I found indications, as I believe, of a chamber cut in the rock by the side of that discovered by Miss Edwards' party, which I will call, for want of a better name, the library. I noticed that the rock had been cut

away above the lintel of the latter, in order, plainly, to support the roof of the brick-court which faces it. The staircase in the court, found by Miss Edwards, evidently ascended to this roof. Adjoining this court, on the south side, I found another square court. This, too, must have had a roof, about a foot lower than the roof of the first court, since steps are cut in rock leading from the second and fourth of four inscribed niches to a point where at present they abruptly break off, leaving a sheer cliff below them. These steps must once have led down to the roof of the southern or second court. I noticed two holes on either side of the top of the second niche; into these beams must have been inserted, supporting the roof of a shrine, which rested on the roof of the southern court. The second niche is cut out of the rock just above the middle of this court; and a crack I detected in it, beginning in the centre of the tablet and widening downward till lost in the sand, makes me believe that a chamber excavated in the rock exists below it. Unfortunately, I did not observe the crack till just before leaving Abu Simbel, and I was consequently unable to test my belief by digging.

I recopied at Abu Simbel, as well as I could, the Greek, Karian, and Phoenician *graffiti* given in the magnificent *Denkmäler* of Lepsius. Every year renders them more and more illegible, thanks to the detestable practice of ignorant travellers, who ruthlessly carve their own names over the inscriptions of an earlier age. My copies do not always agree with those of Lepsius, but this is no doubt due to the deterioration the characters have undergone since he was at Abu Simbel. However, I found a short and almost illegible Karian *graffito* of four letters on the second colossus at the entrance of the smaller temple which had not been observed before. With the assistance of the boatmen I also managed to clamber up into the niche, with a sitting figure within it, cut in the rock just before Abu Simbel is reached. I found that the niche is surrounded by an inscription in half-obliterated hieroglyphs, which shows that the sitting figure represents Nofre-ari, the favourite wife of Ramses II. The face is destroyed by the decay of the calcareous stone out of which it was carved, only the wig remaining perfect. The attitude and whole character of the figure reminded me so forcibly of the Niobe statue on Mount Sipylus that I feel it difficult not to believe the latter to have been a barbarous imitation of Egyptian work. A similar niche and figure are carved out of the rock on the east side of the hill a little to the south of Abu Simbel, and, as is well known, similar figures occur at Silsilis and elsewhere; while the Triads (or Tesserads) cut out of the rock in temples like those of Abu Simbel and Derr, or tombs like that of Pet-Amunoph at Thebes, are merely variations of the same design.

For the benefit of future travellers I may add that I made an excursion into the hills eastward of Wadi Helfa without finding anything to reward my trouble, and that I noticed a number of Koptic Christian tomb inscriptions on the roof-stones of the charming temple of 'Amada—on the top of which a church once stood—which it would be well worth the while of anyone interested in Egyptian Christianity to copy. For myself, I copied all the demotic *graffiti* at Dakkeh and most of those at Philæ, not knowing whether the work had been done before or not, as well as an inscription in Ethiopian demotic on a fallen stone at Debôd. At Maharrâka I picked up a portion of a stone containing a Greek inscription on the site of the Roman town, and brought away from Dakkeh a tile with a short Arabic inscription. I procured another tile with an Arabic inscription, which I have not yet deciphered, at Elephantine, together with one of those well-known tiles which register in cursive Greek the dis-

bursement and receipt of the pay received by the Roman garrison there. This particular tile contains the memorandum of "Aebutius (Αἰβούτιος) Niger and Julius Serenus, *πρακ* (τόρες) ἀ(ργυρικῆς) ἑλεφαντίνης" for "two draohmae, three obols," and is dated in the reign of "(Marcus) Aurelius Antoninus Caesar," though unfortunately the year is lost. After the date come the words:—Ἰούλιος Σέρηνος τοῦ δραχ(μάς). At Abydos I made a careful copy of the Karian inscriptions, and found that the published copies are full of gross blunders. I may also mention a broken slab of stone at the landing-place of Kalabsheh, on which I noticed the name of a Coptic Christian written as follows:—
+ ΠΑΙΠΕΠΜΑΙΝΕΜΠΜΟΣ.

While taking a ride in the desert near Philæ one day, I accidentally came across a valley worn and polished by the frequent and recent action of water, and where, indeed, there was still at the extreme end a deep pool of water. The donkey boys stated that the name of the valley was Wadi Ibrahim, and that the water often descends through it in a foaming torrent. Two Arabic inscriptions are cut upon the rocks of the Wadi, but there are no traces of hieroglyphs, from which I infer that the spot was unvisited by the ancient Egyptians, who have covered the granite boulders of the surrounding district with their memorials. This is the more strange, since the Wadi runs westward into the channel through which the Nile once flowed, and through which now runs the high road to Assuan. The brick wall defending this high road from the Arabs of the east probably dates back to the time of Sethi I., who has left three monuments of himself carved on granite blocks in conspicuous places along its line. One of these is on a low granite peak to the east of the wall, and represents the King triumphing over a Hittite prisoner. The two others are on two very prominent blocks piled one upon the other on the summit of the cliffs to the west of the wall. On the lower block, facing east, the King stands in his chariot pursuing the foe, with a fallen enemy under his feet, while on the upper block, facing north, he holds his sword aloft with one hand and grasps the hair of his enemies in the act of slaying them with the other. I found the narrow passages between the boulders leading up to these two sculptured blocks thickly covered with fragments of early pottery and polishers of green stone, while in one place I discovered the remains of steps cut in the rock.

Accurate maps and guide-books to the Nile are sorely wanted. None of those we have at present are infallible. Thus Murray puts Wadi Helfa on the wrong side of the river, and all the guide-books agree in stating that there is but one granite statue of Amunoph II. on the Island of Bigheh, whereas there are two.

A. H. SAYCE.

PS.—I see that in the letter describing my visit to the site of the Temple of Onias, Ramses II. has twice, by an oversight, been printed for Ramses III.

CORRESPONDENCE.

BULWER LYTTON ON HERMAN MERIVALE AND LORD MACAULAY.

Richmond, Surrey: Feb. 14, 1880.

On February 8, 1874, a man of remarkable talent and high professional attainments, distinguished at school, distinguished at college, and distinguished throughout his career, died in the sixty-ninth year of his age. As an author and a critic, Herman Merivale stood high in the estimation of the literary world. In an obituary notice which appeared in the *Pall Mall Gazette* it was said:—

"His whole career affords a strong illustration of the way in which the institutions of this country and the habits of life in the present day act upon men whose education, ability, general knowledge, and power of mind are out of proportion to their income and connexions. No better work, political, judicial, literary, or professional, is to be had in the world than, maybe—and under favourable circumstances—is got out of such men; but very many of them are too proud to take the common means of securing popular favour, or are awkward in their attempts to do so, and the consequence not unfrequently is a career of obscure distinction which deeply and durably impresses a small circle of friends, but is very soon forgotten by the public at large, if, indeed, people can forget what they never knew."

After remarking how devoid his character was of ambition or self-interest, the writer concludes:—

"His characteristic quality was the vigour and promptitude of his judgment upon every kind of subject, and his power of expressing and defending whatever opinion he might form. He was ready, prompt, and vigorous in mind and body. His manner indicated a singularly affectionate, warm, and kindly disposition."

Such was Herman Merivale, whose memory is still warmly cherished by a large circle of friends and relations. His best-known work is *Historical Studies*, and I am indebted to his cousin, Col. Heber Drury, of Brighton, for a transcript of a *critique* on it recently discovered in the late Lord Lytton's copy of the book. As the MS. has never been published, and, to use Col. Drury's language, "thoroughly portrays the man and the critic," it may interest readers of the ACADEMY.

S. R. TOWNSHEND MAYER.

"The author of this book is one of the most remarkable men I have ever met. The main character of his intellect is massiveness, and it is the massiveness of gold. Perhaps as a critic, for which he has most of the fundamental qualities, he occasionally errs, from the combative quality of an advocate; that is, he will sometimes crush some other critic (see paper on Voltaire, Rousseau, Goethe) without sufficient consideration for the cause, which cause is the person or thing criticised, no matter what rubbish advocates for or against have uttered. Perhaps as a writer he has not

always done justice to the sterling value of his material by the pains taken in the elaboration of its form—viz., that is, he is contented to write well, where, with such intellect and such stores, he ought, if he spent three months on a page, to have been contented with nothing less than writing wonderfully well. Such as he is, with all merits and drawbacks, he belongs to the very highest order of mind in my time or country. I can compare him to no other of less calibre than Macaulay, for whom I have an enthusiastic admiration, and the difference between them I believe to be this: that no man of much mind could form his opinion by Macaulay, and that a man, however powerful his mind might be, would form his opinion from H. Merivale. While assuming both to have inherited or acquired an equal amount of gold, Macaulay often spins out his gold in thread, and Merivale leaves his gold in blocks. Macaulay is the finer artist, Merivale the more original thinker, and each might have been improved in his own way if great men ever were improved by criticism, which they never have been and never will be. The best criticism is enlightened admiration, as the best of Addison's works prove (apart from creative character like his *Sir Roger de Coverley*) in his essays on Milton; and the moment a critic blames a great author he is sure to be wrong, as Scaliger is when he blames Horace, even the ode to the Roman people, and Merivale is when he blames Goethe or Schiller, and Macaulay is where he attempts to depreciate Goldsmith—certainly a smaller man than Goethe or Schiller. But both Macaulay and Merivale are men to whom, in proportion to our respect for those laws of rank without which we should all be clodhoppers, we take off our hats, and with greater, if we presume to cross swords with them.

"E. B. L."

THE HOLBEINS AT BURLINGTON HOUSE.

London: Feb. 14, 1880.

So much interest is taken in the exhibition of Holbein's works at the Royal Academy that I venture to write a few words on those pictures which show the style of the great German portrait-painter in a stage of development so little known in England that they have been even rejected by eminent art-critics as being doubtful and spurious. If such productions were exhibited in Germany, where pictures by Holbein painted in England are comparatively scarce, I have no doubt that they would meet with very different criticism. Of Holbein's very earliest works, only three portraits, dated 1516, are as yet known. Two are in the Basel Museum; a third, belonging to Lord Northbrook, is now exhibited at the Royal Academy (No. 191). The person here represented is the Swiss painter Hans Herbster, of whose work absolutely nothing has come down to us. In Lebrun's time the signature H. H. was still legible; nevertheless, the picture was then ascribed to Hubert van Eyck, because the figure "5" of the date was wrongly read as "4" (1416). Notwithstanding the high qualities of this carefully finished picture, it would certainly be a mistake to rank the portrait of Herbster with the standard works of Holbein's earliest manner in oil painting. The picture, being painted on paper, produces an effect of its own, which differs from that of all his panel pictures, inasmuch as *technique* and colouring are always adapted to the material. Let us now look at the small portrait (No. 190), lent by F. Cook, Esq., hanging over the Herbster portrait. It represents a young man, some twenty years of age, dressed in a dark-green coat with slashed sleeves, with a black cap on his head, holding a book in his right hand, near which appears the hilt of his sword. This very interesting portrait, which is in excellent preservation, executed in glowing colours of deep tones and in solid impasto, is said to represent a member of the Fugger family, the celebrated merchant princes of Augsburg, some members of which Holbein's father has portrayed in the marvellous silverpoint drawings now at Berlin. The

features of the youth are energetic, but the look betrays distrust; it is a true German of the stamp of Hutten's. In this picture the authorship of Holbein is to my mind beyond all doubt. The violet tints in the flesh colours, the deep tone of the colouring, and the rich impasto, are quite in keeping with the early works of Holbein, such as, for instance, the large altar piece at Freiburg-in-Baden, and similar works at Basel and Karlsruhe, painted about the year 1520.

Another portrait by the master, representing an unknown gentleman (No. 170), lent by J. E. Millais, Esq., is generally admired as one of the finest and most imposing pictures of the whole collection, while art-critics and even some considerable authorities have rejected it altogether from the list of Holbein's genuine works. Those who refuse to recognise here the hand of the great German painter are, perhaps, so far justified, as Holbein ceased to paint in the style peculiar to Mr. Millais' picture after settling in England in 1531. These glowing colours, these sharp outlines, and this elaborate, yet somewhat minute, execution are, doubtless, the efforts of a man whose time was not much taken up by commissions, and who endeavoured in his leisure hours to secure well-deserved recognition. It is hardly possible for anyone to doubt the authenticity of this picture, when comparing it with the portrait of Bonifacius Amerbach at Basel, which is quite similar in style, and shows the same pale-blue background, so characteristic of German pictures of the time.

Another very uncommon work of Holbein's is the historical composition entitled *Noli me tangere* (No. 182). This picture, coming from Hampton Court, claims, by its prominent position on the walls of Burlington House, the due recognition denied to it, until now, by art-critics, who strangely enough seem to have overlooked it. Having examined it repeatedly, I cannot but pronounce it to be one of the grandest productions of German historical art. No doubt it would be inappropriate to criticise the ideal types which Holbein here exhibits on Italian principles. From this point of view the type of Christ may even be looked upon as a failure; but the solemn gravity of the conception, the dramatic and imposing movements of the figures, the masterly arrangement of the draperies—all this unmistakably betrays the hand of Holbein, the greatest artist of Southern Germany. Various considerations lead to the belief that this picture, which is unfortunately not well preserved, belongs to a comparatively late period of Holbein's art; but in any case it would be very difficult to point out another work by Holbein which could rival so unique a production.

JEAN PAUL RICHTER.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 23, 5 p.m. London Institution: "Waves and Currents of Industrial Progress," by G. Phillips Bevan.
 7 p.m. Actuaries: "The Position of Life and other Assurance Associations in Relation to their Local Medical Examiners. Is it satisfactory?" by Cornelius Watford.
 8 p.m. Royal Academy: "Some Suggestions as to Method of Study addressed to Young Sculptors," by H. H. Armstead.
 8 p.m. Society of Arts: "The Manufacture of India-rubber and Gutta-percha," IV., by T. Bolas.
 8 p.m. British Architects.
 8.30 p.m. Geographical: "Mr. Hore's Recent Visit to the Lukuga Outlet of Lake Tanganyika;" "The Marutse-Mabunda Empire in South Central Africa," by Dr. E. Holub.
 TUESDAY, Feb. 24, 8 p.m. Royal Institution: "The Physiology of Muscle," by Prof. Schüffler.
 8 p.m. Society of Arts: "Views of Colonisation," by W. Forster.
 8 p.m. Colonial Institute: "An Empire's Parliament," by A. Staveley Hill.
 8 p.m. Civil Engineers: "On the Use of Asphalt and Bitumen in Engineering," by W. H. De laus.
 8 p.m. Anthropological Institute: "The Origin of the Plough and the Wheeled Carriage," by E. S. Tylor; "Fijian Burial Customs," by the Rev. Lorimer Pison; "Exhibition of Ethnological Specimens from British Columbia," by Dr. F. Dally.

8 p.m. Spelling Reform Association: "On the Graphic Representation of Vowels," by J. B. Rundell.
 WEDNESDAY, Feb. 25, 8 p.m. Royal Academy: "The Recently Discovered Sculptures at Olympia," by C. T. Newton.
 8 p.m. Society of Arts: "The Noxious Gases Bill," by E. K. Muscarratt.
 8 p.m. Geological: "On the Geology of Anglesey," by Prof. McKenny Hughes; "Notes on the Strata exposed in laying out the Oxford Sewage Farm at Sandford-on-Thames," by E. S. Cobbold; "A Review and Description of the Various Species of British Upper-Silurian Fenestellidae," by G. W. Shrubsole.
 8 p.m. Literature: "On Recent Explorations in Rome," by R. N. Cust.
 8 p.m. Telegraph Engineers: "On the Resistance of Galvanometers," by O. Heaviside; "On the Variation of Electro-static Capacity in Submarine Cables," by J. B. Stearns; "On Testing by Received Currents," by H. R. Kempe.
 THURSDAY, Feb. 26, 8 p.m. Royal Institution: "Recent Chemical Progress," by Prof. Dewar.
 7 p.m. London Institution: "Living English Painters," by Fredk. Wedmore.
 8.30 p.m. Royal. Antiquaries.
 FRIDAY, Feb. 27, 8 p.m. Quekett: "On Human and Canine Filariæ," by Dr. T. Spencer Cobbold; "On Bleaching and Washing Microscopical Sections," by Dr. Sylvester Marsh, jun.
 9 p.m. Royal Institution: "Sequel to the Thunderer Gun Explosion," by F. J. Bramwell.
 SATURDAY, Feb. 28, 3 p.m. Physical: "On Some Effects of Vibratory Motion in Fluids," by H. R. Ridout; "On the Determination of Chemical Affinity in Terms of Electromotive Forces," Part I., by Dr. C. R. A. Wright; Part II., by Dr. C. R. A. Wright and E. H. Rennie.
 3 p.m. Royal Institution: "Dryden and his Period," by George Saintsbury.
 3.45 p.m. Royal Botanic.

SCIENCE.

Rural Bird Life: being Essays on Ornithology. By Charles Dixon. (Longmans.)

THESE papers are the fruit of much patient and enthusiastic observation of birds, and are published with the praiseworthy intention of attracting others to the same pleasant employment. Its author has an unfortunate contempt for scientific ornithology, systems of classification, and the like, or he would have known that if an observer wishes to advance any branch of science he must be informed of the discoveries which have been already made in it, and at what level its literature now stands. We cannot honestly say that this volume adds anything to our knowledge of English birds. Every country dweller who loves his garden must have noted the same facts as Mr. Dixon here once more repeats. Taking the common birds of the country, he describes the appearance, habits, food, nest, and eggs of each at length. When he sees a water ouzel (*cinclus aquaticus*) it never occurs to him to suspect whether it be the Scandinavian variety of that bird (*c. melanogaster*) which has been so frequently detected in Norfolk; while in supreme contempt of scientific ornithologists he never troubles his head with the question whether the common crow (*corvus corone*) and its ash-coloured brother, the hooded crow (*c. cornix*), a winter visitor on our eastern coasts, be distinct birds or merely "members of a single dimorphic species." Indeed, there is not a Latin name in the book. The author notes such facts as that the blackbird flirts its tail when alighting on a lawn, whereas a thrush never does, and that the house sparrow uses all manner of household odds and ends wherewith to build its nest. Neither can we conscientiously subjoin that these artless narratives are adorned by a graceful style; on the contrary, Mr. Dixon writes cumbrous, pedantic, and at times provincial English, in the "pause, gentle reader," fashion of past generations. Birds are thus at one time "choristers," at another "little sons of Orpheus;" nay, young wagtails become "sylphlike choristers," and the skylark ex-

changes its "privacy of glorious light" for "aerial celsitude." We have come across one or two mysterious sentences, such as "however much the starling will imitate other species when in confinement, still I am convinced that in *ferae naturae* [*sic*] his notes, though resembling other species, are strictly his own;" and still more portentously, "the jackdaw breeds very late in the year, for the rooks have young even before they commence laying." We must protest, too, against Mr. Dixon's assumption of divinity for Amphion.

With all these drawbacks, however, this is a pleasant, genial book. Taken on its own ground it fulfils its promise of instructing the reader among the secluded yew walks and trim shrubberies of home, while in the next page he is transported to the open moor, the cold mist floats over him, rain beats upon his face, and, in words whose fidelity to fact all who have wandered over the Scotch mountains will acknowledge, "suddenly he flushes the red grouse from its heathery bed, and with harsh grating cries the bird bids him *go bac, go bac, bac—bac—bac*; and on rapid wings, now fluttering, now sailing, it flies before him, and again alights a hundred yards away." An ardent love for natural beauty and for all silvan scenes goes with Mr. Dixon hand-in-hand with a great sympathy for bird life. But it must be wild bird life; caged birds he grieves over; stuffed birds and prepared skins are distasteful to him, not merely from his aversion to scientific dilettantism, but much more because he cannot bring himself to take a bird's life. This affection for finches and larks has naturally given him a quick insight into their ways, and in a thousand little touches he betrays that he has been a close observer. If he has no very novel facts to bring back from the kingdom of the birds, it is only because all the more open traits of his favourites have been so frequently dwelt upon by previous bird-lovers. The relations of British birds to the problems of distribution, relative abundance or scarcity of species, migration and connexion with European ornithology, form quite a different class of questions. No delight in listening to the song of birds and lingering by their nests will here avail. Scientific methods must be applied, and these Mr. Dixon scornfully rejects. On migration, indeed, he holds almost pre-historic views. Winter comes and birds leave for more genial climes—such is well-nigh the extent of his vision. On the many curious facts which recent study has collected on migration—the prevalent winds which assist birds in their flights from land to land; the lines of migration, whether those of the coast or otherwise; the great influx here during autumn of such common birds as blackbirds, magpies, &c., from the Continent; the composition of migratory bands, whether strictly males and females separately, or the sexes blended; above all, the question which underlies the whole phenomenon, whether an "inherent wandering instinct" leads them from land to land, or whether it is necessity and acquired habit gradually perfected by practice, as has lately been ably argued by Weissmann (following the Swedish naturalist Palmén), on Darwinian principles—on all these points

Mr. Dixon is silent. But we gladly recognise his appreciation of the liveliness which birds confer on rustic scenery, and his delight in that burst, or rather crash, of melody which ushers a May morning into an old-fashioned country garden. If students of bird life can be contented with every phase of these rural pleasures, then will Mr. Dixon's book give them exceeding satisfaction.

A few more remarks may be added. The author notes that thrushes sing very early in the year, beginning in February. This season we heard one sing before the old year was dead, and on every mild afternoon of January their carol may be expected. Mr. Dixon has heard one sing through five continuous hours without once quitting its bough. He observed, too, as many as ten variations in one "snatch" of this bird's song. He gives several curious instances of localities chosen for the nest of the pied wagtail. We have seen a wagtail's nest under a cabbage, and the bird brought off its young safely. The magpie has to thank Mr. Dixon for a very favourable character; "its injuries are trivial," he says. A game preserver, it may be safely affirmed, would scarcely agree with this. Mr. Dixon rightly dwells on the cunning which this bird displays in evading notice as it approaches or leaves its nest. We remember an instance to the point. A Norfolk squire, a great sportsman, shot down and trapped all magpies on his estate without the least mercy, but was amazed one autumn, when the leaves fell, to find a vacant nest in a tall tree by his own bedroom window, while the young ones hopped impudently about with their parents just out of reach of his gun. The old birds had never flown directly to or from their nest, but with much circumspection had been wont to settle in trees far away from their home, and then gradually hopped to it from one tree to another under cover of the leaves, and thus had succeeded for weeks in outwitting the squire. Chiff-chaffs, Mr. Dixon opines, are become scarcer in his locality. As they are fond of frequenting the tallest trees, it is quite possible that should these be cut down the birds may desert the district. Speaking generally, there is certainly no diminution in their numbers. Nothing is said of the starling's fondness for dovecots, and the hatred of farmers to the bird in consequence. Probably the starling seizes upon the best situation for its nest, and so ousts the pigeon. We could fain hope that divers black tales against its character, charges of murdering young birds and the like, are calumnies; but its relationship to the larger *corvidæ* must not in justice be forgotten. The author is certainly in error when he affirms that the barn owl is rarely seen by day. On any dull day in Devon its appearance, regularly beating down the hedgerows, is the rule rather than the exception. In another place he suspects that the increased numbers of the ring-dove in winter may be due to migration. There is no doubt about this point: multitudes come across to us every winter from the Continent. While entirely agreeing with him that the cuckoo is not polygamous, we must differ on the fact of the young cuckoo ejecting the rightful owners of the nest as soon as they are hatched. Mr. Harting showed conclusively in the *Field* paper that the make of the

young cuckoo was naturally adapted for this purpose. Indeed, a moment's reflection shows that so large and voracious a bird as a young cuckoo could no more live in harmony with fellow-nestlings than could a socialist with an aristocrat.

The tone of this book, and the feelings of kindness to the brute creation which it inculcates, will be thankfully acknowledged by all lovers of the country. Its *motif* might well excuse the shortcomings to which we have been obliged to call attention. It concludes with a most practical chapter on skinning birds. When it is added that it is beautifully got up, and, if some of the illustrations—notably those of the robin and golden-crested wren—are caricatures, still, that the beautiful chromo-lithograph of the cuckoo's favourite nest which forms its frontispiece, and the spirited out of the magpie are excellent, we part from a well-meaning book, only regretting for the sake of young naturalists that it did not appear among the Christmas gift-books.

M. G. WATKINS.

NOTES OF TRAVEL.

In a private letter from Dr. Southon, of the London Missionary Society, written from Ujiji at the end of last September, a few days after his arrival, we find some interesting notes respecting the proceedings of foreigners at Lake Tanganyika. Dr. Southon states that he had already planted a station in Uguha on the west side of the lake under the charge of Messrs. Hutley and Griffith, while he himself proposes shortly to settle at Urambo, King Mirambo's capital in Unyamwezi. He is expecting the arrival of five more Europeans, one of whom will be stationed at Unanguira, and two others on the west side of the lake. The station at Ujiji will be placed in charge of Mr. Hore, the scientific officer and surveyor, who will continue his survey of the lake and report on places suitable for stations. Dr. Southon and Mr. Griffith appear to have taken but 100 days in making the journey from the coast to Ujiji, while Mr. Stanley, whose journey was previously the fastest on record, only accomplished it in 236 days. Dr. Southon attributes the rapidity of the march to propitious weather and careful organisation, and it is worthy of note that he medically examined all the porters before engaging them at Zanzibar, and selected none but able-bodied men.
